In addition to our trims and data exclusions, before determining the PHP APC geometric mean per diem costs, we also assess CCRs (80 FR 70463 through 70464). Our longstanding PHP OPPS ratesetting methodology defaults any CMHC CCR>1 to the statewide hospital ancillary CCR (80 FR 70457). In this CY 2017 final rule ratesetting, we identified 1 CMHC that had a CCR>1. This CMHC's CCR was 1.185 and was defaulted to its appropriate statewide hospital ancillary CCR for CY 2017 final rule ratesetting purposes.

These data preparation steps adjusted the CCR for 1 CMHC and excluded 6 CMHCs, resulting in the inclusion of a total of 45 CMHCs in our CY 2017 final rule ratesetting modeling, and the removal of 2,395 CMHC claims from the 18,990 total CMHC claims used.

After applying all of the above trims, exclusions, or adjustments, the geometric mean per diem cost for all

CMHCs for providing 3 or more services per day (new CMHC APC 5853) is $124.92 (compared to the proposed $135.30).

b. Hospital-Based PHP Data Preparation: Data Trims and Exclusions

For the CY 2017 proposed rule, we followed a data preparation process for hospital-based PHP providers that is similar to that used for CMHCs by applying trims and data exclusions as described in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70463 through 70465) so that our ratesetting is not skewed by providers with extreme data. Before any trimming or exclusions, in the proposed rule there were 404 hospital-based PHP providers in the claims data. For hospital-based PHP providers, we applied a trim on hospital service days when the CCR was greater than 5 at the cost center level. The CCR>5 hospital service day trim removed hospital-based PHP service days that use a CCR>5 to calculate costs for at least one of their component services. Unlike the ±2 standard deviation trim, which excluded CMHC providers that failed the trim, the CCR>5 trim excluded any hospital-based PHP service day where any of the services provided on that day are associated with a CCR>5. Applying this trim removed service days from 8 hospital-based PHP providers with CCRs ranging from 5.8763 to 19.9996 from our proposed rule ratesetting. However, all of the service days for these eight hospital-based PHP providers had at least one service associated with a CCR>5, so the trim removed these providers entirely from our proposed rule ratesetting. In addition, the OPPS ±3 standard deviation trim on costs per day removed four providers from proposed rule ratesetting.

Finally, in our proposed rule ratesetting, we excluded 13 hospital-based PHP providers that reported zero daily costs on their claims, in accordance with our proposed rule PHP ratesetting policy (80 FR 70465). Therefore, we excluded a total of 25 hospital-based PHP providers, resulting in 379 hospital-based PHP providers in the data used for proposed rule ratesetting. After completing these data preparation steps, we calculated the geometric mean per diem cost for proposed new hospital-based PHP APC 5863 for hospital-based PHP services. The proposed geometric mean per diem cost for hospital-based PHP providers that provide 3 or more services per service day (new hospital-based PHP APC 5863) was $192.57.

The proposed CY 2017 PHP APC geometric mean per diem costs for the new CMHC and hospital-based PHP APCs were shown in Table 19 of the proposed rule (81 FR 45674). The proposed PHP APC payment rates were included in Addendum A to the proposed rule (which is available via the Internet on the CMS Web site).

For this final rule with comment period, for hospital-based PHPs, we used updated CY 2015 final claims data. The final CY 2015 Outpatient Standard Analytic File showed that 482 hospital-based PHPs had claims in CY 2015. As described in the discussion of the PHP ratesetting process in the CY 2016 final rule with comment period (80 FR 70462 through 70467), in section II.A. of this final rule with comment period, and in the OPPS Claims Accounting Document under supporting documentation ''Downloads'' for the CY 2017 OPPS/ASC final rule with comment period (available online at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Hospital-Outpatient-Regulations-and-Notices.html*), in developing the claims eligible for ratesetting, we excluded providers paid outside of the OPPS (39 hospital-based PHPs), providers without cost report data (9 hospital-based PHPs), and providers with outlier overall CCRs (14 hospital-based PHPs). After making those exclusions, the updated CY 2015 claims data for this final rule with comment period showed 420 hospital-based PHP providers that were eligible for ratesetting. We then applied our ratesetting trims and exclusions.

For hospital-based PHP providers, for this final rule with comment period, we applied a trim on hospital service days when the CCR was greater than 5 at the cost center level. Applying this trim removed service days from 8 hospital-based PHP providers with CCRs ranging from 5.411 to 17.603. However, all of the service days for these 8 hospital-based PHP providers had at least one service associated with a CCR>5, so the trim removed these providers entirely from ratesetting. Also, the OPPS ±3 standard deviation trim on costs per day removed 1 provider with costs per day over $4,000 from this final rule ratesetting.

For this final rule with comment period, we also excluded 15 hospital-based PHP providers that reported zero daily costs on all of their claims, in accordance with our PHP ratesetting policy (80 FR 70465). Finally, we excluded 1 hospital-based PHP without valid wage index data. Therefore, we excluded a total of 25 hospital-based PHP providers, resulting in 395 hospital-based PHP providers in the data used for ratesetting. After completing these data preparation steps, we calculated the geometric mean per diem cost for new hospital-based PHP APC 5863 for hospital-based PHP services. The final geometric mean per diem cost for hospital-based PHP providers that provide 3 or more services per service day (new hospital-based PHP APC 5863) is $213.14 (compared to the proposed $192.57).

Currently, the highest hospital-based PHP per diem rate, which for CY 2016 was the Level 2 hospital-based PHP per diem rate for APC 5862, serves as the cap for all non-PHP outpatient mental health services provided in a single service day. Because we are finalizing our proposal to replace the existing two-tiered PHP APCs structure with a single APC grouping for these services by specific provider type, the outpatient mental health treatment cap for CY 2017 is the geometric mean per diem rate for new hospital-based PHP APC 5863.

In the CY 2017 OPPS/ASC proposed rule, we solicited comments on our proposals related to CMHCs and hospital-based PHP APC geometric mean per diem cost calculations and data exclusions.

Comment: Several commenters expressed concern that the proposed CY 2017 PHP APC geometric mean per diem costs and payment rates were lower than the current CY 2016 PHP APC geometric mean per diem costs and payment rates, and stated that the proposed payment rates would not provide adequate payment of these services.

Several commenters suggested an alternative payment methodology. Some commenters suggested that CMS delay implementation of the CY 2017 PHP APC per diem payment rates until it can capture and adequately cover hospital-based PHP costs, or that CMS ''freeze'' the CY 2017 PHP APC per diem payment rates at the CY 2016 level. Several commenters recommended that CMS use a median cost phase-in of at least 3 years to allow PHP providers to assess their programs and make necessary changes, using a rolling average of the per diem costs. One commenter stated that this method could minimize the major fluctuations in the payment rates from year to year and provide a more stable basis for hospitals and CMHCs when budgeting and planning. Another commenter stated that the decrease in the PHP APC payment rate would discourage hospitals from offering the PHP benefit to Medicare beneficiaries, ultimately creating a barrier to access to these services, which could place the

population at risk. Some commenters stated that the payment rate reduction would impair services and affect the provider network of both service organization types, or that the lower payment rates will force providers to restructure their organization and programs. Other commenters stated that a payment reduction will force providers to cut costs, staff and programming, which would cause them to assist fewer people, and would lead to higher ED visits. Another commenter stated that providers would be unable to absorb the impact of the reduction. Some commenters noted that PHP costs had increased due to rising wages, the new CMHC conditions of participation (CoPs), and a reduction in bad debt reimbursement.

One commenter mentioned that since last year, another 11 CMHCs closed or discontinued PHP services, and the policy would further decrease valuable resources for the mentally ill. Several commenters believed that PHPs will continue to decrease in numbers without adequate payment. One commenter stated that establishing payment rates that are lower than geometric mean costs is a disincentive for PHPs to continue providing services. Another commenter stated that the 13 percent reduction in hospital-based PHP geometric mean per diem payment rates may prohibit high quality providers from continuing to provide PHP services and exacerbate existing access constraints. A number of commenters noted that PHPs are a vital part of the mental health care continuum, and noted the benefits of the program, which include providing needed care to a vulnerable population, avoiding more costly and less efficient emergency department visits and more costly inpatient stays, and increasing the time between readmission.

Response: We appreciate the commenters' input regarding the CY 2017 proposed PHP APC payment rates. The final hospital-based PHP APC geometric mean per diem cost for new APC 5863 is higher than the proposed hospital-based PHP per diem cost ($213.14 for this final rule versus $192.57 in the proposed rule). However, the final CMHC geometric mean per diem cost for new APC 5853 is lower than the proposed CMHC geometric mean per diem costs ($124.92 for this final rule versus $135.30 in the proposed rule). As we explained in the CY 2014 OPPS/ASC final rule (78 FR 75049), our calculation of geometric mean per diem costs is based on the actual provider-reported claims and cost data and, therefore, represents the cost of providing PHP services, including, for example, rising staff wages. The resulting PHP APC geometric mean per diem costs and specific payment amounts and the APC payment structure reflect the cost providers expend to maintain such programs. While we proposed the geometric mean per diem costs in this section, section 1833(t)(9)(B) of the Act requires that we apply a budget neutrality adjustment before determining final payment rates, as described in section II.A.4. of this final rule with comment period. That adjustment can result in geometric mean per diem payment rates that are higher or lower than the calculated geometric mean per diem costs. It is also important to note that the reduction to bad debt reimbursement was a result of provisions of section 3201 of the Middle Class Tax Extension and Job Creation Act of 2012. The reduction to bad debt impacted all providers eligible to receive bad debt reimbursement, as discussed in the CY 2013 ESRD final rule (77 FR 67518).

We remind PHPs that the services of physicians, clinical psychologists, clinical nurse specialists (CNSs), nurse practitioners (NPs), and physician assistants (PAs) furnished to partial hospitalization patients will continue to be billed separately as professional services and costs for these professional services are not considered to be partial hospitalization services. Therefore, payment for partial hospitalization services represents the provider's overhead costs, support staff, and the services of clinical social workers (CSWs) and occupational therapists (OTs), whose professional services are considered to be partial hospitalization services for which payment is made to the provider (65 FR 18452). We encourage CMHCs and hospital-based PHPs to review their cost reporting procedures, to ensure that they are accurately reporting PHP costs on their cost reports, and hospital-based PHPs to follow the revenue-code-to-cost-center hierarchy.

We recognize the commenters' concern regarding variance in payment rates from year to year. As we explained in the CY 2014 OPPS/ASC final rule (78 FR 75049), payment rates for PHP services fluctuate from year to year based on a variety of factors, including direct changes to the PHP APC per diem payment rate, changes to the OPPS, and provider-driven changes. Over the past several years, we have made changes to the PHP APC per diem payment rates to more accurately align the payments with costs. The changes have included establishing separate APCs and associated per diem payment rates for CMHCs and hospital-based providers based on each provider's costs. We also believe that combining the two tiers into one payment tier for 3 or more services will reduce fluctuations and better stabilize the payment rate variance. Combining the tiers systematically addresses chronic issues with inverted costs leading to inverted payment rates and creates a more stable geometric mean per diem cost, given the small number of PHP providers.

Regarding the recommendation to use median cost, we note that, in the CY 2013 OPPS/ASC final rule with comment period, we finalized our proposal to base the relative payment weights that underpin the OPPS APCs, including the PHP APCs, on geometric mean costs rather than on the median costs (77 FR 68406 through 68412). The use of geometric mean data supports our goal of aligning resource use with appropriate payment.

In response to commenters' suggestions to delay implementation of the CY 2017 per diem payment rates, or to ''freeze'' the PHP APC per diem payment rates at the CY 2016 level, as we discussed in the CY 2014 OPPS/ASC final rule with comment period (78 FR 75049), we cannot establish payment rates that do not accurately reflect current claims and cost report data. Providers attest to the accuracy of the cost reports from which we obtain PHP claims and cost data. In addition, the ratesetting methodology for calculating OPPS APC payment rates as stated in the regulations at 42 CFR 419.31 does not allow us to take an average of prior year and current PHP per diem payment rate data to determine the PHP geometric mean per diem payment rates. Rather, the regulations at § 419.31(b)(1) require us to use the most current available cost data in ratesetting. Therefore, we cannot delay or ''freeze'' the CY 2017 PHP APC per diem payment rates, or base the calculations upon an average of multiple years of data.

We appreciate the commenters' input regarding the effect any reduction in PHP payment rates would have on access to care. As noted earlier, the final PHP geometric mean per diem cost increased for hospital-based PHPs, but decreased for CMHCs. Our calculated geometric mean per diem costs are based on the actual provider-reported claims and cost data and, therefore, represent the cost of providing PHP services.

We are working to strengthen continued access to the PHP benefit for eligible beneficiaries. For example, in CY 2016 ratesetting, we conducted an extensive analysis of the ratesetting process, and discovered errors providers

had made in claims coding of revenue and HCPCS codes that were leading to lower geometric mean per diem costs. In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70462 through 70467), we also included a detailed description of the ratesetting process to help PHPs record costs correctly so that we can more fully capture PHP costs in ratesetting.

To address fluctuations in payments and to protect ratesetting from aberrant data, we also implemented trims on the PHP data used in ratesetting in the CY 2016 rulemaking. For example, the CMHC ±2 standard deviation trim has protected CMHCs by removing from ratesetting several providers with aberrantly low costs per day, which would have lowered total CMHC geometric mean per diem costs, and thus lowered CMHC geometric mean per diem payment rates.

We agree that PHPs serve a vulnerable population, and appreciate the care that PHPs provide to Medicare beneficiaries. We also believe that PHPs can help patients avoid emergency department visits and inpatient stays in a cost-efficient fashion. We remain concerned about access to PHP services, and particularly about the declining numbers of CMHCs. We will continue to explore policy options for strengthening the PHP benefit.

Comment: A few commenters stated that the lack of a required standardized PHP cost center on the Medicare cost report may be creating some cost-finding nuances in the cost report itself (for example, inaccurate step-down of overhead cost allocations to the PHP program, diluted CCRs by the comingling of PHP and ''Intensive Outpatient Program (IOP)'' on the cost report, among others) that may have contributed to this decreased PHP median [sic] cost. These commenters believed that the cost decreases observed with hospital-based PHP costs may not be ''real'' cost decreases, but rather a result of Medicare cost accounting.

Response: We agree that if PHP costs are combined with other less intensive outpatient mental health treatment costs in the same cost center, the CCR could be diluted, leading to lower geometric mean per diem costs being calculated. We will analyze this further and consider adding a cost center to the hospital cost report for PHP costs only.

After consideration of the public comments we received, we are finalizing our proposals to replace the four PHP APCs (5851, 5852, 5861, and 5862) with the two new PHP APCs (5853 and 5863) and to calculate the geometric mean per diem costs using the most recent claims and cost data for each provider type. The final CY 2017 PHP APC geometric mean per diem costs for the new CMHC and hospital-based PHP APCs are shown in Table 41 below. The final PHP APC payment rates are included in Addendum A to this final rule with comment period (which is available at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Hospital-Outpatient-Regulations-and-Notices.html*).

TABLE 41—CY 2017 PHP APC GEOMETRIC MEAN PER DIEM COSTS

CY 2017 APC	Group title	PHP APC geometric mean per diem costs
5853	Partial Hospitalization (3 or more services per day) for CMHCs	$124.92
5863	Partial Hospitalization (3 or more services per day) for hospital-based PHPs	213.14

3. PHP Ratesetting Process

While PHP services are part of the OPPS, PHP ratesetting has some unique aspects. To foster understanding and transparency, we provided a detailed explanation of the PHP APC ratesetting process in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70462 through 70466). The OPPS ratesetting process includes various steps as part of its data development process, such as CCR determination and calculation of geometric mean per diem costs, identification of allowable charges, development of the APC relative payment weights, calculation of the APC payment rates, and establishment of outlier thresholds. We refer readers to section II. of this final rule with comment period and encourage readers to review these discussions to increase their overall understanding of the entire OPPS ratesetting process. We also refer readers to the OPPS Claims Accounting narrative, which is a supporting document to this final rule with comment period, available on the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Hospital-Outpatient-Regulations-and-Notices.html*; click on the link to this final rule with comment period to find the Claims Accounting narrative. We encourage CMHCs and hospital-based PHPs to review their accounting and billing processes to ensure that they are following these procedures, which should result in greater accuracy in setting the PHP payment rates.

C. Outlier Policy for CMHCs

1. Estimated Outlier Threshold

As discussed in the CY 2004 OPPS final rule with comment period (68 FR 63469 through 63470), after examining the costs, charges, and outlier payments for CMHCs, we believed that establishing a separate OPPS outlier policy for CMHCs would be appropriate. A CMHC-specific outlier policy would direct OPPS outlier payments towards the genuine cost of outlier cases, and address situations where charges were being inflated to enhance outlier payments.

We created a separate outlier policy that would be specific to the estimated costs and OPPS payments provided to CMHCs. Beginning in CY 2004, we designated a portion of the estimated OPPS outlier threshold specifically for CMHCs, consistent with the percentage of projected payments to CMHCs under the OPPS each year, excluding outlier payments, and established a separate outlier threshold for CMHCs.

The separate outlier threshold for CMHCs resulted in $1.8 million in outlier payments to CMHCs in CY 2004, and $0.5 million in outlier payments to CMHCs in CY 2005. In contrast, in CY 2003, more than $30 million was paid to CMHCs in outlier payments. We note that, in the CY 2009 OPPS/ASC final rule with comment period, we also established an outlier reconciliation policy to address charging aberrations related to OPPS outlier payments (73 FR 68594 through 68599).

In the CY 2017 OPPS/ASC proposed rule (81 FR 45675 through 45678), we proposed to continue to designate a portion of the estimated 1.0 percent outlier threshold specifically for CMHCs, consistent with the percentage of projected payments to CMHCs under

the OPPS in CY 2017, excluding outlier payments. CMHCs are projected to receive 0.03 percent of total OPPS payments in CY 2017, excluding outlier payments. This policy results in CMHC outliers being paid under limited circumstances associated with costs from complex cases, rather than as a substitute for the standard PHP payment to CMHCs. Therefore, we proposed to designate less than 0.01 percent of the estimated 1.0 percent outlier threshold for CMHCs. As we do for each rulemaking cycle, we have updated the CMHC CCRs and claims data used to model the PHP payments rates.

Based on our simulations of CMHC payments for CY 2017, in the proposed rule, we proposed to continue to set the cutoff point for CY 2017 at 3.4 times the highest CMHC APC payment rate implemented for that calendar year, which for CY 2017 is the payment rate for new CMHC APC 5853. In addition, we proposed to continue to apply the same outlier payment percentage that applies to hospitals. Therefore, for CY 2017, we proposed to continue to pay 50 percent of CMHC APC geometric mean per diem costs over the cutoff point. For example, for CY 2017, if a CMHC's cost for partial hospitalization services paid under new CMHC APC 5853 exceeds 3.4 times the proposed payment rate for proposed new CMHC APC 5853, the outlier payment would be calculated as 50 percent of the amount by which the cost exceeds 3.4 times the payment rate for new CMHC APC 5853.

In section II.G. of the proposed rule, for the hospital outpatient outlier payment policy, we proposed to set a fixed dollar threshold in addition to an APC multiplier threshold. APC 5853 is the only APC for which CMHCs may receive payment under the OPPS, and is for providing a defined set of services which are relatively low cost when compared to other OPPS services. As such, it is not necessary to also impose a fixed dollar threshold on CMHCs. Therefore, we did not propose to set a dollar threshold for CMHC outlier payments.

In summary, in this section, we proposed to continue to calculate our CMHC outlier threshold and CMHC outlier payments according to our established policies.

We did not receive any public comments on these proposals, and are finalizing them without modification.

2. CMHC Outlier Cap

a. Summary of Proposal

As discussed in the CY 2017 OPPS/ASC proposed rule (81 FR 45675 through 45678), prior to receipt of CY 2015 preliminary claims data, we analyzed CY 2014 CMHC final claims data and found that CMHC outlier payments began to increase similarly to the way they had prior to CY 2004. While many CMHCs had small outlier payments or no outlier payments, three CMHCs had very high charges for their CMHC services, which resulted in their collecting large outlier payments that exceeded their total per diem payments. CMHC total per diem payments are comprised of the Medicare CMHC total per diem payments and the beneficiary share of those per diem payments. In total, Medicare paid CMHCs $6.2 million in outlier payments in CY 2014, which was 36 percent of all CMHC total per diem payments. The 36 percent is a stark contrast to the OPPS outlier threshold of 1 percent of total OPPS payments, especially because the CMHC threshold is a fraction of that 1 percent, based on the percentage of projected per diem payments to CMHCs under the OPPS. In CY 2014, three CMHCs accounted for 98 percent of all CMHC outlier payments that year and received outlier payments that ranged from 104 percent to 713 percent of their total per diem payments.

When a CMHC's outlier payments approach or exceed its total per diem payments, it suggests that outlier payments are not being used as intended, specifically for exceptionally high-cost cases, but instead as a routine supplement to the per diem payment because outlier payments are being made for nearly all patients. The OPPS outlier policy is intended to compensate providers for treating exceptionally resource-intensive cases. As we noted in our CY 2004 OPPS/ASC final rule with comment period (68 FR 63470), outlier payments were never intended to be made for all patients and used as a supplement to the per diem payment amount. Sections 1833(t)(5)(A) and (B) of the Act specify that outlier payments are to approximate the marginal cost of care when charges, adjusted to cost, exceed a cutoff point established by the Secretary. As stated previously, for CMHCs, that cutoff point is 3.4 times the highest CMHC APC payment rate (PHP APC 0173). In the CY 2014 claims, that meant a CMHC was eligible for an outlier payment for a given day if the cost for that day was greater than 3.4 times the CMHC APC 0173 payment rate for Level II services, or 3.4 times $111.73, which equals $379.88 before wage adjustment.

We examined the total average cost per day for the three CMHCs with outlier payments that were more than 100 percent of their regular payments. In CY 2014, these three CMHCs had a total average cost per day of $1,065, which exceeded the FY 2014 unadjusted daily payment rate for inpatient psychiatric care of $713.19. We do not believe that the cost of a day of intensive outpatient CMHC services, which usually comprises 4 hours of services (mostly group therapy), should equal or exceed the cost of a 24-hour period of inpatient care, which includes 24-hour nursing care, active psychiatric treatment, room and board, drugs, and laboratory tests. Because the outpatient PHP daily payment rate includes payment for fewer items and services than the inpatient psychiatric facility daily payment rate, we believe that the cost of a day of outpatient PHP services should be significantly less than the cost of a day of inpatient psychiatric care. Therefore, we believe that those three CMHCs with total average cost per day of $1,065 demonstrated excessive outlier payments.

We believe that these excessive outlier payments to some CMHCs are the result of inflated costs, which result from artificially inflated charges. Costs are calculated by multiplying charges by the CCR. The CCR used for calculating outlier payments has established upper limits for hospitals and for CMHCs (we refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70456) and the Medicare Claims Processing Internet-only Manual, Chapter 4, Section 10.11.9, available at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c04.pdf*). We also believe that these excessive outlier payments do not approximate the marginal cost of care when costs exceed the established cutoff point, as specified in sections 1833(t)(5)(A) and (B) of the Act. The resulting outlier payments would be inappropriate. We are entrusted with accurately paying CMHCs participating in Medicare. Therefore, we are addressing outlier payments resulting from inflated costs. By continuing this pattern of inflated charges for partial hospitalization services, CMHCs will receive a disproportionate share of outlier payments compared to other OPPS providers that do not artificially inflate their charges, thereby limiting outlier payments for truly deserving cases.

Based on our available claims data, we chose to apply 30 percent of total per diem payments as a cutoff point for reasonable outlier payments. In the CY 2014 claims data, the average charge per day for the 3 CMHCs that received outlier payments greater than or equal to 30 percent of their total per diem payments was $3,233, which was nearly 8 times greater than the average charge

per day for the CMHCs that received outlier payments that were less than 30 percent of their total per diem payments. In our review of CY 2015 claims data for the CY 2017 OPPS/ASC proposed rule, the average charge per day for the CMHCs that received outlier payments greater than or equal to 30 percent of their total per diem payments was $1,583, which was more than 3 times greater than the average charge per day for the CMHCs that received outlier payments that were less than 30 percent of their total per diem payments.

In our review of CY 2015 claims data for the CY 2017 proposed rulemaking, Medicare paid CMHCs $3.2 million in outlier payments, with over 99 percent of those payments made to 4 CMHCs. These outlier payments were 26 percent of all CMHC total per diem payments, and ranged from 39 percent to 179 percent of the individual CMHC's total per diem payments. Total outlier payments to CMHCs decreased from $6.2 million in CY 2014 to $3.2 million in CY 2015 because the CMHC that received the largest outlier payments in CY 2014 no longer had outlier payments in CY 2015. This CMHC revised its charge structure downward. However, two additional CMHCs that did not receive outlier payments in CY 2014 began receiving outlier payments in CY 2015 that were greater than or equal to 30 percent of their total payments, which suggests a continuing, if not growing problem.

Under the current outlier reconciliation process, a MAC will reconcile a CMHC's outlier payments at the time of final cost report settlement if the CMHC's CCR has changed by 0.10 or more and if the CMHC received any outlier payments. This process is described in Section 10.7.2, Chapter 4, of the Medicare Claims Processing Manual, which is available at: *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c04.pdf*. Typically, final cost report settlement occurs within 12 months of the MAC's acceptance of the cost report. However, because cost reports are filed up to 5 months after the CMHC's fiscal year end, CMHC outlier reconciliation can occur more than a year after outlier overpayments are made. Long timeframes between outlier payment and outlier reconciliation at final cost report settlement have also allowed cases with outlier overpayments to continue and to grow. For example, one CMHC with inflated charges in CY 2013 continued to have inflated charges in CY 2014, and received more than double its CY 2013 outlier payments in CY 2014. This CMHC did not receive outlier payments in CY 2015 because it revised its charge structure downward and, therefore, no longer had costs qualifying for outlier payments.

Although efforts geared towards limiting very high outlier payments to CMHCs are occurring, such as the outlier reconciliation process, these efforts typically occur after the outlier payments are made. We would prefer to focus on stopping questionable outlier payments *before* they occur, to avoid the risk that a provider would be unable to repay Medicare after those overpayments occur. Therefore, we considered whether a broader, supplementary policy change to our CMHC outlier payment policy might also be warranted to mitigate possible billing vulnerabilities associated with very high outlier payments, while at the same time ensuring that we adhere to the existing statutory requirements related to covering the marginal cost of care for exceptionally resource-intensive cases. We want to ensure that CMHCs that provide services that represent the cost of care for legitimate high-cost cases are able to continue to receive outlier payments.

Given these program integrity concerns and our longstanding history of introducing CMHC-specific outlier policies when necessary (the CMHC-specific outlier threshold and the CMHC-specific reconciliation process), we proposed to implement a CMHC outlier payment cap to be applied at the provider level, such that in any given year, an individual CMHC would receive no more than a set percentage of its CMHC total per diem payments in outlier payments. This outlier payment cap would only affect CMHCs, and would not affect other provider types. This outlier payment cap would be in addition to and separate from the current outlier policy and reconciliation policy in effect. We proposed that the CMHC outlier payment cap be set at 8 percent of the CMHC's total per diem payments. As noted previously, each CMHC's total per diem payments are comprised of its Medicare CMHC total per diem payments plus the total beneficiary share of those per diem payments. If implemented, this proposal would mean that a CMHC's total outlier payments in a calendar year could not exceed 8 percent of its total per diem payments in that year.

To determine this CMHC outlier cap percentage, we performed analyses to model the impact that a variety of cap percentages would have on CMHC outlier payments. We want to ensure that any outlier cap policy would not disadvantage CMHCs with truly high-cost cases that merit an outlier payment, while also protecting the benefit from making payments for outlier cases that exceed the marginal cost of care. In the CY 2017 OPPS/ASC proposed rule, we used CY 2015 claims data to perform a detailed impact analysis of CMHC outlier payments. That analysis showed that out of 51 CMHCs with paid claims in CY 2015, 9 CMHCs received outlier payments. We separated these 9 CMHCs into 4 CMHCs that received outlier payments that were greater than or equal to 30 percent of their total CMHC payments in CY 2015, and 5 CMHCs that received outlier payments that were less than 30 percent of their total CMHC payments in CY 2015.

In the CY 2017 proposed rule, the 5 CMHCs that received outlier payments that were less than 30 percent of their total per diem payments received a total of $11,496 in outlier payments. We believe that these 5 CMHCs are representative of the types of CMHCs we are most concerned about that would be disadvantaged with an outlier payment policy that includes a cap at the individual CMHC level. We tested the effects of CMHC outlier caps ranging from 3 percent to 10 percent on these two groups of CMHCs. Our analysis focused on total CMHC per diem payments, total CMHC outlier payments, and percentage reductions in payments if a CMHC outlier payment cap were imposed, as shown in Table 20 of the proposed rule (81 FR 45677).

Table 20 of the proposed rule showed that 4 out of the 5 CMHCs that received outlier payments that were less than 30 percent of their total per diem payments received outlier payments that were less than 1 percent of their total per diem payments and, therefore, would be unaffected by a CMHC outlier payment cap. The fifth CMHC received outlier payments that were 9.4 percent of its total per diem payments and is the only CMHC that would have been affected by a CMHC outlier payment cap applied at the provider level. The effect on this CMHC was shown under the various cap percentage options. At the 8 percent level, this CMHC's outlier payments would have been reduced by $1,628. A 10-percent cap would have had no effect on this CMHC. The difference in total outlier payments to all CMHCs between the 8 percent and 10 percent cap levels was relatively small (approximately $58,000).

We also conducted our CMHC outlier cap analysis using final CY 2014 claims data. When we evaluated the effect of the different CMHC provider-level outlier cap percentages on the CMHCs with outlier payments that were less than 30 percent of their total per diem

payments, using the final CY 2014 claims data, we found that 5 CMHCs would be affected by an 8-percent cap, and 4 CMHCs would be affected by a 10-percent cap, with a difference in outlier payments of only $4,069. However, an 8-percent cap compared to a 10-percent cap saved more than $37,000 in outlier payments to the CMHCs that were charging excessively (data not shown).

We considered both the CY 2014 and CY 2015 claims data as we sought to balance our concern about disadvantaging CMHCs with our interest in protecting the benefit from excessive outlier payments by proposing an 8-percent CMHC outlier payment cap. An 8-percent CMHC outlier payment cap would mitigate potential inappropriate outlier billing vulnerabilities by limiting the impact of inflated CMHC charges on outlier payments. The 8-percent cap would have reduced outlier payments to the 4 CMHCs that received outlier payments that were greater than or equal to 30 percent of their total per diem payments in CY 2015 by $3.0 million dollars, or 93.3 percent.

Therefore, for CY 2017 and subsequent years, we proposed to apply a CMHC outlier payment cap of 8 percent to each CMHC's total per diem payments, such that in any given calendar year, an individual CMHC would not receive more than 8 percent of its CMHC total per diem payments in outlier payments.

We invited public comments on the CMHC provider-level outlier cap percentage. We also proposed to revise § 419.43(d) of the regulations by adding a paragraph (7) to require that CMHC outlier payments for the calendar year be subject to a CMHC outlier payment cap, applied at the individual CMHC level, that is, 8 percent of each CMHC's total per diem payments for that same calendar year.

We did not receive any public comments on these proposals.

b. CY 2017 Final Rule Update and Policy

Updated analysis using CY 2015 final claims data for this CY 2017 final rule with comment period continued to show that Medicare paid CMHCs $3.2 million in outlier payments, with over 99 percent of those payments made to 4 CMHCs. These outlier payments were 23 percent of all CMHC total per diem payments, and ranged from 42 percent to 163 percent of the individual CMHC's total per diem payments. The updated CY 2015 data showed that out of 52 CMHCs with paid claims in CY 2015, 9 CMHCs received outlier payments.

Five CMHCs with outlier payments that were less than 30 percent of their total per diem payments received a total of $11,643 in outlier payments. Four CMHCs with outlier payments that were greater than or equal to 30 percent of their total per diem payments received $3.2 million in outlier payments, which was 99.6 percent of all CMHC outlier payments made in CY 2015. The average charge per day for the 4 CMHCs that received outlier payments that were greater than or equal to 30 percent of their total per diem payments was $1,566, which was 3 times greater than the average charge per day for the 5 CMHCs that received outlier payments that were less than 30 percent of their total per diem payments.

We tested the effects of CMHC outlier caps ranging from 3 percent to 10 percent on these two groups of CMHCs using the final CY 2015 claims data as shown in Table 42 below. Our analysis focused on total CMHC per diem payments, total CMHC outlier payments, and percentage reductions in payments if a CMHC outlier payment cap were imposed. Because 4 out of the 5 CMHCs that received outlier payments that were less than 30 percent of their total per diem payments received outlier payments that were less than 1 percent of their total per diem payments, Table 42 below shows that these providers would be unaffected by a CMHC outlier payment cap. The fifth CMHC with outlier payments that were less than 30 percent of its total per diem payments received outlier payments that were 8.0 percent of its total per diem payments. This CMHC would not have been affected by an 8 percent or 10 percent CMHC outlier payment cap applied at the provider level because its outlier payments did not exceed 8 or 10 percent.

TABLE 42—EFFECT OF CMHC OUTLIER CAP SIMULATION ON OUTLIER PAYMENTS

	Simulated CMHC outlier payments using final CY 2015 claims data						
	Total per diem payments	Actual outlier payments	3% cap	5% cap	6% cap	8% cap	10% cap
All 52 CMHCs	$14,022,861	$3,245,624					
Outlier Payments <30% of Total Per Diem Payments							
Total Actual Payments (n = 5)	$1,419,316	11,643					
Simulated Outlier Payments			$4,869	$7,581	$8,936	$11,643	$11,643
Reduction in Outlier Payments			$6,775	$4,063	$2,707		
% Reduction			58.2%	34.9%	23.2%	0.0%	0.0%
CMHCs Affected			1	1	1		
Outlier Payments ≥30% of Total Per Diem Payments							
Total Actual Payments (n = 4)	$3,154,279	$3,233,981					
Simulated Outlier Payments			$94,628	$157,714	$189,257	$252,342	$315,428
Reduction in Outlier Payments			$3,150,996	$3,087,910	$3,056,367	$2,993,282	$2,930,196
% Reduction			97.4%	95.5%	94.5%	92.6%	90.6%
CMHCs Affected			4	4	4	4	4

As noted in the CY 2017 OPPS/ASC proposed rule, we sought to balance our concern about disadvantaging CMHCs with our interest in protecting the benefit from excessive outlier payments by proposing an 8-percent CMHC outlier payment cap. The updated CY 2015 claims data for this final rule with comment period shows that an 8-percent CMHC outlier payment cap would mitigate potential inappropriate outlier billing vulnerabilities by limiting

the impact of inflated CMHC charges on outlier payments. The 8-percent cap would have reduced outlier payments to the CMHCs that received outlier payments that were greater than or equal to 30 percent of their total per diem payments in CY 2015 by $3.0 million dollars, or 92.6 percent, without affecting any of the CMHCs that received outlier payments that were less than 30 percent of their CY 2015 total per diem payments.

We did not receive any public comments on our proposals and are finalizing them as proposed. As we noted in the proposed rule, our existing outlier reconciliation policy will continue to remain in effect with the final 8 percent CMHC outlier payment cap serving as a complement. We also are finalizing our proposed revision of § 419.43(d) of the regulations by adding a paragraph (7) to require that CMHC outlier payments for the calendar year be subject to a CMHC outlier payment cap, applied at the individual CMHC level, that is, 8 percent of each CMHC's total per diem payments for that same calendar year.

We will continue to monitor the trends in outlier payments and also monitor these policy effects. Also, we will analyze CMHC outlier payments at the provider level, relative to the 8 percent CMHC outlier cap. Finally, we will continue to utilize program integrity efforts, as necessary, for those CMHCs receiving excessive outlier payments.

3. Implementation Strategy for the 8-Percent Cap on CMHC Outlier Payments

CMS envisions that the 8-percent CMHC cap on outlier payments will be managed by the claims processing system. We will provide detailed information on our implementation strategy through sub-regulatory channels. However, to foster a clearer understanding of the CMHC outlier payment cap, we are providing the following high-level summary of the preliminary approach we envision.

For each CMHC, for a given calendar year, the claims processing system will maintain a running tally of year-to-date (YTD) total CMHC per diem payments (Medicare payments and the beneficiary share) and YTD actual CMHC outlier payments. YTD outlier payments for that calendar year could never exceed 8 percent of YTD CMHC total per diem payments for that CMHC for that calendar year. For example, we will determine whether or not a given provider-specific outlier payment exceeds the 8-percent cap on a ''rolling'' basis. Under such an implementation approach, for each CMHC, the claims processing system will maintain a running tally of the YTD total CMHC per diem payments. The claims processing system will ensure that each time an outlier claim for a CMHC is processed, actual outlier payments will never exceed 8 percent of the CMHC's YTD total payments. While a CMHC will receive its per diem payment timely, the outlier portion of the claim will be paid as the CMHC's YTD payments support payment of the outlier. As part of our routine claims processing, we will utilize a periodic review process under which outlier payments that were withheld will subsequently be paid if the CMHC's total payments have increased to the point that its outlier payments can be made. This process will result in additional cash flow to CMHCs. As noted previously, we will also maintain our existing outlier reconciliation policy, which is applied at the time of cost report final settlement if the CMHC's CCR changed by 0.10 or more. With regard to revenue tracking by CMHCs, distinct coding will be used on the CMHC's remittance advice when outlier payments are withheld, assisting receivables accountants in identifying and accounting for the differences between expected and actual payments.

4. Summary of Policies

In summary, for CY 2017, we are finalizing our proposals to:

- Continue to designate a portion of the estimated 1.0 percent outlier threshold specifically for CMHCs, consistent with the percentage of projected payments to CMHCs under the OPPS in CY 2017, excluding outlier payments;
- Implement an 8-percent cap on CMHC outlier payments at the individual CMHC provider level for CY 2017 and subsequent years and change the regulations at § 419.43(d) accordingly;
- Continue to set the cutoff point for CMHC outlier payments in CY 2017 at 3.4 times the highest CMHC APC payment rate implemented for that calendar year, which for CY 2017 is new CMHC APC 5853; and
- Continue to pay 50 percent of CMHC APC geometric mean per diem costs over the cutoff point in CY 2017.

We believe that these CMHC outlier policies will minimize the impact of inflated CMHC charges on outlier payments, result in a better approximation of the marginal cost of care beyond the applicable cutoff point compared to the current process, and better target outlier payments to truly exceptionally high-cost cases.

IX. Procedures That Will Be Paid Only as Inpatient Procedures

A. Background

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74352 through 74353) for a full historical discussion of our longstanding policies on how we identify procedures that are typically provided only in an inpatient setting (referred to as the inpatient only (IPO) list) and, therefore, will not be paid by Medicare under the OPPS, and on the criteria that we use to review the IPO list each year to determine whether or not any procedures should be removed from the list. The complete list of codes (IPO list) that will be paid by Medicare in CY 2017 as inpatient only procedures is included as Addendum E to this final rule with comment period (which is available via the Internet on the CMS Web site).

B. Changes to the Inpatient Only (IPO) List

In the CY 2017 OPPS/ASC proposed rule (81 FR 45678 through 45679), for CY 2017, we proposed to use the same methodology (described in the November 15, 2004 final rule with comment period (69 FR 65834)) of reviewing the current list of procedures on the IPO list to identify any procedures that may be removed from the list. The established criteria upon which we make such a determination are as follows:

1. Most outpatient departments are equipped to provide the services to the Medicare population.
2. The simplest procedure described by the code may be performed in most outpatient departments.
3. The procedure is related to codes that we have already removed from the IPO list.
4. A determination is made that the procedure is being performed in numerous hospitals on an outpatient basis.
5. A determination is made that the procedure can be appropriately and safely performed in an ASC, and is on the list of approved ASC procedures or has been proposed by us for addition to the ASC list.

Using the above-listed criteria, we proposed to remove the following six codes (four spine procedure codes and two laryngoplasty codes) from the IPO list for CY 2017:

- CPT code 22840 (Posterior non-segmental instrumentation (*e.g.,* Harrington rod technique, pedicle fixation across 1 interspace, atlantoaxial transarticular screw fixation, sublaminar wiring at C1, facet screw fixation) (List

separately in addition to code for primary procedure));

- CPT code 22842 (Posterior segmental instrumentation (eg., pedicle fixation, dual rods with multiple hooks and sublaminar wires); 3 to 6 vertebral segments (List separately in addition to code for primary procedure));
- CPT code 22845 (Anterior instrumentation; 2 to 3 vertebral segments (List separately in addition to code for primary procedure));
- CPT code 22858 (Total disc arthroplasty (artificial disc), anterior approach, including discectomy with end plate preparation (includes osteophytectomy for nerve root or spinal cord decompression and microdissection); second level, cervical (List separately in addition to code for primary procedure));
- CPT code 31584 (Laryngoplasty; with open reduction of fracture); and
- CPT code 31587 (Laryngoplasty, cricoid split).

We reviewed the clinical characteristics of the four spine procedure codes and related evidence, including input from multiple physician specialty societies whose members specialize in spine surgery, and determined the four spine procedure codes listed above to be appropriate candidates for removal from the IPO list. These four spine procedure codes are add-on codes to procedures that are currently performed in the HOPD and describe variations of (including additional instrumentation used with) the base code procedure. Therefore, we believe these spine procedures satisfy criterion 3 listed above as they are related to codes that we have already removed from the IPO list. Because these four spine procedure codes are add-on codes, in accordance with the regulations at 42 CFR 419.2(b)(18), we proposed to package them with the associated procedure and assign them status indicator ''N.''

We also reviewed the clinical characteristics of the two laryngoplasty procedure codes and related evidence, and determined that the two laryngoplasty procedure codes listed above are appropriate candidates for removal from the IPO list because we believe they satisfy criterion 3 listed above (that is, the procedure is related to codes that we have already removed from the IPO list). These two codes are related to and clinically similar to CPT code 21495 (Open treatment of hyoid fracture), which is currently not on the IPO list. We proposed that the two laryngoplasty procedure codes would be assigned to APC 5165 (Level 5 ENT Procedures) with status indicator ''J1.''

Comment: Several commenters supported the proposal to remove CPT codes 22840, 22842, 22845, 22858, 31584, and 31587 from the IPO list for CY 2017. One commenter opposed the proposal to remove these codes from the IPO list, stating that although the spine codes were add-on codes for procedures currently performed in the HOPD, these codes represented variations in the instrumentation used which made them more complex than the base code procedures. The commenter also believed that the two laryngoplasty codes were too complex to be performed in the HOPD.

Another commenter opposed the removal of CPT codes 31584 and 31587 from the IPO list, stating that these procedures often require prolonged use of intravenous pain medications and close monitoring of drainage tubes. The commenter also stated that both procedures frequently involve patient admission to the intensive care unit postoperatively, as they warrant assessments of respiratory status and oxygenation at frequent intervals to evaluate for postoperative swelling.

Response: We appreciate the commenters' support. We disagree with the commenter that CPT codes 22840, 22842, 22845, 22858, 31584, and 31587 should remain on the IPO list. As discussed in the CY 2017 OPPS/ASC proposed rule (81 FR 45678 through 45679), we believe that these codes satisfy criterion 3 for removal from the IPO list; that is, being a procedure that is related to codes that we have already removed from the IPO list. We remind the commenter and the public that removal of a code from the IPO list does not mean that all procedures described by the code or even a majority of procedures must or should be performed in the outpatient setting. Removal of a procedure from the IPO list only means that the procedure is no longer precluded from being paid under the OPPS if it is performed in the outpatient setting. The cases that the commenters are concerned about can all still be performed on an inpatient basis if appropriate.

Comment: Several commenters disagreed with the proposal to package the four spine codes proposed to be removed from the IPO list with associated procedure and assign them status indicator ''N.'' The commenters requested that CMS allow for separate payment for these procedures.

Response: As specified in 42 CFR 419.2(b)(18), services described by add-on codes are packaged costs that are integral, ancillary, supportive, dependent, or adjunctive to performing a procedure or furnishing a service on an outpatient basis. The procedures described by the four spinal codes are all procedures described by add-on codes. The costs for the procedures described by these codes are included in the payment rate for the related procedure or service. Therefore, we will not provide separate payment for these codes.

Comment: Other commenters requested that the following additional codes be removed from the IPO list:

- CPT code 22585 (Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophytectomy, and decompression of spinal cord and/or nerve roots; each additional interspace (List separately in addition to code for primary procedure));
- CPT code 22633 (Arthrodesis, combined posterior or posterolateral technique with posterior interbody technique including laminectomy and/or discectomy sufficient to prepare interspace (other than for decompression), single interspace and segment; lumbar;
- CPT code 22850 (Removal of posterior nonsegmental instrumentation (eg., Harrington rod);
- CPT code 23472 (Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg., total shoulder); and
- CPT code 27130 (Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft.

Response: We agree with the commenter at this time only for removal of the procedure described by CPT code 22585, which is an add-on code, from the IPO list. The base code for CPT code 22585, CPT code 22554 (Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); cervical below C2), is assigned to APC 5115 (Level 5 Musculoskeletal Procedures). We believe that cases involving CPT codes 22554 and 22585 are sufficiently comparable to cases involving only CPT code 22554, such that it is appropriate to remove CPT code 22585 from the IPO list. Because CPT code 22585 is an add-on code, it is being assigned status indicator ''N.'' After reviewing the clinical characteristics of these procedures described by CPT codes 22633, 22850, 23472, and 27130, we do not believe that removal from the IPO list is warranted at this time.

After consideration of the public comments we received, we are removing CPT codes 22585, 22840, 22842, 22845, 22858, 31584, and 31587 from the IPO

list for CY 2017. The complete list of codes (the IPO list) that will be paid by Medicare in CY 2017 as inpatient only procedures is included as Addendum E to this final rule with comment period (which is available via the Internet on the CMS Web site).

C. Response To Solicitation of Public Comments on the Possible Removal of Total Knee Arthroplasty (TKA) Procedure From the IPO List

1. Background

Total knee arthroplasty (TKA) or total knee replacement, CPT code 27447 (Arthroplasty, knee, condyle and plateau; medical and lateral compartments with or without patella resurfacing (total knee arthroplasty)), has traditionally been considered an inpatient surgical procedure. The procedure described by CPT code 27447 was placed on the original IPO list in the 2000 OPPS final rule (65 FR 18781). In 2000, the primary factors that were used to determine the assignment of a procedure to the IPO list were as follows: (1) The invasive nature of the procedure; (2) the need for at least 24 hours of postoperative care; and (3) the underlying physical condition of the patient who would require the surgery (65 FR 18443 and 18455). In 2000, the geometric mean average length of stay for the DRG to which an uncomplicated TKA procedure was assigned was 4.6 days, and in 2016, the average length of stay for a current uncomplicated TKA procedure for the MS–DRG is 2.8 days.

Recent innovations have enabled surgeons to perform TKA on an outpatient basis on non-Medicare patients (both in the HOPD and in the ASC). In this context, ''outpatient'' services include both same day outpatient surgery (that is, the patient goes home on the same day that the outpatient surgery was performed) and outpatient surgery that includes one overnight hospital stay for recovery from the surgery. These innovations in TKA care include minimally invasive techniques, improved perioperative anesthesia, alternative postoperative pain management, and expedited rehabilitation protocols. Patients generally benefit from a shorter hospital stay. Some of these benefits include a likelihood of fewer complications, more rapid recovery, increased patient satisfaction, recovery at home with the assistance of family members, and a likelihood of overall improved outcomes. On the contrary, unnecessary inpatient hospitalization exposes patients to the risk of hospital-acquired conditions such as infections and a host of other iatrogenic mishaps.

Like most surgical procedures, TKA needs to be tailored to the individual patient's needs. Patients with a relatively low anesthesia risk and without significant comorbidities who have family members at home who can assist them would likely be good candidates for an outpatient TKA procedure. On the other hand, patients with severe illnesses aside from their osteoarthritis would more likely require inpatient hospitalization and possibly postacute care in a skilled nursing facility or other facility. Surgeons who have discussed outpatient TKA procedures with us have emphasized the importance of careful patient selection and strict protocols to optimize outpatient TKA outcomes. These protocols typically manage all aspects of the patient's care, including the at-home preoperative and postoperative environment, anesthesia, pain management, and rehabilitation to maximize rapid recovery and ambulation.

In the CY 2013 OPPS/ASC proposed rule (77 FR 45153), we proposed to remove the procedure described by CPT code 27447 from the IPO list. We proposed to remove the procedure described by CPT code 27447 from the IPO list because we believed that the procedure could be appropriately provided and paid for as a hospital outpatient procedure for some Medicare beneficiaries, based upon the five evaluation criteria for removal from the IPO list discussed earlier. The public comments we received on the CY 2013 proposal varied. There were several surgeons and other stakeholders who supported the proposal. They believed that, given thorough preoperative screening by medical teams with significant experience and expertise involving knee replacement procedures, the TKA procedure could be provided on an outpatient basis for some Medicare beneficiaries. These commenters discussed recent advances in total knee replacement technology and surgical care protocols, including improved perioperative anesthesia, and expedited rehabilitation protocols, as well as significant enhancements to the postoperative process, such as improvements in pain management, early mobilization, and careful monitoring. These commenters also stated that early preventive intervention for the most common medical complications has decreased the average length of hospital stays to the point that a TKA procedure can now be performed on an outpatient basis in certain cases. The commenters noted significant success involving same day discharge for patients who met the screening criteria and whose experienced medical teams were able to perform the procedure early enough in the day for the patients to achieve postoperative goals, allowing home discharge by the end of the day. The commenters believed that the benefits of furnishing a TKA procedure on an outpatient basis will lead to significant enhancements in patient well-being and cost savings to the Medicare program, including shorter hospital stays resulting in fewer medical complications, improved results, and enhanced patient satisfaction. However, the majority of the commenters disagreed with the CY 2013 proposal and believed that it would be unsafe to perform outpatient TKA for Medicare beneficiaries. (We refer readers to 77 FR 68419 for a discussion of these comments.) After consideration of these public comments, we decided not finalize the proposal, and the procedure described by CPT code 27447 remains on the IPO list.

We also note that, not uncommonly, we receive questions from the public about the IPO list that lead us to believe that some members of the public may misunderstand certain aspects of the IPO list. Therefore, two important principles of the IPO list must be reiterated at the outset of this discussion. First, just because a procedure is not on the IPO list *does not* mean that the procedure cannot be performed on an inpatient basis. IPO list procedures must be performed on an inpatient basis (regardless of the expected length of the hospital stay) in order to qualify for Medicare payment, but procedures that are not on the IPO list can be and very often are performed on individuals who are inpatients (as well as individuals who are hospital outpatients and ASC patients). Second, the IPO list status of a procedure has no effect on the MPFS professional payment for the procedure. Whether or not a procedure is on the IPO list is not in any way a factor in the MPFS payment methodology.

2. Discussion of TKA and the IPO List

Since 2000, when the IPO list was established, there have been significant developments in both TKA technique and patient care. The advances in TKA technique and patient care are discussed in general terms above. As noted above, in 2000, the criteria by which procedures were reviewed to determine IPO list assignment were as follows: (1) The invasive nature of the procedure; (2) the need for at least 24 hours of postoperative care; and (3) the underlying physical condition of the patient who would require the surgery.

In order to discuss the possibility of removing TKA procedures from the IPO list, we believe it is helpful to explore each of these criteria in turn as they apply to present-day TKA. In the CY 2017 OPPS/ASC proposed rule (81 FR 45680), we solicited comment from the public on a list of questions that relate to considering removing TKA from the IPO list in the future.

The first criterion was ''the invasive nature of the procedure.'' We elaborated on this criterion in the 2000 OPPS final rule by stating: ''We believe that certain surgically invasive procedures on the brain, heart, and abdomen, such as craniotomies, coronary artery bypass grafting, and laparotomies, indisputably require inpatient care, and therefore are outside the scope of outpatient services'' (65 FR 18456). TKA does not invade the brain, heart, or abdomen; instead, like several other outpatient orthopedic surgeries, it is an operation on the knee joint. A similar procedure described by CPT code 27446 (Arthroplasty, knee, condyle and plateau; medical OR lateral compartment) (unicompartmental knee replacement) was removed from the IPO list on January 1, 2002, and also was added to the ASC covered surgical procedures list in 2008. The degree of invasiveness of TKA as compared to other major surgical procedures would not appear to prohibit its removal from the IPO list.

The second IPO list criterion from the 2000 OPPS final rule is ''the need for at least 24 hours of postoperative recovery time or monitoring before the patient can be safely discharged.'' Currently, for procedures that are not on the IPO list, services furnished to patients requiring 24 hours of postoperative recovery time may be payable as either outpatient services or inpatient services, depending on the condition of the patient. Therefore, the need for at least 24 hours of postoperative recovery time or monitoring in many cases should not require IPO list placement.

The third criterion is ''the underlying physical condition of the patient who would require the surgery.'' For this criterion to be the basis of an IPO list assignment seems to presume a relatively homogeneous and morbid patient population undergoing the surgical procedure. Otherwise, patients with a good underlying physical condition could be considered for outpatient surgery while those with a poor underlying physical condition might be more appropriate for inpatient admission. TKA candidates, although they all have osteoarthritis severe enough to warrant knee replacement, are a varied group in which the anticipated length of hospitalization is dictated more by comorbidities and diseases of other organ systems. Some patients may be appropriate for outpatient surgery while others may be appropriate for inpatient surgery.

3. Topics and Questions for Public Comment

In the CY 2017 OPPS/ASC proposed rule (81 FR 45680), we sought public comments on whether we should remove the procedure described by CPT code 27447 from the IPO list from all interested parties, including the following groups or individuals: Medicare beneficiaries and advocate associations for Medicare beneficiaries; orthopedic surgeons and physician specialty societies that represent orthopedic surgeons who perform TKA procedures; hospitals and hospital trade associations; and any other interested stakeholders. We sought public comments on any of the topics discussed earlier in addition to the following questions:

1. Are most outpatient departments equipped to provide TKA to some Medicare beneficiaries?

2. Can the simplest procedure described by CPT code 27447 be performed in most outpatient departments?

3. Is the procedure described by CPT code 27447 sufficiently related to or similar to the procedure described by CPT code 27446 such that the third criterion listed at the beginning of this section for identifying procedures that may be removed from the IPO list, that is, the procedure under consideration for removal from the IPO list is related to codes that we have already removed from the IPO, is satisfied?

4. How often is the procedure described by CPT code 27447 being performed on an outpatient basis (either in an HOPD or ASC) on non-Medicare patients?

5. Would it be clinically appropriate for some Medicare beneficiaries in consultation with his or her surgeon and other members of the medical team to have the option of a TKA procedure as a hospital outpatient, which may or may not include a 24-hour period of recovery in the hospital after the operation?

6. CMS is currently testing two episode-based payment models that include TKA: The Comprehensive Care for Joint Replacement (CJR) Model and the Bundled Payment for Care Improvements (BPCI) Model. These models hold hospitals and, in the case of the BPCI, physicians and postacute care providers, responsible for the quality and cost of an episode of care. Providers participating in the CJR model or BPCI Models 2 and 4 initiate episodes with admission to the hospital of a beneficiary who is ultimately discharged under an included MS–DRG. Both initiatives include MS–DRGs 469 (Major Joint Replacement or Reattachment of Lower Extremity with MCC) and 470 (Major Joint Replacement or Reattachment of Lower Extremity without MCC). Depending on the model, the episode ends 30 to 90 days postdischarge in order to cover the period of recovery for beneficiaries. Episodes include the inpatient stay and all related items and services paid under Medicare Part A and Part B for all Medicare fee-for-service (FFS) beneficiaries, with the exception of certain exclusions.

In the BPCI and CJR models, services are paid on an FFS basis with a retrospective reconciliation for all episodes included in a defined time period (quarterly in BPCI and annually in CJR). At reconciliation, actual spending is compared to a target price. The target price is based on historical episode spending. If CMS were to remove the procedure described by CPT code 27447 from the IPO list and pay for outpatient TKA procedures, the historical episode spending data may no longer be an accurate predictor of episode spending for beneficiaries receiving inpatient TKA procedures. As such, establishing an accurate target price based on historical data would become more complicated. This is because some patients who previously would have received a TKA procedure in an inpatient setting may receive the procedure on an outpatient basis if the procedure is removed from the IPO list.

We sought public comment on how CMS could modify the CJR and BPCI models if the TKA procedure were to be moved off the IPO list. Specifically, we sought public comment on how to reflect the shift of some Medicare beneficiaries from an inpatient TKA procedure to an outpatient TKA procedure in the BPCI and CJR model pricing methodologies, including target price calculations and reconciliation processes. Some of the issues CMS faces include the lack of historical data on both the outpatient TKA episodes and the average episode spending for beneficiaries who would continue to receive the TKA procedure on an inpatient basis. Because historically the procedure described by CPT code 27447 has been on the IPO list, there is no claims history for beneficiaries receiving TKA on an outpatient basis. In addition, we sought public comment on the postdischarge care patterns for Medicare beneficiaries that may receive an outpatient TKA procedure if it were removed from the IPO list and how this

may be similar or different from these beneficiaries' historical postdischarge care patterns. For example, Medicare beneficiaries who are appropriate candidates for an outpatient TKA procedure may be those who, in the past, would have received outpatient physical therapy services as follow-up care after an inpatient TKA procedure. CMS would need to develop a methodology to ensure model target prices account for the potentially higher risk profiles of Medicare beneficiaries who would continue to receive TKA procedures in inpatient settings.

Comment: Numerous comments responded to CMS' solicitation for discussion of the removal of TKA from the IPO list. The overwhelming majority of the commenters (which included organizations and individuals) supported removing TKA from the IPO list. The commenters who supported the removal of TKA from the IPO list included ASCs, therapeutic professional associations, hospital associations, as well as many surgeons. A number of facilities indicated that they were currently performing TKA procedures on an outpatient basis in both the HOPD and ASC on non-Medicare patients. Several organizations cited innovations such as less invasive surgical techniques, improved perioperative anesthesia, alternative postoperative pain management, expedited rehabilitation protocols, and the similarity of the TKA procedure to other procedures currently being performed as outpatient services (namely CPT code 27446 (Unicompartmental Knee Arthroplasty)) as reasons to remove the procedure from the IPO list. Most organizations in support of the removal of TKA from the IPO list noted that an appropriate patient selection protocol should be used to determine the patients who are best suited for outpatient joint replacement. Some commenters requested that total hip arthroplasty and total shoulder replacement procedures also be removed from the IPO list.

A few commenters representing professional organizations, health systems, and hospital associations, opposed the removal of a TKA procedure from the IPO list. These commenters believed that the increased likelihood that Medicare patients have comorbidities that require the need for intensive rehabilitation after a TKA procedure preclude this procedure from being performed in the outpatient setting. They also stated that most outpatient departments are not currently equipped to provide TKA procedures to Medicare beneficiaries, which require exceptional patient selection, exceptional surgical technique, and a carefully constructed postoperative care plan. One commenter opined that only exceptional surgeons can perform outpatient TKA procedures, and, for this reason, CMS should not pay for TKA procedures performed in an outpatient setting. One commenter believed that the procedure described by CPT code 27446 can be performed through a much smaller and limited incision than required by CPT code 27447 and, therefore, was a less complex procedure.

Other commenters were concerned about the implications that the removal of the TKA procedure from the IPO list would have for the pricing methodologies, target pricing, and reconciliation process of the procedure in certain Medicare payment models (that is, the Comprehensive Care for Joint Replacement and the Bundled Payments for Care Improvement models). They requested modifications to these models if the TKA procedure is removed from the IPO list.

Response: We thank the stakeholder public for the many detailed comments on this topic. We will consider all of these comments in future policy making.

X. Nonrecurring Policy Changes

A. Implementation of Section 603 of the Bipartisan Budget Act of 2015 Relating to Payment for Certain Items and Services Furnished by Off-Campus Provider-Based Departments of a Hospital

1. Background

When a Medicare beneficiary receives services in an off-campus department of a hospital, the total payment amount for the services made by Medicare is generally higher than the total payment amount made by Medicare when the beneficiary receives those same services in a physicians' office. Medicare pays a higher amount for services furnished to beneficiaries in the off-campus department of a hospital because it generally pays two separate claims for these services—one under the OPPS for the institutional services and one under the MPFS for the professional services furnished by a physician or other practitioner. Medicare beneficiaries are responsible for the cost-sharing liability, if any, for both of these claims, often resulting in higher total beneficiary cost-sharing than if the service had been furnished in a physician's office.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45681), we discussed the provision of section 603 of the Bipartisan Budget Act of 2015 (Pub. L. 114–74), enacted on November 2, 2015, which amended section 1833(t) of the Act. Specifically, this provision amended the OPPS statute at section 1833(t) by amending paragraph (1)(B) and adding a new paragraph (21). As a general matter, under sections 1833(t)(1)(B)(v) and (t)(21) of the Act, applicable items and services furnished by certain off-campus outpatient departments of a provider on or after January 1, 2017, will not be considered covered OPD services as defined under section 1833(t)(1)(B) of the Act for purposes of payment under the OPPS and will instead be paid ''under the applicable payment system'' under Medicare Part B if the requirements for such payment are otherwise met. We note that, in order to be considered part of a hospital, an off-campus department of a hospital must meet the provider-based criteria established under 42 CFR 413.65. Accordingly, in the proposed rule and this final rule with comment period, we refer to an ''off-campus outpatient department of a provider,'' which is the term used in section 603, as an ''off-campus outpatient provider-based department'' or an ''off-campus PBD.''

As noted earlier, section 603 of Public Law 114–74 made two amendments to section 1833(t) of the Act—one amending paragraph (1)(B) and the other adding new paragraph (21). The provision amended section 1833(t)(1)(B) by adding a new clause (v), which excludes from the definition of ''covered OPD services'' applicable items and services (defined in paragraph (21)(A) of such section) that are furnished on or after January 1, 2017 by an off-campus PBD, as defined in paragraph (21)(B) of such section. The second amendment added a new paragraph (21) to section 1833(t) of the Act, which defines the terms ''applicable items and services'' and ''off-campus outpatient department of a provider,'' requires the Secretary to make payments for such applicable items and services furnished by an off-campus PBD under an applicable payment system (other than OPPS), provides that hospitals shall report on information as needed for implementation of the provision, and establishes a limitation on administrative and judicial review on certain determinations for applicable items and services, applicable payment system, and off-campus outpatient department of a provider, and information required to be reported.

In defining the term ''off-campus outpatient department of a provider,'' section 1833(t)(21)(B)(i) of the Act specifies that the term means a department of a provider (as defined at 42 CFR 413.65(a)(2) as that regulation was in effect on November 2, 2015, the

date of enactment of Pub. L. 114–74) that is not located on the campus of such provider, or within the distance from a remote location of a hospital facility. Section 1833(t)(21)(B)(ii) of the Act excepts from the definition of ''off-campus outpatient department of a provider,'' for purposes of paragraphs (1)(B)(v) and (21)(B) of such section, an off-campus PBD that was billing under section 1833(t) with respect to covered OPD services furnished prior to the date of enactment of Public Law 114–74, that is, November 2, 2015. In the CY 2017 OPPS/ASC proposed rule, we proposed to refer to this exception as providing ''excepted'' status to certain off-campus PBDs and certain items and services furnished by such excepted off-campus PBDs, which would continue to be paid under the OPPS. Moreover, because the definition of ''applicable items and services'' specifically excludes items and services furnished by a dedicated emergency department as defined at 42 CFR 489.24(b) and the definition of ''off-campus outpatient department of a provider'' does not include PBDs located on the campus of a hospital or within the distance (described in the definition of campus at 413.65(a)(2)) from a remote location of a hospital facility, the items and services furnished by these excepted off-campus PBDs on or after January 1, 2017 will continue to be paid under the OPPS.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45681), we proposed to make a number of proposals to implement section 603 of Public Law 114–74. Broadly, we proposed to do three things: (1) Define applicable items and services in accordance with section 1833(t)(21)(A) of the Act for purposes of determining whether such items and services are covered OPD services under section 1833(t)(1)(B)(v) of the Act or whether payment for such items and services shall instead be made under section 1833(t)(21)(C) of the Act; (2) define off-campus PBD for purposes of sections 1833(t)(1)(B)(v) and (t)(21) of the Act; and (3) establish policies for payment for applicable items and services furnished by an off-campus PBD (nonexcepted items and services) under section 1833(t)(21)(C) of the Act. To do so, we proposed policies that would define whether certain items and services furnished by a given off-campus PBD may be considered excepted and, thus, continue to be paid under the OPPS; establish the requirements for the off-campus PBDs to maintain excepted status (both for the excepted off-campus PBD and for the items and services furnished by such excepted off-campus PBDs); and describe the applicable payment system for nonexcepted items and services. In addition, we solicited public comments on information collection requirements for implementing this provision in accordance with section 1833(t)(21)(D) of the Act.

There is no legislative history on record regarding section 603 of Public Law 114–74. However, the Congressional Budget Office estimated program savings for this provision of approximately $9.3 billion over a 10-year period. In January 2016, we posted a notice on the CMS Web site that informed stakeholders that we expected to present our proposals for implementing section 603 of Public Law 114–74 in the CY 2017 OPPS/ASC proposed rule. Because we had already received several inquiries or suggestions from stakeholders regarding implementation of the section 603 provision, we provided a dedicated email address for stakeholders to provide information they believed was relevant in formulating the proposals in the proposed rule. We stated in the proposed rule that we had considered this stakeholder feedback in developing the proposed policies.

Comment: Numerous commenters urged CMS to delay implementation of the section 603 provisions to allow the agency additional time to develop policies that would not impose undue burden on CMS and hospitals. The commenters stated that if all of the proposals related to section 603 are adopted as final without modification, hospitals may not be able to continue to provide the current level of health care necessary in their communities. Commenters who support a delay posited that the delay would provide additional time to collect data that would inform ''implementation'' of section 603. In addition, commenters stated that there is precedence for CMS to delay implementation of legislative provisions, even if the legislation includes a deadline for enactment. The commenters cited the following as examples of CMS delaying implementation of legislative provisions:

- Hospital Outpatient Prospective Payment System for 18 months, from January 1, 1999 to July 1, 2000;
- Ambulance Fee Schedule for 27 months, from January 1, 2000 to April 1, 2002; and
- Medicare Clinical Diagnostic Laboratory Tests Payment System for 12 months, from January 1, 2017 to January 1, 2018.

Response: As discussed in detail later in this final rule with comment period, we are not delaying implementation of the section 603 provisions of Public Law 114–74, and are finalizing implementation of the provisions, effective January 1, 2017, in this final rule with comment period. In addition, in an interim final rule with comment period presented under section X.B. of this document, we are establishing payment rates under the MPFS to be used by hospitals for billing for nonexcepted items and services. With respect to the comment that a delay would enable CMS to collect appropriate data; we disagree. As discussed in section X.A.3.b.(2) of this final rule with comment period and also in the interim final rule with comment period in section X.B. of this document, we are establishing a modifier for use by hospitals to bill on their claim to identify nonexcepted items and services beginning January 1, 2017. These claims-based data will prove useful for making payment for nonexcepted items and services under the MPFS beginning in January 2017 and will be helpful over time as Medicare is able to collect and analyze hospital data on nonexcepted items and services and use that information to refine payment for nonexcepted items and services. Accordingly, we do not agree with commenters that a delay is appropriate. Moreover, we note that the law requires the section 603 provisions to take effect January 1, 2017.

Comment: MedPAC commended CMS' effort to ''rigorously implement'' section 603 and further stated that if CMS finalized the proposed policies, it believed the policies would have the potential to reduce the financial burden on taxpayers and beneficiaries, although there would likely be substantial administrative burdens on the agency, its contractors and providers. Other commenters generally supported the proposed policies and believed that the proposals would reduce the incentive for hospitals to purchase physician's offices and convert them to HOPDs without changing their location or patient population.

Response: We appreciate the commenters' support. We summarize and respond to public comments on specific proposals within the appropriate sections below.

2. Defining Applicable Items and Services and an Off-Campus Outpatient Department of a Provider as Set Forth in Sections 1833(t)(21)(A) and (B) of the Act

a. Background on the Provider-Based Status Rules

Since the beginning of the Medicare program, some hospitals, which we refer

to as ''main providers,'' have functioned as a single entity while owning and operating multiple departments, locations, and facilities. Having clear criteria for provider-based status is important because this designation can result in additional Medicare payments under the OPPS for services provided at the provider-based facility and may also increase the coinsurance liability of Medicare beneficiaries receiving those services versus if those same services were furnished in a physician's office. The current criteria for provider-based status are located in the regulations at 42 CFR 413.65.

When a facility or organization has provider-based status, it is considered to be part of the hospital. The hospital as a whole, including all of its PBDs, must meet all Medicare conditions of participation and conditions of payment that apply to hospitals. In addition, a hospital bills for services furnished by its provider-based facilities and organizations using the CMS Certification Number of the hospital. One type of facility or organization that a hospital may treat as provider-based is an off-campus outpatient department. In order for the hospital to do so, the off-campus outpatient department must meet certain requirements under 42 CFR 413.65, including, but not limited to:

- It generally must be located within a 35-mile radius of the campus of the main hospital;
- Its financial operations must be fully integrated within those of the main provider;
- Its clinical services must be integrated with those of the main hospital (for example, the professional staff at the off-campus outpatient department must have clinical privileges at the main hospital, the off-campus outpatient department medical records must be integrated into a unified retrieval system (or cross reference) of the main hospital), and patients treated at the off-campus outpatient department who require further care must have full access to all services of the main hospital;
- It is held out to the public as part of the main hospital.

Section 603 of Public Law 114–74 makes certain distinctions with respect to whether a department of the hospital is ''on'' campus or ''off'' campus and also excludes from the definition of ''off-campus outpatient department of a provider'' a department of a provider within the distance from a remote location of a hospital facility. Below we provide some details on the definitions of the terms ''campus'' and ''remote locations.''

Section 413.65(a)(2) of the regulations defines a ''campus'' as ''[T]he physical area immediately adjacent to the provider's main buildings, other areas and structures that are not strictly contiguous to the main buildings but are located within 250 yards of the main buildings, and any other areas determined on an individual case basis, by the CMS Regional Office, to be part of the provider's campus.''

In developing the provider-based rules, CMS also recognized that many hospitals operated fully integrated, though geographically separate, inpatient facilities. While the initial scope of provider-based rulemaking primarily concerned situations with outpatient departments, we believed the policies set forth were equally applicable to inpatient facilities. Therefore, CMS also finalized a regulatory definition for a ''remote location of a hospital'' at 42 CFR 413.65(a)(2) as ''a facility or an organization that is either created by, or acquired by, a hospital that is a main provider for the purpose of furnishing inpatient hospital services under the name, ownership, and financial and administrative control of the main provider, in accordance with the provisions of this section. A remote location of a hospital comprises both the specific physical facility that serves as the site of services for which separate payment could be claimed under the Medicare or Medicaid program, and the personnel and equipment needed to deliver the services at that facility. The Medicare conditions of participation do not apply to a remote location of a hospital as an independent entity. For purposes of this part, the term 'remote location of a hospital' does not include a satellite facility as defined in §§ 412.22(h)(1) and 412.25(e)(1) of this chapter.''

Under the provider-based rules, we consider these inpatient ''remote locations'' to be ''off-campus,'' and CMS reiterated this position in the FY 2003 IPPS/LTCH PPS final rule (67 FR 50081 through 50082). Hospitals that comprise several sites at which both inpatient and outpatient care are furnished are required to designate one site as its ''main'' campus for purposes of the provider-based rules. Thus, any facility not located on that main campus (generally within 250 yards) is considered ''off-campus'' and must satisfy the provider-based rules in order to be treated by the main hospital as provider-based. For Medicare purposes, a hospital that wishes to add an off-campus PBD must submit an amended Medicare provider enrollment form detailing the name and location of the provider-based facility within 90 days of adding the new facility to the hospital. In addition, a hospital may ask CMS to make a determination that a facility or organization has provider-based status by submitting a voluntary attestation to its MAC, for final review by the applicable CMS Regional Office, attesting that the facility meets all applicable provider-based criteria in the regulations. If no attestation is submitted and CMS later determines that the hospital treated a facility or organization as provider-based when the facility or organization did not meet the requirements for provider-based status, CMS will recover the difference between the amount of payments actually made to the hospital and the amount of payments that CMS estimates should have been made for items and services furnished at the facility in the absence of compliance with the provider-based requirements for all cost reporting periods subject to reopening. However, if the hospital submits a complete attestation of compliance with the provider-based status requirement for a facility or organization that has not previously been found by CMS to have been inappropriately treated as provider based, but CMS subsequently determines that the facility or organization does not meet the requirements for provider-based status, CMS will recover the difference between the amount of payments actually made to the hospital since the date the attestation was submitted and the amount of payments that CMS estimates should have been made in the absence of compliance with the provider-based requirements.

Historically, PBDs billed as part of the hospital and could not be distinguished from the main hospital or other PBDs within the claims data. In CY 2015 OPPS/ASC final rule with comment period (79 FR 66910 through 66914), CMS adopted a voluntary claim modifier ''PO'' to identify services furnished in off-campus PBDs (other than emergency departments, remote locations and satellite locations of the hospital) to collect data that will help identify the type and costs of services typically furnished in off-campus PBDs. Based on the provision in the CY 2015 OPPS/ASC final rule with comment period, use of this modifier became mandatory beginning in CY 2016. While the modifier identifies that the service was provided in an off-campus PBD, it does not identify the type of off-campus PBD in which services were furnished, nor does it distinguish between multiple off-campus PBDs of the same hospital. As discussed in section X.A.2.e. of this

final rule with comment period, in the CY 2017 OPPS/ASC proposed rule, we solicited public comments on the type of information that would be needed to identify nonexcepted off-campus PBDs for purposes of section 603, although we did not propose to collect such information for CY 2017.

b. Exemption of Items and Services Furnished in a Dedicated Emergency Department or by an Off-Campus PBD as Defined at Sections 1833(t)(21)(B)(i)(I) and (II) of the Act (Excepted Off-Campus PBD)

(1) Dedicated Emergency Departments (EDs)

Section 1833(t)(21)(A) of the Act specifies that, for purposes of paragraph (1)(B)(v) and this paragraph 21 of section 1833(t), the term ''applicable items and services'' means items and services *other* than items and services furnished by a dedicated emergency department (as defined in 42 CFR 489.24(b)). Existing regulations at § 489.24(b) define an ED as any department or facility of the hospital, regardless of whether it is located on or off the main hospital campus, that meets at least one of the following requirements:

- It is licensed by the State in which it is located under applicable State law as an emergency room or emergency department;
- It is held out to the public (by name, posted signs, advertising, or other means) as a place that provides care for emergency medical conditions on an urgent basis without requiring a previously scheduled appointment; or
- During the calendar year immediately preceding the calendar year in which a determination under this section is being made, based on a representative sample of patient visits that occurred during that calendar year, it provides at least one-third of all of its outpatient visits for the treatment of emergency medical conditions on an urgent basis without requiring a previously scheduled appointment.

Accordingly, based on existing regulations, an ED may furnish both emergency and nonemergency services as long as the requirements under § 489.24(b) are met. In accordance with section 1833(t)(21)(A) of the Act and regulations at § 489.24(b), in the CY 2017 OPPS/ASC proposed rule (81 FR 45683), we proposed that all services furnished in an ED, whether or not they are emergency services, would be exempt from application of sections 1833(t)(1)(B)(v) and 1833(t)(21) of the Act, and thus continue to be paid under the OPPS. Moreover, we proposed to define ''applicable items and services'' to which sections 1833(t)(1)(B)(v) and (t)(21)(A) of the Act apply to include all items and services not furnished by an ED as described in the regulations at 42 CFR 489.24(b).

Comment: Many commenters supported CMS' proposal to exempt application of the section 603 payment provisions to EDs. These commenters stated that CMS correctly interpreted the statutory provisions and agreed with the CMS proposal to exclude all services, emergency and nonemergency, furnished in a dedicated ED of a hospital.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are adopting as final, without modification, our proposal to exempt all items and services (emergency and nonemergency) furnished in an ED from the provisions of section 603, as long as the department maintains its status as an ED under the regulation at § 489.24(b).

(2) On-Campus Locations

As noted earlier, section 1833(t)(21)(B)(i) of the Act defines the term ''off-campus outpatient department of a provider'' for purposes of paragraphs (1)(B)(v) and (21) of such section as a department of a provider (as defined at 42 CFR 413.65(a)(2) *as that term is in effect as of* the date of enactment of Public Law 114–74), that is not located on the campus of that provider or within the distance (described in the definition of campus at § 413.65(a)(2)) from a remote location of a hospital facility (as defined in § 413.65(a)(2)). We stated in the CY 2017 OPPS/ASC proposed rule that we believe the statutory language refers to such departments as defined by the regulations at § 413.65 as they existed as of the date of enactment of Public Law 114–74, which was November 2, 2015. The existing regulatory definition at § 413.65(a)(2) of a ''department of a provider'' includes both the specific physical facility that serves as the site of services of a type for which payment could be claimed under the Medicare or Medicaid program, and the personnel and equipment needed to deliver the services at that facility. We used the existing regulatory definition of a department of a provider as a guide in designing our proposals to implement section 603 of Public Law 114–74.

In the proposed rule, we did not propose to change the existing definition of ''campus'' located at § 413.65(a)(2) of our regulations. We stated that we believe hospitals can adequately determine whether their departments are on-campus, including by using the current provider-based attestation process described in § 413.65(b) to affirm their on-campus status. Currently, the CMS Regional Offices review provider-based attestations to determine whether a facility is within full compliance of the provider-based rules, and hospitals that ask for a provider-based determination are required to specify whether they are seeking provider-based status for an on-campus or off-campus facility or organization. If a CMS Regional Office determines that a department is not in full compliance with the provider-based rules, hospitals may utilize the reconsideration process described under § 413.65(j) and the administrative appeal process described at 42 CFR part 498.

In accordance with section 1833(t)(21)(B)(i)(I) of the Act, in the CY 2017 OPPS/ASC proposed rule (81 FR 45683), we proposed that on-campus PBDs and the items and services provided by such a department would be excepted from application of sections 1833(t)(1)(B)(v) and (t)(21) of the Act.

Comment: Several commenters supported the decision by CMS to not modify existing provider-based regulations. They stated that it is advisable to continue to use the current definition of facilities that are considered to be on-campus versus off-campus, including the use of both the 250 yards rule, as well as allowing the CMS Regional Offices to continue to provide case-specific discretion for making such determinations. Other commenters requested revisions to the definitions at § 413.65(a)(2). Many of these commenters suggested using a ''reasonable proximity'' test for ''campus'' or to emphasize the ability of CMS Regional Offices to allow for expanded campuses. Other commenters requested that certain types of providers be exempted from the general 250 yard limitation. Some commenters requested that CMS remove the Regional Office's discretion and not consider any location outside the 250 yard radius as part of a campus. Several commenters requested that CMS provide additional subregulatory guidance concerning the existing definition of ''campus'' and ''main building.''

Response: We continue to believe that the current regulatory definition of campus at § 413.65(a)(2), including the ability for the CMS Regional Offices to exercise discretion, allows a flexible and realistic approach to the configurations a hospital may adopt. Because we did not propose any changes to the existing definition of ''campus,'' we are not changing the definition at this time.

While implementation of the provisions of section 603 has added significantly more focus and attention on provider-based criteria, we note that the CMS Regional Offices have been making on-campus and off-campus provider-based determinations for many years, with relatively few instances where there has not been consensus as to whether a facility was on-campus or off-campus. As we gain experience with the implementation of section 603, our preference is to make any necessary adjustments to provider-based policies at § 413.65 through separate notice-and-comment rulemaking.

After consideration of the public comments we received, we are finalizing the proposed policy that on-campus PBDs and the items and services provided by such departments would be excepted from application of sections 1833(t)(1)(B)(v) and (t)(21) of the Act.

(3) Within the Distance From Remote Locations

In addition to the statutory exception for PBDs located on the campus of a provider, section 1833(t)(21)(B)(i)(II) of the Act excludes off-campus PBDs that are not located within the distance (as described in the definition of campus at § 413.65(a)(2)) from a ''remote location'' (as also defined at § 413.65(a)(2)) of a hospital facility. The ''distance'' described in the definition of ''campus'' at § 413.65(a)(2) is 250 yards. While hospitals that operate remote locations are referred to as ''multi-campus'' hospitals, as discussed previously, under current provider-based rules, a hospital is not allowed to have more than one single ''main'' campus for each hospital. Therefore, in the CY 2017 OPPS/ASC proposed rule (81 FR 45683 through 45684), when determining whether an off-campus PBD meets the exception set forth at section 1833(t)(21)(B)(i)(II) of the Act, we proposed that the off-campus PBD must be located at or within the distance of 250 yards from a remote location of a hospital facility. We stated that hospitals should use surveyor reports or other appropriate documentation to ensure that their off-campus PBDs are within 250 yards (straight-line) from any point of a remote location for this purpose.

Comment: A number of commenters requested specific clarifications of remote-location definitions. In particular, the commenters requested that CMS better define the exact methodology a hospital should use to determine the 250 yard criterion. Commenters also requested verification that if any portion of an outpatient facility is within 250 yards of the remote location, the entire facility can be considered excepted from section 603 payment implications.

Response: We note that all remote locations of a hospital, as well as any nearby outpatient departments, continue to be considered as ''off-campus'' under regulations at § 413.65. A remote location is not a ''campus'' as that term is currently defined in § 413.65, and we did not propose any changes to the definitions in § 413.65. Therefore, as stated in the proposed rule, we interpreted the distance (described in such definition of campus) from a remote location of a hospital facility (as defined in § 413.65(a)(2)) to be 250 yards. Because neither section 1833(t)(21)(B)(i)(II) of the Act, as added by section 603 of Public Law 114–74, nor the provider-based regulations specify the specific point from which to measure (for example, the main entrance), we interpret this to mean that a hospital may measure 250 yards from any point of the physical facility that serves as the site of services of the remote location to any point in the PBD. We believe this implementation is consistent with how CMS has historically implemented the 250-yard criterion when making on-campus determinations under § 413.65.

After consideration of the public comments we received, we are finalizing the policy as proposed. Off-campus PBDs that are located at or within 250 yards of a remote location of a hospital facility, as defined in § 413.65(a)(2), will be excepted from application of sections 1833(t)(1)(B)(v) and (t)(21) of the Act.

c. Applicability of Exception at Section 1833(t)(21)(B)(ii) of the Act

Section 1833(t)(21)(B)(ii) of the Act states that, for purposes of sections 1833(t)(1)(B)(v) and 1833(t)(21) of the Act, the term ''off-campus outpatient department of a provider'' shall not include a department of a provider (that is, an off-campus PBD) (as so defined) that was billing under this subsection, that is, the OPPS, with respect to covered OPD services furnished prior to November 2, 2015. In the CY 2017 OPPS/ASC proposed rule (81 FR 45684), we proposed that, as provided in section 1833(t)(21)(B)(ii) of the Act, if an off-campus PBD meets this exception, sections 1833(t)(1)(B)(v) and 1833(t)(21) of the Act do not apply to that department or to the types of items and services furnished by that department (discussed in greater detail below) that were being billed under the OPPS prior to November 2, 2015.

A major concern with determining the scope of the exception set forth at section 1833(t)(21)(B)(ii) of the Act for purposes of applying sections 1833(t)(1)(B)(v) and 1833(t)(21) of the Act is determining how relocation of the physical location or expansion of services lines furnished at the ''excepted'' off-campus PBD affects the excepted status of the off-campus PBD itself and the items and services furnished by that excepted off-campus PBD.

In the proposed rule, we noted that we had heard from some providers that they believe that section 1833(t)(21)(B)(ii) of the Act specifically excepted off-campus PBDs billing for covered OPD services furnished before November 2, 2015, and that these excepted departments should remain excepted, regardless of whether they relocate or expand services, or both. These providers noted that the exception for certain off-campus PBDs states that section 1833(t)(21)(B)(ii) of the Act does not include an off-campus PBD (as so defined) that was billing under this subsection with respect to covered OPD services furnished prior to the date of the enactment of this paragraph. These providers argued that, because the statute does not include a specific limitation on relocation or expansion of services, no limitation should be applied.

We also noted that providers also suggested that off-campus PBDs should be able to relocate and maintain excepted status as long as the structure of the PBD is substantially similar to the PBD prior to the relocation and that some stakeholders have suggested that the criteria for defining substantially similar could be based on maintaining similar personnel, space, patient population, or equipment, or a combination of these factors. In the proposed rule, we stated our belief that section 1833(t)(21)(B)(ii) of the Act excepted off-campus PBDs as they existed at the time that Public Law 114–74 was enacted, including those items and services furnished and billed by such a PBD prior to that time. Thus, as noted above, we developed our proposals in defining the scope of the excepted off-campus PBD and the items and services it furnishes based on the existing regulatory definition of department of a provider, which speaks to both the specific physical facility that serves as the site of services of a type for which payment could be claimed under the Medicare or Medicaid program and the personnel and equipment needed to deliver the services at that facility.

Below we discuss the proposals we made in the proposed rule regarding the scope of the exception at section 1833(t)(21)(B)(ii) of the Act for purposes of applying sections 1833(t)(1)(B)(v) and (t)(21) of the Act.

(1) Relocation of Off-Campus PBDs Excepted Under Section 1833(t)(21)(B)(ii) of the Act

In the proposed rule, we stated that in considering how relocation of an excepted off-campus PBD could affect application of sections 1833(t)(1)(B)(v) and (t)(21) of the Act, we were concerned that if we proposed to permit excepted off-campus PBDs to relocate and continue such status, hospitals would be able to relocate excepted off-campus PBDs to larger facilities, purchase additional physician practices, move these practices into the larger relocated facilities, and receive OPPS payment for services furnished by these physicians, which we believe section 603 of Public Law 114–74 intended to preclude.

As stated in the proposed rule, we believe that section 603 of Public Law 114–74 applies to off-campus PBDs as they existed at the time of enactment and excepts those items and services that were being furnished and billed by off-campus PBDs prior to November 2, 2015.

After reviewing the statutory authority, and the concerns noted earlier, we proposed that, for purposes of paragraphs (1)(B)(v) and (21) of section 1833(t) of the Act, excepted off-campus PBDs and the items and services that are furnished by such departments would no longer be excepted if the excepted off-campus PBD moves or relocates from the physical address that was listed on the provider's hospital enrollment form as of November 1, 2015. In the case of addresses with multiple units, such as a multi-office building, the unit number is considered part of the address; in other words, an excepted hospital PBD could not purchase and expand into other units in its building, and remain excepted under our proposal. Once an excepted off-campus PBD has relocated, we proposed that both the off-campus PBD itself and the items and services provided at that off-campus PBD would no longer be excepted, and instead, would be subject to paragraphs (1)(B)(v) and (21) of section 1833(t) of the Act.

In the proposed rule, we noted that hospitals had expressed concern that there may be instances when an excepted off-campus PBD may need to relocate, including, for example, to meet Federal or State requirements, or due a natural disaster. We recognize that there may be circumstances beyond the hospital's control where an excepted off-campus PBD must move from the location in which it existed prior to November 2, 2015. In the CY 2017 OPPS/ASC proposed rule, we solicited public comments on whether we should develop a clearly defined, limited relocation exception process, similar to the disaster/extraordinary circumstance exception process under the Hospital VBP program (as implemented in the FY 2014 IPPS/LTCH PPS final rule; 78 FR 50704) for hospitals struck by a natural disaster or experiencing extraordinary circumstances that would allow off-campus PBDs to relocate in very limited situations, and that would mitigate the potential for the hospital to avoid application of sections 1833(t)(1)(B)(v), and (t)(21)(C) of the Act. In addition, we sought public comments on whether we should consider exceptions for any other circumstances that are completely beyond the control of the hospital, and, if so, what those specific circumstances would be.

Comment: Numerous commenters opposed CMS' proposal to limit excepted off-campus PBDs to the physical address on the provider's hospital enrollment form as of November 1, 2015. The commenters stated that a PBD that moves or relocates from its physical address after November 2, 2015, should not lose its excepted status, given the many circumstances that may necessitate a hospital to move or relocate, temporarily or permanently, such as lease expiration, building safety code compliance, building deterioration, population shifts, natural disaster, seismic requirements, and other situations beyond a hospital's control. Many commenters stated that CMS' proposal is overly restrictive and that CMS does not have the authority to apply payment reductions to hospitals that move or relocate because section 603 does not explicitly discuss or address relocation. These commenters believed that Congress intended the section 603 provisions to apply to new off-campus PBDs and not to relocation of existing off-campus PBDs. The commenters requested that CMS allow flexibility such that excepted off-campus PBDs could move or relocate for any reason without jeopardizing payment under the OPPS. Several commenters opposed CMS' consideration of a disaster/extraordinary circumstance exception process similar to the Hospital VBP Program because they believed excepted off-campus PBDs should be allowed to relocate for any reason without permission or approval from CMS.

Some commenters were opposed to the relocation proposal and suggested that, if CMS moves forward with adopting a limitation on relocation of existing PBDs, CMS clearly define relocation exceptions. In particular, the commenters recommended that CMS allow excepted PBDs to relocate without the loss of excepted status under the following circumstances:

- Relocation to comply with Federal and State requirements;
- Relocation of an HOPD that has been destroyed or substantially damaged in a disaster or emergency;
- Temporary relocation of an HOPD in order to allow rebuilding, updating or retrofitting of its infrastructure;
- Relocation due to the HOPD losing its lease;
- Relocating a HOPD in order to provide access to care in an underserved area; and
- Relocation due to a shifting/growing patient population.

Response: We disagree that, in the context of section 603, an off-campus PBD should be allowed to relocate for any reason and continue to be paid under the OPPS. In the proposed rule, we cited our concern that without limitations on relocation, hospitals would be able to relocate excepted off-campus PBDs to larger facilities, purchase additional physician practices, and move these practices into the larger relocated facilities that would continue to be paid under the OPPS.

As previously stated, we believe that section 603 applies to off-campus PBDs as they existed at the time the law was enacted. That is, we believe that the statutory language provides for payment to continue under the OPPS for such departments as defined by the regulations at § 413.65 as they existed at the time of enactment of Public Law 114–74. The existing regulatory definition at § 413.65 of a ''department of a provider'' includes both the specific physical facility that serves as the site of services of a type for which payment could be claimed under the Medicare or Medicaid program, and the personnel and equipment needed to deliver the services at that facility. To allow excepted off-campus PBDs to relocate under *every* circumstance and continue to be paid OPPS rates would allow hospitals to continue the practices we believe section 603 was intended to curb. Allowing unlimited relocation of an off-campus PBD would potentially result in relocation to larger facilities, with different equipment and staff and unbridled expansion of service lines. Among other changes, its composition

could result in an off-campus PBD that is remarkably different than it was prior to November 2, 2015, the date of enactment of Public Law 114–74.

With respect to exercising flexibility in interpreting the statute, we are adopting an exceptions process to our relocation proposal that is limited to extraordinary circumstances outside a hospital's control, which is described later in this section. We believe that this final policy adds some additional flexibility from what we proposed, which was excepted off-campus PBDs and the items and services that are furnished by such departments would no longer be excepted if the excepted off-campus PBD moves or relocates from the physical address that was listed on the provider's hospital enrollment form as of November 1, 2015. In addition, with respect to the comment about defining criteria under which exceptions for relocation might be made, we note that it is not feasible to establish criteria that would apply to every type of extraordinary circumstance that may arise. Accordingly, we believe providing an exhaustive list of scenarios for which relocation is necessary would be contrary to the notion of added flexibility.

Comment: Several commenters suggested two alternatives to CMS' relocation proposal that would grant more flexibility to hospitals that may need to relocate for reasons seen and unforeseen. One suggested alternative was to allow relocation so long as the total number of off-campus PBDs for a hospital did not increase relative to the number prior to enactment of section 603. A second suggested alternative was that CMS develop a ''substantially similar'' test to determine if a relocated location is actually new. Commenters suggested that the substantially similar test could be similar to the critical access hospital (CAH) relocation requirements as defined in regulations at 42 CFR 485.610(d).

Response: We appreciate the commenters' feedback. As discussed earlier in section X.A.1. of this final rule with comment period, we believe that one of the primary goals of section 603 of Public Law 114–74 is to remove the difference in payment for outpatient services furnished in freestanding facilities and nonexcepted off-campus PBDs. Also, in the proposed rule, we stated our concern with establishing relocation policies that could result in an unintentional loophole and therefore undermine what we believe is the intent of the law. We disagree with the commenters' recommendation to allow relocation based on CAH relocation requirements because it could allow fairly unlimited relocation and expansion as long as 75 percent of the services/staff continue to be present in the expanded service area. In addition, this recommendation has significant operational and enforcement challenges and would require significant administrative resources to evaluate exception requests, including data analysis to ensure criteria are met. Likewise, while ''capping and freezing'' the total number of off-campus PBDs a hospital could have to the number of off-campus PBDs the hospital had prior to enactment of section 603 would limit the total number of off-campus PBDs to those that existed prior to enactment, we believe it would not address the previously stated concerns that a hospital could use relocation to expand to a new type of department that furnishes a higher volume and a wider variety of services with staff, personnel, and equipment that the off-campus PBD that was billing prior to enactment of section 603 previously did not have. Therefore, we do not agree with either suggestion.

Comment: Several commenters and MedPAC supported CMS' relocation proposal but recommended that CMS allow excepted off-campus PBDs to relocate for acts of nature, either temporarily or permanently, without loss of excepted status.

Response: We appreciate the commenters' support and agree that excepted off-campus PBDs should be permitted to relocate for extraordinary circumstances outside their control, such as natural disasters, significant seismic building codes, or significant public health and public safety issues, without loss of excepted status. Accordingly, we are adopting a policy in this final rule with comment period to allow an excepted off-campus PBD to relocate in the limited instances of extraordinary circumstances outside of the hospital's control, such as natural disasters, significant seismic building code requirements, or significant public health and public safety issues, that necessitate moving to a new building (either temporarily or permanently) without losing its excepted status. Exceptions to the relocation policy will be evaluated on a case-by-case basis by the appropriate CMS Regional Office. We note that such exceptions will be both limited and rare because we do not wish to allow this extraordinary circumstances exception to undermine the goal of limiting the growth and expansion of excepted off-campus PBDs. We intend to issue subregulatory guidance on the extraordinary circumstances process. Technical details will be addressed in that guidance.

Comment: Some commenters raised the question of whether an on-campus PBD that was billing under the OPPS prior to November 2, 2015, would maintain excepted status if the PBD moved off-campus after the date of enactment of Public Law 114–74.

Response: In this scenario, an on-campus PBD that relocates off-campus would be subject to sections 1833(t)(1)(B)(v) and (t)(21) of the Act in CY 2017 and subsequent years. We believe that section 603 applies to off-campus PBDs as they existed at the time the law was enacted. Therefore, while an on-campus PBD as of November 2, 2015 would be treated as an excepted off-campus PBD, the subsequent relocation of that PBD off-campus would result in the PBD no longer being paid under the OPPS.

Comment: Several commenters recommended that, if CMS were to adopt a relocation exceptions process, the process to obtain an exception be administratively simple and timely. Specifically, the commenters suggested two approaches to establishing a relocation exceptions process: First, CMS could modify the Medicare 855 enrollment form and the online Medicare Provider Enrollment, Chain, and Ownership System (PECOS) so that the hospital would notify CMS of the reason for a relocation of an excepted off-campus PBD by choosing among the list of preapproved exceptions. Second, CMS Regional Offices could have discretionary authority to approve additional relocation exceptions for excepted off-campus PBDs in other reasonable, but unforeseen, circumstance.

Response: We agree that the relocation exceptions process should be as administratively simple as possible. As mentioned earlier, the appropriate CMS Regional Office will evaluate relocation requests on a case-by-case basis. We will take these comments into consideration prior to issuing subregulatory technical guidance.

After consideration of the public comments received, we are finalizing our proposed policy on relocation, with modification to allow excepted off-campus PBDs to relocate temporarily or permanently, without loss of excepted status, for extraordinary circumstances outside of the hospital's control, such as natural disasters, significant seismic building code requirements, or significant public health and public safety issues. This policy is intended to be applied in a limited and rare manner to ensure that excepted off-campus PBDs do not leverage these

requirements to subvert the intent of section 603. CMS Regional Offices will evaluate and approve or deny these relocation requests. We will provide instruction through subregulatory guidance on the process to request a relocation exception. CMS Regional Offices will make determinations for relocation exception requests.

(2) Expansion of Clinical Family of Services at an Off-Campus PBD Excepted Under Section 1833(t)(21)(B)(ii) of the Act

In the CY 2017 OPPS/ASC proposed rule, we noted that we had received questions from some hospitals regarding whether an excepted off-campus PBD can expand the number or type of services the department furnishes and maintain excepted status for purposes of paragraphs (1)(B)(v) and (21) of section 1833(t) of the Act. As mentioned earlier in the relocation discussion, we have heard that some providers believe that section 1833(t)(21)(B)(ii) of the Act specifically excepted *departments*, and that excepted departments should remain excepted, regardless of whether these departments expand either the number of services or the types of services they provide. Under this interpretation, section 1833(t)(21)(B)(ii) of the Act would limit only the number of excepted off-campus PBDs a hospital can have to the number of off-campus PBDs that were billing Medicare for covered OPD services furnished prior to enactment of Public Law 114–74.

In the proposed rule, we stated that we believe section 1833(t)(21)(B)(ii) of the Act excepts off-campus PBDs and the items and services that are furnished by such excepted off-campus PBDs for purposes of paragraphs (1)(B)(v) and (21) of section 1833(t) of the Act as they were being furnished on the date of enactment of section 603 of Public Law 114–74, as guided by our regulatory definition at § 413.65(a)(2) of a department of a provider. Thus, we proposed that the excepted off-campus PBD items and services that would continue to be paid under the OPPS would be limited to the provision of items and services it was furnishing prior to the date of enactment of section 603 of Public Law 114–74 only. Moreover, we proposed that items and services that are not part of a clinical family of services furnished and billed by the excepted off-campus PBD prior to November 2, 2015 would be subject to paragraphs (1)(B)(v) and (21) of section 1833(t) of the Act, that is, not payable under the OPPS.

As noted earlier, we believe that the amendments to section 1833(t) of the Act by section 603 of Public Law 114–74 were intended to address items and services furnished at physicians' offices that are converted to hospital off-campus PBDs on or after November 2, 2015 from being paid at OPPS rates. One issue we contemplated in considering how expanded services should affect excepted status is how it could affect payment to newly acquired physicians' offices or new off-campus PBDs established *after* the date of enactment of section 603. In the proposed rule, we indicated that we were concerned that if excepted off-campus PBDs could expand the types of services provided at the excepted off-campus PBDs and also be paid OPPS rates for these new types of services, hospitals may be able to purchase additional physician practices and add those physicians to existing excepted off-campus PBDs. This could result in newly purchased physician practices furnishing services that are paid at OPPS rates, which we believe these amendments to section 1833(t) of the Act are intended to address.

After reviewing the statutory authority and the concerns raised by commenters noted above, we proposed, for purposes of paragraphs (1)(B)(v) and (21) of section 1833(t) of the Act, that excepted status of items and services furnished in excepted off-campus PBDs is limited to the items and services (defined as clinical families of services in Table 21 of the proposed rule (81 FR 45685 through 45686)) such a department was billing for under the OPPS and were furnished prior to November 2, 2015. We proposed that if an excepted off-campus PBD furnishes services from a clinical family of services that it did not furnish prior to November 2, 2015, and thus did not also bill for, these new or expanded clinical families of services would not be covered OPD services, and instead would be subject to paragraphs (1)(B)(v) and (21) of section 1833(t) of the Act as described in section X.A.1.c. of the proposed rule. We note that we proposed not to limit the volume of excepted items and services within a clinical family of services that an excepted off-campus PBD could furnish.

In summary, our proposals related to expansion of clinical families of services are as follows: We proposed that service types be defined by the 19 clinical families of hospital outpatient service types described in Table 21 of the proposed rule (81 FR 45685 through 45686). Moreover, we proposed that if an excepted off-campus PBD furnished and billed for any specific service within a clinical family of services prior to November 2, 2015, such clinical family of services would be excepted and be eligible to receive payment under the OPPS. However, we proposed that if an excepted off-campus PBD furnishes services from a clinical family of services that such department did not furnish and bill for prior to November 2, 2015, those services would be subject to sections 1833(t)(1)(B)(v) and (t)(21) of the Act in CY 2017 and subsequent years. We referred readers to Addendum B to the proposed rule (which is available via the Internet on the CMS Web site) for which HCPCS codes mapped to each clinical family of services. We stated that if we added a new HCPCS code or APC in future years, we would provide mapping to these clinical families of services, where relevant.

In addition, we considered, but did not propose, to specify a specific timeframe in which service lines had to be billed under the OPPS for covered OPD services furnished prior to November 2, 2015. We sought public comment on whether we should adopt a specific timeframe for which the billing had to occur, such as CY 2013 through November 1, 2015.

Under our proposal, while excepted off-campus PBDs would not be eligible to receive OPPS payments for expanded clinical families of services, such excepted off-campus PBDs would continue to be eligible to receive OPPS payment for clinical families of services that were furnished and billed prior to that date. We discuss later in this section how we proposed to pay for expanded items and services that are furnished at excepted off-campus PBDs, that is, are nonexcepted items and services.

We sought public comments on these proposals. In addition, we sought public comments on our proposed categories of clinical families of services, and our proposal not to limit the volume of services furnished within a clinical family of services that the hospital was billing prior to November 2, 2015.

Comment: A large number of commenters opposed CMS' proposals related to service expansion. The commonly cited concerns among the commenters who opposed the proposed policy were as follows:

- The statutory language included in section 603 does not address changes in service-mix by excepted off-campus PBDs. These commenters stated that CMS exceeded its authority to state that Congress established both excepted facilities and excepted items and services that those facilities may provide.
- Limitations on service line expansion does not reflect that health care is ever evolving and new therapies and services may be developed that do

not fit squarely in the proposed clinical families. Commenters stated that CMS' proposal would hinder beneficiary access to innovative technologies if an excepted off-campus PBD is penalized financially for keeping up with the practice of medicine.

- The term ''clinical families of service'' appears to be a new term created by CMS for the purpose of implementing section 603. Commenters expressed concern that, because the clinical families are defined by APC groupings, it would be difficult for CMS and hospitals to manage changes in the composition of APCs and HCPCS code changes contained in those APCs.
- Operational challenges and administrative burden seem significant for both CMS and hospitals. Commenters believed that CMS' proposal is unnecessarily complex and will create challenges for CMS to operationalize, track, manage, and enforce particularly because hospitals do not report or attest to the types of services furnished at each off-campus PBD.

In addition, MedPAC recommended an alternative approach that it suggested would also meet the intent of section 603 by minimizing the incentive of hospitals to purchase independent physician practices and convert them to off-campus PBDs. MedPAC recommended that CMS establish a baseline service volume for each applicable off-campus PBD and cap services, regardless of clinical family, at that limit. When the hospital reaches the annual cap for that location, CMS would no longer pay OPPS rates for those services. The annual cap could be updated based on the annual updates to the OPPS payment rates. However, MedPAC noted that, in order for CMS to implement this approach, CMS would have to collect information on OPPS payments to each excepted off-campus PBD from November 2, 2014 through November 1, 2015 to establish a baseline.

Response: We appreciate the detailed comments that were submitted. We disagree that section 603 does not provide us the authority to adopt a policy that would limit OPPS payment to the type of services that had been furnished and billed at an off-campus PBD prior to enactment of Public Law 114–74. Further, we believe the statute gives us the authority to limit the volume of services furnished to the level that was furnished prior to the date of enactment; however, we did not propose to do so. However, we are interested in feedback from stakeholders in this final rule with comment period about how such a policy would work, and we intend to monitor for potential shifting of services to excepted off-campus PBDs, including on-campus PBDs. As mentioned in the proposed rule, we were concerned that if excepted off-campus PBDs could expand the types of services provided at the excepted off-campus PBDs and also be paid OPPS rates for these new types of services, hospitals may be able to purchase additional physician practices and add those physicians to existing excepted off-campus PBDs. This could result in newly purchased physician practices furnishing services that are paid at OPPS rates, which we believe these amendments to section 1833(t) of the Act are intended to prevent. Nonetheless, we agree with commenters, including MedPAC, that our proposed policy could be operationally complex and could pose an administrative burden to hospitals, CMS, and our contractors to identify, track, and monitor billing for clinical services. Further, we believe that the relocation policy for excepted off-campus PBDs, when coupled with the final service expansion policy we are adopting in this final rule with comment period, will help ensure that off-campus PBDs excepted from application of sections 1833(t)(1)(B)(v) and (t)(21) of the Act will not be able to circumvent applicability of payment under section 1833(t)(21) of the Act. In response to the comments about the need to allow services to evolve over time to meet community needs, we recognize that community needs may evolve over time. However, to the extent that the community needs are of the service type that could be furnished by either a hospital or a different provider supplier type, we do not believe that our proposed policy would have hindered access to needed services in the community. Accordingly, we are not finalizing this proposal at this time. However, we intend to monitor service line growth and, if appropriate, may propose to adopt a limitation on the expansion of services or service lines in future rulemaking. In that event, we will consider the commenters' concerns expressed in comments received on the proposed clinical families of service in development of any future rulemaking on service expansion.

After consideration of the public comments we received, we are not finalizing our proposed policy to limit service line expansion. Therefore, an excepted off-campus PBD will receive payments under the OPPS for all billed items and services, regardless of whether it furnished such items and services prior to the date of enactment of Public Law 114–74, as long as the excepted off-campus PBD remains excepted; that is, it meets the relocation and change of ownership requirements adopted in this final rule with comment period. As mentioned earlier in this section, we intend to monitor this issue and continue to consider how a potential limitation on expansion would work. To that end, we would appreciate receiving feedback from stakeholders on how either a limitation on volume of services, as MedPAC described in its comments, or a limitation on lines of service, as we laid out in the proposed rule, would work in practice. Specifically, we are interested in what data are currently available or could be collected that would allow us to implement a limitation on service expansion. We also are interested in suggestions for changes to the clinical families of services that we set forth in Table 21 of the proposed rule as we move forward (81 FR 45685 through 45686).

(3) Other Related Public Comments

Comment: A few commenters requested clarification on whether the section 603 provisions apply to Federally Qualified Health Centers (FQHCs) that meet provider-based criteria set forth in 42 CFR 413.65(n) and are paid under the OPPS. In addition, the commenters stated that even if the section 603 policies would apply, CMS has the authority to exempt FQHCs from policies related to implementation of section 603 using equitable adjustment authority as defined in section 1833(t)(2)(E) of the Act. Commenters requested that CMS invoke the equitable adjustment authority and continue to pay FQHCS that meet the criteria at § 413.65(n) under the OPPS in spite of the section 603 provisions.

Response: Section 603 of Public Law 114–74 generally provides that applicable items and services furnished by certain off-campus outpatient departments of a provider on or after January 1, 2017, will not be considered covered OPD services as defined under section 1833(t)(1)(B) of the Act for purposes of payment under the OPPS and will instead be paid ''under the applicable payment system'' under Medicare Part B if the requirements for such payment are otherwise met.

Under existing regulations at 42 CFR 413.65(n), a FQHC or FQHC look-alike facility that has, since April 7, 1995, furnished only services that were billed as if they had been furnished by a department of a provider will continue to be treated, for purposes of the provider-based regulations, as a

department of a provider without regard to whether it complies with the criteria for provider-based status, as long as it was qualified as an FQHC (not including tribal/Indian facilities which are subject to 413.65(m)) or FQHC look-alike on or before April 7, 2000. (An ''FQHC look-alike'' is an organization that has been identified by HRSA as meeting the definition of ''Health Center'' under section 330 of the PHS Act, but does not receive grant funding under section 330.)

Section 603 does not apply to FQHCs that are paid under the FQHC Prospective Payment System methodology at section 1834(k) of the Act. However, section 603 provisions would apply to any entity that is paid under section 1833(t), including a provider-based FQHC under § 413.65(n), because a provider-based FQHC is considered a department of a provider under the OPPS.

The commenter mentioned section 1833(t)(2)(E) of the Act, which provides that the Secretary shall establish, in a budget neutral manner, other adjustments under the OPPS as determined to be necessary to ensure equitable payments. In other words, section 1833(t)(2)(E) of the Act provides the authority to make a payment adjustment under the OPPS. While section 1833(t)(2)(E) of the Act does provide fairly broad authority to make such a payment adjustment, we do not believe this authority extends to exempting a class of off-campus PBDs from application of a separate statutory provision that specifically prohibits payment under the OPPS itself; that is, there would be no OPPS payment to which a payment adjustment could be made.

Comment: Several commenters requested clarification on whether the section 603 provisions apply to off-campus PBDs of hospitals operated by the Indian Health Service (IHS) or by a tribe or tribal organization.

Response: Hospitals that are operated by the IHS, tribes, or tribal organizations are paid under section 1880 of the Act. As mentioned, section 603 of Public Law 114–74 amended sections 1833(t)(l)(B) and (t)(21) of the Act and only applies to those entities paid under section 1833(t) of the Act. Section 603 does not change payment to the IHS, tribes, and tribal organization eligible for payment under section 1880 of the Act.

Comment: Numerous commenters acknowledged that the CY 2017 OPPS/ASC proposed rule did not include a proposal for the treatment of off-campus PBDs mid-build or under development at the time Public Law 114–74 was enacted on November 2, 2015. Commenters contended that PBDs under construction or in the development phase could not have reasonably foreseen the restrictions put in place by section 603. The commenters further believed that, in the absence of reasonable knowledge or notice that such restrictions would ever be put in place at the time plans were completed for and construction begun on the new off-campus departments, these facilities will be inadvertently disadvantaged financially because they will not be paid under the OPPS. As such, commenters requested that CMS either delay implementation of section 603 to allow Congress time to pass H.R. 5273—Helping Hospitals Improve Patient Care Act of 2016 or add ''mid-build'' or ''under development'' PBDs to the types of excepted off-campus PBDs.

Response: While we understand the commenters' concerns that hospitals could not have reasonably predicted or expected that new off-campus PBDs would not be paid under the OPPS, section 603 does not provide an exception for off-campus PBDs that were mid-build at the time of enactment. Therefore, we did not propose to include mid-build or under development off-campus PBDs among the types of excepted off-campus PBDs. In addition, we are required to implement the provisions of section 603 to provide payments for nonexcepted items and services furnished by nonexcepted off-campus PBDs under the applicable payment system other than the OPPS beginning January 1, 2017.

Comment: Several commenters believed that CMS misinterpreted the statute when the agency proposed to limit the definition of an excepted off-campus PBD to those that submitted a bill for covered outpatient services under the OPPS furnished prior to November 2, 2015. Commenters believed that CMS' proposal is based on a narrow read of the statute and that Congress did not intend the billing function to be the deciding factor in determining the exceptions requirement. Instead, the commenters requested that CMS consider a more flexible interpretation and except off-campus PBDs that satisfy any of the following scenarios:

- Off-campus PBDs fully operational but not yet treating patients on or before November 2, 2015;
- Off-campus PBDs fully operational and treating patients on or before November 2, 2015, but billing department not yet fully functional; and
- Off-campus PBDs fully operational and treating patients on or before November 2, 2015, but internal process for billing claims includes a standard review period before the claims are submitted to Medicare.

Response: We disagree with the commenters' request to except off-campus PBDs that were operational and not yet treating patients by November 2, 2015. We believe that the exception under section 1833(t)(21)(B)(ii) of the Act, as added by section 603, is limited to those off-campus PBDs that were ''billing under this subsection with respect to covered OPD services furnished prior to [November 2, 2015].'' However, we agree with commenters' that one interpretation of the statute could allow for an exception for off-campus PBDs that furnished a covered OPD service prior to November 2, 2015, but had not submitted a bill to Medicare for such service prior to November 2, 2015. We are finalizing our interpretation as proposed, with modification, which means that off-campus PBDs would be eligible to receive OPPS payment as excepted off-campus PBDs for services that were furnished prior to November 2, 2015, and billed under the OPPS in accordance with timely filing limits.

d. Change of Ownership and Excepted Status

Under current policy, provider-based status is defined as the relationship between a facility and a main provider. If a Medicare-participating hospital, in its entirety, is sold or merges with another hospital, a PBD's provider-based status generally transfers to new ownership as long as the transfer does not result in any material change of provider-based status. A provider-based approval letter for such a department will be considered valid as long as the new owners accepted the prior hospital's provider agreement, consistent with other hospital payment policies.

We have received inquiries regarding whether excepted off-campus PBDs would maintain excepted status if a hospital were purchased by a new owner, if a hospital merged with another provider, or if only an excepted off-campus PBD were sold to another hospital.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45686), we proposed that excepted status for the off-campus PBD would be transferred to new ownership only if ownership of the main provider is also transferred and the Medicare provider agreement is accepted by the new owner. Under our proposal, if the provider agreement is terminated, all excepted off-campus PBDs and the excepted items and services furnished

by such off-campus PBD would no longer be excepted for purposes of paragraphs (1)(B)(v) and (21) of section 1833(t) of the Act. We proposed that individual excepted off-campus PBDs cannot be transferred from one hospital to another and maintain excepted status. We solicited public comments on these proposals.

Comment: A few commenters supported CMS' proposal that an excepted off-campus PBD would continue to be excepted after a change in ownership in which the buyer accepts assignment of the provider agreement. However, many commenters opposed the proposals regarding change of ownership on the grounds that the section 603 provisions do not specifically address change of ownership. The commenters asserted that, had Congress intended payment reductions for purchases or acquisitions of existing off-campus PBDs by a different hospital, Congress would have included it in the law. Several commenters stated that hospitals in financial difficulty that plan to close their inpatient hospital beds will offer to transfer their HOPDs to better-performing hospitals in order to ensure that critical hospital-based outpatient services are still accessible to patients in the community. Similarly, commenters expressed concern that the change of ownership proposals could have an unintended consequence for hospitals that downsize from providing inpatient and outpatient services to outpatient services only or that close inpatient hospital beds but want to retain the outpatient off-campus PBD. Commenters believed that such acquisitions or reconfigurations within a health system may not be financially feasible if the excepted off-campus PBD were to lose payment under the OPPS. To remedy their concerns, the commenters requested that CMS permit individual off-campus PBDs to retain their excepted status even if bought individually by another provider.

Response: We disagree with the commenters who believe that we do not have the authority or are prohibited from addressing change of ownership as part of our implementation of section 603. For hospitals that participate in Medicare, CMS has a longstanding policy codified in regulation at 42 CFR 489.18 and Manual Publication 100–07, Chapter 3, Sections 3210 through 3210.5(C) that addresses change of ownership including merger/acquisitions and consolidations, and the effect on the Medicare provider agreement. Our change of ownership proposals to implement the section 603 provisions are modeled after longstanding payment policy across several payment systems in which assets/liabilities are transferred to the new owner only if the new owner accepts the existing provider agreement. If a hospital is sold or merges with another hospital, a PBD's provider-based status generally transfers to the new ownership as long as the transfer would not result in any material change of provider-based status. In addition, provider-based status is defined as the relationship between a facility and a main hospital provider, not an asset that can be transferred from one provider to another. Therefore, because provider-based status is a relationship with the main hospital provider, it is not practical to allow the sale of an individual PBD even if the main hospital is closing or downsizing. For example, a hospital owner that decides to combine two certified hospitals under one Medicare provider agreement, with one CMS Certification Number (CCN) would lose excepted status if the off-campus PBD was not enrolled as a provider-based department of the resulting combined hospital and billing under the OPPS for covered items and services furnished prior to November 2, 2015.

After consideration of the public comments we received, we are finalizing our proposals without modification. Specifically, we are allowing excepted status for the off-campus PBD to be transferred to new ownership only if ownership of the main provider is also transferred and the Medicare provider agreement is accepted by the new owner. If the provider agreement is terminated, all excepted off-campus PBDs will no longer be excepted for purposes of paragraphs (1)(B)(v) and (21) of section 1833(t) of the Act. Finally, an individual excepted off-campus PBDs cannot be transferred from one hospital to another and maintain excepted status.

e. Comment Solicitation for Data Collection Under Section 1833(t)(21)(D) of the Act

Hospitals are required to include all practice locations on the CMS 855 enrollment form. Beginning in March 2011 and ending in March 2015, in accordance with section 1866(j) of the Act, CMS conducted a revalidation process where all actively enrolled hospitals were required to complete a new CMS 855 enrollment form to (1) initially enroll in Medicare, (2) add a new practice location, or (3) revalidate existing enrollment information.

Collection and retention of Medicare enrollment data have been authorized through a Paperwork Reduction Act notice in the **Federal Register**. The authority for the various types of data to be collected is found in multiple sections of the Act and the Code of Federal Regulations; specifically, in sections 1816, 1819, 1833, 1834, 1842, 1861, 1866, and 1891 of the Act, and 42 CFR Chapter IV, Subchapter A.

As we discussed in the CY 2017 OPPS/ASC proposed rule, sections 1833(t)(21)(A) and (B) of the Act exempt both certain off-campus PBDs and the items and services furnished in certain types of off-campus PBDs from application of sections 1833(t)(1)(B)(v) and (21) of the Act. However, while the Medicare enrollment process requires that a hospital identify the name and address of each of its off-campus PBDs, such departments bill under the CMS Certification Number of the hospital, rather than a separate identifier. Accordingly, at the time of development of the proposed rule, we were unable to automate a process by which we could link hospital enrollment information to claims processing information to identify items and services to specific off-campus PBDs of a hospital. In order to accurately identify items and services furnished by each off-campus PBD (exempt or not) and to actively monitor the expansion of clinical family of services at excepted off-campus PBDs, we sought public comments on whether to require hospitals to self-report this information to us (via their MAC) using the authority under section 1833(t)(21)(D) of the Act to collect information as necessary to implement the provision.

Specifically, we sought public comments on whether hospitals should be required to separately identify all individual excepted off-campus PBD locations, the date that each excepted off-campus PBD began billing and the clinical families of services (shown in Table 21 of the proposed rule) that were provided by the excepted off-campus PBD prior to the November 2, 2015 date of enactment. We indicated that if we were to require hospitals to report this information, we would expect to collect this information through a newly developed form which would be available for download on the CMS Web site.

Comment: Commenters believed that CMS would not be able to distinguish between individual off-campus PBDs of a hospital nor would CMS be able to determine if an individual off-campus PBD billed for certain services prior to enactment based on currently available data. Some commenters believed that an additional data collection would be needed to ascertain this information before CMS could effectively implement

its proposed policy. Another commenter suggested that CMS collect information to separately identify each off-campus PBD location, the date that each off-campus PBD began billing Medicare, the provider number of the parent hospital, and the clinical family of services the off-campus PBD was providing before enactment. This commenter suggested that this information should be made public for use by oversight agencies and policy analysts.

Some commenters asked CMS to analyze whether additional data collection is necessary given the burden for providers. Other commenters believed that the CMS proposals on relocation and expansion of services would require significant data collection to implement. Commenters believed the data collection burden provided good reason for CMS to alter its proposals for relocation and expansion of services.

Response: We thank the commenters for their input. As with OPPS payments generally, we rely on hospitals to bill all HCPCS codes accurately in accordance with their code descriptors and CPT and CMS instructions, and to report charges on claims and charges and costs on their Medicare hospital cost report appropriately. We note that hospital billing, in general, relies upon hospitals to appropriately identify items and services for which they are claiming payment under the Medicare program, including use of modifiers as appropriate. From a monitoring and enforcement perspective, we intend to follow traditional practices, including prepayment and postpayment reviews to the extent applicable to ensure that hospitals are correctly identifying nonexcepted items and services. We expect that existing protocols used by program integrity entities will continue to be used to monitor and enforce appropriate billing of nonexcepted items and services. Hospitals will be expected to maintain documentation sufficient to prove that an off-campus PBD is an excepted off-campus PBD; that is, was an off-campus PBD billing for covered OPD services furnished prior to November 2, 2015. We note that, because multiple off-campus PBDs may bill under the same CMS Control Number (CCN), Medicare billing data may not be sufficient to prove that an off-campus PBD was billing Medicare for covered OPD services furnished prior to November 2, 2015.

In addition, we plan to issue instructions to the Medicare contractors to update their systems using enrollment data that would identify each off-campus PBD by physical address and by the date it was added to the hospital's enrollment.

Comment: One commenter suggested that CMS wait to require additional data collection until after it had the opportunity to analyze data provided by the mandatory use of the ''PO'' modifier to indicate off-campus OPPS services that began in CY 2016.

Response: We appreciate the commenter's feedback. As the commenter mentioned, use of the ''PO'' modifier became mandatory for services furnished on or after January 1, 2016 (it was voluntary in 2015) for all off-campus PBDs other than remote locations, satellite facilities, and EDs. We are monitoring data that include the ''PO'' modifier and intend to continue to monitor the data. In addition, we are establishing a new modifier ''PN'' that will be required to be billed with nonexcepted items and services. This new modifier is discussed in greater detail later in this section, is also discussed in the interim final rule with comment period in section X.B. of this document, and will be discussed in subregulatory guidance.

Comment: MedPAC and other commenters suggested that CMS create new claim line modifiers to indicate when an item or service is an excepted or nonexcepted service. MedPAC suggested that such modifiers would help ensure program integrity. In addition, MedPAC suggested that CMS establish modifiers to indicate when a service is provided in a dedicated ED and whether the dedicated ED is on-campus or off-campus, citing its June 2016 report in which it quantified the recent growth in the number of off-campus EDs billing Medicare and the inability of the Medicare program to distinguish between on-campus and off-campus ED services. In addition, MedPAC suggested that CMS seek legislative authority to impose strict penalties on hospitals that inappropriately bill for nonexcepted services under the OPPS and that these claims should be subject to the False Claims Act.

Response: We appreciate MedPAC's detailed comments on these issues. We have established a new claim line modifier for nonexcepted items and services (''PN'') that can be used to identify and pay nonexcepted items and services billed on an institutional claim. This modifier will be effective for items and services furnished on or after January 1, 2017, and is discussed in more detail in section X.A.3.b.(2) of this final rule with comment period. We have not established a modifier specific to services provided at an off-campus dedicated ED at this time and note that EDs, whether they are on- campus or off-campus, are excepted from section 603. The comment suggesting that we seek legislative authority to impose penalties against hospitals that inappropriately bill for nonexcepted services is outside the scope of the proposed rule.

3. Payment for Items and Services Furnished in Off-Campus PBDs to Which Sections 1833(t)(1)(B)(v) and 1833(t)(21) of the Act Apply (Nonexcepted Items and Services Furnished by Nonexcepted Off-Campus PBDs)

a. Background on Medicare Payment for Services Furnished in an Off-Campus PBD

As previously noted, under existing policies, Medicare generally makes two types of payments for items and services furnished in an off-campus PBD: (1) Payment for the items and services furnished by the off-campus PBD (that is, the facility) where the procedure is performed (for example, surgical supplies, equipment, and nursing services); and (2) payment for the physician's professional services in furnishing the service(s).

The first type of payment is made under the OPPS. Items and services furnished in an off-campus PBD are billed using HCPCS codes and paid under the OPPS according to the APC group to which the HCPCS code of the item or service is assigned. The OPPS includes payment for most hospital outpatient services, except those identified in section I.C. of this final rule. Section 1833(t)(1)(B) of the Act generally outlines what are covered OPD services eligible for payment under the OPPS. Sections 1833(t)(1)(B)(i) through (iii) of the Act provide for Medicare payment under the OPPS for hospital outpatient services designated by the Secretary (which includes partial hospitalization services furnished by community mental health centers (CMHCs)), certain items and services that are furnished to inpatients who have exhausted their Part A benefits or who are otherwise not in a covered Part A stay, and certain implantable items. Section 1833(t)(1)(B)(iv) and new subsection (v) of the Act, as added by section 603 of Public Law 114–74, list those items and services that are not covered OPD services and, therefore, not eligible for Medicare payment under the OPPS.

The second type of payment for items and services furnished in an off-campus PBD is for physicians' services and is made under the MPFS at the MPFS ''facility rate.'' For most MPFS services, Medicare maintains two separate payment rates: One that assumes a

payment is also made to the facility (*i.e.,* the facility rate); and another that assumes the professional furnishes and incurs the full costs associated with furnishing the service (that is, the nonfacility rate). The MPFS facility rate is based on the relative resources involved in furnishing a service when separate Medicare payment is also made to the facility, usually through an institutional payment system, like the OPPS. The MPFS nonfacility rate, which reflects all of the direct and indirect practice expenses involved in furnishing the particular services, is paid in a variety of settings such as physician offices, where Medicare does not make a separate, institutional payment to the facility.

Under Medicare Part B, the beneficiary is responsible for paying cost-sharing, which is generally about 20 percent of both the OPPS hospital payment amount and the MPFS facility allowed amount. Because the sum of the OPPS payment and the MPFS facility payment is greater than the MPFS nonfacility payment for most services, there is generally a greater cost to both the beneficiary and the Medicare program for services furnished in facilities and paid through both an institutional payment system like the OPPS and the MPFS.

The incentives for hospital acquisition of physician practices and the resultant higher payments for the same types of services when those physician practices are converted to PBDs have been the topic of several reports in the popular media and by governmental agencies. For example, MedPAC stated in its March 2014 Report to Congress that Medicare pays more than twice as much for a level II echocardiogram in an outpatient facility ($453) as it does in a freestanding physician office ($189) (based on CY 2014 payment rates). The report determined that the payment difference creates a financial incentive for hospitals to purchase freestanding physicians' offices and convert them to HOPDs without changing their location or patient-mix. (MedPAC March 2014 Report to Congress, Chapter 3.) The Government Accountability Office (GAO) also published a report in response to a Congressional request about hospital vertical consolidation. Vertical consolidation is a transaction (or combination of transactions) through which a hospital acquires a physician practice. In addition, the Office of Inspector General (OIG) published a report in June 2016 entitled ''CMS Is Taking Steps To Improve Oversight of Provider-Based Facilities, But Vulnerabilities Remain'' (OEI–04–12–00380), in which it highlighted concerns about provider-based status in light of the higher costs to both the Medicare program and Medicare beneficiaries relative to when the same services are furnished at a freestanding facility such as a physician's office. These types of reports highlight the types of concerns we believe Congress may have been trying to address with section 603 of Public Law 114–74.

As we stated in the CY 2017 OPPS/ASC proposed rule, as we developed our proposal to implement section 603, we took into consideration the concerns described above, the specific statutory language, and the discretion provided in that statutory language. As described in detail earlier and below, paragraphs (1)(B)(v) and (21) of section 1833(t), as added by section 603 of Public Law 114–74, provide that certain items and services furnished by certain off-campus PBDs (that is, nonexcepted items and services furnished by nonexcepted off-campus PBDs) are not covered OPD services under the OPPS, and that payment shall be made for those applicable items and services under the applicable payment system if the requirements for such payment are otherwise met. However, the statutory amendments do not reference or define a specific applicable payment system under which payment shall be made.

We have established and maintained institutional Medicare payment systems based on specific statutory requirements and on how particular institutions provide particular kinds of services and incur particular kinds of costs. The rules regarding provider and supplier enrollment, conditions of participation, coverage, payment, billing, cost reporting, and coding vary across these institutional payment systems. While some of the requirements are explicitly described in statute and others are captured in CMS regulatory rules or subregulatory guidance, the requirements are unique to the particular type of institution.

Section 1833(t)(21)(C) of the Act provides for the availability of payment under other payment systems for ''nonexcepted items and services.'' Section 1833(t)(21)(C) of the Act provides that payments for these nonexcepted items and services furnished by a nonexcepted off-campus PBD shall be made under the applicable payment system under Medicare Part B (other than under this subsection, that is OPPS), if the requirements for such payment are otherwise met.

While we noted our intention to provide a mechanism for a hospital to bill and receive payment for nonexcepted items and services furnished by an off-campus PBD under an applicable payment system that is not the OPPS in the proposed rule, we further noted that there was no straightforward way to do that before January 1, 2017. As discussed elsewhere in this final rule with comment period, we also proposed the MPFS to be the applicable payment system for nonexcepted items and services furnished and billed by off-campus PBDs. We stated in the proposed rule that, at a minimum, numerous complex systems changes would need to be made to allow an off-campus PBD to bill and be paid as another provider or supplier type. For example, currently, off-campus PBDs bill under the OPPS for their services on an institutional claim, whereas physicians and other suppliers bill under the MPFS on a practitioner claim; and there are numerous systems edits designed to be sure that entities enrolled in Medicare bill for their services only within their own payment systems. The Medicare system that is used to process professional claims (the Multi-Carrier System or ''MCS'') was not designed to accept nor process institutional OPPS claims. Rather, OPPS claims are processed through an entirely separate system referred to as the Fiscal Intermediary Standard System or ''FISS'' system. To permit an off-campus PBD to bill under a different payment system than the OPPS would require significant changes to these complex systems as well as other systems involved in the processing of Medicare Part B claims. In the proposed rule, we did not suggest these operational issues are insurmountable, but we indicated that they are multifaceted and will require time and care to resolve. As such, we did not propose a mechanism for an off-campus PBD to bill and receive payment for nonexcepted items and services furnished on or after January 1, 2017, under an applicable payment system that is not the OPPS.

As described in greater detail below, in order to begin implementing the requirements of section 603 of Public Law 114–74, we proposed to specify that the applicable payment system for purposes of section 1833(t)(21)(C) of the Act is the MPFS. We indicated that while we did not believe there is a way to permit off-campus PBDs to bill for nonexcepted items and services they furnish under the MPFS beginning January 1, 2017, we were actively exploring options that would allow off-campus PBDs to bill for these services under another payment system and be paid at the applicable rate under such system beginning in CY 2018. We solicited public comment on the

changes that might need to be made to enrollment forms, claim forms, the hospital cost report, as well as any other operational changes that might need to be made in order to allow an off-campus PBD to bill for nonexcepted items and services under a payment system other than the OPPS in a way that provides accurate payments under such payment system and minimizes burden on both providers and Medicare beneficiaries. Accordingly, we stated that we intended the policy we proposed to be a temporary, 1-year solution until we could adapt our systems to accommodate payment to off-campus PBDs for the nonexcepted items and services they furnish under the applicable payment system, other than OPPS. The public comments we received on this proposal will be discussed in the following sections that discuss each aspect of the proposed payment policy in detail.

b. Payment for Applicable Items and Services Furnished in Off-Campus PBDs That Are Subject to Sections 1833(t)(1)(B)(v) and (21) of the Act

(1) Definition of ''Applicable Payment System'' for Nonexcepted Items and Services

In the CY 2017 OPPS/ASC proposed rule (81 FR 45688), we describe our interpretation and proposed implementation of section 1833(t)(21)(C) of the Act, as it applies to nonexcepted items and services for CY 2017. Section 1833(t)(21)(C) of the Act requires that payments for nonexcepted items and services be made under the applicable payment system under Medicare Part B (other than under this subsection; that is, the OPPS) if the requirements for such payment are otherwise met. While section 1833(t)(21)(C) of the Act clearly specifies that payment for nonexcepted items and services shall not be made under section 1833(t) (that is, the OPPS), it does not define the term ''applicable payment system.'' In analyzing the term ''applicable payment system,'' we considered whether and how the requirements for payment could be met under alternative payment systems in order to pay for nonexcepted items and services, and considered several other payment systems under which payment is made for similar items and services, such as the ASC payment system, the MPFS, or the CLFS.

As noted above, many off-campus PBDs were initially enrolled in Medicare as freestanding physician practices, and were converted as evidenced by the rapid growth of vertical hospital consolidation and hospital acquisition of physician practices.[5] We believe that this trend has continued. In September 2016, the Physicians Advocacy Institute collaborated with Avalere Health to study recent physician employment trends.[6] Avalere analyzed a database that contains physician and practice location information on hospital/health system ownership and linked data with the CMS National Plan & Provider Enumeration System. The findings showed that hospital ownership of physician practices has increased by 86 percent and the percent of hospital-employed physicians increased by almost 50 percent from July 2012 to July 2015.

Before these physician practices were converted to off-campus PBDs, the services furnished in these locations were paid under the MPFS using an appropriate place of service code that identified the location as a nonfacility setting. This would trigger Medicare payment under the MPFS at the nonfacility rate, which includes payment for the ''practice expense'' resources involved in furnishing services. Many physician practices that were acquired by a hospital became provider-based to the hospital in accordance with the regulations at 42 CFR 413.65. Once a hospital-acquired physician practice became provider-based, the location became an off-campus PBD eligible to bill Medicare under the OPPS for its facility services, while physicians' services furnished in the off-campus PBD were paid at the facility rate under the MPFS. Because many of the services furnished in off-campus PBDs are identical to those furnished in freestanding physician practices, as discussed later in this section, in the CY 2017 OPPS/ASC proposed rule, we proposed to designate the applicable payment system for the payment of the majority of nonexcepted items and services to be the MPFS. Specifically, we proposed that, because we currently do not have a mechanism to pay the off-campus PBD for nonexcepted items and services, the physician or practitioner would bill and be paid for items and services in the off-campus PBD under the MPFS at the nonfacility rate instead of the facility rate.

When items and services similar to those often furnished by off-campus PBDs are furnished outside of a setting with an applicable Medicare institutional payment system, Medicare payment is generally made under the MPFS under one of several different benefit categories of Medicare benefit such as physician's services, diagnostic tests, preventive services, or radiation treatment services. Although section 1833(t)(1)(B)(v) of the Act specifically carves out from the definition of covered OPD services those items and services defined at section 1833(t)(21)(A) of the Act furnished by certain off-campus PBDs defined by section 1833(t)(21)(B) of the Act, the amendments to section 1833(t) of the Act do not specify that the off-campus outpatient departments of a provider are no longer considered a PBD part of the hospital. We stated in the proposed rule that this nuance made it difficult for us to determine how to provide payment for the hospital-based portion of the services under MPFS because, as previously noted, Medicare payment processing systems were not designed to allow these off-campus PBDs to bill for their hospital services under a payment system other than OPPS.

Currently, a hospital (including a PBD) does not meet the requirements to bill under another payment system; that is, a hospital and its departments are enrolled as such in the Provider Enrollment, Chain and Ownership System (PECOS) and may only submit institutional claims for payment of covered OPD services under the hospital OPPS under the CMS Certification Number of the hospital. As explained above, there are several other Medicare payment systems for other types of providers and suppliers. Many of these are designed for particular kinds of institutional settings, are specifically authorized by law, and have their own regulations, payment methodologies, rates, enrollment and billing requirements, and in some cases, cost reporting requirements. While the services furnished in a PBD may be the same or similar to those that are furnished in other sites of service, for Medicare purposes, an off-campus PBD is considered to be part of the hospital that meets the requirements for payment under the OPPS for covered OPD services. There currently is no mechanism for it to be paid under a different payment system. In order to allow an off-campus PBD to bill under the MPFS for nonexcepted items and services, we indicated in the proposed

[5] The number of vertically consolidated hospitals and physicians increased from 2007 through 2013. Specifically, the number of vertically consolidated hospitals increased from about 1,400 to 1,700, while the number of vertically consolidated physicians nearly doubled from about 96,000 to 182,000. This growth occurred across all regions and hospital sizes, but was more rapid in recent years. (Government Accountability Office; GAO 16–189, December 2015; *http://www.gao.gov/products/GAO–16–189*).

[6] Avalere Health Study. Physician Practice Acquistion Study: National and Regional Employment Changes. Prepared for Physicians Advocacy Institute. September 2016.

rule that we believe it would be necessary to establish a new provider/supplier type (for nonexcepted off-campus PBDs) that could bill and be paid under the MPFS for nonexcepted items and services using the professional claim. At the time of the proposed rule, we did not propose new mechanisms to allow an off-campus PBD to bill and receive payment from Medicare for these nonexcepted items and services as currently enrolled as a hospital based department. However, as described in detail later in this section, we solicited comments on changes that would need to be made in order to allow an off-campus PBD to bill for nonexcepted items services it furnishes under a payment system other than the OPPS.

Accordingly, we proposed the MPFS to be the applicable payment system for nonexcepted items and services that, but for section 603, would have otherwise been paid under the OPPS; and that payment would be made for applicable nonexcepted items and services to the physician or practitioner under the MPFS at the nonfacility rate because no separate facility payment would be made to the hospital. We also noted that, for CY 2017, no mechanism would allow an off-campus PBD to bill under the MPFS for nonexcepted items and services for which coding and billing rules would otherwise allow payment (such as the technical component of diagnostic tests or radiation treatment delivery services). We sought comment on the kinds of changes that would need to be made in order to allow off-campus PBDs to bill for these kinds of services in the future. We noted that the hospital may continue to bill for services that are not paid under the OPPS, such as laboratory services.

Comment: Many commenters disagreed that the MPFS should be the applicable payment system and suggested that the ASC payment system, a combination of the ASC payment system and the MPFS, or an entirely new Part B payment system should be the applicable payment system for nonexcepted items and services. Many of these commenters believed that the applicable payment system could be an entirely new payment system that is an amalgamation of current Part B payment systems (the ASC payment system, the MPFS, and the OPPS) that selects whichever current system best applies for the applicable service. Commenters noted that, for many surgical services, the ASC payment system would better reflect facility costs than the MPFS. MedPAC discouraged CMS from creating a new provider/supplier type. MedPAC and other commenters agreed with the proposal to establish the MPFS as the applicable payment system for nonexcepted services. Other commenters suggested that the MPFS is an appropriate applicable payment system because it reduces cost of services for beneficiaries and creates more equitable payments between off-campus PBDs and nonprovider-based clinics that bill under the MPFS instead of the OPPS.

Response: We thank commenters for their feedback. After considering the public comments on the proposed rule, we continue to believe that the MPFS is the appropriate applicable payment system for nonexcepted items and services. As previously mentioned, many of the services furnished in off-campus PBDs are also furnished in the physician office setting. We reiterate that many off-campus PBDs were initially enrolled in Medicare as freestanding physician practices, and were converted as evidenced by the rapid growth of vertical hospital consolidation and hospital acquisition of physician practices. In addition, the findings of the recent Avalere Health study mentioned earlier showed that hospital ownership of physician practices has increased by 86 percent and the percent of hospital-employed physicians increased by almost 50 percent from July 2012 to July 2015. As mentioned previously in this section, MedPAC commended CMS for the effort to rigorously implement section 603 and stated that, if finalized, the proposals would have the potential to reduce the financial burden on taxpayers and beneficiaries, although there would likely be substantial administrative burdens on the agency and its contractors and providers. Furthermore, preliminary data billed by off-campus departments with the ''PO'' modifier indicate that most items and services furnished in those departments are the types of services that are also commonly furnished in the physician office setting. The most commonly billed item or service was for an evaluation and management visit, followed by diagnostic and imaging services, drugs or biologicals and drug administration. We believe that adopting the MPFS as the applicable payment system is the most appropriate system for these nonexcepted off-campus PBDs items and services and is appropriate to implement section 603. However, we are modifying our proposal regarding payment for nonexcepted items and services, as discussed in section X.A.3.a.(2) of this final rule with comment period.

(2) Definition of Applicable Items and Services and Section 603 Amendment to Section 1833(t)(1)(B) of the Act and Payment for Nonexcepted Items and Services for CY 2017

(a) Background

Section 1833(t)(21)(A) of the Act defines the term ''applicable items and services'' for purposes of paragraph (1)(B)(v) and paragraph (21) of section 1833(t) to mean items and services (other than those furnished by a dedicated emergency department). Paragraph (1)(B)(v) of such section then specifically carves out from the definition of covered OPD services, that is, those applicable items and services that are furnished on or after January 1, 2017, by an off-campus PBD, as defined in paragraph (21)(B) of such section. Thus, such applicable items and services are not eligible for payment under the OPPS because they are not covered OPD services. Under our proposals in the CY 2017 OPPS/ASC proposed rule, we explained that this would mean that all items and services furnished by a nonexcepted off-campus PBD and those nonexcepted items and services furnished by an excepted off-campus PBD (collectively references as nonexcepted items and services) are applicable items and services under the statute. Therefore, we stated in the proposed rule that instead of being eligible for payment under the OPPS as covered OPD services, paragraph (21)(C) of section 1833(t) of the Act requires that, for nonexcepted items and services, payment shall be made under the applicable payment system, other than OPPS, if the requirements for such payment are otherwise met. In other words, under our proposed rule, the payment requirement under paragraph (21)(C) of section 1833(t) pf the Act applies to items and services furnished by nonexcepted off-campus PBDs and for expanded clinical families of services furnished by excepted off-campus PBDs (nonexcepted items and services). However, we note here that the proposed payment policy will not apply to expanded items and services because we are not finalizing our proposal with respect to expanded clinical families of services furnished by excepted off-campus PBDs.

(b) Payment Policy for CY 2017

In accordance with sections 1833(t)(1)(B)(v) and 1833(t)(21)(C) of the Act, we specified in the CY 2017 OPPS/ASC proposed rule that payment for nonexcepted items and services as defined in section X.A.2. of the proposed rule will no longer be made under the OPPS, effective January 1,

2017. Instead, we proposed that, for items and services for which payment can be made to a billing physician or practitioner under the MPFS, the physician or practitioner furnishing such services in the off-campus PBD would bill under the MPFS at the nonfacility rate. As discussed in the proposed rule, we do not believe that, under current systems, an off-campus PBD could be paid for its facility services under the MPFS, but we noted that we would actively explore options that would allow for this beginning in CY 2018. Alternatively, we noted that an off-campus PBD continues to have the option to enroll as a freestanding facility or supplier in order to bill for the nonexcepted items and services it furnishes (which is different from billing only for reassigned physicians' services) under the MPFS.

At the time of development of the proposed rule, we did not propose a change in payment policy under the MPFS regarding these nonexcepted items and services. However, in the CY 2017 MPFS proposed rule, we proposed to amend our regulations and subregulatory guidance to specify that physicians and nonphysician practitioners furnishing professional services would be paid the MPFS nonfacility rate when billing for such services because there will be no accompanying Medicare facility payment for nonexcepted items and services furnished in that setting. (We refer readers to the CY 2017 MPFS final rule with comment period for a discussion of the final policies for CY 2017.) The MPFS nonfacility rate is calculated based on the full costs of furnishing a service, including, but not limited to, space, overhead, equipment, and supplies. Under the MPFS, there are many services that include both a professional component and a technical component. Similarly, there are some services that are defined as either a ''professional-only'' or ''technical-only'' service. The professional component is based on the relative resource costs of the physician's work involved in furnishing the service and is generally paid at a single rate under the MPFS, regardless of where the service is performed. The technical component portion of the service is based on the relative resource costs of the nonphysician clinical staff who perform the test, medical equipment, medical supplies, and overhead expenses. When the service is furnished in a setting where Medicare makes a separate payment to the facility under an institutional payment system, the technical component is not paid under the MPFS because the practitioner/supplier did not incur the cost of furnishing the technical component. Rather, it is paid to the facility under the applicable institutional payment system.

As we noted in the proposed rule, if an off-campus PBD that furnishes nonexcepted items and services wishes to bill Medicare for those services, it could choose to meet the requirements to bill and receive payment under a payment system other than the OPPS by enrolling the off-campus PBD as another provider/supplier type. For example, an off-campus PBD could enroll in Medicare as an appropriate alternative provider or supplier type (such as an ASC or physician group practice). The enrolled provider/supplier would then be able to bill and be paid under the payment system for that type of Medicare enrolled entity. For example, if an off-campus PBD were to enroll as a group practice, it would bill on the professional claim and be paid under the MPFS at the nonfacility rate in accordance with laws and regulations that apply under the MPFS.

We recognize that our proposal in the CY 2017 OPPS/ASC proposed rule to pay under the MPFS for all nonexcepted items and services furnished to beneficiaries could result in hospitals establishing business arrangements with the physicians or nonphysician practitioners who bill under the MPFS. In the proposed rule, we solicited public comments regarding the impact of other billing and claims submission rules, the fraud and abuse laws, and other statutory and regulatory provisions on our proposals. Specifically, we solicited public comments regarding the limitations of section 1815(c) of the Act and 42 CFR 424.73 (the reassignment rules); the limitations of section 1842(n) of the Act and 42 CFR 414.50 (the anti-markup prohibition); the application of section 1877 of the Act and 42 CFR 411.350 through 411.389 (the physician self-referral provisions) to any compensation arrangements that may arise; and the application of section 1128B(b) of the Act (the Federal anti-kickback statute) to arrangements between hospitals and the physicians and other nonphysician practitioners who refer to them. We stated that we will consider these laws and regulations as well, and look forward to reviewing public comments on the anticipated impact of these provisions on our proposed policy and any possible future proposals.

In the proposed rule, we noted that there are some services that off-campus departments may furnish that are not billed or paid under the OPPS. For example, although laboratory tests are generally packaged under the OPPS, there are some circumstances in which hospitals are permitted to bill for certain laboratory tests and receive separate payment under the CLFS. These circumstances include:

- Outpatient laboratory tests are the only services provided. If the hospital provides outpatient laboratory tests only and no other hospital outpatient services are reported on the same claim.
- Unrelated outpatient laboratory tests. If the hospital provides an outpatient laboratory test on the same claim as other hospital outpatient services that is clinically unrelated to the other hospital outpatient services (that is, the laboratory test is ordered by a different practitioner than the practitioner who ordered the other hospital outpatient services and for a different diagnosis than the other hospital outpatient services). We note that this exception was proposed for deletion for CY 2017, and this deletion is being finalized in this final rule with comment period. We refer readers to section II.A.3.b.(2) of this final rule with comment period for a discussion of this policy.
- Molecular pathology laboratory tests and advanced diagnostic laboratory tests (ADLTs) (section II.A.3.b.(3) of this final rule with comment period).
- Laboratory tests that are preventive services.

Under our proposal, if a laboratory test furnished by a nonexcepted off-campus PBD is eligible for separate payment under the CLFS, the hospital may continue to bill for it and receive payment under the CLFS. In addition, a bill may be submitted under the MPFS by the practitioner (or hospital for physicians who have reassigned their benefit), provided that the practitioner meets all the MPFS requirements. Consistent with cost reporting guidance and the Medicare Provider Reimbursement Manual, Part 1, Chapter 23, Section 2302.8, hospitals should report these laboratory services on a reimbursable cost center on the hospital cost report.

In addition, with respect to partial hospitalization programs (PHP) (intensive outpatient psychiatric day treatment programs furnished to patients as an alternative to inpatient psychiatric hospitalization or as a stepdown to shorten an inpatient stay and transition a patient to a less intensive level of care), section 1861(ff)(3)(A) of the Act specifies that a PHP is a program furnished by a hospital, to its outpatients, or by a CMHC. Because CMHCs also furnish PHP services and are ineligible to be

provider-based to a hospital, we noted in our proposal that a nonexcepted off-campus PBD would be eligible for PHP payment if the entity enrolls and bills as a CMHC. We noted that a hospital may choose to enroll a nonexcepted off-campus PBD as a CMHC, provided it meets all Medicare requirements and conditions of participation. While a hospital could still choose this option, we are modifying this proposal in order to provide for payment for PHP services furnished by a nonexcepted off-campus PBD under the MPFS as explained later in this interim final rule with comment period.

Comment: Many commenters opposed the payment proposal for nonexcepted items and services because they believed it would make no payment to hospitals for the nonexcepted items and services they furnish to Medicare beneficiaries. These commenters specifically noted that, under the proposal, no payment would be made to the nonexcepted off-campus PBD of the hospital for the nursing, laboratory, imaging, chemotherapy, surgical services, and many other reasonable and necessary services they provide to Medicare beneficiaries. The commenters believed that such a payment policy is unjustified. In addition, these commenters believed that CMS has a mechanism at its disposal that it could use to pay hospitals directly for nonexcepted services under the MPFS and urged CMS to work to be able to use this, or another, mechanism to provide reasonable payment to hospitals. The commenters stated that CMS must delay implementation of its site-neutral policies until it does so. In addition, the commenters objected to the notion that an off-campus PBD would have to enroll as a different provider/supplier type in order to bill for its services.

Many commenters raised concerns regarding the impact of the fraud and abuse laws on hospitals and physicians in the event that CMS finalizes the proposals. Commenters identified perceived legal and operational impediments associated with the payment policies as they affect nonexcepted off-campus OPDs. Specifically, the commenters were concerned that the proposed payment policies, if finalized, would require hospitals to enter into financial relationships with referring physicians that cannot satisfy the requirements of an applicable exception to the physician self-referral law, resulting in a violation of that law's referral and claims submission prohibitions and subjecting hospitals to False Claims Act liability. Some commenters expressed doubt that, even if hospitals and physicians could structure their business arrangements to avoid noncompliance with the physician self-referral law and Federal anti-kickback statute, they could do so by January 1, 2017 when the payment policies would go into effect. As a result, according to the commenters, beneficiary access could be limited if off-campus PBDs were forced to close or remain ''frozen'' as of November 2, 2015 due to their inability to comply with the physician self-referral law or Federal anti-kickback statute. A few commenters believed that the impact and effect of the proposals would be particularly burdensome in rural areas where, often, the only available services are provided by hospitals. Other commenters expressed concerns about the impact of certain State laws, such as fee-splitting and corporate practice of medicine prohibitions, on the ability of hospitals and physicians to implement changes in their business and employment arrangements in order to comply with the proposed payment policies if finalized. One commenter expressed concerns about potential False Claims Act liability if a physician were to submit a claim with the place of service noted as ''non-facility'' (in accordance with the CMS billing and claims submission rules under the proposed payment policy) when the service was, in fact, furnished in an nonexcepted off-campus PBD.

Response: We appreciate the commenters' consideration of our proposals regarding the impact of the Federal fraud and abuse laws on hospitals and physicians should we finalize our proposals. We reiterate our belief that our proposal to make payment under the MPFS at the nonfacility rate for CY 2017 only would result in site neutral payment between physician offices and hospitals for furnished nonexcepted items and services, and we disagree that our proposal was ''unjustified.'' However, we agree with the commenters that our proposed payment policies could have required hospitals and physicians to establish financial relationships that implicate the physician self-referral law and Federal anti-kickback statute for CY 2017 only. Further, we recognize the difficulties that would be faced by hospitals and physicians in establishing financial relationships that comply with the physician self-referral law and other fraud and abuse laws (mentioned earlier) under our proposed payment methodology for nonexcepted items and services. Therefore, we are not finalizing our proposal. Instead, we are issuing an interim final rule with comment period under section X.B. of this document (and in conjunction with this final rule with comment period) to establish rates under the MPFS that will be paid for nonexcepted items and services furnished by off-campus PBDs, effective for services furnished on or after January 1, 2017. Because we are providing for payment directly to hospitals that furnish services to beneficiaries in nonexcepted off-campus PBDs, we believe that the commenters' concerns regarding the application of the Federal fraud and abuse laws are moot. Specifically, we refer readers to our commentary in the CY 2016 MPFS final rule with comment period (80 FR 71321) where we discuss the application of the physician self-referral law in ''split billing'' arrangements under which a hospital bills the Medicare program under the OPPS for the resources and services that it furnishes to a beneficiary in a PBD (that is, the facility fee) and the referring physician bills the Medicare program under the MPFS for only the professional services that he or she furnishes to the beneficiary in a PBD.

Details about the specific payment that will be made for these services are included in the interim final rule with comment period under section X.B. of this document.

Comment: Many commenters who did not support the proposed payment policy and who suggested that CMS delay implementation of the section 603 provisions requested that CMS convene a stakeholder workgroup or gather stakeholder input and expert advice on an alternative payment policy. Some commenters suggested that CMS pay providers the technical component of services from the MPFS. Many hospital commenters believed that the MPFS nonfacility rate is insufficient to pay for services provided at hospital facilities. Some commenters objected to the idea of nonexcepted off-campus PBDs having to enroll as another provider/supplier type to receive Medicare payment, especially if the CY 2017 policy is a transition to a more permanent policy in CY 2018. Some commenters suggested paying hospitals through the institutional claim at MPFS rates. Other commenters suggested adopting the ASC payment system as the applicable payment system instead of the MPFS.

Some commenters recommended that CMS adopt an alternative payment policy that would allow the off-campus PBD to bill under the OPPS using a modifier that would trigger payment based on the practice expense for the service under the MPFS. Commenters believed that this alternative would allow facility payment for services provided until CMS develops a new

payment system or billing mechanism. Other commenters noted that hospital-billed therapy and laboratory services are currently paid under other fee schedules and stated that Medicare already has the ability to pay for nonexcepted items and services billed on the institutional claim.

Response: We thank commenters for their feedback. We do not believe a delay in implementation is necessary. We also note that delaying the provision for a year would not only result in not meeting the statutory deadline for implementing section 603, but also a year's loss of savings to the Medicare Part B program, which the CMS Office of the Actuary estimates to be $50 million for CY 2017 in this final rule.

We are issuing an interim final rule with comment period under section X.B. of this document to establish new MPFS rates for nonexcepted items and services furnished in an off-campus PBD. Providers will be able to bill for nonexcepted items and services on the institutional claim utilizing new claim line modifier ''PN'' to indicate that an item or service is a nonexcepted item or service. We consider these rates to be site-of-service specific rates for the technical component of MPFS services.

As described in the interim final rule with comment period, for CY 2017, the newly established MPFS rate for nonexcepted items and services will be based upon OPPS rates. That is, several payment policies that apply under the OPPS, including C–APCs and OPPS packaging logic, are being adopted under the newly established site-of-service MPFS rates. Because we do not currently have site-of-service specific data from nonexcepted off-campus PBDs on which to base these rates for CY 2017, we conducted an analysis of off-campus PBD payment data from 2016 and compared these payment data to MPFS rates. As discussed in detail in the interim final rule with comment period under section X.B. of this document, we are using a rate that is 50 percent of the OPPS rate for each nonexcepted item or service, with some exceptions, as the interim technical component of MPFS services for items or services provided at a nonexcepted PBD. We are seeking public comments on the new payment mechanisms and rates detailed in the interim final rule with comment period and, based on these comments, will make adjustments as necessary to the payment mechanisms and rates through rulemaking that could be effective in CY 2017.

We agree with the commenters who recommended that we pay for nonexcepted items and services using the technical component of the facility MPFS rate. Specifically, we are establishing, under the interim final rule with comment period, policies under the MPFS that will allow nonexcepted off-campus PBDs to be paid the site-specific technical component for services beginning in CY 2017. As discussed in the interim final rule with comment period, the initial payment rates will be made based on the general relationship between OPPS and MPFS rates for comparable services. Therefore, we note that payments under our interim final rule policy may not be exactly equal to payment under the technical component of MPFS for any specific item or service. Over time, we believe this billing and payment mechanism will provide information that will help us to refine and improve the accuracy of payment for these services under the MPFS. We will continue to pay for therapy and preventive services, as well as separately payable drugs, at the MPFS rate because nonexcepted off-campus PBDs would bill under the MPFS.

The new rates under the MPFS will incorporate several important exceptions to the general payment methodologies. These exceptions are described in the interim final rule with comment period. Briefly, because payment for Part B drugs is prescribed under section 1842(o) and 1847A of the Act and separately payable Part B drugs are paid at the same rate under the OPPS and the MPFS, which is a longstanding policy determination rather than a statutory requirement, we are not reducing the payment rate for separately payable Part B drugs. Similarly, we will use the existing MPFS rate for items and services that are currently paid the MPFS rate under the OPPS, including the majority of therapy and preventive services.

We believe that these payment policies address the majority of issues and concerns raised by commenters. Accordingly, we do not believe it is necessary to establish a formal stakeholder workgroup. However, we continue to be interested in feedback and comments from all interested parties on the payment policies we have set forth in the interim final rule with comment period, especially comments related to stakeholders' preference for the approach being adopted in the interim final rule with comment period as well as potential other approaches, or ratesetting methodologies based on readily available data.

Comment: Many commenters noted that, under the proposed rule, there would be services for which no payment would be available because there is no payment rate for these services under the MPFS or because these services are furnished ''incident to'' physician services. Commenters noted that these services included drug administration, Part B drugs, clinical laboratory services, observation services, partial hospitalization services, and services that do not have nonfacility RVUs under the MPFS. Commenters expressed concern that the proposed payment policy would result in impracticable payment options for these services would lead to access issues for beneficiaries.

Commenters specifically noted that outpatient services furnished ''incident-to'' physicians' services are only priced in the nonfacility setting under the MPFS. The commenters added that payment for these services is provided under the OPPS, not the MPFS, when these services are provided in an outpatient setting. The commenters suggested that payment to the practitioner for ''incident to'' services furnished in a nonexcepted off-campus PBD would run counter to CMS' ''incident to'' regulations at 42 CFR 410.26 (b)(1), which state that services and supplies must be furnished in a noninstitutional setting to noninstitutional patients. The commenters suggested that these regulations indicated that there would be no payment for ''incident-to'' services provided by non-excepted PBDs under the proposed policy, as payment could not be made to the PBD nor the practitioner for these services.

Response: We thank the commenters for their feedback. As discussed in the interim final rule with comment period, we are implementing a policy that will allow hospitals to bill for nonexcepted items and services, including many of the types of services that commenters mentioned, under newly established rates under the MPFS that are being adopted in the interim final rule with comment period.

Comment: Several commenters disagreed with the payment proposal as it relates to PHP services. These commenters stated that the proposal would provide no payment for PHP services which would disrupt the continuity of care that is provided by hospital-based PHPs and restrict access to PHP services. Several commenters urged CMS to apply the authority under section 1833(t)(2)(E) of the Act, thereby allowing nonexcepted off-campus PBD PHPs to continue being paid under OPPS. Many commenters believed that Congress did not intend for PHP to no longer be paid when furnished at nonexcepted off-campus PBDs. In addition, the commenters noted that

application of the MPFS to nonexcepted off-campus PBDs would require hospitals to hire additional physicians in order to meet the MPFS supervision requirements and completely restructure residency programs so that attending physicians meet the requirements to provide ''personally performed services'' to obtain payment under the MPFS. The commenters believed this would radically alter the residency training programs and impose extraordinary new costs to hire attending supervisors to attend to patients with trainees.

Several commenters disagreed with the notion of enrolling as a CMHC in order to receive payment, stating that hospital-based PHPs and CMHCs are inherently different in structure, operation, and reimbursement, and noting that the conditions of participation for hospital departments and CMHCs are different.

Response: Sections 1833(t)(1)(B)(v) and (t)(21) do not exempt PHP services from application of section 603. In response to the commenters who requested that we apply section 1833(t)(2)(E) of the Act to exclude PHP services from application under section 603, while section 1833(t)(2)(E) of the Act does provide fairly broad authority to make ''other adjustments as determined to be necessary to ensure equitable payments,'' we do not believe this authority extends to exempting a class of hospital off-campus PBDs from application of a separate statutory provision specifically prohibiting payment under the OPPS itself. In other words, for these PHP services provided by hospital-based PHPs to which sections 1833(t)(1)(B)(v) and (t)(21) of the Act apply, there would be no OPPS payment to which a payment adjustment could be made.

In addition, we are adopting as final our proposal that the applicable payment system is the MPFS. As noted in the interim final rule with comment period in section X.B. of this document, PHP services are payable to hospitals only under the OPPS. As we have for certain other nonexcepted items and services, we are identifying the MPFS as the applicable payment system for PHP services furnished by a nonexcepted off-campus PBD, and we are setting the MPFS payment rate for these PHP services as the rate that would be paid to a CMHC. Therefore, hospital-based PHPs to which sections 1833(t)(1)(B)(v) and (t)(21) of the Act apply will continue to be able to bill and be paid for the furnishing of those services. Alternatively, as we proposed, these PBDs may choose to enroll as a CMHC in order to continue to provide PHP services and receive Medicare payment. We acknowledge that CMHCs and hospital-based PHPs have differences in structure, operation, and payment, and that there can be advantages to providing PHP care through a hospital-based PHP. In the CY 2017 OPPS/ASC proposed rule (81 FR 45681), we noted that when a beneficiary receives services in an off-campus department of a hospital, the Medicare payment for those services is generally higher than when those same services are provided in a physician's office. Similarly, when partial hospitalization services are provided in a hospital-based PHP, Medicare pays more than when those same services are provided by a CMHC. CMHCs are freestanding providers that are not part of a hospital, and that have lower cost structures than hospital-based PHPs. This is similar to the differences between freestanding entities paid under the MPFS that furnish other services also provided by hospital-based entities. We believe that paying for nonexcepted hospital-based partial hospitalization services at the lower CMHC per diem rate is in alignment with section 603 of Public Law 114–74, while also preserving access to the PHP benefit. As we noted in section VIII.B.1 of this final rule with comment period, Medicare beneficiaries with mental health needs can access outpatient care in a variety of ways, including individual mental health services that are reasonable and medically necessary. Therefore, we believe that beneficiaries will still have access to mental health care.

In regards to the comment that the application of the MPFS to nonexcepted off-campus PBDs would require hospitals to hire additional physicians in order to meet the MPFS supervision requirements, the requirements for supervision are the same whether the PHP is on-campus or off-campus. The amendments made by section 603 of Public Law 114–74 did not change the status of these PBDs; only the status of and payment mechanisms for the services they furnished changed.

Comment: Many commenters stated that it was important that hospitals be able to bill for the facility portion of payment on the institutional claim. These commenters noted that hospital claim systems are designed to utilize the institutional claim and suggested that if CMS proposed that hospitals utilize the practitioner claim for these services, it would represent a significant burden for providers. Some commenters noted that the statute that amended section 1833(t)(21)(D) of the Act to allow the Secretary to collect information from hospitals to implement this provision included the parenthetical phrase ''(which may include reporting of information on a hospital claim using a code or modifier)''; these commenters suggested that this parenthetical phrase indicates that Congress envisioned that nonexcepted items and services would be billed on a hospital claim. Commenters inquired whether and how nonexcepted items and services would be included in the 3-day payment window if the nonexcepted items and services were billed on a practitioner claim. Commenters suggested that supplemental payers may have difficulty processing claims that have hospital outpatient services billed on both an institutional claim and a practitioner claim. Commenters also suggested there may be implications for the Health Insurance Portability and Accountability Act (HIPAA) transaction standards if institutional services are billed on a professional claim. Some commenters noted that if nonexcepted items and services are not billed on an institutional claim, these services would not appear on Provider Statistical and Reimbursement reports. MedPAC and other commenters suggested that nonexcepted items and services should be included on hospital cost reports because CMS has indicated that it will view nonexcepted off-campus PBDs as part of the hospital.

Response: We thank commenters for their feedback. We do not interpret section 1833(t)(21)(D) of the Act to mean that the statute requires that nonexcepted items and services be billed on an institutional claim. Rather, it explicitly provides the Secretary the authority to collect data from hospitals for purposes of implementing section 603 through means such as a modifier on the hospital claim. As discussed in the interim final rule with comment period, we are implementing a policy that will allow hospitals to identify and bill for nonexcepted items and services on the institutional claim with HCPCS modifier ''PN''. Hospital outpatient services identified with the modifier will continue to be reflected on Provider Statistical and Reimbursement reports. We believe implementation of this policy will obviate the commenters' concerns with the possibility that facility costs for nonexcepted items and services would not be billed and reflected as reimbursable costs on the Medicare hospital cost report.

Comment: Several commenters requested that specific services paid under the OPPS be exempt from application of this provision, either because the service is most commonly performed in the outpatient setting or because of the importance of the service.

Response: We thank the commenters for their feedback. We do not believe the statute allows us to exempt items and services from application of this provision unless the items or services are specifically mentioned in section 1833(t)(21) of the Act as exempt from application of this provision, such as those furnished in a dedicated ED. We reiterate that we are adopting MPFS rates for nonexcepted items and services in the interim final rule with comment period in section X.B. of this document. We refer readers to the interim final rule with comment period for details on payment for various categories of items and services.

Comment: Many commenters requested that CMS clarify how payment for laboratory services and Part B drugs would be made for nonexcepted items and services.

Response: As discussed in the interim final rule with comment period in section X.B. of this document, laboratory services that are separately paid under the CLFS under standard OPPS policy will be separately paid under the CLFS. Laboratory services that are packaged under standard OPPS policy will continue to be packaged under the newly established MPFS rate for nonexcepted items and services. Part B drugs that are separately payable under the OPPS will still be paid separately under the newly established policy using the Part B drug pricing methodologies under sections 1842(o) and 1847A of the Act. That is, in accordance with a longstanding policy rather than a statutory requirement, we generally pay separately payable Part B drugs at ASP + 6 percent. Drugs that are packaged into OPPS services are not separately paid under the current OPPS rates and will not be separately paid under the newly established MPFS rates.

Comment: Many commenters noted that the proposed rule did not specifically address whether nonexcepted off-campus PBDs would be eligible as ''child sites'' under HRSA's 340B drug program. These commenters noted that, under the proposal, most nonexcepted items and services would not be billed on the institutional claim and therefore would not automatically be recorded as a reimbursable cost center on the cost report, which under HRSA's methodology would make them eligible for the 340B drug program. Most of these commenters indicate that nothing in section 603 mentions the 340B drug program and that, as a result, the 340B drug program should not be affected by the implementation of section 603. These commenters suggested that CMS specifically indicate in the final rule that we do not intend for implementation of section 603 to affect the 340B drug program. Other commenters suggested that the intention of the statute was to remove incentives to provide care in the outpatient setting that could be provided in a physician's office, and thus that CMS indicate that nonexcepted off-campus PBDs should not be eligible for the 340B drug program. Some commenters suggested that nonexcepted off-campus PBDs should be considered PBDs of hospitals, but that their costs should not show up as payable on a cost report, and that, as such, they should not be eligible for the 340B drug program.

Response: We note that, under our finalized policy, services provided at nonexcepted off-campus PBDs will continue to be reported on the hospital cost report. We refer interested parties to HRSA for questions on when drugs qualify for discounts under the 340B program. To the extent that our final payment policies necessitate a change for hospital cost reporting, we will issue guidance, as applicable, in subregulatory guidance.

(3) Comment Solicitation on Allowing Direct Billing and Payment for Nonexcepted Items and Services in CY 2018

In the CY 2017 OPPS/ASC proposed rule (81 FR 45690), for nonexcepted items and services furnished in an off-campus PBD, we solicited public comments on developing a new billing and payment policy proposal for CY 2018. Specifically, we solicited comments regarding whether an off-campus PBD should be allowed to bill nonexcepted items and services on the professional (not institutional) claim and receive payment under the MPFS, provided the off-campus PBD meets all the applicable MPFS requirements. Under this scenario, we envisioned that the PBD would still be considered to be part of the hospital and that the hospital as a whole would continue to be required to meet all applicable conditions of participation and regulations governing its provider-based status, but, for payment purposes, the off-campus PBD would be considered a nonhospital setting that is similar to a freestanding physician office or clinic and that is paid the same rate that is paid to freestanding offices or clinics under the MPFS. We noted that there are other nonpractitioner entities that bill these kinds of services under the MPFS (for example, Independent Diagnostic Testing Facilities, Radiation Treatment Centers), and we sought public comments on whether or not there are administrative impediments for hospitals billing for such services. We sought public comments on whether making the necessary administrative changes that would allow the hospital to bill for these kinds of services under the MPFS would provide any practical benefit to the hospitals relative to the current requirements for billing under the MPFS. We also solicited public comments on other implications or considerations for allowing the hospital to do this, such as how the cost associated with furnishing such services might be reflected on the hospital cost report.

Comment: MedPAC recommended that CMS not create a new provider/supplier type for nonexcepted off-campus PBDs because this would add unnecessary complexity. MedPAC suggested that, instead, CMS continue its proposed 2017 policy of paying the practitioner under the MPFS at the nonfacility rate. Many commenters noted the difficulty providers would have in implementing the proposed temporary payment policy for CY 2017, then adapting their systems to receive facility payments for nonexcepted items and services under the practitioner claim process in CY 2018. Other commenters suggested that CMS include a proposed CY 2018 payment policy for nonexcepted items and services in the CY 2017 final rule, in order for providers to have a better idea of what the CY 2018 payment policy would require while providers are adapting their systems for the CY 2017 payment policy.

Response: We thank commenters for their feedback. As discussed in the interim final rule with comment period in section X.B. of this document, we are implementing a policy that will allow providers to bill for nonexcepted items and services on the institutional claim. We appreciate commenters' feedback about billing for facility costs for nonexcepted items and services on the professional claim. We intend to continue open communication with stakeholders on an ongoing basis and will take these comments into consideration for future rulemaking as we develop and refine the payment mechanisms under the newly established MPFS policies.

4. Beneficiary Cost-Sharing

Under our proposed policy in the CY 2017 OPPS/ASC proposed rule, payment for most nonexcepted items and services under section 1833(t)(21)(C) of the Act would be made under the MPFS to the physician at the nonfacility rate. As a result, the beneficiary cost-sharing for such nonexcepted items and services would

generally be equal to the beneficiary cost-sharing if the service was provided at a freestanding facility.

Comment: Some commenters suggested that if, in CY 2018, CMS provided a way for providers to bill for nonexcepted items and services utilizing a practitioner claim, this may prove to be confusing to beneficiaries, who could then receive up to three bills for copayments: One from the provider for excepted services billed on the institutional claim; one from the provider for nonexcepted services billed on the practitioner claim; and one from the practitioner billed on the practitioner claim.

Response: We thank commenters for their feedback. As discussed earlier, we are implementing a policy that will allow providers to bill for nonexcepted items and services on the institutional claim, and we believe implementation of this policy will obviate the concerns the commenters noted above. We note that, under the interim final rule with comment period in section X.B. of this document, beneficiary cost-sharing will generally be equal to that which applies under the MPFS.

5. Summary of Finalized Policies

Under our finalized policy, all excepted off-campus PBDs will be permitted to continue to bill for the furnishing of excepted items and services under the OPPS. These excepted items and services include those furnished in an ED, in an on-campus PBD, or within the distance from a remote location of a hospital facility. In addition, excepted items and services include those furnished by an off-campus PBD that was billing Medicare for covered OPD services furnished prior to November 2, 2015, the date of enactment of Public Law 114–74, provided that the excepted off-campus PBD does not impermissibly relocate from the same physical address of the PBD on the provider enrollment form as of November 2, 2015 (with limited exceptions for extraordinary circumstances), or experience an impermissible change of ownership (CHOW). That is, an excepted off-campus PBD will lose its status as excepted (that is, the off-campus PBD will be considered a new nonexcepted off-campus PBD) if the excepted off-campus PBD changes location or changes ownership. An off-campus PBD that experiences a CHOW will continue its excepted status only if the new hospital owners acquire the main hospital and adopt the existing Medicare provider agreement.

Items and services furnished in a new nonexcepted off-campus PBD (that is, one that was not billing under the OPPS for covered OPD services furnished prior to November 2, 2015) will be nonexcepted items and services, no longer eligible for payment under the OPPS.

Beginning in CY 2017, the MPFS will be the ''applicable payment system'' for the majority of nonexcepted items and services furnished in an off-campus PBD. Physicians furnishing services in these nonexcepted departments will be paid based on the professional claim and will be paid at the facility rate for services for which they are permitted to bill, consistent with the established policy of applying the MPFS facility rate to the professional when Medicare makes a corresponding payment to the facility for the same service. Provided it can meet all Federal and other requirements, a hospital continues to have the option of enrolling the nonexcepted off-campus PBD as the type of provider/supplier for which it wishes to bill in order to meet the requirements of that payment system (such as an ASC or a group practice).

In response to public comments and due to concerns that our proposed payment policy may result in beneficiaries being unable to access needed medical services and administrative complexities for hospitals and physicians, we have decided to issue an interim final rule with comment period (in section X.B. of this document) to establish new MPFS rates for nonexcepted items and services. Under this final policy, a hospital will bill for nonexcepted items and services on the institutional claim and must identify that such items and services are nonexcepted through use of claim line modifier ''PN.'' This ''PN'' modifier will be used to trigger payment under the newly adopted PFS rates for nonexcepted items and services. Additional details about these payment rates are included in the interim final rule with comment period in section X.B. of this document.

As we and our contractors conduct audits of hospital billing, we and our contractors will examine whether nonexcepted off-campus PBDs are billing correctly for nonexcepted items and services. We expect hospitals to maintain proper documentation showing which individual off-campus PBDs were billing Medicare prior to November 2, 2015, and to make this documentation available to us and our contractors upon request.

6. Changes to Regulations

To implement the provisions of section 1833(t) of the Act, as amended by section 603 of Public Law 114–74, in the CY 2017 OPPS/ASC proposed rule (81 FR 45691), we proposed to amend the Medicare regulations by (a) adding a new paragraph (v) to § 419.22 to specify that, effective January 1, 2017, for cost reporting periods beginning January 1, 2017, excluded from payment under the OPPS are items and services that are furnished by an off-campus provider-based department that do not meet the definition of excepted items and services; and (b) adding a new § 419.48 that sets forth the definition of excepted items and services, and also the definition of ''excepted off-campus provider-based department''.

In response to public comments, we are modifying paragraph (v) of § 419.22 as specified in the interim final rule with comment period under section X.B. of this document and finalizing the addition of a new § 419.48 that sets forth the definition of excepted items and services and off-campus PBDs and codifies the MPFS, generally, as the applicable payment system.

7. Other Technical Clarification Requests

Comment: Several hospitals with high Medicaid populations expressed concern that State Medicaid programs may adopt site neutral payment policies. The commenters acknowledged that the site neutral policies included in the CY 2017 OPPS/ASC proposed rule are focused on the Medicare program, but urged CMS to direct States not to apply site neutral payment policies to State Medicaid programs.

Response: We appreciate the commenters' concern with protecting access to hospital services for Medicaid recipients. As noted earlier, the section 603 provisions amended section 1833(t) of the Act, which authorizes Medicare payment to hospital outpatient departments. Our final policies to implement the amendments made by section 603 will provide a Medicare payment for nonexcepted items and services furnished by nonexcepted off-campus PBDs. We refer commenters to the Center for Medicaid and CHIP Services for questions on similar section 603 provisions for State Medicaid programs.

B. Interim Final Rule With Comment Period: Establishment of Payment Rates Under the Medicare Physician Fee Schedule for Nonexcepted Items and Services Furnished by Nonexcepted Off-Campus Provider-Based Departments of a Hospital

1. Background

This interim final rule with comment period is being issued in conjunction with a final rule discussed under section X.A. of this document which implements section 603 of the Bipartisan Budget Act of 2015 (Pub. L. 114–74). Specifically, this provision amended the OPPS statute at section 1833(t) by amending paragraph (1)(B) and adding a new paragraph (21). Sections 1833(t)(1)(B)(v) and (t)(21) of the Act require that certain items and services furnished in certain off-campus provider-based departments (PBDs) (collectively referenced here as nonexcepted items and services furnished by nonexcepted off-campus PBDs) shall not be considered covered OPD services for purposes of OPPS, and payment for those nonexcepted items and services shall be made ''under the applicable payment system'' beginning January 1, 2017. In the CY 2017 OPPS/ASC proposed rule (81 FR 45681), we proposed to implement section 603, and we proposed that the MPFS would be the ''applicable payment system'' for the majority of the items and services furnished by nonexcepted off-campus PBDs. In this final rule with comment period, we are finalizing that proposal. As such, for purposes of payment for nonexcepted items and services, the applicable payment system is the MPFS. In the CY 2017 OPPS/ASC proposed rule, we noted that, due to concerns with the significant changes that would need to be made to complex Medicare billing and claims systems, we would not be able to operationalize a mechanism to make payment to the off-campus PBD for nonexcepted items and services under a payment system other than the OPPS by January 1, 2017. Therefore, in that proposed rule, we noted that we intended the payment proposal to be a temporary 1-year policy, applicable in CY 2017 only, while we continued to explore operational changes that would allow nonexcepted items and services to be billed by the off-campus PBD under the applicable payment system, which, in the majority of cases, would be the MPFS (81 FR 45687 through 45689).

We are finalizing, with modifications, our proposal to implement section 603 of Public Law 114–74 in the CY 2017 OPPS/ASC final rule with comment period and refer readers to section X.A. of that final rule with comment period for a detailed discussion. As part of that discussion, we indicate that, in response to public comments received on the proposed payment policies for nonexcepted items and services, we are issuing this interim final rule with comment period to establish payment policies under the MPFS for nonexcepted items and services furnished on or after January 1, 2017. We thank commenters for their insightful comments during the proposed rule process and intend to continue open communication with stakeholders on an ongoing basis as we develop and refine the payment mechanisms for CY 2017 and for future years.

The following discussion establishes policies for nonexcepted items and services furnished by nonexcepted off-campus PBDs and billed by hospitals for payment under the MPFS. We are seeking public comments on the new payment mechanisms and rates detailed in this interim final rule with comment period and, based on these comments, will make adjustments as necessary to the payment mechanisms and rates through rulemaking that could be effective in CY 2017.

2. Payment Mechanisms

a. Relevance of the MPFS for Payment for Nonexcepted Items and Services

Under the MPFS, Medicare makes payment to physicians, nonphysician practitioners, and other suppliers for physicians' services as specified in section 1848 of the Act. In accordance with section 1848(b) and (c) of the Act, MPFS payment is based on the relative value of the resources involved in furnishing particular services. Because Medicare makes separate payment under institutional payment systems (such as the OPPS) for the facility costs associated with many of the same services, we establish two different MPFS payment rates for many of these services—one that applies when the service is furnished in a location where a facility bills and is paid for the service under a Medicare payment system other than the MPFS (the facility rate), and another that applies when the billing practitioner or supplier furnishes and bills for the entire service (the nonfacility rate). The nonfacility rate is developed based on the assumption that the practitioner or other supplier typically bears the practice expense costs such as labor, medical supplies, and medical equipment associated with the service. The facility rate is developed based on the assumption that the practitioner or other supplier is not typically bearing the cost of these direct practice expenses, and that the costs of resources such as labor, medical supplies, and medical equipment are borne by another entity to which Medicare makes payment under a different payment system.

When services are furnished in a facility that is paid under the MPFS, other coding and billing mechanisms are used to distinguish between the portion of the service furnished by the practitioner and the portion furnished by the facility. For example, both radiologists and independent diagnostic testing facilities (IDTFs) furnish and are paid for diagnostic imaging tests under the MPFS. Payment under the MPFS for most codes that describe diagnostic imaging tests is, consequently, ''split'' into the professional component and the technical components of the service. The payment for the professional component is based on the practitioner's work involved in furnishing the service and is generally paid at a single rate under the MPFS, regardless of where the service is performed. The payment for the technical component of the service is based on the relative cost of the other resources involved in furnishing the service, such as clinical staff who perform the test, medical equipment, medical supplies, and overhead expenses involved with imaging acquisition; and the technical component payment is only billed and paid when the service is furnished in a setting in which Medicare does not make an institutional payment for the service through another payment system.

For example, an MRI for a beneficiary may be furnished by an IDTF that owns and operates the capital equipment required to furnish the service. This IDTF would bill under the MPFS for its portion of the service furnished (acquiring the image), by submitting a claim using the appropriate HCPCS code describing the test with the ''–TC'' modifier, signifying a bill for the technical component of the service. The interpretation of the same test for the same patient might be furnished by a radiologist who would bill separately under the MPFS for the professional component of the test by submitting a claim using the HCPCS code with the ''26'' modifier, signifying a bill for the professional component of the service. Alternatively, both the professional and the technical components of the test could be furnished at the office of a radiologist who owns and operates the capital equipment. In this case, the radiologist would bill under the MPFS using the same HCPCS code without either of the modifiers, signifying a

''global'' bill for the service that includes both the professional and the technical components of the service. Under the MPFS ratesetting process, this global payment rate is automatically valued as the sum of the relevant professional and technical components. When the imaging acquisition (technical component) is furnished in a setting to which Medicare makes a separate payment to the facility under a payment system other than the MPFS, the technical component is not paid under the MPFS because the practitioner or supplier did not incur the cost of furnishing the technical component. Rather, payment for this component of the service is paid through the other applicable payment system.

Similar to IDTFs, radiation treatment centers are a type of supplier paid under the MPFS for the kinds of services they furnish. However, billing for radiation treatment services hinges on different coding conventions. For radiation treatment services, there are separate HCPCS codes that describe and distinguish the professional aspects of radiation treatment services (such as treatment planning) and the technical aspects of radiation treatment (such as application of the therapeutic radiation). When the radiation treatment delivery is furnished in a setting where Medicare makes a separate payment to the facility under a different payment system, these services are generally not paid under the MPFS because the practitioner or supplier did not incur the cost of furnishing the technical aspects of the service. Rather, payment is made for these services to the facility under the other applicable payment system. In both cases, the coding and billing mechanisms allow for practitioners to be paid for their professional services under the MPFS, and for other billing entities to be paid for their facility services under either the MPFS or another applicable payment system for the portion of the service they furnish.

b. Operational Considerations

When we developed our proposal to identify the MPFS as the applicable payment system for nonexcepted items and services furnished by nonexcepted off-campus PBDs, we recognized that these nonexcepted off-campus PBDs, similar to IDTFs and radiation treatment centers currently paid under the MPFS, furnish certain components of services that are sometimes paid under the MPFS. In addition, similar to IDTFs and radiation treatment centers, these nonexcepted off-campus PBDs likely incur costs that are, in many cases, complementary to the costs of the practitioners who furnish professional services. Consequently, we surveyed the necessary operational changes that would be necessary to allow hospitals to bill directly under the MPFS for these nonexcepted items and services using the same billing mechanisms currently available to IDTFs and radiation treatment centers. We sought to identify the scope of changes that would be required that would allow nonexcepted off-campus PBDs to bill in the same manner as these entities currently bill. After examining the claims processing, cost reporting, and enrollment records changes that would be necessary, we concluded that it would not be possible to implement these billing process modifications for nonexcepted items and services furnished by nonexcepted off-campus PBDs for CY 2017.

After we considered the public comments we received on the payment proposal for CY 2017 which did not provide for direct billing by, or payment to, the nonexcepted off-campus PBDs for their services, we recognized that establishing the MPFS as the ''applicable payment system'' for nonexcepted items and services furnished by nonexcepted off-campus PBDs without implementing simultaneous billing mechanisms for nonexcepted items and services furnished by hospitals under the MPFS may result in significant negative consequences, such as implications under the physician self-referral and anti-kickback laws and existing ''incident to'' regulations, thereby leading to an inability for either the physician or the hospital to bill for certain nonexcepted items and services. While we believe that many of these issues would only be present in the context of the temporary payment policy that we proposed for CY 2017, we were concerned that if we were to finalize the payment proposal without modification, the potential implications of the issues raised by commenters could result in possible access to care issues for Medicare beneficiaries in CY 2017. At the same time, we recognize that many off-campus PBDs that would bill for nonexcepted items and services incur costs involved in furnishing a broader range of services paid under the MPFS than those services provided in IDTFs and radiation therapy centers. Therefore, we determined that it was necessary, for CY 2017, to establish MPFS rates for the technical component of nonexcepted items and services furnished by nonexcepted off-campus PBDs, in order to provide hospitals a mechanism to bill and be paid.

c. General MPFS Coding and Billing Mechanisms

Coding and payment policies under the MPFS have long recognized the differences between the portions of services for which direct costs generally are incurred by practitioners and the portions of services for which direct costs generally are incurred by facilities. At present, the coding and relative value units (RVUs) established for particular groups of services under the MPFS generally reflect such direct cost differences. As described earlier, we establish separate nonfacility and facility RVUs for many HCPCS codes describing particular services paid under the MPFS. For many other services, we establish separate RVUs for the professional component and the technical component of the service described by the same HCPCS code. For yet other services, we establish RVUs for the different HCPCS codes that segregate and describe the discrete professional and technical aspects of particular services.

After consideration of the public comments we received in response to our proposed payment policies for nonexcepted items and services that are subject to sections 1833(t)(1)(B)(v) and (21) of the Act (81 FR 45688 through 45690), we continue to believe that it is currently operationally infeasible for nonexcepted off-campus PBDs to bill under the MPFS for the subset of MPFS services for which there is a separately valued technical component (either through a ''TC'' value or through unique HCPCS codes). In addition, we believe that hospitals that furnish nonexcepted items and services are likely to furnish a broader range of services than other provider or supplier types for which there is currently a separately valued technical component under the MPFS. Therefore, we believe it is necessary for CY 2017 to establish a new set of payment rates under the MPFS that reflects the relative resource costs of furnishing the technical component of a broad range of services to be paid under the MPFS specific to one site of service (the off-campus PBD of a hospital) with packaging (bundling) rules that are significantly different from current MPFS rules.

The variety of coding and billing mechanisms used under the MPFS evolved over time based on the practice patterns of the practitioners and suppliers paid under the MPFS, and we believe that the change in policy to shift payment to these nonexcepted off-campus PBDs from the OPPS to the MPFS similarly requires accommodation of their practice

patterns under the MPFS. Because we are finalizing our proposal to establish the MPFS as the applicable payment system for nonexcepted items and services furnished by nonexcepted off-campus PBDs in section X.A. of the CY 2017 OPPS/ASC final rule with comment period, we believe that it is necessary to establish a mechanism for CY 2017 under the MPFS for these entities to bill and be paid under the MPFS for the component of the services they furnish to Medicare beneficiaries. We also believe that, in accordance with the effective date specified in section 603 of Public Law 114–74, this billing mechanism must be effective for January 1, 2017. In accordance with the MPFS, the payment rates under this mechanism should reflect the estimated relative resource costs involved in furnishing these services compared to other MPFS services based on the information we have available to us at this time.

The changes implemented through this interim final rule with comment period are intended to provide a billing mechanism for hospitals to report and be paid for nonexcepted items and services furnished by nonexcepted off-campus PBDs to Medicare beneficiaries in CY 2017. In principle, the coding and billing mechanisms required to make appropriate payment to hospitals are parallel to those currently used to make payment for the technical component of diagnostic tests and for codes that describe technical radiation treatment services. However, hospitals are generally more likely to furnish a wider range of items and services than those items and services for which there currently are separate values for the professional component and the technical component of services under the MPFS. Therefore, the new payment rates for the nonexcepted items and services billed by hospitals under the MPFS will establish a means to report the technical aspect of all applicable items and services under the MPFS, not merely the ones with currently separate values for the component rates.

However, we do not believe that the establishment of these payment mechanisms and rates should be disruptive to other practitioners and suppliers paid under the MPFS for CY 2017. In addition, we note that there is no current payment rate under the MPFS that is based on the existing packaging (bundling) rules for hospitals paid under the OPPS. Therefore, we are not implementing any change to the current payment rules, rates, or mechanisms used by other practitioners and suppliers that bill under the MPFS. Instead, the rates and policies established by this interim final rule with comment period implement a payment mechanism under the MPFS intended to reflect the relative resource costs incurred in furnishing the technical component of services in a specific site of service (the nonexcepted off-campus PBD) using the current packaging policies used in the hospital outpatient setting.

In concept, this new payment rate parallels the current technical component for diagnostic tests furnished under the MPFS and the technical component codes currently used under the MPFS, as well as the facility fees paid under a Medicare institutional payment system, such as the OPPS. However, the payment amounts established under this interim final rule with comment period are intended to reflect the estimated relative resource costs of furnishing services only under the MPFS using the packaging rules unique to the hospital outpatient setting.

Because section 603 of Public Law 114–74 did not change the fact that nonexcepted off-campus PBDs are still departments of a hospital, despite no longer being able to be paid under the OPPS for nonexcepted items and services, and in order to implement the statutory payment changes by the effective date of section 603 of Public Law 114–74 of January 1, 2017, we believe it is appropriate to establish a mechanism to allow nonexcepted off-campus PBDs that furnish nonexcepted items and services to bill in the same way as other hospital outpatient departments through use of the institutional claims processing systems in order to be paid under the MPFS for CY 2017. That is, nonexcepted off-campus PBDs will continue to bill on the institutional claim that will pass through the Outpatient Code Editor and into the OPPS PRICER for calculation of payment under the MPFS. It is not operationally feasible to revise the Multi-Carrier System (MCS), which is used to process professional claims, to accept and process institutional claims by January 1, 2017. We also considered adopting a mechanism whereby the hospital would bill under the MPFS on the professional claim, but due to operational challenges that are not possible to adequately address by January 1, 2017, we are not adopting such a policy in this interim final rule with comment period. In addition, as described later in this interim final rule with comment period, we believe it is necessary for now to apply to the payments for nonexcepted items and services the same hospital wage index that would otherwise apply if the off-campus PBD was billing for excepted items and services. Therefore, we are implementing a set of MPFS payment rates that are specific to and can only be reported by hospitals reporting nonexcepted items and services on the institutional claim form in CY 2017.

We also are making a conforming change to our regulations at 42 CFR 414.22(b)(5)(ii) by deleting the paragraph that limits the number of practice expense RVUs that can be applied for services that have only technical component practice expense RVUs or only professional component practice expense RVUs; evaluation and management services, such as hospital or nursing facility visits, that are furnished exclusively in one setting; and major surgical services.

3. Establishment of Payment Rates

We have long acknowledged our concerns regarding some of the information currently used to develop RVUs for payment rates under the MPFS (for example, in the CY 2015 MPFS final rule with comment period (79 FR 67568)). We believe that, for nonexcepted items and services furnished by an off-campus PBD, the quality of the data currently used to develop payment rates under the OPPS, including hospital claims data and cost reporting, far exceeds the quality of data currently used for MPFS payments. In fact, the narrower the gap between the OPPS and MPFS packaging and billing rules and/or the better we are able to estimate the effect of that gap, the greater the potential would be to utilize the OPPS data in the MPFS ratesetting in future years. Nevertheless, it is not currently appropriate to use the OPPS data for services furnished, for example, in physicians' offices, given the significant differences in packaging and billing rules that remain in place, and the fact that we have not yet sufficiently been able to estimate the effect of those differences.

However, given that for CY 2017 we are implementing a set of MPFS payment rates that are specific to and can only be reported by hospitals reporting nonexcepted items and services on the institutional claim form, we do believe it would be appropriate to use the OPPS data to establish code-level relativity between these services when furnished in hospital outpatient departments. Given the current superiority of the OPPS data for these services, and its straightforward applicability when used in conjunction with the OPPS packaging and billing rules, we are establishing a payment mechanism for CY 2017 under the MPFS that, at the code level, is based on

the relative payment rates and packaging and billing rules for these services as paid under the OPPS. However, the mechanism will only use the OPPS payment rates to the extent that they serve to establish appropriate payment under the MPFS based on the relative resources involved, in accordance with those packaging rules. Similarly, there are specific policies and adjustments that currently apply under the OPPS that we are incorporating into the MPFS, exclusively for this site-specific payment rate. In other words, in order to maintain the integrity of the code-specific relativity of current payments under the OPPS as we shift payment for services furnished by nonexcepted off-campus PBDs to the MPFS, we are adopting under the MPFS a set of OPPS payment adjustments as MPFS policies for these payments. We believe this will maintain the code-level relativity that is essential to the MPFS and provide an operational means to implement the amendments made by section 603 of Public Law 114–74 by making payment to hospitals for these nonexcepted items and services furnished.

However, establishing the relativity among the nonexcepted items and services billed by hospitals under the MPFS is only one aspect of establishing the necessary relativity of these services under the MPFS more broadly. We still need to estimate the relativity of these services compared to MPFS services furnished in other settings. In other words, we need to make our current best estimate of the more general relativity between the technical component of MPFS services furnished in nonexcepted off-campus PBDs and all other MPFS services furnished in other settings. As described more fully below, using the limited information available to us at this time, we estimate that, for CY 2017, scaling the OPPS payment rates by 50 percent will strike an appropriate balance that avoids potentially underestimating the relative resources involved in furnishing services in nonexcepted off-campus PBDs as compared to the services furnished in other settings for which payment is made under the MPFS. Specifically, we are establishing site-specific rates under the MPFS for the technical component of the broad range of nonexcepted items and services furnished by nonexcepted off-campus PBDs to be paid under the MPFS that will be based on the OPPS payment amount for these same services, scaled downward by 50 percent. We discuss below how we arrived at this adjustment percentage for CY 2017.

a. Methodology

We began by analyzing hospital outpatient claims data from January 1 through August 26, 2016, that contained the ''PO'' modifier signifying that they were billed by an off-campus department of a hospital paid under the OPPS other than a remote location, a satellite facility, or a dedicated emergency department (ED). We note that the use of the ''PO'' modifier was a new mandatory reporting policy for CY 2016. In development of this interim final rule with comment period, we analyzed available ''PO'' modifier claims data billed from January through August 2016. We limited our analysis to those claims billed on the 13X Type of Bill because those claims are used for Medicare Part B billing under the OPPS. We then identified the top (most frequently billed) 25 ''major codes'' that were billed by claim line; that is, items and services that were separately payable or conditionally packaged. Specifically, we restricted our analysis to codes with OPPS status indicators'' J1'', ''J2'', ''Q1'', ''Q2'', ''Q3'', ''S'', ''T'', or ''V''. We did not include separately payable drugs or biologicals in this analysis because those drugs or biologicals are paid the same rate whether they are furnished in the physician office setting or the hospital setting, and because we are not adopting a percentage reduction to separately payable drugs and biologicals under this interim final rule with comment period. Similarly, we excluded codes assigned an OPPS status indicator ''A'' because the services described by these codes are already paid at a rate under a fee schedule other than the OPPS and payment for those nonexcepted items and services will not be changed under the rates being established under this interim final rule with comment period. Next, for the same major codes (or analogous codes in the rare instance that different coding applies under the OPPS than the MPFS), we compared the CY 2016 payment rate under the OPPS to a CY 2016 payment rate under the MPFS attributable to the nonprofessional resource costs involved in furnishing the services.

The most frequently billed service with the ''PO'' modifier is described by HCPCS code G0463 (Hospital outpatient clinic visit for assessment and management of a patient), which is paid under APC 5012; the total number of CY 2016 claim lines for this service is approximately 6.7 million as of August 2016. In CY 2016, the OPPS payment rate for APC 5012 is $102.12. Because there are multiple CPT codes (CPT codes 99201 through 99215) used under the MPFS for billing this service, an exact comparison between the $102.12 OPPS payment rate for APC 5012 and the payment rate for a single CPT code billed under the MPFS is not possible. However, for purposes of this analysis, we examined the difference between the nonfacility payment rates and the facility payment rates under the MPFS for CPT codes 99213 and 99214, which are the billing codes for a Level III and a Level IV office visit. While we do not have data to precisely determine the equivalent set of MPFS visit codes to use for the comparison, we believe that, based on the distribution of services billed for the visit codes under the MPFS and the distribution of the visit codes under the OPPS from the last time period the CPT codes were used under the OPPS in CY 2014, these two codes provide reliable points of comparison. For CPT code 99213, the difference between the nonfacility payment rate and the facility payment rate under the MPFS in CY 2016 is $21.86, which is 21 percent of the OPPS payment rate for APC 5012 of $102.12. For CPT code 99214, the difference between the nonfacility payment rate and the facility payment rate under the MPFS in CY 2016 is $29.02, which is 28 percent of the OPPS payment rate for APC 5012. However, we recognize that, due to the more extensive packaging that occurs under the OPPS for services provided along with clinic visits relative to the more limited packaging that occurs under the MPFS for office visits, these payment rates are not entirely comparable.

We then assessed the next 24 major codes most frequently billed on the 13X claim form by hospitals. We removed HCPCS code 36591 (Collection of blood specimen from a completely implantable venous access device) because, under current MPFS policies, the code is used only to pay separately under the MPFS when no other service is on the claim. We also removed HCPCS code G0009 (Administration of Pneumococcal Vaccine) because there is no payment for this code under the MPFS. For the remaining 22 major codes most frequently billed, we estimated the amount that would have been paid to the physician in the office setting under the MPFS for practice expenses not associated with the professional component of the service. As indicated in Table X.B.1. below, this amount reflects (1) the difference between the MPFS nonfacility payment rate and the MPFS facility rate, (2) the technical component, or (3) in instances where payment would have been made only to the facility or only to the

physician, the full nonfacility rate. This estimate ranged from 0.0 percent to 137.8 percent of the OPPS payment rate for a code. Overall, the average (weighted by claim line volume times rate) of the nonfacility payment rate estimate for the MPFS compared to the estimate for the OPPS for the 22 remaining major codes is 45 percent.

TABLE X.B.1—COMPARISON OF CY 2016 OPPS PAYMENT RATE TO CY 2016 MPFS PAYMENT RATE FOR TOP HOSPITAL CODES BILLED USING THE "PO" MODIFIER

HCPCS Code	Code Description	Total Claim Lines	CY 2016 OPPS Payment Rate	CY 2016 Applicable MPFS Technical Payment Amount Estimate	Col (5) as a Percent of OPPS (%)	MPFS Estimate
(1)	(2)	(3)	(4)	(5)	(6)	
96372	Injection beneath the skin or into muscle for therapy, diagnosis, or prevention.	338,444	$42.31	$25.42	60.1	Single rate paid exclusively to either practitioner or facility: Full nonfacility rate.
71020	X-ray of chest, 2 views, front and side.	333,203	60.80	16.83	27.7	Technical component: Full nonfacility rate.
93005	Routine electrocardiogram (EKG) with tracing using at least 12 leads.	318,099	55.94	8.59	15.4	Technical component: Full nonfacility rate.
96413	Infusion of chemotherapy into a vein up to 1 hour.	254,704	280.27	136.41	48.7	Single rate paid exclusively to either practitioner or facility: Full nonfacility rate.
93798	Physician services for outpatient heart rehabilitation with continuous EKG monitoring per session.	203,926	103.92	11.10	10.7	Nonfacility rate—Facility rate.
96375	Injection of different drug or substance into a vein for therapy, diagnosis, or prevention.	189,140	42.31	22.56	53.3	Single rate paid exclusively to either practitioner or facility: Full nonfacility rate.
93306	Ultrasound examination of heart including color-depicted blood flow rate, direction, and valve function.	179,840	416.80	165.77	39.8	Technical component: Full nonfacility rate.
77080	Bone density measurement using dedicated X-ray machine.	155,513	100.69	31.15	30.9	Technical component: Full nonfacility rate.
77412	Radiation treatment delivery.	137,241	194.35	267.86	137.8	Technical component (Full nonfacility rate) based on weighted averages for the following MPFS codes: G6011; G6012; G6013; and G6014.
90853	Group psychotherapy	123,282	69.65	0.36	0.5	Nonfacility rate—Facility rate.
96365	Infusion into a vein for therapy, prevention, or diagnosis up to 1 hour.	122,641	173.18	69.82	40.3	Nonfacility rate—Facility rate.
20610	Aspiration and/or injection of large joint or joint capsule.	106,769	223.76	13.96	6.2	Nonfacility rate—Facility rate.
11042	Removal of skin and tissue first 20 sq cm or less.	99,134	225.55	54.78	24.3	Nonfacility rate—Facility rate.
96367	Infusion into a vein for therapy prevention or diagnosis additional sequential infusion up to 1 hour.	98,930	42.31	30.79	72.8	Single rate paid exclusively to either practitioner or facility: Full nonfacility rate.
93017	Exercise or drug-induced heart and blood vessel stress test with EKG tracing and monitoring.	96,312	220.35	39.74	18.0	Technical component: Full nonfacility rate.
77386	Radiation therapy delivery	81,925	505.51	347.30	68.7	Technical component: Nonfacility rate for CPT code G6015 (analogous code used under the MPFS).

TABLE X.B.1—COMPARISON OF CY 2016 OPPS PAYMENT RATE TO CY 2016 MPFS PAYMENT RATE FOR TOP HOSPITAL CODES BILLED USING THE ''PO'' MODIFIER—Continued

HCPCS Code	Code Description	Total Claim Lines	CY 2016 OPPS Payment Rate	CY 2016 Applicable MPFS Technical Payment Amount Estimate	Col (5) as a Percent of OPPS (%)	MPFS Estimate
(1)	(2)	(3)	(4)	(5)	(6)	
78452	Nuclear medicine study of vessels of heart using drugs or exercise. multiple studies	79,242	1,108.46	412.82	37.2	Technical component: Full nonfacility rate.
74177	CT scan of abdomen and pelvis with contrast.	76,393	347.72	220.20	63.3	Technical component: Full nonfacility rate.
71260	CT scan chest with contrast.	75,052	236.86	167.21	70.6	Technical component: Full nonfacility rate.
71250	CT scan chest	74,570	112.49	129.61	115.2	Technical component: Full nonfacility rate.
73030	X-ray of shoulder, minimum of 2 views.	71,330	60.80	19.33	31.8	Technical component: Full nonfacility rate.
90834	Psychotherapy, 45 minutes with patient and/or family member.	70,524	125.04	0.36	0.3	Nonfacility rate—Facility rate.
Weighted Average (claim line volume*rate) of the MPFS payment compared to OPPS payment for the 22 major codes:						45.

As noted with the clinic visits, we recognize that there are limitations to our data analysis including that OPPS payment rates include the costs of packaged items or services billed with the separately payable code, and therefore the comparison to rates under the MPFS will not be a one-to-one comparison. Also, we include only a limited number of services, and additional services may have different patterns than the services described here. After considering the payment differentials for major codes billed by off-campus departments of hospitals with the ''PO'' modifier and based on the data limitations of our analysis, we are adopting, with some exceptions noted below, a set of MPFS payment rates that are based on a 50-percent reduction to the OPPS payment rates (inclusive of packaging) for nonexcepted items and services furnished in nonexcepted off-campus PBDs in this interim final rule with comment period. Generally speaking, we arrived at 50 percent by examining the 45-percent rate noted above, the ASC payment rate—which is roughly 55 percent of the OPPS payment rate on average—and the payment rate for the large number of OPPS and MPFS evaluation and management services, as described above. We recognize the equivalent MPFS nonfacility rate may be higher or lower than the percentage reduction we are applying to the OPPS payment rates on a code specific basis. However, we believe that, on the whole, this percentage reduction will not underestimate the overall relativity between the OPPS and the MPFS based on the limited data currently available. We are concerned, however, that this percentage reduction might be too small. For example, if we were able at this time to sufficiently estimate the effect of the packaging differences between the OPPS and MPFS, we suspect that the equivalent portion of MPFS payments for evaluation and management codes, and for MPFS services on average, would likely be less than 50 percent for the same services. We consider this percentage reduction for CY 2017 to be a transitional policy until such time that we have more precise data to better identify and value nonexcepted items and services furnished by nonexcepted off-campus PBDs and billed by hospitals.

There are several significant exceptions to this standard adjustment. For example, for services that are currently paid under the OPPS based on payment rates from other Medicare fee schedules (including the MPFS) on an institutional claim, we will not adjust the current payment rates. These are the items and services assigned status indicator ''A'' in Addendum B to the CY 2017 OPPS/ASC final rule with comment period (which is available via the Internet on the CMS Web site) that will continue to be reported on an institutional claim and paid under the MPFS, the CLFS, or the Ambulance Fee Schedule without a payment reduction. Similarly, drugs and biologicals that are separately payable under the OPPS (identified by status indicator ''G'' or ''K'' in Addendum B to the CY 2017 OPPS/ASC final rule with comment period) will be paid in accordance with section 1847A of the Act (that is, typically ASP + 6 percent), consistent with payment rules in the physician office setting. Drugs and biologicals that are unconditionally packaged under the OPPS and are not separately payable (that is, those drugs and biologicals assigned status indicator of ''N'' in Addendum B to the CY 2017 OPPS/ASC final rule with comment period) will be bundled into the MPFS payment and will not be separately paid to hospitals billing for nonexcepted items and services. The full range of exceptions and adjustments to the otherwise applicable OPPS payment rate that are being adopted in the new MPFS site-of-service payment rates in this interim final rule with comment period are displayed in Table X.B.2. below.

All nonexcepted items and services billed by a hospital on an institutional claim with modifier ''PN'' (Nonexcepted service provided at an off-campus, outpatient, provider-based department of a hospital) will be paid under the MPFS at the rate established in this interim final rule with comment period. Specifically, nonexcepted off-campus PBDs must report modifier ''PN'' on each UB–04 claim line to indicate a nonexcepted item or service, but should otherwise continue to bill as they currently do. There are no billing changes for excepted items and services provided at an off-campus PBDs because these items and services remain covered outpatient department services that are paid under the OPPS.

b. MPFS Relativity Adjuster

If we were to use the payment mechanisms described in this interim final rule with comment period over several years, we would anticipate using Medicare claims data to compare the services paid in this nonexcepted off-campus PBD setting to a similar set of services otherwise paid under the MPFS in other sites of service (office or freestanding center, among others) in order to develop a MPFS relativity adjuster that incorporates the specific mix of services furnished in nonexcepted off-campus PBDs. However, given the lack of data regarding the mix of services currently being furnished in nonexcepted off-campus PBDs, we examined the data that were available to us to estimate a first year MPFS relativity adjuster that we believe best approximates the appropriate measure of relativity without underestimating it. In other words, we conducted several analyses in order to develop a MPFS relativity adjuster that we believe would, in the aggregate, approximate the payment under MPFS rates that would otherwise be applicable without underestimating it, were the necessary alternative coding and billing mechanisms under the MPFS present. In this interim final rule with comment period, we discuss two analyses that were considered in determination of the MPFS relativity adjuster for CY 2017. First, we examined the payment differential between the OPPS and the ASC payment system. Under the ASC payment system, covered surgical procedures furnished in an ASC are paid approximately 55 percent of the amount paid to hospital outpatient departments for performing the same services. Second, we considered the CY 2016 claims reported with the ''PO'' modifier (used to report services at off-campus PBDs under the OPPS). We compared overall payment under the OPPS and the MPFS for clinic visits from a list of the most frequently billed HCPCS codes reported with the ''PO'' modifier and determined the weighted average payment differential for these services. Using the ASC differential and the ''PO'' modifier as points of reference, and taking into account our desire not to underestimate the relativity adjuster for CY 2017, we determined the initial year (CY 2017) MPFS-relativity adjuster to be 50 percent. We intend to continue to study this issue and welcome comments regarding potential future refinements as we gain more experience with these new site-of-service MPFS rates.

c. Geographic Adjustments

For 2017, we are establishing class-specific geographic practice cost indices (GPCIs) under the MPFS exclusively used to adjust these site-specific, technical component rates for nonexcepted items and services furnished in nonexcepted off-campus PBDs. These class-specific GPCIs are parallel to the geographic adjustments made under the OPPS based on the hospital wage index. We believe it is appropriate to adopt the hospital wage index areas for purposes of geographic adjustment because nonexcepted off-campus PBDs are still considered to be part of a hospital and the MPFS payments to these entities will be limited to the subset of PFS services furnished by hospitals. We also believe it is appropriate, as an initial matter for CY 2017, to adopt the actual wage index values for these hospitals in addition to the wage index areas. The MPFS GPCIs that would otherwise currently apply are not based on the hospital wage index areas. Pending further study of this issue for future years, for CY 2017, we are using the authority under section 1848 (e)(1)(B) of the Act to establish a new set of GPCIs for these site-specific, technical component rates that are based both on the hospital wage index areas and the hospital wage index value themselves.

d. Coding Consistency

For most services, the same HCPCS codes are used to describe services paid under both the MPFS and the OPPS. There are two notable exceptions that describe high-volume services. The first of these are evaluation and management services, which are reported under the MPFS using the 5 levels of CPT codes describing new or established patient visits (for a total of 10 codes). However, since CY 2014, these visits have been reported under the OPPS using the single HCPCS code G0463 (Hospital Outpatient Clinic Visit) (78 FR 75042). We are establishing the MPFS payment rate for HCPCS code G0463 based on the OPPS payment rate reduced by the 50 percent MPFS relativity adjuster. Second, several radiation treatment delivery and imaging guidance services also are reported using different codes under the MPFS and the OPPS. CMS established HCPCS Level II ''G'' codes to describe radiation treatment delivery services when furnished in the physician office setting (79 FR 67666 through 67667). However, these HCPCS ''G'' codes are not recognized under the OPPS; rather, CPT codes are used to describe these services when furnished in the HOPD. Both sets of codes were implemented for CY 2015 and were maintained for CY 2016. Under the MPFS, there is a particular statutory provision under section 1848(c)(2)(K) of the Act that requires maintenance of the CY 2016 coding and payment inputs for these services for CY 2017 and CY 2018. Accordingly, the finalized CY 2017 MPFS rates for these services were calculated based on the maintenance of the CY 2016 coding payment inputs. On that basis, we are establishing payment amounts for nonexcepted items and services consistent with the payments that would be made to other facilities under the MPFS. That is, an off-campus PBDs submitting claims for nonexcepted items and services will bill the HCPCS ''G'' codes established under the MPFS to describe radiation treatment delivery procedures. However, the off-campus PBD must append modifier ''PN'' to each applicable claim line for nonexcepted items and services. The payment amount for these services will be set to reflect the technical component rate for the code under the MPFS.

4. OPPS Payment Adjustments

In this interim final rule with comment period, we are adopting the packaging payment rates and multiple procedure payment reduction (MPPR) percentage that apply under the OPPS to establish the MPFS payment rates for nonexcepted items and services furnished by nonexcepted off-campus PBDs and billed by hospitals. That is, the claims processing logic that is used for payments under the OPPS for comprehensive APCs (C–APCs), conditionally and unconditionally packaged items and services, and major procedures will be incorporated into the newly established MPFS rates. We believe it is necessary to incorporate these OPPS payment policies for C–APCs, packaged items and services, and the MPPR in order to effectuate a mechanism for payment for nonexcepted items and services furnished by off-campus PBDs by January 1, 2017. We also believe that this is necessary in order to maintain the integrity of the MPFS relativity adjuster because the adjuster intends to incorporate the differences in these rules under the OPPS and the MPFS rates that would otherwise apply. Hospitals will continue to bill on an institutional claim form that will pass through the Outpatient Code Editor and into the OPPS PRICER for calculation of payment. This approach will yield data based on reported charges for nonexcepted items and services furnished by nonexcepted off-campus PBDs, which can be used to refine MPFS payment rates for these services

in future years should we ultimately determine to continue this policy in future years.

There are several OPPS payment adjustments that we are not adopting in this interim final rule with comment period, including, but not limited to, outlier payments, the rural sole community hospital (SCH) adjustment, the cancer hospital adjustments, transitional outpatient payments, the hospital outpatient quality reporting payment adjustment, and the inpatient hospital deductible cap to the cost-sharing liability for a single hospital outpatient service. We believe these payment adjustments are expressly authorized for, and should be limited to, hospitals that are paid under the OPPS for covered OPD services in accordance with section 1833(t) of the Act.

5. Partial Hospitalization Services

With respect to partial hospitalization programs (PHP) (intensive outpatient psychiatric day treatment programs furnished to patients as an alternative to inpatient psychiatric hospitalization or as a stepdown to shorten an inpatient stay and transition a patient to a less intensive level of care), section 1861(ff)(3)(A) of the Act specifies that a PHP is a program furnished by a hospital, to its outpatients, or by a CMHC. In the CY 2017 OPPS/ASC proposed rule (81 FR 45681), in the discussion of the proposed implementation of section 603 of Public Law 114–74, we noted that because CMHCs also furnish PHP services and are ineligible to be provider-based to a hospital, a nonexcepted off-campus PBD would be eligible for PHP payment if the entity enrolls and bills as a CMHC for payment under the OPPS. We further noted that a hospital may choose to enroll a nonexcepted off-campus PBD as a CMHC, provided it meets all Medicare requirements and conditions of participation (81 FR 45690).

Commenters expressed concern that without a clear payment mechanism for PHP services furnished by nonexcepted off-campus PBDs, access to partial hospitalization services would be limited, and pointed out the critical role PHPs play in the continuum of mental health care. Many commenters believed that Congress did not intend for partial hospitalization services to no longer be paid for by Medicare when such services are furnished by nonexcepted off-campus PBDs. Several commenters disagreed with the notion of enrolling as a CMHC in order to receive payment for PHP services. These commenters stated that hospital-based PHPs and CMHCs are inherently different in structure, operation, and payment, and noted that the conditions of participation for hospital departments and CMHCs are different. Several commenters requested that CMS find a mechanism to pay hospital-based PHPs in nonexcepted off-campus PBDs. Because we share the commenters' concerns, we are adopting payment for nonexcepted items and services furnished by PHP under the MPFS. When billed in accordance with this interim final rule with comment period, these items and services will be paid at the CMHC per diem rate for APC 5853, for providing 3 or more partial hospitalization services per day.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45681), we noted that when a beneficiary receives outpatient services in an off-campus department of a hospital, the total Medicare payment for those services is generally higher than when those same services are provided in a physician's office. Similarly, when partial hospitalization services are provided in a hospital-based PHP, Medicare pays more than when those same services are provided by a CMHC. Our rationale for adopting the CMHC per diem rate for APC 5853 as the MPFS payment amount for nonexcepted PBDs providing PHP services is because CMHCs are freestanding entities that are not part of a hospital, but they provide the same PHP services as hospital-based PHPs. This is similar to the differences between freestanding entities paid under the MPFS that furnish other services also provided by hospital-based entities. Similar to other entities currently paid for their technical component services under the MPFS, we believe CMHCs would typically have lower cost structures than hospital-based PHPs, largely due to lower overhead costs and other indirect costs such as administration, personnel, and security. We believe that paying for nonexcepted hospital-based partial hospitalization services at the lower CMHC per diem rate aligns with section 603 of Public Law 114–74, while also preserving access to PHP services. In addition, nonexcepted off-campus PBDs will not be required to enroll as CMHC in order to bill and be paid for providing partial hospitalization services. However, a nonexcepted off-campus PBD that wishes to provide PHP services may still enroll as a CMHC if it chooses to do so and meets the relevant requirements. Finally, we recognize that because hospital-based PHPs are providing partial hospitalization services in the hospital outpatient setting, they can offer benefits that CMHCs do not have, such as an easier patient transition to and from inpatient care, and easier sharing of health information between the PHP and the inpatient staff.

6. Supervision Rules

The supervision rules that apply for hospitals will continue to apply for off-campus PBDs that furnish nonexcepted items and services. The amendments made by section 603 of Public Law 114–74 did not change the status of these PBDs, only the status of and payment mechanism for the services they furnish. These supervision requirements are defined in 42 CFR 410.27.

7. Beneficiary Cost-Sharing

Under the MPFS, the beneficiary copayment is generally 20 percent of the fee schedule amount, unless it is waived in accordance with the statute. All cost-sharing rules that apply under the MPFS in accordance with section 1848(g) of the Act and section 1866(a)(2)(A) of the Act will continue to apply for all nonexcepted items and services furnished by off-campus PBDs, regardless of the cost-sharing obligation under the OPPS.

8. CY 2018, CY 2019, and Future Years

In this interim final rule with comment period, we are finalizing MPFS payment amounts for a new site of service—nonexcepted off-campus PBDs—for CY 2017. We are seeking public comments on the new payment mechanisms and rates detailed in this interim final rule with comment period and, based on these comments, will make adjustments as necessary to the payment mechanisms and rates through rulemaking that could be effective in CY 2017. Unless we significantly modify the policies set forth in this interim final rule with comment period in response to public comments, we anticipate continuing to use this same method to determine MPFS payment amounts for nonexcepted items and services furnished by nonexcepted off-campus PBDs for CY 2018 in order to allow for the operational changes necessary to design and implement a long-term payment approach for nonexcepted off-campus PBDs under the MPFS.

As we note elsewhere in this interim final rule with comment period and in section X.A. of the CY 2017 OPPS/ASC final rule with comment period, we believe the amendments made to the statute by section 603 of Public Law 114–74 intended to eliminate the Medicare payment incentive for hospitals to purchase physician offices, convert them to off-campus PBDs, and bill under the OPPS for services furnished there. Therefore, we believe the payment policy under this provision

should ultimately equalize payment rates between nonexcepted off-campus PBDs and physician offices to the greatest extent possible, while allowing nonexcepted off-campus PBDs to bill in a straight-forward way for services furnished.

We intend, for CY 2019 and beyond, to adopt an approach similar to the approach that we initially proposed for CY 2017. Under this approach, we would pay nonexcepted off-campus PBDs for their nonexcepted items and services at a MPFS-based rate that would reflect the relative resources involved in furnishing the services. We anticipate that payment amounts under this approach would approximate the amount Medicare would pay under the MPFS to cover facility overhead costs if the same services were furnished in a physician's office. For most services, this MPFS-based rate would equal the nonfacility payment rate under the MPFS minus the facility payment rate under the MPFS for the service in question. For other services for which we do not provide separate payment under the MPFS, if payment is made under OPPS, this MPFS-based rate would equal the MPFS nonfacility rate. For still other services, the technical component rate under the MPFS would serve as the MPFS-based rate. We recognize that certain services are billable under OPPS but not under MPFS; for such services, we would consider the relative resources involved in furnishing them, and we envision a rate similar to the rate that we pay ASCs for similar services. We note that the key advantage to this payment approach is that payment amounts would be nearly equal whether the service is furnished in a nonexcepted off-campus PBD or a physician office. This would address the differences in payment between the two sites of service that now create an incentive for hospitals to purchase and convert physician offices to off-campus PBDs in order to bill under the OPPS. However, to implement such a change, we would need to undertake substantial systems changes in order to both calculate and pay at these MPFS-based rates, and we would need to undertake such systems changes before we could require nonexcepted off-campus PBDs to bill using either the professional or facility claims forms for CY 2019 and beyond. We are seeking public comment on this intended payment approach, which we believe would best accomplish the goal of the section 603 provisions set out for us under the statute as amended by section 603 of Public Law 114–74.

Alternatively, we are seeking public comment on the possibility of continuing to make payment using a methodology similar to that described under this interim final rule with comment period. Under such a methodology, we would pay nonexcepted off-campus PBDs under the MPFS at a percentage of standard OPPS rates that we believe reflects the relative resources involved in furnishing the services; we note that this percentage could be lower or higher than the percentage adopted in this interim final rule with comment period, and we would utilize billing data to the extent they are available, initially from CY 2017 and CY 2018, to determine the appropriate percentage adjustment, and then update the percentage adjustment annually based on the most recently available data, for future years. While in the aggregate we would seek to equalize payment rates between physician offices and nonexcepted off-campus PBDs to the extent appropriate, the rates would not be equal on a procedure-by-procedure basis. Therefore, for certain specialties, service lines, and nonexcepted off-campus PBD types, total Medicare payments for the same services might be either higher or lower when furnished in a nonexcepted off-campus PBD rather than in a physician office. We are concerned that such specialty-specific patterns in payment differentials could result in continued incentives for hospitals to buy certain types of physician offices and convert them to nonexcepted off-campus PBDs. In other words, we are concerned that continuing this type of payment approach indefinitely could create incentives to undertake exactly the behavior we believe Congress intended to avoid. However, continuing a policy similar to the one we are adopting in this interim final rule with comment period would allow hospitals to continue billing through a facility claim form and would allow for continuation of the packaging rules and cost report-based relative payment rate determinations under OPPS, which we believe are preferable to using the current valuation methdologies under the MPFS for nonexcepted items and services furnished by nonexcepted off-campus PBDs. In the future, we also will need to determine how rates established for nonexcepted off-campus PBDs will interact with the MPFS ratesetting methodology, rules, and statutory requirements because these rates would continue to be rates under the MPFS.

We recognize that nonexcepted off-campus PBDs would benefit from knowing our preliminary thoughts regarding a long-term payment approach for CY 2018 and beyond, so that they can conduct long-term planning and begin considering possible operational or organizational changes in response. We are seeking public comment on both the policies established in this interim final rule with comment period and the intended and alternative approaches described above that may be used in future rulemaking.

9. Waiver of Proposed Rulemaking

Under 5 U.S.C. 553(b) of the Administrative Procedure Act (APA), the agency is required to publish a notice of the proposed rule in the **Federal Register** before the provisions of a rule take effect. Similarly, section 1871(b)(1) of the Act requires the Secretary to provide for notice of the proposed rule in the **Federal Register** and provide a period of not less than 60 days for public comment. Section 553(b)(B) of the APA provides for exceptions from the notice and comment requirements; in cases in which these exceptions apply, section 1871(b)(2)(C) of the Act provides for exceptions from the notice and 60-day comment period requirements of the Act as well. Section 553(b)(B) of the APA and section 1871(b)(2)(C) of the Act authorize an agency to dispense with normal rulemaking requirements for good cause if the agency makes a finding that the notice and comment process is impracticable, unnecessary, or contrary to the public interest.

We find that there is good cause to waive the notice and comment requirements under sections 553(b)(B) of the APA and section 1871(b)(2)(C). Section 603 of Public Law 114–74, enacted on November 2, 2015, amended section 1833(t) of the Act. In general, section 603 of Public Law 114–74 provides that certain items and services furnished in certain off-campus PBDs will not be considered covered OPD services for which payment may be made under the OPPS and instead provides that those items and services shall be paid ''under the applicable payment system'' beginning January 1, 2017. Because the amendments to section 1833(t) of the Act at paragraphs (1)(B)(v) and (21) are effective for items and services that would have otherwise been paid through the OPPS beginning January 1, 2017, we proposed to implement these amendments in the CY 2017 OPPS/ASC proposed rule.

We received a significant number of public comments raising concerns with our proposals in the CY 2017 OPPS/ASC proposed rule. Specifically, commenters raised concerns with our proposing the ''applicable payment system'' to be the MPFS, proposing to make no payment to the hospital, and

proposing to make payment only to the physician or practitioner under the MPFS for the services they furnish. We thank the many commenters and acknowledge their valued input throughout the proposed rule process. After consideration of the public comments we received on these proposals included in the CY 2017 OPPS/ASC proposed rule, we have determined that establishing the MPFS as the applicable payment system for nonexcepted items and services furnished by nonexcepted off-campus PBDs without simultaneously implementing billing mechanisms to enable hospitals to bill and be paid under the MPFS may result in a number of negative consequences, such as implications under the physician self-referral and anti-kickback statutes and existing ''incident to'' regulations, thereby possibly leading to an inability for either the physician or the hospital to bill for certain nonexcepted items and services, and potentially, in effect, failing to fully implement the statutory language providing for payment for nonexcepted items and services under the applicable payment system. In addition, the public comments raised concerns that if we chose to finalize the payment proposal without modification, those final policies could result in possible access to care issues for Medicare beneficiaries in CY 2017. Commenters suggested that many nonexcepted off-campus PBDs would have chosen to cease operations rather than attempting to navigate the issues and resolve concerns raised in public comments, and that some of these may have been in otherwise underserved areas. After considering the gravity of concerns raised in public comments on our proposed policy on billing and payment for nonexcepted items and services, we conclude that it is not feasible to finalize the policy we proposed for CY 2017, and for which we provided detailed notice and an opportunity to comment in the CY 2017 OPPS/ASC proposed rule. At the same time, the amendments made by section 603 of Public Law 114–74 require that payment shall be made for these nonexcepted items and services under the applicable payment system other than the OPPS beginning January 1, 2017. As such, because of the potential implications of finalizing some of our proposed policies related to payment for nonexcepted items and services furnished by nonexcepted off-campus PBDs on hospitals, physicians, and beneficiaries, and the statutory requirement that payment shall be made for these items and services under the applicable payment system other than OPPS beginning January 1, 2017, we find that it would be impracticable and contrary to the public interest to undergo notice and comment procedures before finalizing, on an interim basis subject to public comment, a payment policy for these items and services for CY 2017. Therefore, we find good cause to waive the notice of proposed rulemaking as provided under section 1871(b)(2)(C) of the Act and section 553(b)(B) of the APA and to issue this final rule on an interim basis subject to public comment. We are providing a 60-day public comment period as specified in the **DATES** section of this document.

10. Collection of Information Requirements

This document does not impose information collection requirements; that is, reporting, recordkeeping or third-party disclosure requirements. Consequently, there is no need for review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

11. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

12. Regulatory Impact Statement

We estimate that the implementation of section 603 of Public Law 114–74 in this interim final rule with comment period will reduce Medicare Part B expenditures by roughly $50 million in CY 2017. While this is a significantly lower impact than the $330 million reduction estimated for the CY 2017 OPPS proposed rule, this lower impact is primarily the result of changes in technical assumptions regarding the services affected by this provision, and not a result of the change in payment policy. For this interim final rule with comment period, we analyzed OPPS claims data through the first 6 months of CY 2016 that were coded with the ''PO'' modifier to indicate that the service was performed off-campus. Based on this analysis, we have significantly reduced the volume of services that we expect to be affected by this provision. Additionally, the proposed rule estimate included an impact in CY 2017 for lower Medicare Advantage payments due to lower fee-for-service expenditures that result from this provision. For this interim final rule with comment period, we have removed the associated Medicare Advantage impact for CY 2017, as the 2017 Medicare Advantage payment rates were set well before this provision will be implemented. For comparison purposes, if we had finalized the proposed rule policy using these revised assumptions, we would now estimate that the provision would reduce Medicare Part B expenditures by $70 million in CY 2017.

C. Changes for Payment for Film X-Ray

Section 502(b) of Division O, Title V of the Consolidated Appropriations Act, 2016 (Pub. L. 114–113) amended section 1833(t)(16) of the Act by adding new subparagraph (F). New section 1833(t)(16)(F)(i) of the Act provides that, effective for services furnished during 2017 or any subsequent year, the payment under the OPPS for imaging services that are X-rays taken using film (including the X-ray component of a packaged service) that would otherwise be made under the OPPS (without application of subparagraph (F)(i) and before application of any other adjustment) shall be reduced by 20 percent. New section 1833(t)(16)(F)(ii) of the Act provides that payments for imaging services that are X-rays taken using computed radiography (including the X-ray component of a packaged service) furnished during CY 2018, 2019, 2020, 2021, or 2022, that would otherwise be made under the OPPS (without application of subparagraph (F)(ii) and before application of any other adjustment), be reduced by 7 percent, and similarly, if such X-ray services are furnished during CY 2023 or a subsequent year, by 10 percent. New section 1833(t)(16)(F)(iii) of the Act provides that the reductions made under section 1833(t)(16)(F) shall not be considered an adjustment under section 1833(t)(2)(E) of the Act, and shall not be implemented in a budget neutral manner. New section 1833(t)(16)(F)(iv) of the Act instructs the implementation of the reductions in payment set forth in subparagraph (F) through appropriate mechanisms which may include use of modifiers. Below we discuss the implementation of the reduction in payment for imaging services that are X-rays taken using film provided for in section 1833(t)(16)(F)(i) of the Act. We will address the reductions in OPPS payment for imaging services that are X-rays taken using computed radiography technology (including the imaging portion of a service) in future rulemaking.

To implement the provisions of sections 1833(t)(16)(F)(i) of the Act relating to the payment reduction for imaging services that are X-rays taken using film that are furnished during CY 2017 or a subsequent year, in the CY 2017 OPPS/ASC proposed rule (81 FR 45691), we proposed to establish a new modifier to be used on claims, as allowed under the provisions of new section 1833(t)(16)(F)(iv) of the Act. The applicable HCPCS codes describing imaging services that are X-rays taken using film were included in Addendum B to the proposed rule (which is available via the Internet on the CMS Web site). We proposed that, beginning January 1, 2017, hospitals would be required to use this modifier on claims for imaging services that are X-rays taken using film.

Comment: Several commenters requested that the proposal for the new modifier be revised to include language that required registered radiologic technologists to perform all radiography procedures billed within the Medicare system.

Response: We proposed to adopted the new modifier to implement the statutory provisions of sections 1833(t)(16)(F)(i) of the Act relating to the payment reduction for imaging services that are X-rays taken using film that are furnished during CY 2017 or a subsequent year. The statute does not address, nor did we propose to change, the type of professional that is eligible to perform radiography procedures. Accordingly, we believe this comment is outside the scope of the proposed rule.

Comment: Commenters questioned whether facilities such as CAHs and hospitals in the State of Maryland are required to use the modifier to identify imaging services that are X-rays taken using film.

Response: In accordance with section1833(t)(16)(F)(i) of the Act, the payment under the OPPS for imaging services that are X-rays taken using film that would otherwise be made under the OPPS (without application of subparagraph (F)(i) and before application of any other adjustment) shall be reduced by 20 percent. The reduction in payment is not applicable to hospitals that do not bill for payments for services under the OPPS. Therefore the modifier is not required to be used by hospitals that do not receive payments under the OPPS, such as CAHs or hospitals exempted from payment under the OPPS in accordance with section 1814(b)(3) of the Act.

Comment: One commenter requested that certain types of X-ray services, including radiographic-fluoroscopic (R&F) services that combine both radioscopy and radiography in a single examination, vascular imaging services which use radioscopy and do not use CR or film technologies, and mammography imaging services which largely involve the use of digital technology, be considered exempt from payment reductions because these services are not typically performed using traditional X-ray systems.

Response: Section 1833(t)(16)(F)(i) of the Act specifically identifies imaging services that are X-rays and states that payment under the OPPS for imaging services that are X-rays taken using film shall be reduced by 20 percent in CY 2017. Therefore, the use of the proposed modifier is required for all imaging services that are X-rays receiving payment under the OPPS if those X-rays are taken using film. The statute does not provide exemptions to this policy for any imaging services that are X-rays. Therefore, we are not adopting any exemptions in this final rule with comment period.

Comment: One commenter noted that the text of the legislation did not specify which CPT codes will be affected by the proposed policy and that without this information the scope of the policy is ambiguous.

Response: Section 1833(t)(16)(F)(i) of the Act references imaging services that are X-rays taken using film. The use of the proposed modifier and subsequent reduction in payment under the OPPS is applicable to all imaging services that are X-rays taken using film as opposed to other methods. Each of the imaging services that are X-rays, along with all other codes payable under the OPPS, are included in Addendum B to this final rule with comment period.

After consideration of the public comments we received, we are finalizing the use of new modifier, FX, for use on claims for imaging services that are X-rays taken using film that are furnished during CY 2017 and subsequent years. The use of this modifier will result in a 20-percent payment reduction for an imaging service that is an X-ray service taken using film (including the X-ray component of a packaged service), as specified under section 1833(t)(16)(F)(i) of the Act, of the determined OPPS payment amount (without application of subparagraph (F)(i) and before any other adjustments under section 1833(t) of the Act). We note that when payment for an X-ray service taken using film is packaged into the payment for another item or service under the OPPS, no separate payment for the X-ray service taken using film is made. Accordingly, the payment reduction in this instance would be 0 percent (that is, 20 percent of $0).

D. Changes to Certain Scope-of-Service Elements for Chronic Care Management (CCM) Services

In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70450 through 70453), we finalized the CCM scope-of-service elements (as described in the CY 2015 MPFS final rule with comment period (79 FR 67721)) required in order for hospitals to bill and receive OPPS payment for furnishing CCM services. These scope-of-service elements are the same as those required for CCM under the MPFS. In the CY 2017 OPPS/ASC proposed rule (81 FR 45691), we discussed that in the CY 2017 MPFS proposed rule, we proposed some minor changes to certain CCM scope-of-service elements. We proposed that these proposed changes also would apply to CCM services furnished to hospital outpatients under the OPPS. All of the fundamental scope-of-service requirements are remaining intact. An example of these proposed minor changes are that the electronic sharing of care plan information would need to be timely but not necessarily on a 24 hour a day/7 days a week basis, as is currently required. We refer readers to the CY 2017 MPFS final rule with comment period for a detailed discussion of the proposed changes to the scope of service elements for CCM, the public comments received, and the finalized policies.

Comment: Commenters supported CMS' proposed changes to certain CCM scope-of-service elements under the OPPS. One commenter, in support of the proposal, suggested limiting billing for CCM under the OPPS to only those providers who use systems that do not limit information exchange.

Response: We thank commenters for their support. In response to the commenter's suggestion to limit billing for CCM under the OPPS to providers who use systems that do not limit information exchange, we note that we did not propose such a limitation on billing. Therefore, we are not accepting this suggestion but may consider it in future years' rulemaking.

After consideration of the public comments we received, we are finalizing our CY 2017 proposal, without modification, for CY 2017, to apply the changes to certain scope-of-service elements finalized in the CY 2017 MPFS final rule with comment period to CCM services furnished to hospital outpatients under the OPPS.

E. Appropriate Use Criteria for Advanced Diagnostic Imaging Services

Section 218(b) of the Protecting Access of Medicare Act of 2014 (PAMA, Pub. L. 113–93) amended section 1834 of the Act by adding paragraph (q) which directs the Secretary to establish a program to promote the use of appropriate use criteria (AUC) for advanced diagnostic imaging services. The CY 2016 MPFS final rule with comment period (80 FR 71102 through 71116) addressed the initial component of the Medicare AUC program, including specifying applicable AUC and establishing CMS authority to identify clinical priority areas for making outlier determinations. The regulations governing the Medicare AUC program are codified at 42 CFR 414.94. The program's criteria and requirements were established and are being updated as appropriate through the MPFS rulemaking process. While the MPFS is the most appropriate vehicle for this practitioner-based program, we note that ordering practitioners will be required to consult AUC at the time of ordering advanced diagnostic imaging, and imaging suppliers will be required to report information related to such consultations on claims, for all applicable advanced diagnostic imaging services paid under the MPFS, the OPPS, and the ASC payment system. In the CY 2017 OPPS/ASC proposed rule (81 FR 45691), we noted that the CY 2017 MPFS proposed rule included proposed requirements and processes for the second component of the Medicare AUC program, which is the specification of qualified clinical decision support mechanisms (CDSMs) under the program. The CDSM is the electronic tool through which the ordering practitioner consults AUC. It also proposed specific clinical priority areas and exceptions to the AUC consultation and reporting requirements. We refer readers to the CY 2017 MPFS final rule with comment period for further information, including a summarization of any public comments received and the finalized policies for CY 2017.

XI. CY 2017 OPPS Payment Status and Comment Indicators

A. CY 2017 OPPS Payment Status Indicator Definitions

Payment status indicators (SIs) that we assign to HCPCS codes and APCs serve an important role in determining payment for services under the OPPS. They indicate whether a service represented by a HCPCS code is payable under the OPPS or another payment system and also whether particular OPPS policies apply to the code. The complete list of the payment status indicators and their definitions that we are applying for CY 2017 is displayed in Addendum D1 to this final rule with comment period, which is available on the CMS Web site at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html.* The CY 2017 payment status indicator assignments for APCs and HCPCS codes are shown in Addendum A and Addendum B, respectively, to this final rule with comment period, which are available on the CMS Web site at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html.*

In the CY 2017 OPPS/ASC proposed rule (81 FR 45692), we proposed revising the current definition of status indicator ''E'' by creating two status indicators, ''E1'' and ''E2,'' to replace status indicator ''E.'' We proposed that status indicator ''E1'' would be specific to items and services not covered by Medicare and status indicator ''E2'' would be exclusive to those items and services for which pricing information or claims data are not available.

Comment: Several commenters supported the proposal to differentiate between Medicare noncovered services (status indicator ''E1'') and services that have not been assigned a payment rate due to lack of pricing information and claims data (status indicator ''E2''). The commenters also recommended that CMS not assign the noncovered I/OCE edit to status indicator ''E2'' services because noncoverage is not the reason for nonpayment of these services.

Response: We appreciate the commenters' support for the proposal. In response to the commenters' recommendation regarding the I/OCE edit, we are assigning edit 13 to status indicator ''E2'' items and services. This edit will result in a line item rejection. A line item rejection is when a line has reached a final disposition with no payment for a reason other than medical necessity under section 1862(a)(1) of the Act.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to use new status indicators ''E1'' and ''E2'' to differentiate between Medicare noncovered services and services that have not been assigned a payment rate due to lack of pricing information and claims data.

B. CY 2017 Comment Indicator Definitions

In the CY 2017 OPPS/ASC proposed rule (81 FR 45692), we proposed to use four comment indicators for the CY 2017 OPPS. Three of these comment indicators, ''CH'', ''NI,'' and ''NP,'' are in effect for CY 2016 and we proposed to continue their use in CY 2017. In the proposed rule, we also proposed to create new comment indicator ''NC'' that would be used in the final rule to flag the HCPCS codes that were assigned to comment indicator ''NP'' in the proposed rule. Codes assigned the ''NC'' comment indicator in the final rule will not be subject to comments to the final rule. We stated in the proposed rule that we believe that this new comment indicator ''NC'' would help hospitals easily identify new HCPCS codes that would have a final payment assignment effective January 1, 2017. The proposed CY 2017 OPPS comment indicators are as follows:

- ''CH''—Active HCPCS code in current and next calendar year, status indicator and/or APC assignment has changed; or active HCPCS code that will be discontinued at the end of the current calendar year.
- ''NI''—New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year, interim APC assignment; comments will be accepted on the interim APC assignment for the new code.
- ''NP''—New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year proposed APC assignment; comments will be accepted on the proposed APC assignment for the new code.
- ''NC''—New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year for which we requested comments in the proposed rule, final APC assignment; comments will *not* be accepted on the final APC assignment for the new code.

We did not receive any public comments regarding the proposed CY 2017 OPPS comment indicators. Therefore, we are adopting, as final, our proposal to continue to use for CY 2017 comment indicators ''CH'', ''NI,'' and ''NP'' that are in effect for CY 2016, and to create new comment indicator ''NC'' that will be used in the final rule to flag the HCPCS codes that were assigned to comment indicator ''NP'' in the proposed rule. The definitions of the

OPPS comment indicators for CY 2017 are listed in Addendum D2 to this final rule with comment period, which is available on the CMS Web site at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html.*

XII. Updates to the Ambulatory Surgical Center (ASC) Payment System

A. Background

1. Legislative History, Statutory Authority, and Prior Rulemaking for the ASC Payment System

For a detailed discussion of the legislative history and statutory authority related to payments to ASCs under Medicare, we refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74377 through 74378) and the June 12, 1998 proposed rule (63 FR 32291 through 32292). For a discussion of prior rulemaking on the ASC payment system, we refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74378 through 74379), the CY 2013 OPPS/ASC final rule with comment period (77 FR 68434 through 68467), the CY 2014 OPPS/ASC final rule with comment period (78 FR 75064 through 75090), the CY 2015 OPPS/ASC final rule with comment period (79 FR 66915 through 66940), and the CY 2016 OPPS/ASC final rule with comment period (80 FR 70474 through 70502).

2. Policies Governing Changes to the Lists of Codes and Payment Rates for ASC Covered Surgical Procedures and Covered Ancillary Services

Under 42 CFR 416.2 and 416.166 of the Medicare regulations, subject to certain exclusions, covered surgical procedures in an ASC are surgical procedures that are separately paid under the OPPS, that would not be expected to pose a significant risk to beneficiary safety when performed in an ASC, and for which standard medical practice dictates that the beneficiary would not typically be expected to require active medical monitoring and care at midnight following the procedure (''overnight stay''). We adopted this standard for defining which surgical procedures are covered under the ASC payment system as an indicator of the complexity of the procedure and its appropriateness for Medicare payment in ASCs. We use this standard only for purposes of evaluating procedures to determine whether or not they are appropriate to be furnished to Medicare beneficiaries in ASCs. We define surgical procedures as those described by Category I CPT codes in the surgical range from 10000 through 69999, as well as those Category III CPT codes and Level II HCPCS codes that directly crosswalk or are clinically similar to procedures in the CPT surgical range that we have determined do not pose a significant safety risk, that we would not expect to require an overnight stay when performed in ASCs, and that are separately paid under the OPPS (72 FR 42478).

In the August 2, 2007 final rule (72 FR 42495), we also established our policy to make separate ASC payments for the following ancillary items and services when they are provided integral to ASC covered surgical procedures: (1) Brachytherapy sources; (2) certain implantable items that have pass-through payment status under the OPPS; (3) certain items and services that we designate as contractor-priced, including, but not limited to, procurement of corneal tissue; (4) certain drugs and biologicals for which separate payment is allowed under the OPPS; and (5) certain radiology services for which separate payment is allowed under the OPPS. In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66932 through 66934), we expanded the scope of ASC covered ancillary services to include certain diagnostic tests within the medicine range of CPT codes for which separate payment is allowed under the OPPS when they are provided integral to an ASC covered surgical procedure. Covered ancillary services are specified in § 416.164(b) and, as stated previously, are eligible for separate ASC payment. Payment for ancillary items and services that are not paid separately under the ASC payment system is packaged into the ASC payment for the covered surgical procedure.

We update the lists of, and payment rates for, covered surgical procedures and covered ancillary services in ASCs in conjunction with the annual proposed and final rulemaking process to update the OPPS and the ASC payment system (§ 416.173; 72 FR 42535). We base ASC payment and policies for most covered surgical procedures, drugs, biologicals, and certain other covered ancillary services on the OPPS payment policies, and we use quarterly change requests (CRs) to update services covered under the OPPS. We also provide quarterly update CRs for ASC covered surgical procedures and covered ancillary services throughout the year (January, April, July, and October). CMS releases new and revised Level II HCPCS codes and recognizes the release of new and revised CPT codes by the AMA and makes these codes effective (that is, the codes are recognized on Medicare claims) via these ASC quarterly update CRs. CMS releases new and revised Category III CPT codes in the July and January CRs. These updates implement newly created and revised Level II HCPCS and Category III CPT codes for ASC payment and update the payment rates for separately paid drugs and biologicals based on the most recently submitted ASP data. New and revised Category I CPT codes, except vaccine codes, are released only once a year and are implemented only through the January quarterly CR update. New and revised Category I CPT vaccine codes are released twice a year and are implemented through the January and July quarterly CR updates. We refer readers to Table 41 in the CY 2012 OPPS/ASC proposed rule for an example of how this process is used to update HCPCS and CPT codes (76 FR 42291).

In our annual updates to the ASC list of, and payment rates for, covered surgical procedures and covered ancillary services, we undertake a review of excluded surgical procedures (including all procedures newly proposed for removal from the OPPS inpatient list), new codes, and codes with revised descriptors, to identify any that we believe meet the criteria for designation as ASC covered surgical procedures or covered ancillary services. Updating the lists of ASC covered surgical procedures and covered ancillary services, as well as their payment rates, in association with the annual OPPS rulemaking cycle is particularly important because the OPPS relative payment weights and, in some cases, payment rates, are used as the basis for the payment of many covered surgical procedures and covered ancillary services under the revised ASC payment system. This joint update process ensures that the ASC updates occur in a regular, predictable, and timely manner.

B. Treatment of New and Revised Codes

1. Background on Current Process for Recognizing New and Revised Category I and Category III CPT Codes and Level II HCPCS Codes

Category I CPT, Category III CPT, and Level II HCPCS codes are used to report procedures, services, items, and supplies under the ASC payment system. Specifically, we recognize the following codes on ASC claims:

- Category I CPT codes, which describe surgical procedures and vaccine codes;
- Category III CPT codes, which describe new and emerging

technologies, services, and procedures; and

• Level II HCPCS codes, which are used primarily to identify items, supplies, temporary procedures, and services not described by CPT codes.

We finalized a policy in the August 2, 2007 final rule (72 FR 42533 through 42535) to evaluate each year all new and revised Category I and Category III CPT codes and Level II HCPCS codes that describe surgical procedures, and to make preliminary determinations during the annual OPPS/ASC rulemaking process regarding whether or not they meet the criteria for payment in the ASC setting as covered surgical procedures and, if so, whether or not they are office-based procedures. In addition, we identify new and revised codes as ASC covered ancillary services based upon the final payment policies of the revised ASC payment system. In prior rulemakings, we refer to this process as recognizing new codes; however, this process has always involved the recognition of new and revised codes. We consider revised codes to be new when they have substantial revision to their code descriptors that necessitate a change in the current ASC payment indicator. To clarify, we refer to these codes as new and revised in this CY 2017 OPPS/ASC final rule with comment period.

We have separated our discussion below based on when the codes are released and whether we proposed to solicit public comments in the CY 2017 OPPS/ASC proposed rule (and respond to those comments in this CY 2017 OPPS/ASC final rule with comment period) or whether we are soliciting public comments in this CY 2017 OPPS/ASC final rule with comment period (and responding to those comments in the CY 2018 OPPS/ASC final rule with comment period).

We note that we sought public comments in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70371 through 70372) on the new and revised Category I and III CPT and Level II HCPCS codes that were effective January 1, 2016. We also sought public comments in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70371) on the new and revised Level II HCPCS codes effective October 1, 2015, or January 1, 2016. These new and revised codes, with an effective date of October 1, 2015, or January 1, 2016, were flagged with comment indicator ''NI'' in Addenda AA and BB to the CY 2016 OPPS/ASC final rule with comment period to indicate that we were assigning them an interim payment status and payment rate, if applicable, which were subject to public comment following publication of the CY 2016 OPPS/ASC final rule with comment period. We are responding to public comments and finalizing the treatment of these codes under the ASC payment system in this CY 2017 OPPS/ASC final rule with comment period.

In Table 43 below, we summarize our process for updating codes through our ASC quarterly update CRs, seeking public comments, and finalizing the treatment of these new codes under the OPPS.

TABLE 43—COMMENT TIMEFRAME FOR NEW OR REVISED HCPCS CODES

ASC Quarterly update CR	Type of code	Effective date	Comments sought	When finalized
April I, 2016	Level II HCPCS Codes	April 1, 2016	CY 2017 OPPS/ASC proposed rule.	CY 2017 OPPS/ASC final rule with comment period.
July 1, 2016	Level II HCPCS Codes	July 1, 2016	CY 2017 OPPS/ASC proposed rule.	CY 2017 OPPS/ASC final rule with comment period.
	Category I (certain vaccine codes) and III CPT codes.	July 1, 2016	CY 2017 OPPS/ASC proposed rule.	CY 2017 OPPS/ASC final rule with comment period.
October 1, 2016	Level II HCPCS Codes	October 1, 2016	CY 2017 OPPS/ASC final rule with comment period.	CY 2018 OPPS/ASC final rule with comment period.
January 1, 2017	Level II HCPCS Codes	January 1, 2017	CY 2017 OPPS/ASC final rule with comment period.	CY 2018 OPPS/ASC final rule with comment period.
	Category I and III CPT Codes	January 1, 2017	CY 2017 OPPS/ASC proposed rule.	CY 2017 OPPS/ASC final rule with comment period.

Note: In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66841 through 66844), we finalized a revised process of assigning APC and status indicators for new and revised Category I and III CPT codes that would be effective January 1. We refer readers to section XII.A.3. of this CY 2017 OPPS/ASC final rule with comment period for further discussion of this issue.

2. Treatment of New and Revised Level II HCPCS Codes and Category III CPT Codes Implemented in April 2016 and July 2016 for Which We Solicited Public Comments in the CY 2017 OPPS/ASC Proposed Rule

In the April 2016 and July 2016 CRs, we made effective for April 1, 2016 and July 1, 2016, respectively, a total of 19 (incorrectly referenced in the proposed rule as 20) new Level II HCPCS codes and 9 new Category III CPT codes that describe covered ASC services that were not addressed in the CY 2016 OPPS/ASC final rule with comment period.

In the April 2016 ASC quarterly update (Transmittal 3478, CR 9557, dated March 11, 2016), we added 10 new drug and biological Level II HCPCS codes to the list of covered ancillary services. Table 23 of the proposed rule listed the new Level II HCPCS codes that were implemented April 1, 2016, along with their proposed payment indicators for CY 2017.

In the July 2016 ASC quarterly update (Transmittal R3531CP, CR 9668, dated May 27, 2016), we added nine new drug and biological Level II HCPCS codes to the list of covered ancillary services. Table 24 of the proposed rule listed the new Level II HCPCS codes that were implemented July 1, 2016. The proposed payment rates, where applicable, for these April and July codes can be found in Addendum BB to the proposed rule (which is available via the Internet on the CMS Web site).

Through the July 2016 quarterly update CR, we also implemented ASC payment for nine new Category III CPT codes as ASC covered surgical procedures, effective July 1, 2016. These codes were listed in Table 25 of the proposed rule, along with their proposed payment indicators. The proposed payment rates for these new Category III CPT codes can be found in Addendum AA to the proposed rule (which is available via the Internet on the CMS Web site).

In the CY 2017 OPPS/ASC proposed rule, we invited public comments on these proposed payment indicators and the proposed payment rates for the new Category III CPT codes and Level II HCPCS codes that were newly

recognized as ASC covered surgical procedures or covered ancillary services in April 2016 and July 2016 through the quarterly update CRs, as listed in Tables 23, 24, and 25 of the proposed rule. We also proposed to finalize their payment indicators and their payment rates in this CY 2017 OPPS/ASC final rule with comment period.

We did not receive any public comments regarding the proposed ASC payment indicators and payment rates. Therefore, we are adopting as final the CY 2017 proposed ASC payment indicators and payment rates for the ASC covered surgical procedures and covered ancillary services described by the new Level II HCPCS codes implemented in April 2016 and July 2016 through the quarterly update CRs as shown below in Tables 44, 45, and 46, respectively. We note that, for the CY 2017 update, the HCPCS Workgroup replaced the temporary drug HCPCS C-codes that were listed in Table 23, 24, and 25 of the proposed rule with permanent HCPCS J-codes effective January 1, 2017. Therefore, we are assigning the replacement HCPCS J-codes to the same payment indicators as their predecessor HCPCS C-codes, as shown in Tables 44, 45, and 46 below. The final CY 2017 ASC payment rates for these codes, where applicable, can be found in ASC Addendum AA and BB of this OPPS/ASC final rule with comment period.

TABLE 44—FINAL CY 2017 PAYMENT INDICATORS FOR THE NEW LEVEL II HCPCS CODES FOR COVERED SURGICAL PROCEDURES OR COVERED ANCILLARY SERVICES IMPLEMENTED ON APRIL 1, 2016

CY 2016 HCPCS Code	CY 2017 HCPCS Code	CY 2017 Long descriptor	Final CY 2017 payment indicator
C9137	J7207	Injection, Factor VIII (antihemophilic factor, recombinant) PEGylated, 1 I.U	K2
C9138	J7209	Injection, Factor VIII (antihemophilic factor, recombinant) (Nuwiq), 1 I.U	K2
C9461	A9515	Choline C 11, diagnostic, per study dose	K2
C9470	J1942	Injection, aripiprazole lauroxil, 1 mg	K2
C9471	J7322	Hyaluronan or derivative, Hymovis, for intra-articular injection, 1 mg	K2
C9472	J9325	Injection, talimogene laherparepvec, 1 million plaque forming units (PFU)	K2
C9473	J2182	Injection, mepolizumab, 1 mg	K2
C9474	J9205	Injection, irinotecan liposome, 1 mg	K2
C9475	J9295	Injection, necitumumab, 1 mg	K2
J7503	J7503	Tacrolimus, extended release, (Envarsus XR), oral, 0.25 mg	K2

TABLE 45—FINAL CY 2017 PAYMENT INDICATORS FOR THE NEW LEVEL II HCPCS CODES FOR COVERED ANCILLARY SERVICES IMPLEMENTED IN JULY 2016

CY 2016 HCPCS Code	CY 2017 HCPCS Code	CY 2017 Long descriptor	Final CY 2017 payment indicator
C9476	J9145	Injection, daratumumab, 10 mg	K2
C9477	J9176	Injection, elotuzumab, 1 mg	K2
C9478	J2840	Injection, sebelipase alfa, 1 mg	K2
C9479	C9479	Instillation, ciprofloxacin otic suspension, 6 mg	K2
C9480	J9352	Injection, trabectedin, 0.1 mg	K2
Q9981	J8670	Rolapitant, oral, 1 mg	K2
Q5102	Q5102	Injection, infliximab, biosimilar, 10 mg	K2
Q9982 *	Q9982	Flutemetamol F18, diagnostic, per study dose, up to 5 millicuries	K2
Q9983 **	Q9983	Florbetaben f18, diagnostic, per study dose, up to 8.1 millicuries	K2

* HCPCS code C9459 (Flutemetamol f18, diagnostic, per study dose, up to 5 millicuries) was deleted on June 30, 2016, and replaced with HCPCS code Q9982 effective July 1, 2016.

** HCPCS code C9458 (Florbetaben f18, diagnostic, per study dose, up to 8.1 millicuries) was deleted on June 30, 2016, and replaced with HCPCS code Q9983 effective July 1, 2016.

TABLE 46—FINAL CY 2017 PAYMENT INDICATORS FOR THE NEW CATEGORY III CPT CODES FOR COVERED SURGICAL PROCEDURES OR COVERED ANCILLARY SERVICES IMPLEMENTED IN JULY 2016

CY 2016 HCPCS Code	CY 2017 HCPCS Code	CY 2017 Long descriptor	Final CY 2017 payment indicator
0437T	0437T	Implantation of non-biologic or synthetic implant (*e.g.,* polypropylene) for fascial reinforcement of the abdominal wall (List separately in addition to primary procedure).	N1
0438T *	0438T	Transperineal placement of biodegradable material, peri-prostatic (via needle), single or multiple, includes image guidance.	G2
0439T	0439T	Myocardial contrast perfusion echocardiography; at rest or with stress, for assessment of myocardial ischemia or viability (List separately in addition to primary procedure).	N1
0440T	0440T	Ablation, percutaneous, cryoablation, includes imaging guidance; upper extremity distal/peripheral nerve.	G2

TABLE 46—FINAL CY 2017 PAYMENT INDICATORS FOR THE NEW CATEGORY III CPT CODES FOR COVERED SURGICAL PROCEDURES OR COVERED ANCILLARY SERVICES IMPLEMENTED IN JULY 2016—Continued

CY 2016 HCPCS Code	CY 2017 HCPCS Code	CY 2017 Long descriptor	Final CY 2017 payment indicator
0441T	0441T	Ablation, percutaneous, cryoablation, includes imaging guidance; lower extremity distal/peripheral nerve.	G2
0442T	0442T	Ablation, percutaneous, cryoablation, includes imaging guidance; nerve plexus or other truncal nerve (*e.g.,* brachial plexus, pudendal nerve).	G2
0443T	0443T	Real time spectral analysis of prostate tissue by fluorescence spectroscopy	G2
0444T	0444T	Initial placement of a drug-eluting ocular insert under one or more eyelids, including fitting, training, and insertion, unilateral or bilateral.	N1
0445T	0445T	Subsequent placement of a drug-eluting ocular insert under one or more eyelids, including re-training, and removal of existing insert, unilateral or bilateral.	N1

*HCPCS code C9743 (Injection/implantation of bulking or spacer material (any type) with or without image guidance (not to be used if a more specific code applies) was deleted on June 30, 2016, and replaced with CPT code 0438T effective July 1, 2016.

3. Process for Recognizing New and Revised Category I and Category III CPT Codes That Will Be Effective January 1, 2017 for Which We Are Responding to Comments in This CY 2017 Final Rule With Comment Period

For new and revised CPT codes effective January 1 that were received in time to be included in the CY 2017 OPPS/ASC proposed rule, we proposed APC and status indicator assignments (81 FR 45695). We are responding to comments and finalizing the APC and status indicator assignments in this OPPS/ASC final rule with comment period. For those new/revised CPT codes that were received too late for inclusion in the OPPS/ASC proposed rule, we indicated that we may either make interim final assignments in the final rule with comment period or possibly use HCPCS G-codes that mirror the predecessor CPT codes and retain the current APC and status indicator assignments for a year until we can propose APC and status indicator assignments in the following year's rulemaking cycle.

For the CY 2017 ASC update, the new and revised CY 2017 Category I and III CPT codes will be effective on January 1, 2017, and can be found in ASC Addendum AA and Addendum BB to this final rule with comment period (which are available via the Internet on the CMS Web site). The new and revised CY 2017 Category I and III CPT codes that were not received in time for inclusion in the proposed rule are assigned to new comment indicator ''NP'' to indicate that the code is new for the next calendar year or the code is an existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year and that comments will be accepted on the proposed payment indicator. Further, we remind readers that the CPT code descriptors that appear in Addendum AA and Addendum BB are short descriptors and do not accurately describe the complete procedure, service, or item described by the CPT code. Therefore, we included the 5-digit placeholder codes and their long descriptors for the new and revised CY 2017 CPT codes in Addendum O to the proposed rule (which is available via the Internet on the CMS Web site) so that the public could have time to adequately comment on our proposed payment indicator assignments. The 5-digit placeholder codes were included in Addendum O, specifically under the column labeled ''CY 2017 OPPS/ASC Proposed Rule 5-Digit Placeholder Code,'' to the proposed rule. We indicated that the final CPT code numbers would be included in the CY 2017 OPPS/ASC final rule with comment period. We also noted that not every code listed in Addendum O was subject to comment. For the new/revised Category I and III CPT codes, we requested comments on only those codes that are assigned to comment indicator ''NP.''

Comment: One commenter objected to the proposed assignment of the procedure described by HCPCS code 05X1T (Suprachoroidal injection of a pharmacologic agent (does not include supply of medication)) to payment indicator ''G2.'' The commenter believed that the procedure is similar in procedural complexity, resource utilization, and clinical application to the procedure described by CPT code 67028 (Intravitreal injection of a pharmacologic agent (separate procedure)), which is assigned to payment indicator ''P3.''

Response: We agree with the commenter that the procedure described by HCPCS code 05X1T (which is finalized as CPT code 0465T in this final rule with comment period) is similar to the procedure described by CPT code 67028. Therefore, we are modifying our proposal to assign CPT code 0465T to payment indicator ''P3'' for CY 2017.

After consideration of the public comments we received, we are finalizing, with one modification, the proposed CY 2017 ASC payment indicator assignments for new and revised CPT codes, effective January 1, 2017. We are modifying our proposal and are assigning CPT code 0465T to payment indicator ''P3.'' These final CPT codes with short descriptors only and their final payment indicators are listed in Addendum AA and Addendum BB to this final rule with comment period (which is available via the Internet on the CMS Web site). We also list these CPT codes with long descriptors in Addendum O to this final rule with comment period (which is available via the Internet on the CMS Web site).

4. Process for New and Revised Level II HCPCS Codes That Will Be Effective October 1, 2016 and January 1, 2017 for Which We Are Soliciting Public Comments in This CY 2017 OPPS/ASC Final Rule With Comment Period

As has been our practice in the past, we incorporate those new and revised Level II HCPCS codes that are effective January 1 in the final rule with comment period, thereby updating the OPPS and the ASC payment system for the following calendar year. These codes are released to the public via the CMS HCPCS Web site, and also through the January OPPS quarterly update CRs. In the past, we also released new and revised Level II HCPCS codes that are effective October 1 through the October OPPS quarterly update CRs and

incorporated these new codes in the final rule with comment period, thereby updating the OPPS and the ASC payment system for the following calendar year.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45696), for CY 2017, we proposed to continue our established policy of assigning comment indicator ''NI'' in Addendum B to the OPPS/ASC final rule with comment period to those new and revised Level II HCPCS codes that are effective October 1 and January 1 to indicate that we are assigning them an interim payment status, which is subject to public comment. Specifically, the Level II HCPCS codes that will be effective October 1, 2016, and January 1, 2017, would be flagged with comment indicator ''NI'' in Addendum B to this CY 2017 OPPS/ASC final rule with comment period to indicate that we have assigned the codes an interim OPPS payment status for CY 2017. We are inviting public comments in this CY 2017 OPPS/ASC final rule with comment period on the interim status indicator and APC assignments, and payment rates for these codes that will be finalized in the CY 2018 OPPS/ASC final rule with comment period.

C. Update to the List of ASC Covered Surgical Procedures and Covered Ancillary Services

1. Covered Surgical Procedures

a. Covered Surgical Procedures Designated as Office-Based

(1) Background

In the August 2, 2007 ASC final rule, we finalized our policy to designate as ''office-based'' those procedures that are added to the ASC list of covered surgical procedures in CY 2008 or later years that we determine are performed predominantly (more than 50 percent of the time) in physicians' offices based on consideration of the most recent available volume and utilization data for each individual procedure code and/or, if appropriate, the clinical characteristics, utilization, and volume of related codes. In that rule, we also finalized our policy to exempt all procedures on the CY 2007 ASC list from application of the office-based classification (72 FR 42512). The procedures that were added to the ASC list of covered surgical procedures beginning in CY 2008 that we determined were office-based were identified in Addendum AA to that rule by payment indicator ''P2'' (Office-based surgical procedure added to ASC list in CY 2008 or later with MPFS nonfacility PE RVUs; payment based on OPPS relative payment weight); ''P3'' (Office-based surgical procedures added to ASC list in CY 2008 or later with MPFS nonfacility PE RVUs; payment based on MPFS nonfacility PE RVUs); or ''R2'' (Office-based surgical procedure added to ASC list in CY 2008 or later without MPFS nonfacility PE RVUs; payment based on OPPS relative payment weight), depending on whether we estimated the procedure would be paid according to the standard ASC payment methodology based on its OPPS relative payment weight or at the MPFS nonfacility PE RVU-based amount.

Consistent with our final policy to annually review and update the list of covered surgical procedures eligible for payment in ASCs, each year we identify covered surgical procedures as either temporarily office-based (these are new procedure codes with little or no utilization data that we have determined are clinically similar to other procedures that are permanently office-based), permanently office-based, or nonoffice-based, after taking into account updated volume and utilization data.

(2) Changes for CY 2017 to Covered Surgical Procedures Designated as Office-Based in developing the CY 2017 OPPS/ASC proposed rule, we followed our policy to annually review and update the covered surgical procedures for which ASC payment is made and to identify new procedures that may be appropriate for ASC payment, including their potential designation as office-based. We reviewed CY 2015 volume and utilization data and the clinical characteristics for all covered surgical procedures that are assigned payment indicator ''G2'' (Nonoffice-based surgical procedure added in CY 2008 or later; payment based on OPPS relative payment weight) in CY 2016, as well as for those procedures assigned one of the temporary office-based payment indicators, specifically ''P2,'' ''P3,'' or ''R2'' in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70480 through 70482).

Our review of the CY 2015 volume and utilization data resulted in our identification of one covered surgical procedure, CPT code 0377T (Anoscopy with directed submucosal injection of bulking agent for fecal incontinence), that we believe meets the criteria for designation as office-based. The data indicate that this procedure is performed more than 50 percent of the time in physicians' offices, and we believe that the services are of a level of complexity consistent with other procedures performed routinely in physicians' offices. The CPT code that we proposed to permanently designate as office-based for CY 2017 was listed in Table 26 of the proposed rule (81 FR 45697).

We invited public comment on this proposal.

We did not receive any public comments on this proposal. Therefore, we are finalizing our proposal, without modification, to designate the procedures described by CPT code 0377T as permanently office-based for CY 2017, as set forth in Table 47 below.

TABLE 47—ASC COVERED SURGICAL PROCEDURE NEWLY DESIGNATED AS PERMANENTLY OFFICE-BASED FOR CY 2017

CY 2017 CPT Code	CY 2017 Long descriptor	CY 2016 ASC payment indicator	Final CY 2017 ASC payment indicator *
0377T	Anoscopy with directed submucosal injection of bulking agent for fecal incontinence Esophagoscopy, flexible, transnasal; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure).	G2	R2

*Final payment indicators are based on a comparison of the rates according to the ASC standard ratesetting methodology and the MPFS proposed rates. Current law specifies a 0.5 percent update to the MPFS payment rates for CY 2017. For a discussion of the MPFS rates, we refer readers to the CY 2017 MPFS final rule with comment period.

We also reviewed CY 2015 volume and utilization data and other information for eight procedures designated as temporary office-based in Tables 64 and 65 in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70480 through 70482). Of these eight procedures, there were very few claims in our data or no claims data for all

eight procedures: CPT code 0299T (Extracorporeal shock wave for integumentary wound healing, high energy, including topical application and dressing care; initial wound); CPT code 0402T (Collagen cross-linking of cornea (including removal of the corneal epithelium and intraoperative pachymetry when performed)); CPT code 10030 (Image-guided fluid collection drainage by catheter (*e.g.,* abscess, hematoma, seroma, lymphocele, cyst), soft tissue (*e.g.,* extremity, abdominal wall, neck), percutaneous); CPT code 64461 (Paravertebral block (PVB) (paraspinous block), thoracic; single injection site (includes imaging guidance, when performed); CPT code 64463 (Paravertebral block (PVB) (paraspinous block), thoracic; continuous infusion by catheter (includes imaging guidance, when performed)); CPT code 65785 (Implantation of intrastromal corneal ring segments); CPT code 67229 (Treatment of extensive or progressive retinopathy, one or more sessions; preterm infant (less than 37 weeks gestation at birth), performed from birth up to 1 year of age (for example, retinopathy of prematurity), photocoagulation or cryotherapy); and CPT code C9800 (Dermal injection procedure(s) for facial lipodystrophy syndrome (LDS) and provision of Radiesse or Sculptra dermal filler, including all items and supplies)), which is being replaced by CPT code G0429 (Dermal filler injection(s) for the treatment of facial lipodystrophy syndrome (lds) (*e.g.,* as a result of highly active antiretroviral therapy)) in this final rule with comment period. Consequently, in the CY 2017 OPPS/ASC proposed rule (81 FR 45697), we proposed to maintain the temporary office-based designations for these eight codes for CY 2017. We listed all of these codes for which we proposed to maintain the temporary office-based designations for CY 2017 in Table 27 of the proposed rule. The procedures for which the proposed office-based designations for CY 2017 are temporary also were indicated by asterisks in Addendum AA to the proposed rule (which is available via the Internet on the CMS Web site).

We invited public comment on this proposal.

We did not receive any public comments on this proposal. Therefore, we are finalizing our proposal, without modification, to designate the eight procedures listed in Table 48 below as temporary office-based for CY 2017.

TABLE 48—CY 2017 PAYMENT INDICATORS FOR ASC COVERED SURGICAL PROCEDURES DESIGNATED AS TEMPORARY OFFICE-BASED IN THE CY 2016 OPPS/ASC FINAL RULE WITH COMMENT PERIOD

CY 2017 CPT Code	CY 2017 Long descriptor	CY 2016 ASC payment indicator*	Final CY 2017 ASC payment indicator**
0299T	Extracorporeal shock wave for integumentary wound healing, high energy, including topical application and dressing care; initial wound.	R2*	R2**
0402T	Collagen cross-linking of cornea (including removal of the corneal epithelium and intraoperative pachymetry when performed).	R2*	R2**
10030	Image-guided fluid collection drainage by catheter (*e.g.,* abscess, hematoma, seroma, lymphocele, cyst), soft tissue (*e.g.,* extremity abdominal wall, neck), percutaneous.	P2*	P2**
64461	Paravertebral block (PVB) (paraspinous block), thoracic; single injection site (includes imaging guidance, when performed).	P3*	P3**
64463	Continuous infusion by catheter (includes imaging guidance, when performed)	P3*	P3**
65785	Implantation of intrastromal corneal ring segments	R2*	P2**
67229	Treatment of extensive or progressive retinopathy, one or more sessions; preterm infant (less than 37 weeks gestation at birth), performed from birth up to 1 year of age (*e.g.,* retinopathy of prematurity), photocoagulation or cryotherapy.	R2*	R2**
G0429***	Dermal injection procedure(s) for facial lipodystrophy syndrome (LDS) and provision of Radiesse or Sculptra dermal filler, including all items and supplies.	R2*	R2**

* If designation is temporary.

** Final payment indicators are based on a comparison of the final rates according to the ASC standard ratesetting methodology and the MPFS final rates. Current law specifies a 0.5 percent update to the MPFS payment rates for CY 2017. For a discussion of the MPFS rates, we refer readers to the CY 2017 MPFS final rule with comment period.

*** HCPCS code G0429 replaces HCPCS code C9800, effective January 1, 2017.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45698), for CY 2017, we proposed to designate certain new CY 2017 codes for ASC covered surgical procedures as temporary office-based, as displayed in Table 28 of the proposed rule. After reviewing the clinical characteristics, utilization, and volume of related procedure codes, we determined that the procedures described by these new CPT codes would be predominantly performed in physicians' offices. However, because we had no utilization data for the procedures specifically described by these new CPT codes, we proposed to make the office-based designations temporary rather than permanent and we will reevaluate the procedures when data become available. The procedures for which the proposed office-based designations for CY 2017 are temporary also were indicated by asterisks in Addendum AA to the proposed rule (which is available via the Internet on the CMS Web site).

We invited public comments on these proposals.

We did not receive any public comments on our proposal. Therefore, for CY 2017, we are finalizing our proposal, without modification, to designate the two new CY 2017 codes for ASC surgical procedures listed in Table 49 as temporary office-based.

TABLE 49—CY 2017 PAYMENT INDICATORS FOR NEW CY 2017 CPT CODES FOR ASC COVERED SURGICAL PROCEDURES DESIGNATED AS TEMPORARY OFFICE-BASED

CY 2017 OPPS/ASC proposed rule 5-digit CMS placeholder code	CY 2017 OPPS/ASC final rule CPT code	CY 2017 Long descriptor	Final CY 2017 ASC payment indicator**
369X1	36901	Introduction of needle(s) and/or catheter(s), dialysis circuit, with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, radiological supervision and interpretation and image documentation and report.	P2*
36X41	36473	Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, mechanochemical; first vein treated.	P2*

* If designation is temporary.

** Final payment indicators are based on a comparison of the final rates according to the ASC standard ratesetting methodology and the MPFS final rates. Current law specifies a 0.5 percent update to the MPFS payment rates for CY 2017. For a discussion of the MPFS rates, we refer readers to the CY 2017 MPFS final rule with comment period.

b. ASC Covered Surgical Procedures Designated as Device-Intensive—Finalized Policy for CY 2016 and Final Policy for CY 2017

(1) Background

As discussed in the August 2, 2007 final rule (72 FR 42503 through 42508), we adopted a modified payment methodology for calculating the ASC payment rates for covered surgical procedures that are assigned to the subset of OPPS device-dependent APCs with a device offset percentage greater than 50 percent of the APC cost under the OPPS, in order to ensure that payment for the procedure is adequate to provide packaged payment for the high-cost implantable devices used in those procedures. According to that modified ASC payment methodology, we apply the device offset percentage based on the standard OPPS APC ratesetting methodology to the OPPS national unadjusted payment to determine the device cost included in the OPPS payment rate for a device-intensive ASC covered surgical procedure, which we then set as equal to the device portion of the national unadjusted ASC payment rate for the procedure. We then calculate the service (nondevice) portion of the ASC payment for device-intensive procedures by applying the uniform ASC conversion factor to the service portion of the OPPS relative payment weight for the device-intensive procedure. Finally, we sum the ASC device portion and ASC service portion to establish the full payment for the device-intensive procedure under the revised ASC payment system. For CY 2015, we implemented a comprehensive APC policy under the OPPS under which we created C–APCs to replace most of the then-current device-dependent APCs and a few nondevice-dependent APCs under the OPPS, which discontinued the device-dependent APC policy (79 FR 66798 through 66810). We did not implement C–APCs in the ASC payment system.

Therefore, in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66925), we provided that all separately paid covered ancillary services that are provided integral to covered surgical procedures that mapped to C–APCs continue to be separately paid under the ASC payment system instead of being packaged into the payment for the C–APC as under the OPPS. To avoid duplicating payment, we provided that the CY 2015 ASC payment rates for these C–APCs were based on the CY 2015 OPPS relative payments weights that had been calculated using the standard APC ratesetting methodology for the primary service instead of the relative payment weights that were based on the comprehensive bundled service. For the same reason, under the ASC payment system, we also used the standard OPPS APC ratesetting methodology instead of the C–APC methodology to calculate the device offset percentage for C–APCs for purposes of identifying device-intensive procedures and to calculate payment rates for device-intensive procedures assigned to C–APCs. Because we implemented the C–APC policy and, therefore, eliminated device-dependent APCs under the OPPS in CY 2015, we revised our definition of ASC device-intensive procedures to be those procedures that are assigned to any APC (not only an APC formerly designated as device-dependent) with a device offset percentage greater than 40 percent based on the standard OPPS APC ratesetting methodology.

We also provided that we would update the ASC list of covered surgical procedures that are eligible for payment according to our device-intensive procedure payment methodology, consistent with our modified definition of device-intensive procedures, reflecting the APC assignments of procedures and APC device offset percentages based on the CY 2013 OPPS claims and cost report data available for the CY 2015 OPPS/ASC proposed rule and final rule with comment period.

(2) ASC Device-Intensive Designation by HCPCS Code

In CY 2016, we restructured many of the APCs under the OPPS, which resulted in some procedures with significant device costs not being designated device-intensive. In the CY 2016 OPPS/ASC proposed rule (80 FR 39310), we specifically recognized that, in some instances, there may be a surgical procedure that uses a high-cost device but is not assigned to a device-intensive APC. When an ASC covered surgical procedure is not designated as device-intensive, it will be paid under the ASC methodology established for that covered surgical procedure, through either an MPFS nonfacility PE RVU based amount or an OPPS relative payment weight based methodology, depending on the ASC payment indicator assignment.

In response to stakeholder concerns regarding circumstances where procedures with high-cost devices are not classified as device-intensive under the ASC payment system, we solicited public comments in the CY 2016 OPPS/ASC proposed rule, specifically requesting suggestions for alternative methodologies for establishing device-intensive status for ASC covered surgical services (80 FR 39310). We received several comments, which we summarized in the CY 2016 OPPS/ASC

final rule with comment period, and we indicated we would take them into consideration for future rulemaking (80 FR 70484). Among the comments we received, several commenters requested that we calculate device intensity at the HCPCS level because the commenters believed the current method of calculating device intensity at the APC level does not take into account device similarity within an APC.

We believe that it is no longer appropriate to designate ASC device-intensive procedures based on APC assignment because APC groupings of clinically similar procedures do not necessarily factor in device cost similarity. This means that there are some surgical procedures that include high-cost implantable devices that are assigned to an APC with procedures that include the cost of significantly lower-cost devices or no device at all. As a result, the proportion of the APC geometric mean unit cost attributed to implantation of a high-cost device can be underrepresented due to higher claim volume and the lower costs of relatively low-cost device implantation procedures or procedures that do not use an implantable device.

We believe that a HCPCS code-level device offset would be a better representation of a procedure's device cost than an APC-wide average device offset based on the device offset of many procedures. Unlike a device offset calculated at the APC level, which is a weighted average offset for all devices used in all of the procedures assigned to an APC, a HCPCS code-level device offset is calculated using only claims for a single HCPCS code. We believe that such a methodological change would result in a more accurate representation of the cost attributable to implantation of a high-cost device, which would ensure consistent device-intensive designation of procedures with a significant device cost. Further, we believe that a HCPCS code-level device offset would remove an inappropriate device-intensive status for procedures without a significant device cost, but which are granted such status because of the APC assignment.

Therefore, in the CY 2017 OPPS/ASC proposed rule (81 FR 45698 through 45699), for CY 2017, we proposed that a procedure with a HCPCS code-level device offset of greater than 40 percent of the APC costs when calculated according to the standard OPPS APC ratesetting methodology would be designated as ASC device-intensive and would be subject to all of the payment policies applicable to procedures designated as an ASC device-intensive procedure under our established methodology, including our policies on device credits and discontinued procedures. We proposed to revise the regulations at 42 CFR 416.171(b)(2) to redefine device-intensive procedures in accordance with this proposal.

Comment: The majority of commenters supported CMS' proposal to revise the device-intensive procedure designation methodology such that an individual HCPCS code with a device offset greater than 40 percent, regardless of the APC assignment, would be designated as a device-intensive procedure. Among the commenters who supported the proposal, a few requested that CMS lower the ASC device offset threshold to 30 percent to qualify a larger number of ASC procedures as device-intensive.

Response: We appreciate the commenters' support. However, we do not believe that lowering the device offset percentage from 40 percent to 30 percent in the ASC setting only is appropriate. As discussed in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66924), the intent of the device-intensive policy is to align significant device cost percentage in the OPPS with the device-intensive procedures in the ASC payment system. That is, we should not pay more for a device when it is implanted in an ASC than if the same device were implanted in an HOPD. Lowering the ASC device-intensive procedure offset to 30 percent would create a disparity in the number of procedures designated device-intensive in the ASC setting, when compared to the HOPD setting. A lower device offset percentage in the ASC setting would result in more device-intensive procedures, when compared to the HOPD setting and, therefore, would result in a financial incentive to perform certain device-intensive procedures in the ASC setting rather than the HOPD setting. Therefore, for CY 2017, we believe it is not appropriate to lower the ASC device-intensive offset percentage to 30 percent when the OPPS device-intensive offset percentage is 40 percent. We refer readers to section IV.B. of this final rule with comment period for background on the OPPS device-intensive procedure policy.

After consideration of the public comments we received, we are finalizing our proposal, without modification, for CY 2017, to designate all procedures that involve the implantation of a device and that have an individual HCPCS code-level device offset of greater than 40 percent, regardless of the APC assignment, as device-intensive. In addition, we are revising the regulations under 42 CFR 416.171(b)(2) to reflect this finalized policy.

In addition, for new HCPCS codes describing procedures involving the implantation of medical devices that do not yet have associated claims data, we proposed to designate these procedures as device-intensive with a default device offset set at 41 percent until claims data are available to establish the HCPCS code-level device offset for the procedures. This default device offset amount of 41 percent would not be calculated from claims data; instead it would be applied as a default until claims data are available upon which to calculate an actual device offset for the new code. The purpose of applying the 41-percent default device offset to new codes that describe procedures that involve the implantation of medical devices would be to ensure ASC access for new procedures until claims data become available. However, in certain rare instances, for example, in the case of a very expensive implantable device, we may temporarily assign a higher offset percentage if warranted by additional information such as pricing data from a device manufacturer. Once claims data are available for a new procedure involving the implantation of a medical device, the device-intensive designation would be applied to the code if the HCPCS code device offset is greater than 40 percent, according to our proposed policy of determining device-intensive status by calculating the HCPCS code-level device offset. The complete listing of ASC device-intensive procedures was included in Addendum AA to the proposed rule (which is available via the Internet on the CMS Web site).

Comment: Several commenters supported CMS' proposal to apply a default device offset of at least 41 percent to new implant procedures, with the possibility for a higher device offset if supported by device cost. Some commenters asked that CMS specify how additional information can be submitted to CMS, including the deadline for submission and the type of information that can be submitted, for consideration of a higher device offset percentage for a new implant procedure.

Response: We appreciate the commenters' support. Additional information for CMS consideration of an offset percentage higher than the default of 41 percent for new HCPCS codes describing procedures involving the implantation (or in some cases the insertion) of a medical device that do not yet have associated claims data, such as pricing data or invoices from a device manufacturer, may be directed to CMS staff in the Division of Outpatient

Care, Mail Stop C4–01–26, Centers for Medicare and Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244–1850, or electronically at *ASCPPS@cms.hhs.gov*. Additional information can be submitted prior to the issuance of an OPPS/ASC proposed rule or as a public comment in response to the proposed rule. Device offset percentages for a given year will be established in each year's OPPS/ASC final rule.

After consideration of the public comments we received, we are finalizing our proposal, without modification, for CY 2017 to designate as device-intensive all procedures described by new HCPCS codes involving the implantation of a medical device that do not yet have associated claims data with a default device offset set at 41 percent, until claims data are available to establish the HCPCS code-level device offset for the procedure. For CY 2017, we also are finalizing our proposal, without modification, to temporarily assign a higher offset percentage if warranted by additional information. The complete listing of ASC device-intensive procedures for CY 2017 is included in Addendum AA to this final rule with comment period (which is available via the Internet on the CMS Web site).

(3) Changes to List of ASC Covered Surgical Procedures Designated as Device-Intensive for CY 2017

For CY 2017, in the CY 2017 OPPS/ASC proposed rule (81 FR 45699), we proposed to revise our methodology for designating ASC covered surgical procedures as device-intensive. Specifically, for CY 2017, we proposed to update the ASC list of covered surgical procedures that are eligible for payment according to our device-intensive procedure payment methodology, consistent with our proposed revised definition of device-intensive procedures, reflecting the proposed individual HCPCS code device offset percentages based on CY 2015 OPPS claims and cost report data available for the proposed rule.

The ASC covered surgical procedures that we proposed to designate as device-intensive and would be subject to the device-intensive procedure payment methodology for CY 2017 were included in Addendum AA to the proposed rule (which is available via the Internet on the CMS Web site). The CPT code, the CPT code short descriptor, the proposed CY 2017 ASC payment indicator, the proposed CY 2017 HCPCS code device offset percentage, and an indication of whether the full credit/partial credit (FB/FC) device adjustment policy would apply also were included in Addendum AA to the proposed rule.

We invited public comments on the proposed list of ASC device-intensive procedures.

Comment: One commenter requested that CMS review the proposed device offset percentage for CPT code 43284 (proposed as CPT code 432X1) (Laparoscopy, surgical, esophageal sphincter augmentation procedure, placement of sphincter augmentation device (*i.e.*, magnetic band), including cruroplasty when performed). CPT code 43284 is the replacement code for predecessor HCPCS codes C9737 (Laparoscopy, surgical, esophageal sphincter augmentation with device (*e.g.,* magnetic band)) and 0392T (laparoscopy, surgical, esophageal sphincter augmentation procedure, placement of sphincter augmentation device (*e.g.,* magnetic band)). Therefore, the commenter believed that CY 2015 claims data for HCPCS codes C9737 and 0392T should be used to determine the device offset percentage for CPT code 43284. However, the commenter suggested that CMS used CY 2015 claims data for HCPCS code 0392T only when determining the device offset percentage for CPT code 43284.

Response: We agree with the commenter. Accordingly, for this CY 2017 OPPS/ASC final rule with comment period, we used CY 2015 claims data for HCPCS codes C9737 and 0392T to determine the device offset percentage for CPT code 43284.

Comment: One commenter supported CMS' proposed designation of the procedure described by HCPCS code C9739 (cystourethroscopy with insertion of transprostatic implant; 1 to 3 implants) as device-intensive based on the proposed methodology change to device-intensive designations.

Response: We appreciate the commenter's support.

After consideration of the public comments we received, we are designating the ASC covered surgical procedures displayed in Addendum AA as device-intensive and subject to the device-intensive procedure payment methodology for CY 2017. The CPT code, the CPT code short descriptor, the final CY 2017 ASC payment indicator, the final CY 2017 HCPCS code device offset percentage, and an indication of whether the full credit/partial credit (FB/FC) device adjustment policy will apply, are included in the ASC policy file labeled ''CY 2017 ASC Procedures to which the No Cost/Full Credit and Partial Credit Device Adjustment Policy Applies,'' which is available via the Internet on the CMS Web site at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ASCPayment/ASC-Policy-Files.html*.

c. Adjustment to ASC Payments for No Cost/Full Credit and Partial Credit Devices

Our ASC payment policy for costly devices implanted in ASCs at no cost/full credit or partial credit, as set forth in § 416.179 of our regulations, is consistent with the OPPS policy that was in effect until CY 2014. The established ASC policy reduces payment to ASCs when a specified device is furnished without cost or with full credit or partial credit for the cost of the device for those ASC covered surgical procedures that are assigned to APCs under the OPPS to which this policy applies. We refer readers to the CY 2009 OPPS/ASC final rule with comment period for a full discussion of the ASC payment adjustment policy for no cost/full credit and partial credit devices (73 FR 68742 through 68744).

As discussed in section IV.B. of the CY 2014 OPPS/ASC final rule with comment period (78 FR 75005 through 75006), we finalized our proposal to modify our former policy of reducing OPPS payment for specified APCs when a hospital furnishes a specified device without cost or with a full or partial credit. Formerly, under the OPPS, our policy was to reduce OPPS payment by 100 percent of the device offset amount when a hospital furnished a specified device without cost or with a full credit and by 50 percent of the device offset amount when the hospital received partial credit in the amount of 50 percent or more (but less than 100 percent) of the cost for the specified device. For CY 2014, we finalized our proposal to reduce OPPS payment for applicable APCs by the full or partial credit a provider receives for a replaced device, capped at the device offset amount.

Although we finalized our proposal to modify the policy of reducing payments when a hospital furnishes a specified device without cost or with full or partial credit under the OPPS, in that final rule with comment period (78 FR 75076 through 75080), we finalized our proposal to maintain our ASC policy for reducing payments to ASCs for specified device-intensive procedures when the ASC furnishes a device without cost or with full or partial credit. Unlike the OPPS, there is currently no mechanism within the ASC claims processing system for ASCs to submit to CMS the actual amount received when furnishing a specified device at full or partial credit. Therefore, under the ASC payment system, we finalized our proposal for

CY 2014 to continue to reduce ASC payments by 100 percent or 50 percent of the device offset amount when an ASC furnishes a device without cost or with full or partial credit, respectively.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45699 through 456700) we proposed to update the list of ASC covered device-intensive procedures, based on the proposed CY 2017 device-intensive definition, which would be subject to the no cost/full credit and partial credit device adjustment policy for CY 2017. Specifically, when a device-intensive procedure is subject to the no cost/full credit or partial credit device adjustment policy and is performed to implant a device that is furnished at no cost or with full credit from the manufacturer, the ASC would append the HCPCS ''FB'' modifier on the line in the claim with the procedure to implant the device. The contractor would reduce payment to the ASC by the device offset amount that we estimate represents the cost of the device when the necessary device is furnished without cost or with full credit to the ASC. We continue to believe that the reduction of ASC payment in these circumstances is necessary to pay appropriately for the covered surgical procedure furnished by the ASC.

For partial credit, we proposed to reduce the payment for implantation procedures that are subject to the no cost/full credit or partial credit device adjustment policy by one-half of the device offset amount that would be applied if a device was provided at no cost or with full credit, if the credit to the ASC is 50 percent or more (but less than 100 percent) of the cost of the new device. The ASC would append the HCPCS ''FC'' modifier to the HCPCS code for a device-intensive surgical procedure that is subject to the no cost/full credit or partial credit device adjustment policy, when the facility receives a partial credit of 50 percent or more (but less than 100 percent) of the cost of a device. To report that the ASC received a partial credit of 50 percent or more (but less than 100 percent) of the cost of a new device, ASCs would have the option of either: (1) Submitting the claim for the device replacement procedure to their Medicare contractor after the procedure's performance but prior to manufacturer acknowledgment of credit for the device, and subsequently contacting the contractor regarding a claim adjustment once the credit determination is made; or (2) holding the claim for the device implantation procedure until a determination is made by the manufacturer on the partial credit and submitting the claim with the ''FC'' modifier appended to the implantation procedure HCPCS code if the partial credit is 50 percent or more (but less than 100 percent) of the cost of the replacement device. Beneficiary coinsurance would be based on the reduced payment amount. As finalized in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66926), to ensure our policy covers any situation involving a device-intensive procedure where an ASC may receive a device at no cost/full credit or partial credit, we apply our FB/FC policy to all device-intensive procedures.

We invited public comments on our proposals to adjust ASC payments for no cost/full credit and partial credit devices.

We did not receive any public comment on these proposals. Therefore, we are finalizing these proposals without modification. Specifically, we will apply the HCPCS FB/FC modifier policy to all device-intensive procedures in CY 2017. The device-intensive procedures for CY 2017 are listed in the ASC policy file labeled ''CY 2017 ASC Procedures to which the No Cost/Full Credit and Partial Credit Device Adjustment Policy Applies'' (referred to as ''ASC device adjustment file'' below), which is available via the Internet on the CMS Web site at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ASCPayment/ASC-Policy-Files.html*. For CY 2017, we will reduce the payment for the procedures listed in the ASC device adjustment file by the full device offset amount if a device is furnished without cost or with full credit. ASCs must append the HCPCS modifier ''FB'' to the HCPCS code for a surgical procedure listed in the ASC device adjustment file previously mentioned when the device is furnished without cost or with full credit. In addition, for CY 2017, we will reduce the payment for the procedures listed in the ASC device adjustment file by one-half of the device offset amount if a device is provided with partial credit, if the credit to the ASC is 50 percent or more (but less than 100 percent) of the device cost. The ASC must append the HCPCS ''FC'' modifier to the HCPCS code for a surgical procedure listed in the ASC device adjustment file when the facility receives a partial credit of 50 percent or more (but less than 100 percent) of the cost of a device.

d. Additions to the List of ASC Covered Surgical Procedures

We conducted a review of HCPCS codes that currently are paid under the OPPS, but not included on the ASC list of covered surgical procedures, to determine if changes in technology and/or medical practice affected the clinical appropriateness of these procedures for the ASC setting. Based on this review, in the CY 2017 OPPS/ASC proposed rule (81 FR 45700 through 45701), we proposed to update the list of ASC covered surgical procedures by adding eight procedures to the list for CY 2017. We determined that these eight procedures would not be expected to pose a significant risk to beneficiary safety when performed in an ASC, and would not be expected to require active medical monitoring and care of the beneficiary at midnight following the procedure. These codes are add-on codes to procedures that are currently performed in the ASC and describe variations of (including additional instrumentation used with) the base code procedure. Therefore, we proposed to include them on the list of ASC covered surgical procedures for CY 2017.

The eight procedures that we proposed to add to the ASC list of covered surgical procedures, including their HCPCS code long descriptors and proposed CY 2017 payment indicators, were displayed in Table 29 of the proposed rule.

Comment: Several commenters supported the proposal to add the eight codes that were displayed in Table 29 of the proposed rule to the list of ASC covered surgical procedures for CY 2017.

Response: We appreciate the commenters' support.

Comment: Commenters noted that CPT code 22851 (Application of intervertebral biomechanical device(s) (*e.g.,* synthetic cage(s), methlmethacrylate) to vertebral defect or interspace (List separately in addition to code for primary procedure)), which was proposed to be added to the list of ASC covered surgical procedures (81 FR 45701) was deleted by the AMA Editorial Panel in April 2016. These commenters indicated that this code was replaced with the following three new CPT codes, effective January 1, 2017: 22853 (Insertion of interbody biomechanical device(s) (*e.g.,* synthetic cage, mesh) with integral anterior instrumentation for device anchoring (*e.g.,* screws, flanges), when performed, to intervertebral disc space in conjunction with interbody arthrodesis, each interspace (List separately in addition to code for primary procedure); 22854 (Insertion of intervertebral biomechanical device(s) (*e.g.,* synthetic cage, mesh) with integral anterior instrumentation for device anchoring (*e.g.,* screws, flanges), when performed,

to vertebral corpectomy(ies) (vertebral body resection, partial or complete) defect, in conjunction with interbody arthrodesis, each contiguous defect (List separately in addition to code for primary procedure); and 22859 (Insertion of intervertebral biomechanical device(s) (*e.g.,* synthetic cage, mesh, methylmethacrylate) to intervertebral disc space or vertebral body defect without interbody arthrodesis, each contiguous defect (List separately in addition to code for primary procedure)). The commenters requested that the replacement codes for CPT code 22851 be included on the list of ASC covered surgical procedures.

Response: The commenters are correct. CPT code 22851 was deleted effective April 13, 2016, and replaced with CPT codes 22853, 22854, and 22859, effective January 1, 2017. CPT code 22851 was included on the list of codes proposed to be added to the ASC covered surgical procedures list in error. Instead of CPT code 22851, which will be deleted on December 31, 2016, we intended to propose to add CPT codes 22853, 22854, and 22859 to the list of ASC covered surgical procedures. We have included these codes with a payment indicator of ''N1'' in Table 51 below as well as Addendum AA to this final rule with comment period (which is available via the Internet on the CMS Web site). We also have removed these codes from Addendum EE to this final rule with comment period (which is available via the Internet on the CMS Web site) for CY 2017.

Comment: Some commenters requested that CMS establish separate payment for the instrumentation codes, CPT codes 22552, 22840, 22842, and 22845 that were proposed to be added to the list of ASC covered surgical procedures. Commenters also requested separate payment for CPT code 22851, which will be replaced with CPT codes 22853, 22854, and 22859, effective January 1, 2017.

Response: Each of these codes are add-on services to procedures and describe variations of (including additional instrumentation used with) the base code procedure. These codes are assigned to status indicator ''N'' under the OPPS. This status indicator is used to identify items and services packaged into APC payment rates. As noted in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70495), we update the ASC payment rates and make changes to ASC payment indicators as necessary to maintain consistency between the OPPS and ASC payment system regarding the packaged or separately payable status of services. Therefore, these services are assigned payment indicator ''N1'' under the ASC payment system, which identifies a packaged service where no separate payment is made.

Comment: Some commenters requested that CMS include several additional codes that were not proposed in the CY 2017 OPPS/ASC proposed rule on the list of ASC covered surgical procedures for CY 2017. These codes are shown in Table 50 below. One commenter also requested that CMS revise existing ASC regulations to allow unlisted codes to be payable in the ASC setting.

TABLE 50—PROCEDURES REQUESTED BY COMMENTERS FOR ADDITION TO THE CY 2017 LIST OF ASC COVERED SURGICAL PROCEDURES

CY 2017 CPT/HCPCS Code	Short descriptor
00142	Anesth lens surgery.
00170	Anesth procedure on mouth.
00810	Anesth low intestine scope.
0232T	Njx platelet plasma.
17999	Skin tissue procedure.
19307	Mast mod rad.
20930	Sp bone algrft morsel add-on.
21470	Treat lower jaw fracture.
22558*	Lumbar spine fusion.
22585	Additional spinal fusion.
22600*	Neck spine fusion.
22630*	Lumbar spine fusion.
22632*	Spine fusion extra segment.
22633*	Lumbar spine fusion combined.
22634*	Spine fusion extra segment.
22830*	Exploration of spinal fusion.
22846*	Insert spine fixation device.
22849*	Reinsert spinal fixation.
22850*	Remove spine fixation device.
22852*	Remove spine fixation device.
22856	Cerv artific diskectomy.
22858	Second level cer diskectomy.
22864*	Remove cerv artif disc.
22899	Spine surgery procedure.
23470	Reconstruct shoulder joint.
23472*	Reconstruct shoulder joint.
27130*	Total hip arthroplasty.
27132*	Total hip arthroplasty.
27176*	Treat slipped epiphysis.
27412	Autochondrocyte implant knee.
27447*	Total knee arthroplasty.
27457*	Realignment of knee.
27477	Surgery to stop leg growth.
27485	Surgery to stop leg growth.
27486*	Revise/replace knee joint.
27487*	Revise/replace knee joint.
27535*	Treat knee fracture.
27540*	Treat knee fracture.
27702*	Reconstruct ankle joint.
28805	Amputation thru metatarsal.
28899	Foot/toes surgery procedure.
29799	Casting/strapping procedure.
29867	Allgrft implnt knee w/scope.
29868	Meniscal trnspl knee w/scpe.
29999	Arthroscopy of joint.
31599	Larynx surgery procedure.
32551	Insertion of chest tube.
33244	Remove elctrd transvenously.
37191	Ins endovas vena cava filtr.
37193	Rem endovas vena cava filter.
37244	Vasc embolize/occlude bleed.
37799	Vascular surgery procedure.
38207	Cryopreserve stem cells.
38214	Volume deplete of harvest.
38999	Blood/lymph system procedure.
41899	Dental surgery procedure.
43280	Laparoscopy fundoplasty.
43281	Lap paraesophag hern repair.
43499	Esophagus surgery procedure.
43775*	Lap sleeve gastrectomy.
43999	Stomach surgery procedure.
44180	Lap enterolysis.
44705	Prepare fecal microbiota.
44799	Unlisted px small intestine.
44950	Appendectomy.
44970	Laparoscopy appendectomy.
46999	Anus surgery procedure.
47379	Laparoscope procedure liver.
47600*	Removal of gallbladder.
49329	Laparo proc abdm/per/oment.
49659	Laparo proc hernia repair.
49999	Abdomen surgery procedure.
53899	Urology surgery procedure.
54411	Remov/replc penis pros comp.
54417	Remv/replc penis pros compl.
55899	Genital surgery procedure.
57282	Colpopexy extraperitoneal.
57283	Colpopexy intraperitoneal.
57425	Laparoscopy surg colpopexy.
58300	Insert intrauterine device.
60252	Removal of thyroid.
60260	Repeat thyroid surgery.
61782	Scan proc cranial extra.
63035	Spinal disk surgery add-on.
63048	Remove spinal lamina add-on.
63057	Decompress spine cord add-on.
63081*	Remove vert body dcmprn crvl.
64999	Nervous system surgery.
67904	Repair eyelid defect.
90870	Electroconvulsive therapy.
91110	Gi tract capsule endoscopy.
C9600	Perc drug-el cor stent sing.
C9601	Perc drug-el cor stent bran.
C9602	Perc d-e cor stent ather s.
C9604	Perc d-e cor revasc t cabg s.
C9605	Perc d-e cor revasc t cabg b.
C9606	Perc d-e cor revasc w ami s.
C9607	Perc d-e cor revasc chro sin.
G0455	Fecal microbiota prep instil.
L8699	Prosthetic implant nos

*CPT codes on the OPPS inpatient list for CY 2017.

Response: We reviewed all of the codes that the commenters requested for addition to the ASC list of covered surgical procedures. Of the 102 codes requested for addition to the ASC list, we did not consider procedures that are reported by CPT codes that are on the inpatient only list (identified with an asterisk in Table 50 above). The 27 codes that are on the inpatient list for CY 2017 are not eligible for addition to the ASC list of covered surgical procedures (72 FR 42476 through 42486; 42 CFR 416.166).

We do not believe that the remaining 75 procedures described by codes listed in Table 50 should be added to the list for CY 2017 because they do not meet our criteria for inclusion on the list. Under §§ 416.2 and 416.166 of our regulations, subject to certain exclusions, covered surgical procedures

in an ASC are surgical procedures that are separately paid under the OPPS, that would not be expected to pose a significant risk to safety when performed in an ASC, and would not be expected to require active medical monitoring and care of the beneficiary at midnight following the procedure. The criteria used under the revised ASC payment system to identify procedures that would be expected to pose a significant safety risk when performed in an ASC include, but are not limited to, those procedures that: (1) Generally result in extensive blood loss; (2) require major or prolonged invasion of body cavities; (3) directly involve major blood vessels; (4) are generally emergent or life threatening in nature; (5) commonly require systemic thrombolytic therapy; (6) are designated as requiring inpatient care under 42 CFR 419.22(n); (7) can only be reported using a CPT unlisted surgical procedure code; or (8) are otherwise excluded under 42 CFR 411.15 (42 CFR 416.166). Procedures that do not meet the criteria set forth in § 416.166 would not be added to the list of ASC covered surgical procedures. We note that we have evaluated many of these procedures in previous years (79 FR 66918 through 66921; 78 FR 75067 through 75070) and did not add the procedures to the ASC list because of similar concerns regarding beneficiary safety. The commenters provided no specific information regarding the safety of these procedures in the ASC setting.

In response to the request to allow other unlisted codes to be payable in the ASC setting, we note that we have addressed this comment several times in prior rulemaking. We refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70489) for the most recent response. Our longstanding ASC policy under § 416.166 is that procedures described by all unlisted codes are noncovered in the ASC because we are unable to determine (due to the nondescript nature of unlisted procedure codes) if a procedure that would be reported with an unlisted code would not be expected to pose a significant risk to beneficiary safety when performed in an ASC, and would not be expected to require active medical monitoring and care of the beneficiary at midnight following the procedure. We continue to believe that it would not be appropriate to provide ASC payment for procedures described by unlisted CPT codes in the surgical range, even if payment may be provided under the OPPS. Therefore, we are not adding procedures described by unlisted CPT codes to the list of ASC covered surgical procedures for CY 2017.

After consideration of the public comments we received, we are finalizing our proposal with respect to seven of the eight CPT codes that we proposed to add to the list of ASC covered surgical procedures for CY 2017. We are not adding CPT code 22851 to the list of ASC covered surgical procedures for CY 2017. Instead, in response to public comments, we are adding three additional procedures described by CPT codes 22853, 22854, and 22859 to the list of ASC covered surgical procedures for CY 2017 in this final rule with comment period. In addition, as discussed below, in response to public comments, we removed CPT code 22585 (Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophytectomy, and decompression of spinal cord and/or nerve roots; each additional interspace (List separately in addition to code for primary procedure)) from the OPPS inpatient list for CY 2017. CPT code 22585 is also an add-on code to procedures that are currently performed in the ASC and describes a variation of (including additional instrumentation used with) the base code procedure. Therefore, we are including the procedure described by CPT code 22585 on the list of ASC covered surgical procedures for CY 2017 as well. Table 51 below displays the 11 procedures that we are adding to the ASC list of covered surgical procedures, including their CPT code long descriptors and final CY 2017 payment indicators.

TABLE 51—ADDITIONS TO THE LIST OF ASC COVERED SURGICAL PROCEDURES FOR CY 2017

CY 2017 CPT code	CY 2017 long descriptor	CY 2017 ASC payment indicator
20936	Autograft for spine surgery only (includes harvesting the graft); local (*e.g.*, ribs, spinous process, or laminar fragments) obtained from the same incision (List separately in addition to code for primary procedure).	N1
20937	Autograft for spine surgery only (includes harvesting the graft); morselized (through separate skin or fascial incision) (List separately in addition to code for primary procedure).	N1
20938	Autograft for spine surgery only (includes harvesting the graft); structural, biocortical or tricortical (through separate skin fascial incision).	N1
22552	Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophytectomy and decompression of spinal cord and/or nerve roots; cervical C2, each additional interspace (List separately in addition to code for separate procedure).	N1
22840	Posterior non-segmental instrumentation (*e.g.*, Harrington rod technique, pedicle fixation across 1 interspace, atlantoaxial transarticular screw fixation, sublaminar wiring at C1, facet screw fixation).	N1
22842	Posterior non-segmental instrumentation (*e.g.*, Harrington rod technique, pedicle fixation across 1 interspace, atlantoaxial transarticular screw fixation, sublaminar wiring at C1, facet screw fixation).	N1
22845	Anterior instrumentation; 2 to 3 vertebral segments	N1
22853*	Insertion of interbody biomechanical device(s) (*e.g.*, synthetic cage, mesh) with integral anterior instrumentation for device anchoring (*e.g.*, screws, flanges), when performed, to intervertebral disc space in conjunction with interbody arthrodesis, each interspace (List separately in addition to code for primary procedure).	N1
22854*	Insertion of intervertebral biomechanical device(s) (*e.g.*, synthetic cage, mesh) with integral anterior instrumentation for device anchoring (*e.g.*, screws, flanges), when performed, to vertebral corpectomy(ies) (vertebral body resection, partial or complete) defect, in conjunction with interbody arthrodesis, each contiguous defect (List separately in addition to code for primary procedure).	N1
22859*	Insertion of intervertebral biomechanical device(s) (*e.g.*, synthetic cage, mesh, methylmethacrylate) to intervertebral disc space or vertebral body defect without interbody arthrodesis, each contiguous defect (List separately in addition to code for primary procedure).	N1

* Effective January 1 2017, CPT codes 22853, 22854, and 22859 replaced CPT code 22851, which was deleted April 13, 2016 by the AMA Editorial Panel.

As we discussed in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68724), we adopted a policy to include, in our annual evaluation of the ASC list of covered surgical procedures, a review of the procedures that are being proposed for removal from the OPPS inpatient only list for possible inclusion on the ASC list of covered surgical procedures. We proposed to remove the following six procedures described by CPT codes from the OPPS inpatient list for CY 2017: CPT codes 22840, 22842, 22845, 22858, 31584, and 31587. The long descriptors for each of these six CPT procedure codes were included in the proposed rule (81 FR 45678). We evaluated each of the six procedures we proposed to remove for the OPPS inpatient list for CY 2017 according to the criteria for exclusion from the list of ASC covered surgical procedures. After reviewing these procedures, we also proposed to add the procedures described by CPT codes 22840, 22842, and 22845 listed in Table 29 of the proposed rule to the list of ASC covered surgical procedures for CY 2017 (81 FR 45700 through 45701). We proposed to add these three procedures to the list of ASC covered surgical procedures (as well as proposed to remove them from the OPPS inpatient list) for CY 2017 because these procedures are described by add-on codes for procedures that are currently performed in the ASC and describe variations of (including additional instrumentation used with) the base code procedure. Therefore, we expect that the procedures described by these codes can be safely performed in an ASC without the need for an overnight stay.

Regarding the other three procedures that we proposed to remove from the OPPS inpatient list, we believe that procedures described by CPT codes 22858 (Total disc arthroplasty (artificial disc), anterior approach, including discectomy with end plate preparation (includes osteophytectomy for nerve root or spinal cord decompression and microdissection); second level, cervical (List separately in addition to code for primary procedure)), 31584 (Laryngoplasty; with open reduction of fracture), and 31587 (Laryngoplasty, cricoid split) should continue to be excluded from the list of ASC covered surgical procedures. We invited public comments on the continued exclusion of these procedures from the list of ASC covered surgical procedures.

In response to public comments (as discussed in section IX.B. of this final rule with comment period), we also are removing CPT code 22585 from the OPPS inpatient list for CY 2017 (discussed in section IX.B. of this final rule with comment period). CPT code 22585 is also an add-on code to procedures that are currently performed in the ASC and describes a variation of (including additional instrumentation used with) the base code procedure. We also expect that the procedure described by CPT code 22585 can be safely performed in an ASC without the need for an overnight stay. Therefore, we are including the procedure described by CPT code 22585 on the list of ASC covered surgical procedures for CY 2017 as well.

Comment: Commenters supported the proposal to add the procedures described by CPT codes 22840, 22842, and 22845 to the list of ASC covered surgical procedures. Commenters also requested that CMS add the procedure described by CPT code 22858 to the list of ASC covered surgical procedures.

Response: We appreciate the commenters' support. As discussed earlier, we continue to believe that the procedure described by CPT code 22858 does not meet our criteria for inclusion on the list of ASC covered surgical procedures because this procedure would generally be expected to require at least an overnight stay.

After consideration of the public comments we received, we are finalizing the proposal to add the procedures described by CPT codes 22585, 22840, 22842, and 22845, which are being removed from the OPPS inpatient list for CY 2017, to the list of ASC covered surgical procedures for CY 2017. We also are including the procudure described by CPT code 22585 on the list of ASC covered surgical procedures for CY 2017.

2. Covered Ancillary Services

Consistent with the established ASC payment system policy, in the CY 2017 OPPS/ASC proposed rule (81 FR 45701), we proposed to update the ASC list of covered ancillary services to reflect the payment status for the services under the CY 2017 OPPS. Maintaining consistency with the OPPS may result in proposed changes to ASC payment indicators for some covered ancillary services because of changes that are being proposed under the OPPS for CY 2017. For example, a covered ancillary service that was separately paid under the revised ASC payment system in CY 2016 may be proposed for packaged status under the CY 2017 OPPS and, therefore, also under the ASC payment system for CY 2017.

To maintain consistency with the OPPS, we proposed that these services also would be packaged under the ASC payment system for CY 2017. We proposed to continue this reconciliation of packaged status for subsequent calendar years. Comment indicator ''CH,'' discussed in section XII.F. of the proposed rule, was used in Addendum BB to the proposed rule (which is available via the Internet on the CMS Web site) to indicate covered ancillary services for which we proposed a change in the ASC payment indicator to reflect a proposed change in the OPPS treatment of the service for CY 2017.

All ASC covered ancillary services and their proposed payment indicators for CY 2017 were included in Addendum BB to the proposed rule. We invited public comments on this proposal.

We did not receive any public comments on these proposals. Therefore, we are finalizing, without modification, our proposal to update the ASC list of covered ancillary services to reflect the payment status for the services under the OPPS. All CY 2017 ASC covered ancillary services and their final payment indicators are included in Addendum BB to this final rule with comment period (which is available via the Internet on the CMS Web site).

D. ASC Payment for Covered Surgical Procedures and Covered Ancillary Services

1. ASC Payment for Covered Surgical Procedures

a. Background

Our ASC payment policies for covered surgical procedures under the revised ASC payment system are fully described in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66828 through 66831). Under our established policy for the revised ASC payment system, we use the ASC standard ratesetting methodology of multiplying the ASC relative payment weight for the procedure by the ASC conversion factor for that same year to calculate the national unadjusted payment rates for procedures with payment indicators ''G2'' and ''A2.'' Payment indicator ''A2'' was developed to identify procedures that were included on the list of ASC covered surgical procedures in CY 2007 and, therefore, were subject to transitional payment prior to CY 2011. Although the 4-year transitional period has ended and payment indicator ''A2'' is no longer required to identify surgical procedures subject to transitional payment, we retained payment indicator ''A2'' because it is used to identify procedures that are exempted from application of the office-based designation.

The rate calculation established for device-intensive procedures (payment

indicator ''J8'') is structured so that the packaged device payment amount is the same as under the OPPS, and only the service portion of the rate is subject to the ASC standard ratesetting methodology. In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70474 through 70502), we updated the CY 2015 ASC payment rates for ASC covered surgical procedures with payment indicators of ''A2,'' ''G2,'' and ''J8'' using CY 2014 data, consistent with the CY 2016 OPPS update. We also updated payment rates for device-intensive procedures to incorporate the CY 2016 OPPS device offset percentages calculated under the standard APC ratesetting methodology as discussed earlier in this section.

Payment rates for office-based procedures (payment indicators ''P2,'' ''P3,'' and ''R2'') are the lower of the MPFS nonfacility PE RVU-based amount (we refer readers to the CY 2017 MPFS proposed rule) or the amount calculated using the ASC standard ratesetting methodology for the procedure. In the CY 2016 OPPS/ASC final rule with comment period, we updated the payment amounts for office-based procedures (payment indicators ''P2,'' ''P3,'' and ''R2'') using the most recent available MPFS and OPPS data. We compared the estimated CY 2016 rate for each of the office-based procedures, calculated according to the ASC standard ratesetting methodology, to the MPFS nonfacility PE RVU-based amount to determine which was lower and, therefore, would be the CY 2016 payment rate for the procedure under our final policy for the revised ASC payment system (§ 416.171(d)).

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75081), we finalized our proposal to calculate the CY 2014 payment rates for ASC covered surgical procedures according to our established methodologies, with the exception of device removal procedures. For CY 2014, we finalized a policy to conditionally package payment for device removal codes under the OPPS. Under the OPPS, a conditionally packaged code (status indicators ''Q1'' and ''Q2'') describes a HCPCS code where the payment is packaged when it is provided with a significant procedure but is separately paid when the service appears on the claim without a significant procedure. Because ASC services always include a covered surgical procedure, HCPCS codes that are conditionally packaged under the OPPS are always packaged (payment indicator ''N1'') under the ASC payment system. Under the OPPS, device removal procedures are conditionally packaged and, therefore, would be packaged under the ASC payment system. There would be no Medicare payment made when a device removal procedure is performed in an ASC without another surgical procedure included on the claim; therefore, no Medicare payment would be made if a device was removed but not replaced. To address this concern, for the device removal procedures that are conditionally packaged in the OPPS (status indicator ''Q2''), we assigned the current ASC payment indicators associated with these procedures and continued to provide separate payment in CYs 2014, 2015, and 2016.

b. Update to ASC Covered Surgical Procedure Payment Rates for CY 2017

In the CY 2017 OPPS/ASC proposed rule (81 FR 45702), we proposed to update ASC payment rates for CY 2017 and subsequent years using the established rate calculation methodologies under § 416.171 and using our proposed modified definition of device-intensive procedures, as discussed in section XI.C.1.b. of the proposed rule. Because the proposed OPPS relative payment weights were based on geometric mean costs for CY 2017 and subsequent years, the ASC system would use geometric means to determine proposed relative payment weights under the ASC standard methodology. We proposed to continue to use the amount calculated under the ASC standard ratesetting methodology for procedures assigned payment indicators ''A2'' and ''G2.''

We proposed that payment rates for office-based procedures (payment indicators ''P2,'' ''P3,'' and ''R2'') and device-intensive procedures (payment indicator ''J8'') be calculated according to our established policies and, for device-intensive procedures, using our proposed modified definition of device-intensive procedures, as discussed in section XI.C.1.b. of the proposed rule. Therefore, we proposed to update the payment amount for the service portion of the device-intensive procedures using the ASC standard ratesetting methodology and the payment amount for the device portion based on the proposed CY 2017 OPPS device offset percentages that have been calculated using the standard OPPS APC ratesetting methodology. Payment for office-based procedures would be at the lesser of the proposed CY 2017 MPFS nonfacility PE RVU-based amount or the proposed CY 2017 ASC payment amount calculated according to the ASC standard ratesetting methodology.

As we did for CYs 2014, 2015, and 2016, for CY 2017, we proposed to continue our policy for device removal procedures such that device removal procedures that are conditionally packaged in the OPPS (status indicators ''Q1'' and ''Q2'') would be assigned the current ASC payment indicators associated with these procedures and would continue to be paid separately under the ASC payment system.

We invited public comments on these proposals.

Comment: Several commenters disagreed with the proposed CY 2017 ASC payment rates for the surgical procedures described by the following CPT codes:

- CPT code 29882 (Arthroscopy, knee, surgical; with meniscus repair (medial OR lateral);
- CPT code 29883 (Arthroscopy, knee, surgical; with meniscus repair (medial and lateral));
- CPT code 28293 (Correction, hallux valgus (bunion), with or without sesamoidectomy; resection of joint with implant);
- CPT code 43239 (Esophagogastroduodenoscopy, flexible, transoral; with biopsy, single or multiple);
- CPT code 45378 (Colonoscopy, flexible; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure));
- CPT code 66982 (Extracapsular cataract extraction removal with insertion of intraocular lens prosthesis (one stage procedure), manual or mechanical technique (*e.g.,* irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (*e.g.,* iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage); and
- CPT code 66984 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (one stage procedure), manual or mechanical technique (*e.g.,* irrigation and aspiration or phacoemulsification)).

Commenters believed that the proposed CY 2017 payment rates for these procedures are inadequate and would not cover overhead costs or other standard supplies utilized during surgery. Commenters requested that CMS reconsider the data and methodology used to determine ASC payment rates.

Response: As discussed earlier, the ASC payment is dependent upon the APC assignment for the procedure. Based on our analysis of the latest hospital outpatient and ASC claims data used for this final rule with comment period, we updated ASC payment rates

for CY 2017 using the established rate calculation methodologies under § 416.171 and using our finalized modified definition of device-intensive procedures, as discussed in section XII.C.1.b. of this final rule with comment period. We do not make additional payment adjustments to specific procedures.

After consideration of the public comments we received, we are finalizing our proposed policies, without modification, to calculate the CY 2017 payment rates for ASC covered surgical procedures according to our established methodologies using the modified definition of device-intensive procedures. For those covered surgical procedures where the payment rate is the lower of the final rates under the ASC standard ratesetting methodology and the MPFS final rates, the final payment indicators and rates set forth in this final rule with comment period are based on a comparison using the MPFS rates effective January 1, 2017. For a discussion of the MPFS rates, we refer readers to the CY 2017 MPFS final rule with comment period.

2. Payment for Covered Ancillary Services

a. Background

Our final payment policies under the revised ASC payment system for covered ancillary services vary according to the particular type of service and its payment policy under the OPPS. Our overall policy provides separate ASC payment for certain ancillary items and services integrally related to the provision of ASC covered surgical procedures that are paid separately under the OPPS and provides packaged ASC payment for other ancillary items and services that are packaged or conditionally packaged (status indicators ''N,'' ''Q1,'' and ''Q2'') under the OPPS. In the CY 2013 OPPS/ASC rulemaking (77 FR 45169 and 77 FR 68457 through 68458), we further clarified our policy regarding the payment indicator assignment of codes that are conditionally packaged in the OPPS (status indicators ''Q1'' and ''Q2''). Under the OPPS, a conditionally packaged code describes a HCPCS code where the payment is packaged when it is provided with a significant procedure but is separately paid when the service appears on the claim without a significant procedure. Because ASC services always include a surgical procedure, HCPCS codes that are conditionally packaged under the OPPS are always packaged (payment indictor ''N1'') under the ASC payment system (except for device removal codes as discussed in section IV. of this final rule with comment period). Thus, our final policy generally aligns ASC payment bundles with those under the OPPS (72 FR 42495). In all cases, in order for those ancillary services also to be paid, ancillary items and services must be provided integral to the performance of ASC covered surgical procedures for which the ASC bills Medicare.

Our ASC payment policies provide separate payment for drugs and biologicals that are separately paid under the OPPS at the OPPS rates. We generally pay for separately payable radiology services at the lower of the MPFS nonfacility PE RVU-based (or technical component) amount or the rate calculated according to the ASC standard ratesetting methodology (72 FR 42497). However, as finalized in the CY 2011 OPPS/ASC final rule with comment period (75 FR 72050), payment indicators for all nuclear medicine procedures (defined as CPT codes in the range of 78000 through 78999) that are designated as radiology services that are paid separately when provided integral to a surgical procedure on the ASC list are set to ''Z2'' so that payment is made based on the ASC standard ratesetting methodology rather than the MPFS nonfacility PE RVU amount, regardless of which is lower.

Similarly, we also finalized our policy to set the payment indicator to ''Z2'' for radiology services that use contrast agents so that payment for these procedures will be based on the OPPS relative payment weight using the ASC standard ratesetting methodology and, therefore, will include the cost for the contrast agent (42 CFR 416.171(d)(2)).

ASC payment policy for brachytherapy sources mirrors the payment policy under the OPPS. ASCs are paid for brachytherapy sources provided integral to ASC covered surgical procedures at prospective rates adopted under the OPPS or, if OPPS rates are unavailable, at contractor-priced rates (72 FR 42499). Since December 31, 2009, ASCs have been paid for brachytherapy sources provided integral to ASC covered surgical procedures at prospective rates adopted under the OPPS.

Our ASC policies also provide separate payment for: (1) Certain items and services that CMS designates as contractor-priced, including, but not limited to, the procurement of corneal tissue; and (2) certain implantable items that have pass-through payment status under the OPPS. These categories do not have prospectively established ASC payment rates according to the final policies for the revised ASC payment system (72 FR 42502 and 42508 through 42509; 42 CFR 416.164(b)). Under the revised ASC payment system, we have designated corneal tissue acquisition and hepatitis B vaccines as contractor-priced. Corneal tissue acquisition is contractor-priced based on the invoiced costs for acquiring the corneal tissue for transplantation. Hepatitis B vaccines are contractor-priced based on invoiced costs for the vaccine.

Devices that are eligible for pass-through payment under the OPPS are separately paid under the ASC payment system and are contractor-priced. Under the revised ASC payment system (72 FR 42502), payment for the surgical procedure associated with the pass-through device is made according to our standard methodology for the ASC payment system, based on only the service (nondevice) portion of the procedure's OPPS relative payment weight if the APC weight for the procedure includes other packaged device costs. We also refer to this methodology as applying a ''device offset'' to the ASC payment for the associated surgical procedure. This ensures that duplicate payment is not provided for any portion of an implanted device with OPPS pass-through payment status.

In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66933 through 66934), we finalized that, beginning in CY 2015, certain diagnostic tests within the medicine range of CPT codes for which separate payment is allowed under the OPPS are covered ancillary services when they are integral to an ASC covered surgical procedure. We finalized that diagnostic tests within the medicine range of CPT codes include all Category I CPT codes in the medicine range established by CPT, from 90000 to 99999, and Category III CPT codes and Level II HCPCS codes that describe diagnostic tests that crosswalk or are clinically similar to procedures in the medicine range established by CPT. In the CY 2015 OPPS/ASC final rule with comment period, we also finalized our policy to pay for these tests at the lower of the MPFS nonfacility PE RVU-based (or technical component) amount or the rate calculated according to the ASC standard ratesetting methodology (79 FR 66933 through 66934). We finalized that the diagnostic tests for which the payment is based on the ASC standard ratesetting methodology be assigned to payment indicator ''Z2'' and revised the definition of payment indicator ''Z2'' to include reference to diagnostic services and those for which the payment is based on the MPFS nonfacility PE RVU-based amount be assigned payment

indicator ''Z3,'' and revised the definition of payment indicator ''Z3'' to include reference to diagnostic services.

b. Payment for Covered Ancillary Services for CY 2017

For CY 2017 and subsequent years, in the CY 2017 OPPS/ASC proposed rule (81 FR 45702 through 45704), we proposed to update the ASC payment rates and to make changes to ASC payment indicators as necessary to maintain consistency between the OPPS and ASC payment system regarding the packaged or separately payable status of services and the proposed CY 2017 OPPS and ASC payment rates and subsequent year payment rates. We also proposed to continue to set the CY 2017 ASC payment rates and subsequent year payment rates for brachytherapy sources and separately payable drugs and biologicals equal to the OPPS payment rates for CY 2017 and subsequent year payment rates.

Consistent with established ASC payment policy (72 FR 42497), we proposed that the CY 2017 payment for separately payable covered radiology services be based on a comparison of the proposed CY 2017 MPFS nonfacility PE RVU-based amounts (we refer readers to the CY 2017 MPFS proposed rule) and the proposed CY 2017 ASC payment rates calculated according to the ASC standard ratesetting methodology and then set at the lower of the two amounts (except as discussed below for nuclear medicine procedures and radiology services that use contrast agents). For CY 2017 and subsequent years, we proposed that payment for a radiology service would be packaged into the payment for the ASC covered surgical procedure if the radiology service is packaged or conditionally packaged under the OPPS. The payment indicators in Addendum BB to the proposed rule (which is available via the Internet on the CMS Web site) indicated whether the proposed payment rates for radiology services are based on the MPFS nonfacility PE RVU-based amount or the ASC standard ratesetting methodology; or whether payment for a radiology service is packaged into the payment for the covered surgical procedure (payment indicator ''N1''). Radiology services that we proposed to pay based on the ASC standard ratesetting methodology in CY 2017 and subsequent years are assigned payment indicator ''Z2'' (Radiology or diagnostic service paid separately when provided integral to a surgical procedure on ASC list; payment based on OPPS relative payment weight), and those for which the proposed payment is based on the MPFS nonfacility PE RVU-based amount are assigned payment indicator ''Z3'' (Radiology or diagnostic service paid separately when provided integral to a surgical procedure on ASC list; payment based on MPFS nonfacility PE RVUs).

As finalized in the CY 2011 OPPS/ASC final rule with comment period (75 FR 72050), payment indicators for all nuclear medicine procedures (defined as CPT codes in the range of 78000 through 78999) that are designated as radiology services that are paid separately when provided integral to a surgical procedure on the ASC list are set to ''Z2'' so that payment for these procedures will be based on the OPPS relative payment weight using the ASC standard ratesetting methodology (rather than the MPFS nonfacility PE RVU-based amount, regardless of which is lower) and, therefore, will include the cost for the diagnostic radiopharmaceutical. We proposed to continue this modification to the payment methodology for CY 2017 and subsequent years and, therefore, proposed to assign payment indicator ''Z2'' to nuclear medicine procedures.

As finalized in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74429 through 74430), payment indicators for radiology services that use contrast agents are assigned to ''Z2'' so that payment for these procedures will be based on the OPPS relative payment weight using the ASC standard ratesetting methodology and, therefore, will include the cost for the contrast agent. We proposed to continue this modification to the payment methodology for CY 2017 and subsequent years and, therefore, proposed to assign the payment indicator ''Z2'' to radiology services that use contrast agents.

As finalized in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70471 through 70473), we proposed to continue to not make separate payment as a covered ancillary service for procurement of corneal tissue when used in any noncorneal transplant procedure under the ASC payment system for CY 2017. We also proposed for CY 2017 ASC payments to continue to designate hepatitis B vaccines as contractor-priced based on the invoiced costs for the vaccine, and corneal tissue acquisition as contractor-priced based on the invoiced costs for acquiring the corneal tissue for transplant.

Consistent with our established ASC payment policy, we proposed that the CY 2017 payment for devices that are eligible for pass-through payment under the OPPS are separately paid under the ASC payment system and would be contractor-priced. Currently, the four devices that are eligible for pass-through payment in the OPPS are described by HCPCS code C1822 (Generator, neurostimulator (implantable), high frequency, with rechargeable battery and charging system); HCPCS code C2613 (Lung biopsy plug with delivery system); HCPCS code C2623 (Catheter, transluminal angioplasty, drug-coated, non-laser); and HCPCS code C2624 (Implantable wireless pulmonary artery pressure sensor with delivery catheter, including all system components). Consistent with our current policy, we proposed for CY 2017 that payment for the surgical procedure associated with the pass-through device is made according to our standard methodology for the ASC payment system, based on only the service (nondevice) portion of the procedure's OPPS relative payment weight, if the APC weight for the procedure includes similar packaged device costs.

Consistent with our current policy, we proposed that certain diagnostic tests within the medicine range of CPT codes (that is, all Category I CPT codes in the medicine range established by CPT, from 90000 to 99999, and Category III CPT codes and Level II HCPCS codes that describe diagnostic tests that crosswalk or are clinically similar to procedures in the medicine range established by CPT) for which separate payment is allowed under the OPPS are covered ancillary services when they are provided integral to an ASC covered surgical procedure. We would pay for these tests at the lower of the MPFS nonfacility PE RVU-based (or technical component) amount or the rate calculated according to the ASC standard ratesetting methodology (79 FR 66933 through 66934). There are no additional codes that meet this criterion for CY 2017.

In summary, for CY 2017 and subsequent years, we proposed to continue the methodologies for paying for covered ancillary services established for CY 2016. Most covered ancillary services and their proposed payment indicators for CY 2017 were listed in Addendum BB to the proposed rule (which is available via the Internet on the CMS Web site).

We did not receive public comments on our proposals regarding payment for covered ancillary services and, therefore, are finalizing these policies as proposed for CY 2017 and subsequent years. For those covered ancillary services where the payment rate is the lower of the final rates under the ASC standard ratesetting methodology and the MPFS final rates, the final payment indicators and rates set forth in this final rule with comment period are

based on a comparison using the MPFS rates effective January 1, 2017. For a discussion of the MPFS rates, we refer readers to the CY 2017 MPFS final rule with comment period.

E. New Technology Intraocular Lenses (NTIOLs)

1. NTIOL Application Cycle

Our process for reviewing applications to establish new classes of NTIOLs is as follows:

• Applicants submit their NTIOL requests for review to CMS by the annual deadline. For a request to be considered complete, we require submission of the information that is found in the guidance document entitled ''Application Process and Information Requirements for Requests for a New Class of New Technology Intraocular Lenses (NTIOLs) or Inclusion of an IOL in an Existing NTIOL Class'' posted on the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ASCPayment/NTIOLs.html.*

• We announce annually, in the proposed rule updating the ASC and OPPS payment rates for the following calendar year, a list of all requests to establish new NTIOL classes accepted for review during the calendar year in which the proposal is published. In accordance with section 141(b)(3) of Public Law 103–432 and our regulations at 42 CFR 416.185(b), the deadline for receipt of public comments is 30 days following publication of the list of requests in the proposed rule.

• In the final rule updating the ASC and OPPS payment rates for the following calendar year, we—

++ Provide a list of determinations made as a result of our review of all new NTIOL class requests and public comments;

++ When a new NTIOL class is created, identify the predominant characteristic of NTIOLs in that class that sets them apart from other IOLs (including those previously approved as members of other expired or active NTIOL classes) and that is associated with an improved clinical outcome.

++ Set the date of implementation of a payment adjustment in the case of approval of an IOL as a member of a new NTIOL class prospectively as of 30 days after publication of the ASC payment update final rule, consistent with the statutory requirement.

++ Announce the deadline for submitting requests for review of an application for a new NTIOL class for the following calendar year.

2. Requests To Establish New NTIOL Classes for CY 2017

We did not receive any requests for review to establish a new NTIOL class for CY 2017 by March 1, 2016, the due date published in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70497).

3. Payment Adjustment

The current payment adjustment for a 5-year period from the implementation date of a new NTIOL class is $50 per lens. Since implementation of the process for adjustment of payment amounts for NTIOLs in 1999, we have not revised the payment adjustment amount, and we did not propose to revise the payment adjustment amount for CY 2017. The final ASC payment adjustment amount for NTIOLS in CY 2017 is $50.

4. Announcement of CY 2018 Deadline for Submitting Requests for CMS Review of Applications for a New Class of NTIOLs

In accordance with § 416.185(a) of our regulations, CMS announces that in order to be considered for payment effective beginning in CY 2018, requests for review of applications for a new class of new technology IOLs must be received at CMS by 5:00 p.m. EST, on March 01, 2017. Send requests to ASC/NTIOL, Division of Outpatient Care, Mailstop C4–05–17, Centers for Medicare and Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244–1850. To be considered, requests for NTIOL reviews must include the information requested on the CMS Web site at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ASCPayment/NTIOLs.html.*

F. ASC Payment and Comment Indicators

1. Background

In addition to the payment indicators that we introduced in the August 2, 2007 final rule, we created final comment indicators for the ASC payment system in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66855). We created Addendum DD1 to define ASC payment indicators that we use in Addenda AA and BB to provide payment information regarding covered surgical procedures and covered ancillary services, respectively, under the revised ASC payment system. The ASC payment indicators in Addendum DD1 are intended to capture policy relevant characteristics of HCPCS codes that may receive packaged or separate payment in ASCs, such as whether they were on the ASC list of covered services prior to CY 2008; payment designation, such as device-intensive or office-based, and the corresponding ASC payment methodology; and their classification as separately payable ancillary services, including radiology services, brachytherapy sources, OPPS pass-through devices, corneal tissue acquisition services, drugs or biologicals, or NTIOLs.

We also created Addendum DD2 that lists the ASC comment indicators. The ASC comment indicators used in Addenda AA and BB to the proposed rules and final rules with comment period serve to identify, for the revised ASC payment system, the status of a specific HCPCS code and its payment indicator with respect to the timeframe when comments will be accepted. The comment indicator ''NP'' is used in the OPPS/ASC proposed rule to indicate new codes for the next calendar year for which the interim payment indicator assigned is subject to comment. The comment indicator ''NP'' also is assigned to existing codes with substantial revisions to their descriptors such that we consider them to be describing new services, as discussed in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60622). In this CY 2017 OPPS/ASC final rule with comment period, we respond to public comments and finalize the ASC treatment of all codes that are labeled with comment indicator ''NP'' in Addenda AA and BB to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70497).

The ''CH'' comment indicator is used in Addenda AA and BB to the proposed rule (which are available via the Internet on the CMS Web site) to indicate that the payment indicator assignment has changed for an active HCPCS code in the current year and the next calendar year; an active HCPCS code is newly recognized as payable in ASCs; or an active HCPCS code is discontinued at the end of the current calendar year. The ''CH'' comment indicators that are published in the final rule with comment period are provided to alert readers that a change has been made from one calendar year to the next, but do not indicate that the change is subject to comment.

2. ASC Payment and Comment Indicators

For CY 2017 and subsequent years, in the CY 2017 OPPS/ASC proposed rule (81 FR 45705), we proposed to continue using the current comment indicators of ''NP'' and ''CH.'' For CY 2017, there are new and revised Category I and III CPT codes as well as new and revised Level

II HCPCS codes. Therefore, we proposed that Category I and III CPT codes that are new and revised for CY 2017 and any new and existing Level II HCPCS codes with substantial revisions to the code descriptors for CY 2017 compared to the CY 2016 descriptors that are included in ASC Addenda AA and BB to the CY 2017 OPPS/ASC proposed rule would be labeled with proposed new comment indicator ''NP'' to indicate that these CPT and Level II HCPCS codes are open for comment as part of the CY 2017 OPPS/ASC proposed rule. Proposed new comment indicator ''NP'' means a new code for the next calendar year or an existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year; comments will be accepted on the proposed ASC payment indicator for the new code.

We stated that we would respond to public comments on ASC payment and comment indicators and finalize their ASC assignment in this CY 2017 OPPS/ASC final rule with comment period. We referred readers to Addenda DD1 and DD2 to the proposed rule (which are available via the Internet on the CMS Web site) for the complete list of ASC payment and comment indicators proposed for the CY 2017 update.

We did not receive any public comments on the ASC payment and comment indicators and therefore are finalizing their use as proposed without modification.

G. Calculation of the ASC Conversion Factor and the ASC Payment Rates

1. Background

In the August 2, 2007 final rule (72 FR 42493), we established our policy to base ASC relative payment weights and payment rates under the revised ASC payment system on APC groups and the OPPS relative payment weights. Consistent with that policy and the requirement at section 1833(i)(2)(D)(ii) of the Act that the revised payment system be implemented so that it would be budget neutral, the initial ASC conversion factor (CY 2008) was calculated so that estimated total Medicare payments under the revised ASC payment system in the first year would be budget neutral to estimated total Medicare payments under the prior (CY 2007) ASC payment system (the ASC conversion factor is multiplied by the relative payment weights calculated for many ASC services in order to establish payment rates). That is, application of the ASC conversion factor was designed to result in aggregate Medicare expenditures under the revised ASC payment system in CY 2008 being equal to aggregate Medicare expenditures that would have occurred in CY 2008 in the absence of the revised system, taking into consideration the cap on ASC payments in CY 2007 as required under section 1833(i)(2)(E) of the Act (72 FR 42522). We adopted a policy to make the system budget neutral in subsequent calendar years (72 FR 42532 through 42533; 42 CFR 416.171(e)).

We note that we consider the term ''expenditures'' in the context of the budget neutrality requirement under section 1833(i)(2)(D)(ii) of the Act to mean expenditures from the Medicare Part B Trust Fund. We do not consider expenditures to include beneficiary coinsurance and copayments. This distinction was important for the CY 2008 ASC budget neutrality model that considered payments across the OPPS, ASC, and MPFS payment systems. However, because coinsurance is almost always 20 percent for ASC services, this interpretation of expenditures has minimal impact for subsequent budget neutrality adjustments calculated within the revised ASC payment system.

In the CY 2008 OPPS/ASC final rule with comment period (72 FR 66857 through 66858), we set out a step-by-step illustration of the final budget neutrality adjustment calculation based on the methodology finalized in the August 2, 2007 final rule (72 FR 42521 through 42531) and as applied to updated data available for the CY 2008 OPPS/ASC final rule with comment period. The application of that methodology to the data available for the CY 2008 OPPS/ASC final rule with comment period resulted in a budget neutrality adjustment of 0.65.

For CY 2008, we adopted the OPPS relative payment weights as the ASC relative payment weights for most services and, consistent with the final policy, we calculated the CY 2008 ASC payment rates by multiplying the ASC relative payment weights by the final CY 2008 ASC conversion factor of $41.401. For covered office-based surgical procedures, covered ancillary radiology services (excluding covered ancillary radiology services involving certain nuclear medicine procedures or involving the use of contrast agents, as discussed in section XII.D.2. of this final rule with comment period), and certain diagnostic tests within the medicine range that are covered ancillary services, the established policy is to set the payment rate at the lower of the MPFS unadjusted nonfacility PE RVU-based amount or the amount calculated using the ASC standard ratesetting methodology. Further, as discussed in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66841 through 66843), we also adopted alternative ratesetting methodologies for specific types of services (for example, device-intensive procedures).

As discussed in the August 2, 2007 final rule (72 FR 42517 through 42518) and as codified at § 416.172(c) of the regulations, the revised ASC payment system accounts for geographic wage variation when calculating individual ASC payments by applying the pre-floor and pre-reclassified IPPS hospital wage indexes to the labor-related share, which is 50 percent of the ASC payment amount based on a GAO report of ASC costs using 2004 survey data. Beginning in CY 2008, CMS accounted for geographic wage variation in labor cost when calculating individual ASC payments by applying the pre-floor and pre-reclassified hospital wage index values that CMS calculates for payment under the IPPS, using updated Core Based Statistical Areas (CBSAs) issued by OMB in June 2003.

The reclassification provision in section 1886(d)(10) of the Act is specific to hospitals. We believe that using the most recently available pre-floor and pre-reclassified IPPS hospital wage indexes results in the most appropriate adjustment to the labor portion of ASC costs. We continue to believe that the unadjusted hospital wage indexes, which are updated yearly and are used by many other Medicare payment systems, appropriately account for geographic variation in labor costs for ASCs. Therefore, the wage index for an ASC is the pre-floor and pre-reclassified hospital wage index under the IPPS of the CBSA that maps to the CBSA where the ASC is located.

On February 28, 2013, OMB issued OMB Bulletin No. 13–01, which provides the delineations of all Metropolitan Statistical Areas, Metropolitan Divisions, Micropolitan Statistical Areas, Combined Statistical Areas, and New England City and Town Areas in the United States and Puerto Rico based on the standards published on June 28, 2010 in the **Federal Register** (75 FR 37246 through 37252) and 2010 Census Bureau data. (A copy of this bulletin may be obtained at: *http://www.whitehouse.gov/sites/default/files/omb/bulletins/2013/b-13-01.pdf*.) In the FY 2015 IPPS/LTCH PPS final rule (79 FR 49951 through 49963), we implemented the use of the CBSA delineations issued by OMB in OMB Bulletin 13–01 for the IPPS hospital wage index beginning in FY 2015. In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66937), we finalized a 1-year transition policy that

we applied in CY 2015 for all ASCs that experienced any decrease in their actual wage index exclusively due to the implementation of the new OMB delineations. This transition does not apply in CY 2017.

Generally, OMB issues major revisions to statistical areas every 10 years, based on the results of the decennial census. However, OMB occasionally issues minor updates and revisions to statistical areas in the years between the decennial censuses. On July 15, 2015, OMB issued OMB Bulletin No. 15–01, which provides updates to and supersedes OMB Bulletin No. 13–01 that was issued on February 28, 2013. The attachment to OMB Bulletin No. 15–01 provides detailed information on the update to statistical areas since February 28, 2013. The updates provided in OMB Bulletin No. 15–01 are based on the application of the 2010 Standards for Delineating Metropolitan and Micropolitan Statistical Areas to Census Bureau population estimates for July 1, 2012 and July 1, 2013. The complete list of statistical areas incorporating these changes is provided in the attachment to OMB Bulletin No. 15–01. According to OMB, ''[t]his bulletin establishes revised delineations for the Nation's Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas. The bulletin also provides delineations of Metropolitan Divisions as well as delineations of New England City and Town Areas.'' A copy of this bulletin may be obtained on the Web site at: *https://www.whitehouse.gov/omb/bulletins_default*.

OMB Bulletin No. 15–01 made the following changes that are relevant to the IPPS and ASC wage index:

- Garfield County, OK, with principal city Enid, OK, which was a Micropolitan (geographically rural) area, now qualifies as an urban new CBSA 21420 called Enid, OK.
- The county of Bedford City, VA, a component of the Lynchburg, VA CBSA 31340, changed to town status and is added to Bedford County. Therefore, the county of Bedford City (SSA State county code 49088, FIPS State County Code 51515) is now part of the county of Bedford, VA (SSA State county code 49090, FIPS State County Code 51019). However, the CBSA remains Lynchburg, VA, 31340.
- The name of Macon, GA, CBSA 31420, as well as a principal city of the Macon-Warner Robins, GA combined statistical area, is now Macon-Bibb County, GA. The CBSA code remains as 31420.

In the FY 2017 IPPS/LTCH PPS proposed rule (81 FR 25062), we proposed to implement these revisions, effective October 1, 2016, beginning with the FY 2017 wage indexes. In the FY 2017 IPPS/LTCH PPS proposed rule, we proposed to use these new definitions to calculate area IPPS wage indexes in a manner that is generally consistent with the CBSA-based methodologies finalized in the FY 2005 and the FY 2015 IPPS final rules. (We note that in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56913), we finalized this proposal.) We believe that it is important for the ASC payment system to use the latest labor market area delineations available as soon as is reasonably possible in order to maintain a more accurate and up-to-date payment system that reflects the reality of population shifts and labor market conditions. Therefore, for purposes of the ASC payment system, in the CY 2017 OPPS/ASC proposed rule (81 FR 45706), we proposed to implement these revisions to the OMB statistical area delineations, effective January 1, 2017, beginning with the CY 2017 ASC wage indexes. We invited public comments on these proposals.

For CY 2017, the CY 2017 ASC wage indexes fully reflect the new OMB labor market area delineations (including the revisions to the OMB labor market delineations discussed above, as set forth in OMB Bulletin No. 15–01).

We note that, in certain instances, there might be urban or rural areas for which there is no IPPS hospital that has wage index data that could be used to set the wage index for that area. For these areas, our policy has been to use the average of the wage indexes for CBSAs (or metropolitan divisions as applicable) that are contiguous to the area that has no wage index (where ''contiguous'' is defined as sharing a border). For example, for CY 2014, we applied a proxy wage index based on this methodology to ASCs located in CBSA 25980 (Hinesville-Fort Stewart, GA) and CBSA 08 (Rural Delaware).

When all of the areas contiguous to the urban CBSA of interest are rural and there is no IPPS hospital that has wage index data that could be used to set the wage index for that area, we determine the ASC wage index by calculating the average of all wage indexes for urban areas in the State (75 FR 72058 through 72059). (In other situations, where there are no IPPS hospitals located in a relevant labor market area, we continue our current policy of calculating an urban or rural area's wage index by calculating the average of the wage indexes for CBSAs (or metropolitan divisions where applicable) that are contiguous to the area with no wage index.)

Comment: Several commenters made the same recommendation that was made in the CY 2010 (74 FR 60625), CY 2011 (75 FR 72059), CY 2012 (76 FR 74446), CY 2013 (77 FR 68463), CY 2014 (78 FR 75086), and CY 2015 (79 FR 66937) rulemakings—that is, that CMS adopt for the ASC payment system the same wage index values used for hospital payment under the OPPS.

Response: We have responded to this comment in the prior OPPS/ASC rules mentioned above, and believe our prior rationale for using unadjusted wage indexes is still sound. We continue to believe that the unadjusted hospital wage indexes, which are updated yearly and are used by almost all Medicare payment systems, appropriately account for geographic variance in labor costs for ASCs. We refer readers to our response to this comment in the CY 2011 OPPS/ASC final rule with comment period (75 FR 72059). We discuss our budget neutrality adjustment for changes to the wage indices below in section XII.G.2.b. of this final rule with comment period.

2. Calculation of the ASC Payment Rates

a. Updating the ASC Relative Payment Weights for CY 2017 and Future Years

We update the ASC relative payment weights each year using the national OPPS relative payment weights (and MPFS nonfacility PE RVU-based amounts, as applicable) for that same calendar year and uniformly scale the ASC relative payment weights for each update year to make them budget neutral (72 FR 42533). Consistent with our established policy, in the CY 2017 OPPS/ASC proposed rule (81 FR 45706 through 45707), we proposed to scale the CY 2017 relative payment weights for ASCs according to the following method. Holding ASC utilization, the ASC conversion factor, and the mix of services constant from CY 2015, we proposed to compare the total payment using the CY 2016 ASC relative payment weights with the total payment using the CY 2017 ASC relative payment weights to take into account the changes in the OPPS relative payment weights between CY 2016 and CY 2017. We proposed to use the ratio of CY 2016 to CY 2017 total payments (the weight scalar) to scale the ASC relative payment weights for CY 2017. The proposed CY 2017 ASC scalar was 0.9030 and scaling would apply to the ASC relative payment weights of the covered surgical procedures, covered ancillary radiology services, and certain diagnostic tests within the medicine range of CPT codes which are covered

ancillary services for which the ASC payment rates are based on OPPS relative payment weights.

Scaling would not apply in the case of ASC payment for separately payable covered ancillary services that have a predetermined national payment amount (that is, their national ASC payment amounts are not based on OPPS relative payment weights), such as drugs and biologicals that are separately paid or services that are contractor-priced or paid at reasonable cost in ASCs. Any service with a predetermined national payment amount would be included in the ASC budget neutrality comparison, but scaling of the ASC relative payment weights would not apply to those services. The ASC payment weights for those services without predetermined national payment amounts (that is, those services with national payment amounts that would be based on OPPS relative payment weights) would be scaled to eliminate any difference in the total payment between the current year and the update year.

For any given year's ratesetting, we typically use the most recent full calendar year of claims data to model budget neutrality adjustments. At the time of the proposed rule, we had available 98 percent of CY 2015 ASC claims data.

To create an analytic file to support calculation of the weight scalar and budget neutrality adjustment for the wage index (discussed below), we summarized available CY 2015 ASC claims by ASC and by HCPCS code. We used the National Provider Identifier for the purpose of identifying unique ASCs within the CY 2015 claims data. We used the supplier zip code reported on the claim to associate State, county, and CBSA with each ASC. This file, available to the public as a supporting data file for the proposed rule, is posted on the CMS Web site at: *http://www.cms.gov/Research-Statistics-Data-and-Systems/Files-for-Order/LimitedDataSets/ASCPaymentSystem.html*.

b. Updating the ASC Conversion Factor

Under the OPPS, we typically apply a budget neutrality adjustment for provider level changes, most notably a change in the wage index values for the upcoming year, to the conversion factor. Consistent with our final ASC payment policy, for the CY 2017 ASC payment system and subsequent years, in the CY 2017 OPPS/ASC proposed rule (81 FR 45707), we proposed to calculate and apply a budget neutrality adjustment to the ASC conversion factor for supplier level changes in wage index values for the upcoming year, just as the OPPS wage index budget neutrality adjustment is calculated and applied to the OPPS conversion factor. For CY 2017, we calculated this proposed adjustment for the ASC payment system by using the most recent CY 2015 claims data available and estimating the difference in total payment that would be created by introducing the proposed CY 2017 ASC wage indexes. Specifically, holding CY 2015 ASC utilization and service-mix and the proposed CY 2017 national payment rates after application of the weight scalar constant, we calculated the total adjusted payment using the CY 2016 ASC wage indexes (which reflect the new OMB delineations and include any applicable transition period) and the total adjusted payment using the proposed CY 2017 ASC wage indexes (which would fully reflect the new OMB delineations). We used the 50-percent labor-related share for both total adjusted payment calculations. We then compared the total adjusted payment calculated with the CY 2016 ASC wage indexes to the total adjusted payment calculated with the proposed CY 2017 ASC wage indexes and applied the resulting ratio of 0.9992 (the proposed CY 2017 ASC wage index budget neutrality adjustment) to the CY 2016 ASC conversion factor to calculate the proposed CY 2017 ASC conversion factor.

Section 1833(i)(2)(C)(i) of the Act requires that, if the Secretary has not updated amounts established under the revised ASC payment system in a calendar year, the payment amounts shall be increased by the percentage increase in the Consumer Price Index for all urban consumers (CPI–U), U.S. city average, as estimated by the Secretary for the 12-month period ending with the midpoint of the year involved. Therefore, the statute does not mandate the adoption of any particular update mechanism, but it requires the payment amounts to be increased by the CPI–U in the absence of any update. Because the Secretary updates the ASC payment amounts annually, we adopted a policy, which we codified at 42 CFR 416.171(a)(2)(ii), to update the ASC conversion factor using the CPI–U for CY 2010 and subsequent calendar years. Therefore, the annual update to the ASC payment system is the CPI–U (referred to as the CPI–U update factor).

Section 3401(k) of the Affordable Care Act amended section 1833(i)(2)(D) of the Act by adding a new clause (v) which requires that any annual update under the ASC payment system for the year, after application of clause (iv), shall be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act, effective with the calendar year beginning January 1, 2011. The statute defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multifactor productivity (MFP) (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost reporting period, or other annual period) (the ''MFP adjustment''). Clause (iv) of section 1833(i)(2)(D) of the Act authorizes the Secretary to provide for a reduction in any annual update for failure to report on quality measures. Clause (v) of section 1833(i)(2)(D) of the Act states that application of the MFP adjustment to the ASC payment system may result in the update to the ASC payment system being less than zero for a year and may result in payment rates under the ASC payment system for a year being less than such payment rates for the preceding year.

In the CY 2012 OPPS/ASC final rule with comment period (76 FR 74516), we finalized a policy that ASCs begin submitting data on quality measures for services beginning on October 1, 2012 for the CY 2014 payment determination under the ASC Quality Reporting (ASCQR) Program. In the CY 2013 OPPS/ASC final rule with comment period (77 FR 68499 through 68500), we finalized a methodology to calculate reduced national unadjusted payment rates using the ASCQR Program reduced update conversion factor that would apply to ASCs that fail to meet their quality reporting requirements for the CY 2014 payment determination and subsequent years. The application of the 2.0 percentage point reduction to the annual update factor, which currently is the CPI–U, may result in the update to the ASC payment system being less than zero for a year for ASCs that fail to meet the ASCQR Program requirements. We amended §§ 416.160(a)(1) and 416.171 to reflect these policies.

In accordance with section 1833(i)(2)(C)(i) of the Act, before applying the MFP adjustment, the Secretary first determines the ''percentage increase'' in the CPI–U, which we interpret cannot be a negative percentage. Thus, in the instance where the percentage change in the CPI–U for a year is negative, we would hold the CPI–U update factor for the ASC payment system to zero. For the CY 2014 payment determination and subsequent years, under section 1833(i)(2)(D)(iv) of the Act, we would reduce the annual update by 2.0 percentage points for an ASC that fails to submit quality information under the

rules established by the Secretary in accordance with section 1833(i)(7) of the Act.

Section 1833(i)(2)(D)(v) of the Act, as added by section 3401(k) of the Affordable Care Act, requires that the Secretary reduce the annual update factor, after application of any quality reporting reduction, by the MFP adjustment, and states that application of the MFP adjustment to the annual update factor after application of any quality reporting reduction may result in the update being less than zero for a year. If the application of the MFP adjustment to the annual update factor after application of any quality reporting reduction would result in an MFP-adjusted update factor that is less than zero, the resulting update to the ASC payment rates would be negative and payments would decrease relative to the prior year. We refer readers to the CY 2011 OPPS/ASC final rule with comment period (75 FR 72062 through 72064) for examples of how the MFP adjustment is applied to the ASC payment system.

For the proposed rule, based on IHS Global Insight's (IGI's) 2016 first quarter forecast with historical data through the fourth quarter of 2015, for the 12-month period ending with the midpoint of CY 2017, the CPI–U update was projected to be 1.7 percent. Also, based on IGI's 2016 first quarter forecast, the MFP adjustment for the period ending with the midpoint of CY 2017 was projected to be 0.5 percent. We finalized the methodology for calculating the MFP adjustment in the CY 2011 MPFS final rule with comment period (75 FR 73394 through 73396) and revised it in the CY 2012 MPFS final rule with comment period (76 FR 73300 through 73301) and the CY 2016 OPPS/ASC final rule with comment period (80 FR 70500 through 70501).

In the CY 2017 OPPS/ASC proposed rule (81 FR 45708), for CY 2017, we proposed to reduce the CPI–U update of 1.7 percent by the MFP adjustment of 0.5 percentage point, resulting in an MFP-adjusted CPI–U update factor of 1.2 percent for ASCs meeting the quality reporting requirements. Therefore, we proposed to apply a 1.2 percent MFP-adjusted CPI–U update factor to the CY 2016 ASC conversion factor for ASCs meeting the quality reporting requirements. The ASCQR Program affected payment rates beginning in CY 2014 and, under this program, there is a 2.0 percentage point reduction to the CPI–U for ASCs that fail to meet the ASCQR Program requirements. We proposed to reduce the CPI–U update of 1.7 percent by 2.0 percentage points for ASCs that do not meet the quality reporting requirements and then apply the 0.5 percentage point MFP adjustment. Therefore, we proposed to apply a −0.8 percent MFP-adjusted CPI–U update factor to the CY 2016 ASC conversion factor for ASCs not meeting the quality reporting requirements. We also proposed that if more recent data are subsequently available (for example, a more recent estimate of the CY 2017 CPI–U update and MFP adjustment), we would use such data, if appropriate, to determine the CY 2017 ASC update for the final rule with comment period.

For CY 2017, we proposed to adjust the CY 2016 ASC conversion factor ($44.190) by the proposed wage index budget neutrality factor of 0.9992 in addition to the MFP-adjusted CPI–U update factor of 1.2 percent discussed above, which resulted in a proposed CY 2017 ASC conversion factor of $44.684 for ASCs meeting the quality reporting requirements. For ASCs not meeting the quality reporting requirements, we proposed to adjust the CY 2016 ASC conversion factor ($44.190) by the proposed wage index budget neutrality factor of 0.9992 in addition to the MFP-adjusted CPI–U update factor of −0.8 percent discussed above, which resulted in a proposed CY 2017 ASC conversion factor of $43.801.

We invited public comments on these proposals.

Comment: Several commenters suggested that CMS replace the CPI–U as the update mechanism for ASC payments with the hospital market basket. The commenters stated that the CPI–U measures inflation in a basket of consumer goods atypical of what ASCs purchase. In addition, the commenters stated that the Affordable Care Act requires CMS to reduce the update by a measure of productivity gains, which inappropriately subjects ASCs to two productivity adjustments: Improvements reflected in the price of consumer purchased goods; and the additional statutorily required reduction. The commenters believed that the hospital market basket would be the most appropriate update for ASCs; they indicated that there are various alternatives within the CPI–U that CMS could explore that more accurately reflect the economic climate in the ASC environment. MedPAC acknowledged that there may be a burden associated with requiring ASCs to submit cost reports, but recommended that CMS collect some sort of ASC cost data to determine whether an existing Medicare index is a good proxy or if there should be an ASC-specific market basket.

Response: As we have stated in response to similar comments in the past (for example, 77 FR 68465; 78 FR 75088 through 75089; 79 FR 66939; and 80 FR 70501), we continue to believe that, while commenters believed that the items included in the CPI–U index may not adequately measure inflation for the goods and services provided by ASCs, the hospital market basket does not align with the cost structures of ASCs. Hospitals provide a much wider range of services, such as room and board and emergency services, and the costs associated with providing these services are not part of the ASC cost structure. Therefore, at this time, we do not believe that it is appropriate to use the hospital market basket for the ASC annual update. We recognize that the CPI–U is an output price index that accounts for productivity. However, section 1833(i)(2)(D)(v) of the Act requires the agency to reduce the annual update factor by the MFP adjustment. For the reasons stated above, we do not believe that the hospital market basket appropriately reflects the cost structures of ASCs, and because we do not have cost data on ASCs, we are continuing to use the CPI–U which we believe provides a reasonable approximation of the price increases facing ASCs. We will continue to explore the feasibility of collecting ASC cost data. However, based on our past experience, we do not believe that collecting such data through surveys would be productive.

After consideration of the public comments we received, we are finalizing our proposal to apply our established methodology for determining the final CY 2017 ASC conversion factor. Using more complete CY 2015 data for this final rule with comment period than were available for the proposed rule, we calculated a wage index budget neutrality adjustment of 0.9996. Based on IGI's 2016 third quarter forecast, the CPI–U for the 12-month period ending with the midpoint of CY 2017 is now projected to be 2.2 percent, while the MFP adjustment (as discussed in the CY 2011 MPFS final rule with comment period (75 FR 73394 through 73396), and revised in the CY 2012 MPFS final rule with comment period (76 FR 73300 through 73301) and in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70500 through 70501)) is 0.3 percent, resulting in an MFP-adjusted CPI–U update factor of 1.9 percent for ASCs that meet the quality reporting requirements. The final ASC conversion factor of $45.030, for ASCs that meet the quality reporting requirements, is the product of the CY 2016 conversion factor of $44.190 multiplied by the wage index budget neutrality adjustment of 0.9996 and the MFP-adjusted CPI–U payment update of

1.9 percent. For ASCs that do not meet the quality reporting requirements, we are reducing the CPI–U update of 2.2 percent by 2.0 percentage points and then we are applying the 0.3 percentage point MFP adjustment, resulting in a −0.1 percent MFP adjusted CPI–U update factor. The final ASC conversion factor of $44.330 for ASCs that do not meet the quality reporting requirements is the product of the CY 2016 conversion factor of $44.190 multiplied by the wage index budget neutrality adjustment of 0.9996 and the MFP-adjusted CPI–U payment update of −0.1 percent.

3. Display of CY 2017 ASC Payment Rates

Addenda AA and BB to this final rule with comment period (which are available via the Internet on the CMS Web site) display the updated ASC payment rates for CY 2017 for covered surgical procedures and covered ancillary services, respectively. For those covered surgical procedures and covered ancillary services where the payment rate is the lower of the final rates under the ASC standard ratesetting methodology and the MPFS final rates, the final payment indicators and rates set forth in this final rule with comment period are based on a comparison using the final MPFS rates that will be effective January 1, 2017. For a discussion of the MPFS rates, we refer readers to the CY 2017 MPFS final rule with comment period.

The final payment rates included in these addenda reflect the full ASC payment update and not the reduced payment update used to calculate payment rates for ASCs not meeting the quality reporting requirements under the ASCQR Program. These addenda contain several types of information related to the final CY 2017 payment rates. Specifically, in Addendum AA, a ''Y'' in the column titled ''To be Subject to Multiple Procedure Discounting'' indicates that the surgical procedure would be subject to the multiple procedure payment reduction policy. As discussed in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66829 through 66830), most covered surgical procedures are subject to a 50-percent reduction in the ASC payment for the lower-paying procedure when more than one procedure is performed in a single operative session.

Display of the comment indicator ''CH'' in the column titled ''Comment Indicator'' indicates a change in payment policy for the item or service, including identifying discontinued HCPCS codes, designating items or services newly payable under the ASC payment system, and identifying items or services with changes in the ASC payment indicator for CY 2017. Display of the comment indicator ''NI'' in the column titled ''Comment Indicator'' indicates that the code is new (or substantially revised) and that comments will be accepted on the interim payment indicator for the new code. Display of the comment indicator ''NP'' in the column titled ''Comment Indicator'' indicates that the code is new (or substantially revised) and that comments will be accepted on the ASC payment indicator for the new code.

The values displayed in the column titled ''CY 2017 Payment Weight'' are the final relative payment weights for each of the listed services for CY 2017. The final relative payment weights for all covered surgical procedures and covered ancillary services where the ASC payment rates are based on OPPS relative payment weights were scaled for budget neutrality. Therefore, scaling was not applied to the device portion of the device-intensive procedures, services that are paid at the MPFS nonfacility PE RVU-based amount, separately payable covered ancillary services that have a predetermined national payment amount, such as drugs and biologicals and brachytherapy sources that are separately paid under the OPPS, or services that are contractor-priced or paid at reasonable cost in ASCs.

To derive the final CY 2017 payment rate displayed in the ''Final CY 2017 Payment Rate'' column, each ASC payment weight in the ''Final CY 2017 Payment Weight'' column was multiplied by the CY 2017 conversion factor of $45.030. The conversion factor includes a budget neutrality adjustment for changes in the wage index values and the annual update factor as reduced by the productivity adjustment (as discussed in section XII.G.2.b. of this final rule with comment period).

In Addendum BB, there are no relative payment weights displayed in the ''Final CY 2017 Payment Weight'' column for items and services with predetermined national payment amounts, such as separately payable drugs and biologicals. The ''Final CY 2017 Payment'' column displays the CY 2017 national unadjusted ASC payment rates for all items and services. The CY 2017 ASC payment rates listed in Addendum BB for separately payable drugs and biologicals are based on ASP data used for payment in physicians' offices in October 2016 through December 2016.

Addendum EE provides the HCPCS codes and short descriptors for surgical procedures that we are excluding from payment in ASCs for CY 2017.

XIII. Requirements for the Hospital Outpatient Quality Reporting (OQR) Program

A. Background

1. Overview

CMS seeks to promote higher quality and more efficient healthcare for Medicare beneficiaries. In pursuit of these goals, CMS has implemented quality reporting programs for multiple care settings including the quality reporting program for hospital outpatient care, known as the Hospital Outpatient Quality Reporting (OQR) Program, formerly known as the Hospital Outpatient Quality Data Reporting Program (HOP QDRP). The Hospital OQR Program has generally been modeled after the quality reporting program for hospital inpatient services known as the Hospital Inpatient Quality Reporting (IQR) Program (formerly known as the Reporting Hospital Quality Data for Annual Payment Update (RHQDAPU) Program).

In addition to the Hospital IQR and Hospital OQR Programs, CMS has implemented quality reporting programs for other care settings that provide financial incentives for the reporting of quality data to CMS. These additional programs include reporting for care furnished by:

- Physicians and other eligible professionals, under the Physician Quality Reporting System (PQRS, formerly referred to as the Physician Quality Reporting Program Initiative (PQRI));
- Inpatient rehabilitation facilities, under the Inpatient Rehabilitation Facility Quality Reporting Program (IRF QRP);
- Long-term care hospitals, under the Long-Term Care Hospital Quality Reporting Program (LTCH QRP);
- PPS-exempt cancer hospitals, under the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program;
- Ambulatory surgical centers, under the Ambulatory Surgical Center Quality Reporting (ASCQR) Program;
- Inpatient psychiatric facilities, under the Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program;
- Home health agencies, under the Home Health Quality Reporting Program (HH QRP); and
- Hospices, under the Hospice Quality Reporting Program (HQRP).

In addition, CMS has implemented several value-based purchasing programs, including the Hospital Value-Based Purchasing (VBP) Program and the End-Stage Renal Disease (ESRD)

Quality Incentive Program (QIP), that link payment to performance. In implementing the Hospital OQR Program and other quality reporting programs, we have focused on measures that have high impact and support national priorities for improved quality and efficiency of care for Medicare beneficiaries as reflected in the National Quality Strategy (NQS) and the CMS Quality Strategy, as well as conditions for which wide cost and treatment variations have been reported, despite established clinical guidelines. To the extent possible under various authorizing statutes, our ultimate goal is to align the clinical quality measure requirements of the various quality reporting programs. As appropriate, we will consider the adoption of measures with electronic specifications to enable the collection of this information as part of care delivery. We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68467 through 68469) for a discussion on the principles underlying consideration for future measures that we intend to use in implementing this and other quality reporting programs.

2. Statutory History of the Hospital OQR Program

We refer readers to the CY 2011 OPPS/ASC final rule with comment period (75 FR 72064 through 72065) for a detailed discussion of the statutory history of the Hospital OQR Program.

B. Hospital OQR Program Quality Measures

1. Considerations in the Selection of Hospital OQR Program Quality Measures

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74458 through 74460) for a detailed discussion of the priorities we consider for the Hospital OQR Program quality measure selection. In the CY 2017 OPPS/ASC proposed rule (81 FR 45710), we did not propose any changes to our measure selection policy.

2. Retention of Hospital OQR Program Measures Adopted in Previous Payment Determinations

We previously adopted a policy to retain measures from the previous year's Hospital OQR Program measure set for subsequent years' measure sets in the CY 2013 OPPS/ASC final rule with comment period (77 FR 68471). Quality measures adopted in a previous year's rulemaking are retained in the Hospital OQR Program for use in subsequent years unless otherwise specified. We refer readers to that rule for more information. In the CY 2017 OPPS/ASC proposed rule (81 FR 45710), we did not propose any changes to our retention policy for previously adopted measures.

3. Removal of Quality Measures From the Hospital OQR Program Measure Set

a. Considerations in Removing Quality Measures From the Hospital OQR Program

In the FY 2010 IPPS/LTCH PPS final rule (74 FR 43863), for the Hospital IQR Program, we finalized a process for immediate retirement, which we later termed ''removal,'' of Hospital IQR Program measures based on evidence that the continued use of the measure as specified raised patient safety concerns. We adopted the same immediate measure retirement policy for the Hospital OQR Program in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60634 through 60635). We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68472 through 68473) for a discussion of our reasons for changing the term ''retirement'' to ''removal'' in the Hospital OQR Program. In the CY 2017 OPPS/ASC proposed rule (81 FR 45710), we did not propose any changes to our policy to immediately remove measures as a result of patient safety concerns.

In the CY 2013 OPPS/ASC final rule with comment period, we finalized a set of criteria for determining whether to remove measures from the Hospital OQR Program. We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68472 through 68473) for a discussion of our policy on removal of quality measures from the Hospital OQR Program. The benefits of removing a measure from the Hospital OQR Program will be assessed on a case-by-case basis (79 FR 66941 through 66942). We note that, under this case-by-case approach, a measure will not be removed solely on the basis of meeting any specific criterion. We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68472 through 68473) for our list of factors considered in removing measures from the Hospital OQR Program.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45710), we did not propose any changes to our measure removal policy.

b. Criteria for Removal of ''Topped-Out'' Measures

We refer readers to CY 2015 OPPS/ASC final rule with comment period where we finalized our proposal to refine the criteria for determining when a measure is ''topped-out'' (79 FR 66942). In the CY 2017 OPPS/ASC proposed rule (81 FR 45710), we did not propose any changes to our ''topped-out'' criteria policy.

4. Hospital OQR Program Quality Measures Adopted in Previous Rulemaking

We refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70516) for the previously finalized measure set for the Hospital OQR Program CY 2019 payment determination and subsequent years. These measures also are listed below.

HOSPITAL OQR PROGRAM MEASURE SET PREVIOUSLY ADOPTED FOR THE CY 2019 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

NQF #	Measure name
0287	OP–1: Median Time to Fibrinolysis.†
0288	OP–2: Fibrinolytic Therapy Received Within 30 Minutes of ED Arrival.
0290	OP–3: Median Time to Transfer to Another Facility for Acute Coronary Intervention.
0286	OP–4: Aspirin at Arrival.†
0289	OP–5: Median Time to ECG.†
0514	OP–8: MRI Lumbar Spine for Low Back Pain.
N/A	OP–9: Mammography Follow-up Rates.
N/A	OP–10: Abdomen CT—Use of Contrast Material.
0513	OP–11: Thorax CT—Use of Contrast Material.
N/A	OP–12: The Ability for Providers with HIT to Receive Laboratory Data Electronically Directly into their ONC-Certified EHR System as Discrete Searchable Data.
0669	OP–13: Cardiac Imaging for Preoperative Risk Assessment for Non-Cardiac, Low-Risk Surgery.
N/A	OP–14: Simultaneous Use of Brain Computed Tomography (CT) and Sinus Computed Tomography (CT).

HOSPITAL OQR PROGRAM MEASURE SET PREVIOUSLY ADOPTED FOR THE CY 2019 PAYMENT DETERMINATION AND SUBSEQUENT YEARS—Continued

NQF #	Measure name
0491	OP–17: Tracking Clinical Results between Visits.†
0496	OP–18: Median Time from ED Arrival to ED Departure for Discharged ED Patients.
N/A	OP–20: Door to Diagnostic Evaluation by a Qualified Medical Professional.
0662	OP–21: Median Time to Pain Management for Long Bone Fracture.
0499	OP–22: Left Without Being Seen.†
0661	OP–23: Head CT or MRI Scan Results for Acute Ischemic Stroke or Hemorrhagic Stroke who Received Head CT or MRI Scan Interpretation Within 45 minutes of ED Arrival.
N/A	OP–25: Safe Surgery Checklist Use.
N/A	OP–26: Hospital Outpatient Volume on Selected Outpatient Surgical Procedures.*
0431	OP–27: Influenza Vaccination Coverage among Healthcare Personnel.
0658	OP–29: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients.**
0659	OP–30: Colonoscopy Interval for Patients with a History of Adenomatous Polyps—Avoidance of Inappropriate Use.**
1536	OP–31: Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery.***
2539	OP–32: Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy.
1822	OP–33: External Beam Radiotherapy for Bone Metastases.

† We note that NQF endorsement for this measure was removed.
* OP–26: Procedure categories and corresponding HCPCS codes are located at: *https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1196289981244*.
** We note that measure name was revised to reflect NQF title.
*** Measure voluntarily collected as set forth in section XIII.D.3.b. of the CY 2015 OPPS/ASC final rule with comment period (79 FR 66946 through 66947).

5. New Hospital OQR Program Quality Measures for the CY 2020 Payment Determinations and Subsequent Years

In the CY 2017 OPPS/ASC proposed rule (81 FR 45711 through 45720), for the CY 2020 payment determination and subsequent years, we proposed a total of seven new measures—two of which are claims-based measures and five of which are Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-based measures. The claims-based measures are: (1) OP–35: Admissions and Emergency Department Visits for Patients Receiving Outpatient Chemotherapy; and (2) OP–36: Hospital Visits after Hospital Outpatient Surgery (NQF #2687). The OAS CAHPS Survey-based measures are: (1) OP–37a: OAS CAHPS—About Facilities and Staff; (2) OP–37b: OAS CAHPS—Communication About Procedure; (3) OP–37c: OAS CAHPS—Preparation for Discharge and Recovery; (4) OP–37d: OAS CAHPS—Overall Rating of Facility; and (5) OP–37e: OAS CAHPS—Recommendation of Facility. We discuss these measures in detail below.

We received a few comments that apply across all proposed measures and will address those first.

Comment: Several commenters expressed concern that only one of the seven measures proposed by CMS is NQF-endorsed and, therefore, questioned whether the measures were accurate and a fair representation of hospital performance.

Response: Section 1833(t)(17)(C)(i) of the Act does not require that each measure we adopt for the Hospital OQR Program be endorsed by a national consensus building entity, or the NQF specifically. Under this provision, the Secretary has further authority to adopt non-NQF-endorsed measures. While we strive to adopt NQF-endorsed measures when possible, we believe the requirement that measures reflect consensus among affected parties can be achieved in other ways, including through the measure development process, stakeholder input via a Technical Expert Panel (TEP), broad acceptance and use of the measure, and public comments. As part of that process, we sought and received extensive input on these measures from stakeholders and clinical experts.

We believe that these measures reflect consensus among the affected parties, because the MAP, which represents stakeholder groups, reviewed and conditionally supported the measures for use in the program. The MAP conditionally supported OP–35: Admissions and Emergency Department (ED) Visits for Patient Receiving Outpatient Chemotherapy.[7] In addition, the MAP supported the OP–36: Hospital Visits after Hospital Outpatient Surgery measure for program use citing the vital importance of measures that help facilities reduce unnecessary hospital visits, and the measure received NQF endorsement on September 3, 2015.[8] [9] Furthermore, the MAP encouraged continued development of OP–37a–e: Consumer Assessment of Healthcare Providers and Systems Outpatient and Ambulatory Surgery Survey measures, and the MAP stated that these are high impact measures that will improve both quality and efficiency of care and be meaningful to consumers.[10]

In evaluating and selecting these measures for inclusion in the Hospital OQR Program, we considered whether there were other available measures that have been endorsed or adopted by the NQF that assess the areas in focus for quality measurement and reporting. We were unable to identify other NQF-endorsed measures. However, we developed these measures using the same rigorous process that we have used to develop other publicly reported measures. Lastly, it is our priority to ensure we select measures that are appropriate for the Hospital OQR Program that further our goals under the National Quality Strategy and CMS Quality Strategy.

a. OP–35: Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy Measure

(1) Background

Cancer care is a priority area for outcome measurement, because cancer is an increasingly prevalent condition associated with considerable morbidity and mortality. In 2015, there were more than 1.6 million new cases of cancer in the United States.[11] Each year, about 22 percent of cancer patients receive chemotherapy,[12] with Medicare payments for cancer treatment totaling $34.4 billion in 2011, almost 10 percent of Medicare fee-for-service (FFS) dollars.[13] With an increasing number of cancer patients receiving chemotherapy in a hospital outpatient department,[14] a growing body of peer-reviewed literature identifies unmet needs in the care provided to these patients. This gap in care may be due to reasons including: (1) The large burden and delayed onset of chemotherapy side effects that patients must manage at home; (2) patients' assumption that little can be done about their symptoms, which leads to them to not seek medical assistance; and (3) limited access to providers who can tailor care to the individual.[15] As a result, cancer patients who receive chemotherapy in a hospital outpatient department require more frequent acute care in the hospital setting and experience more adverse events than cancer patients who are not receiving chemotherapy.[16] [17] [18]

Hospital admissions and ED visits among cancer patients receiving chemotherapy often are caused by predictable, and manageable, side effects from treatment. Recent studies of patients receiving chemotherapy in the outpatient setting show the most commonly cited symptoms and reasons for hospital visits are pain, anemia, fatigue, nausea and/or vomiting, fever and/or febrile neutropenia, shortness of breath, dehydration, diarrhea, and anxiety/depression.[19] These hospital visits may be due to conditions related to the cancer itself or to side effects of chemotherapy. However, treatment plans and guidelines exist to support the management of these conditions. Hospitals that provide outpatient chemotherapy should proactively implement appropriate care to minimize the need for acute hospital care for these adverse events. Guidelines from the American Society of Clinical Oncology, the National Comprehensive Cancer Network, the Oncology Nursing Society, the Infectious Diseases Society of America, and other professional societies recommend evidence-based interventions to prevent and treat common side effects and complications of chemotherapy.[20] Appropriate outpatient care should curb potentially avoidable hospital admissions and ED visits for these issues and improve cancer patients' quality of life. We believe that including a measure monitoring admissions and ED visits for patients that receive outpatient chemotherapy in the Hospital OQR Program and publicly reporting results would encourage providers to improve their quality of care and lower rates of adverse events that lead to hospital admissions or ED visits after outpatient chemotherapy.

(2) Overview of Measure

We believe it is important to reduce adverse patient outcomes associated with chemotherapy treatment in the hospital outpatient setting. Therefore, in the CY 2017 OPPS/ASC proposed rule (81 FR 45711 through 45714), we proposed to adopt OP–35: Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy in the Hospital OQR Program for the CY 2020 payment determination and subsequent years. This measure aims to assess the care provided to cancer patients and encourage quality improvement efforts to reduce the number of potentially avoidable inpatient admissions and ED visits among cancer patients receiving chemotherapy in a hospital outpatient setting. Improved hospital management of these potentially preventable symptoms—including anemia, dehydration, diarrhea, emesis, fever, nausea, neutropenia, pain, pneumonia, or sepsis—can reduce admissions and ED visits for these conditions. Measuring potentially avoidable admissions and ED visits for cancer patients receiving outpatient chemotherapy will provide hospitals with an incentive to improve the quality of care for these patients by taking steps to prevent and better manage side effects and complications from treatment.

In addition, this measure addresses the National Quality Strategy priority of ''promoting the most effective prevention and treatment practices'' for the leading causes of mortality. We expect the measure would promote improvement in patient care over time because measuring this area, coupled with transparency in publicly reporting scores, will make potentially preventable hospital inpatient admissions and ED visits following chemotherapy more visible to providers and patients and will encourage providers to incorporate quality improvement activities in order to reduce these visits. This risk-standardized quality measure will address an existing information gap and promote quality improvement by

providing feedback to hospitals and physicians, as well as transparency for patients on the rates and variation across hospitals in these potentially preventable admissions and ED visits following chemotherapy.

The measure is well-defined, precisely specified, and allows for valid comparisons of quality among hospitals. The measure includes only outcome conditions demonstrated in the literature as being potentially preventable in this patient population, is important to patients, is specified to attribute an outcome to other hospital(s) that provided outpatient chemotherapy in the 30 days preceding the outcome, and is risk-adjusted for patient demographics, cancer type, clinical comorbidities, and treatment exposure. Validity testing demonstrated that the measure data elements produce measure scores that correctly reflect the quality of care provided and adequately identify differences in quality. We conducted additional assessments to determine the impact of including sociodemographic status (SDS) factors in the risk-adjustment model, and NQF will review our methodology and findings under the NQF trial period described below.

Section 1890A(a)(2) of the Act outlines the prerulemaking process established under section 1890A of the Act, which requires the Secretary to make available to the public, by December 1 of each year, a list of quality and efficiency measures that the Secretary is considering. This measure (MUC ID: 15–951) was included on a publicly available document titled ''List of Measures under Consideration for December 1, 2015'' on the CMS Web site at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Downloads/2015-Measures-Under-Consideration-List.pdf* in compliance with section 1890A(a)(2) of the Act.

The Measure Applications Partnership (MAP), which represents stakeholder groups, conditionally supported the measure recommending that it be submitted for National Quality Forum (NQF) endorsement with a special consideration for SDS adjustments and the selection of exclusions. MAP members noted the potential for the measure to increase care coordination and spur patient activation. We refer readers to the Spreadsheet of MAP 2016 Final Recommendations available at: *http://www.qualityforum.org/ProjectMaterials.aspx?projectID=75369*.

We understand the important role that SDS plays in the care of patients. However, we continue to have concerns about holding hospitals to different standards for the outcomes of their patients of diverse SDS because we do not want to mask potential disparities or minimize incentives to improve the outcomes of disadvantaged populations. For all our measures, we routinely monitor the impact of SDS on hospitals' results. We will continue to investigate methods to ensure all hospitals are treated as fairly as possible within the program.

The NQF is currently undertaking a 2-year trial period in which new measures and measures undergoing maintenance review will be assessed to determine if risk-adjusting for SDS factors is appropriate. This trial entails temporarily allowing inclusion of sociodemographic factors in the risk-adjustment approach for some performance measures. At the conclusion of the trial, NQF will issue recommendations on future permanent inclusion of SDS factors. During the trial, measure developers are expected to submit information such as analyses and interpretations as well as performance scores with and without SDS factors in the risk-adjustment model.

Furthermore, the Office of the Assistant Secretary for Planning and Evaluation (ASPE) is conducting research to examine the impact of SDS on quality measures, resource use, and other measures under the Medicare program as directed by the IMPACT Act. We will closely examine the findings of the ASPE reports and consider how they apply to our quality programs in future rulemaking, as appropriate and feasible. We look forward to working with stakeholders in this process.

In addition, several MAP members noted the alignment of this measure concept with other national priorities, such as improving patient experience, and other national initiatives to improve cancer care, as well as the importance of this measure to raise awareness and create a feedback loop for providers (meeting transcript available at: *http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=81391*). As required under section 1890A(a)(4) of the Act, we considered the input and recommendations provided by the MAP in selecting measures to propose for the Hospital OQR Program.

Section 1833(t)(17)(C)(i) of the Act requires the Secretary, except as the Secretary may otherwise provide, to develop measures appropriate for the measurement of the quality of care furnished by hospitals in outpatient settings that reflect consensus among affected parties, and to the extent feasible and practicable, that include measures set forth by one or more national consensus building entities. However, we note that section 1833(i)(17)(C)(i) of the Act does not require that each measure we adopt for the Hospital OQR Program be endorsed by a national consensus building entity, or by the NQF specifically. As stated in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74465 and 74505), we believe that consensus among affected parties can be reflected through means other than NQF endorsement, including consensus achieved during the measure development process, consensus shown through broad acceptance and use of measures, and consensus through public comment.

We believe that this proposed measure reflects consensus among the affected parties, because the MAP, which represents stakeholder groups, reviewed and conditionally supported the measure for use in the program. Further, the measure was subject to public input during the MAP and measure development processes, with some public commenters agreeing with the MAP's conclusions on the measure (MUC ID: 15–951; Spreadsheet of MAP 2016 Final Recommendations available at: *http://www.qualityforum.org/ProjectMaterials.aspx?projectID=75369*). We also note that we submitted this measure to NQF as part of the NQF Cancer Consensus Development Project in March 2016, and it is currently undergoing review.

Currently, there are no publicly available quality of care reports for providers or hospitals that provide outpatient chemotherapy treatment. Thus, adoption of this measure would provide an opportunity to enhance the information available to patients choosing among providers who offer outpatient chemotherapy. We believe this measure would reduce adverse patient outcomes after outpatient chemotherapy by capturing and making more visible to providers and patients hospital admissions and emergency department visits for symptoms that are potentially preventable through high quality outpatient care. Further, providing outcome rates to providers will make visible to clinicians, meaningful quality differences and encourage improvement.

(3) Data Sources

The proposed OP–35: Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy measure is a claims-based measure. It uses Medicare Part A and Part B administrative claims data from Medicare FFS beneficiaries receiving chemotherapy treatment in a

hospital outpatient setting. The performance period for the measure is 1 year (that is, the measure calculation includes eligible patients receiving outpatient chemotherapy during a 1-year timeframe). For example, for the CY 2020 payment determination, the performance period would be CY 2018 (that is, January 1, 2018 through December 31, 2018).

(4) Measure Calculation

The OP–35 measure involves calculating two mutually exclusive outcomes: (1) One or more inpatient admissions; or (2) one or more ED visits for any of the following diagnoses—anemia, dehydration, diarrhea, emesis, fever, nausea, neutropenia, pain, pneumonia, or sepsis—within 30 days of chemotherapy treatment among cancer patients receiving treatment in a hospital outpatient setting. These 10 conditions are potentially preventable through appropriately managed outpatient care. Therefore, two scores will be reported for this measure. A patient can only be counted for any measured outcome once, and those who experience both an inpatient admission and an ED visit during the performance period are counted towards the inpatient admission outcome. These two distinct rates provide complementary and comprehensive performance estimates of quality of care following hospital-based outpatient chemotherapy treatment. We calculate the rates separately, because the severity and cost of an inpatient admission is different from that of an ED visit, but both adverse events are important signals of quality and represent patient-important outcomes of care.

The measure derives and reports the two separate scores, one for each mutually exclusive outcome, (also referred to as the hospital-level risk-standardized admission rate (RSAR) and risk-standardized ED visit rate (RSEDR)), each calculated as the ratio of the number of ''predicted'' to the number of ''expected'' outcomes (inpatient admissions or ED visits, respectively), multiplied by the national observed rate (of inpatient admissions or ED visits). For the RSAR and RSEDR, the numerator of the ratio is the number of patients predicted to have the measured adverse outcome (an inpatient admission for RSAR or ED visit for RSEDR with one or more of the 10 diagnoses described above within 30 days) based on the hospital's performance with its observed case-mix. The denominator for each ratio is the number of patients expected to have the measured adverse outcome based on the average national performance and the hospital's observed case-mix. The national observed rate is the national unadjusted number of patients who have the adverse outcome among all qualifying patients who had at least one chemotherapy treatment in a hospital.

We define the window for identifying the outcomes of admissions and ED visits as 30 days after hospital outpatient chemotherapy treatment, as existing literature suggests the vast majority of adverse events occur within that timeframe.[21] [22] [23] Limiting the window to 30 days after each outpatient chemotherapy treatment also: (1) Helps link patients' experiences to the hospitals that provided their recent treatment, while accounting for variations in duration between outpatient treatments; (2) supports the idea that the admission is related to the management of side effects of treatment and ongoing care, as opposed to progression of the disease or other unrelated events; and (3) is a clinically reasonable timeframe to observe related side effects. For additional details on how the measure is calculated, we refer readers to: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html*.

(5) Cohort

The cohort includes Medicare FFS patients ages 18 years and older as of the start of the performance period with a diagnosis of any cancer (except leukemia) who received at least one hospital outpatient chemotherapy treatment at a reporting hospital during the performance period. Based on discussions with clinical and technical panel experts, the measure excludes cancer patients with a diagnosis of leukemia at any time during the performance period due to the high toxicity of treatment and recurrence of disease. Therefore, admissions for leukemia patients may not reflect poorly managed outpatient care, but rather disease progression and relapse. The measure also excludes patients who were not enrolled in Medicare FFS Parts A and B in the year before the first outpatient chemotherapy treatment during the performance period, because the risk-adjustment model (explained further below) uses claims data for the year before the first chemotherapy treatment during the performance period to identify comorbidities. Lastly, the measure excludes patients who do not have at least one outpatient chemotherapy treatment followed by continuous enrollment in Medicare FFS Parts A and B in the 30 days after the procedure, to ensure all patients have complete data available for outcome assessment.

(6) Risk Adjustment

Since the measure has two mutually exclusive outcomes (qualifying inpatient admissions and qualifying ED visits), we developed two risk-adjustment models. The only differences between the two models are the clinically relevant demographic, comorbidity, and cancer type variables used for risk adjustment. The statistical risk-adjustment model for inpatient admissions includes 20 demographic and clinically relevant risk-adjustment variables that are strongly associated with risk of one or more hospital admissions within 30 days following chemotherapy in a hospital outpatient setting. On the other hand, the statistical risk-adjustment model for ED visits include 15 demographic and clinically relevant risk-adjustment variables that are strongly associated with risk of one or more ED visits within 30 days following chemotherapy in a hospital outpatient setting. For additional methodology details, including the complete list of risk-adjustment variables, we refer readers to: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html*.

We invited public comments on our proposal to adopt the OP–35: Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy measure to the Hospital OQR Program for the CY 2020 payment determination and subsequent years as discussed above.

Comment: Several commenters supported the adoption of the proposed OP–35: Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy measure in the Hospital OQR Program. Some commenters applauded CMS for recognizing cancer care as a priority area for outcome measurement, and

[23] McKenzie, H., L. Hayes, K. White, K. Cox, J. Fethney, M. Boughton, and J. Dunn. ''Chemotherapy Outpatients' Unplanned Presentations to Hospital: A Retrospective Study.'' *Supportive Care in Cancer,* Vol. 19, No. 7, 2011, pp. 963–969.

asserted this measure is particularly important as the number of cancer patients receiving chemotherapy in hospital outpatient settings is increasing. These commenters also agreed that it is imperative to include a measure to monitor admissions and ED visits for patients that receive outpatient chemotherapy in the Hospital OQR Program. Many commenters asserted that including an oncology measure would be an important step in holding hospitals accountable for the care they provide to chemotherapy patients—particularly because many of the reasons these patients are admitted to hospitals or visit the ED are for symptoms and side effects that can and should be anticipated and treated in nonacute care settings. These commenters asserted that reducing hospital admissions and ED visits will improve health outcomes and quality of life for chemotherapy patients, and the first step in doing so is to begin measuring the prevalence of these incidents. These commenters also asserted that publicly reporting results would encourage providers to improve their quality of care and lower rates of adverse events that lead to hospital admissions or ED visits after outpatient chemotherapy.

Response: We thank the commenters for their support.

Comment: Several commenters did not support the adoption of OP–35 because the measure is not NQF-endorsed, and asserted that CMS needs to obtain NQF approval prior to measure implementation to ensure that the measure is accurate, valid, and actionable.

Response: Section 1833(t)(17)(C)(i) of the Act does not require that each measure we adopt for the Hospital OQR Program be endorsed by a national consensus building entity, or the NQF specifically. Under this provision, the Secretary has further authority to adopt non endorsed measures. While we strive to adopt NQF-endorsed measures when possible, we believe the requirement that measures reflect consensus among affected parties can be achieved in other ways, including through the measure development process, through broad acceptance and use of the measure, and through public comments. As part of that process, we sought and received extensive input on the measure from stakeholders and clinical experts at multiple points during development, including from the MAP and the NQF.

Furthermore, in evaluating and selecting OP–35 for inclusion in the Hospital OQR Program, we considered whether there were other available measures that have been endorsed or adopted by the NQF that assess admissions and ED visits following outpatient chemotherapy, an important area for quality measurement and reporting. We were unable to identify any other NQF-endorsed measures. We developed OP–35 using the same rigorous process that we have used to develop other publicly reported outcome measures.

Although this measure is not currently NQF-endorsed, our background research and analyses conducted during technical development demonstrate that this measure is accurate, valid, and actionable. This measure is an important signal of high quality care, measures what it intends to measure, and is specified in a way to appropriately differentiate data available between cancer hospitals providing high and low quality care for these patients. This measure assesses an aspect of care with documented unmet patient needs resulting in reduction of patient's quality of life and increase in healthcare utilization and costs. Several studies [24] [25] [26] illustrate a gap in care for patients receiving chemotherapy in the hospital outpatient setting, as hospitals cannot effectively track the condition or status of patients after they return home following treatment. In addition, the performance rates and information provided to stakeholders are actionable and useful for quality improvement efforts by highlighting a specific gap in care for cancer patients treated at each hospital. The diagnoses measured include commonly cited reasons for unplanned hospitalizations and ED visits in this population that are considered potentially preventable through appropriately managed outpatient care. We have limited the outcome measure to these conditions in order to make the performance rate more meaningful and actionable to hospitals.

Thus, adoption of this measure would provide an opportunity to enhance the information available to patients choosing among providers who offer chemotherapy in the hospital outpatient setting. There currently remains a gap in care that leads to acute, potentially preventable hospitalizations among patients receiving chemotherapy. We note that, on average, cancer patients receiving chemotherapy have one hospital admission and two ED visits per year,[27] and therefore we believe it would be a disservice to patients to delay inclusion of the current outcome measure in quality reporting and quality improvement initiatives. As stated in the measure description above, we believe this measure would reduce adverse patient outcomes after outpatient chemotherapy by capturing and making more visible to providers and patients hospital admissions and emergency department visits for symptoms that are potentially preventable through high quality outpatient care. Further, providing outcome rates to providers will make visible to clinicians meaningful quality differences and encourage improvement.

Comment: Several commenters expressed concern that OP–35 is not risk adjusted for cancer type, SDS factors, and clinical complexity. Some commenters specifically stated that the NQF process of reviewing whether to include SDS factors in OP–35's risk-adjustment methodology is important to reflect and evaluate the effect of known disparities in access and outcomes for cancer patients in underserved areas. Some commenters asserted that OP–35 is particularly susceptible to performance variation due to SDS and factors outside the control of the hospital because chemotherapy patients may come back to an emergency department or require an inpatient admission not because of the care they received during the outpatient department visit, but because of a variety of community factors or their living conditions which may hamper the implementation of the post-discharge plan of care. One commenter further asserted that without this information, OP–35 lacks the necessary information needed to determine whether it is appropriate for public reporting.

Response: We would like to make clear that OP–35 is in fact risk-adjusted to account for the variation in patient mix and aggressiveness of treatment, and does adjust for clinical complexities

including patient's age, sex, exposure (number of chemotherapy treatments during the performance period), cancer type, and certain clinical comorbidities. We refer readers to the measure specifications as originally made available in the CY 2017 OPPS/ASC proposed rule (81 FR 45722) at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html*.

Regarding SDS factors, we understand the important role that SDS plays in the care of patients. However, we continue to have concerns about holding hospitals to different standards for the outcomes of their patients of diverse SDS because we do not want to mask potential disparities or minimize incentives to improve the outcomes of disadvantaged populations. For all our measures, we routinely monitor the impact of SDS on hospitals' results. We will continue to investigate methods to ensure all hospitals are treated as fairly as possible within the program.

The NQF is currently undertaking a 2-year trial period in which new measures and measures undergoing maintenance review will be assessed to determine if risk-adjusting for sociodemographic factors is appropriate. This trial entails temporarily allowing inclusion of sociodemographic factors in the risk adjustment approach for some performance measures. At the conclusion of the trial, NQF will issue recommendations on future permanent inclusion of sociodemographic factors. During the trial, measure developers are encouraged to submit information such as analyses and interpretations as well as performance scores with and without sociodemographic factors in the risk adjustment model. Several measures developed by CMS have been brought to NQF since the beginning of the trial, including OP–35. CMS, in compliance with NQF's guidance, has tested sociodemographic factors in the measures' risk models and made recommendations about whether or not to include these factors in the proposed measure. We intend to continue engaging in the NQF process as we consider the appropriateness of adjusting for sociodemographic factors in our outcome measures.

Furthermore, the Office of the Assistant Secretary for Planning and Evaluation (ASPE) is conducting research to examine the impact of sociodemographic status on quality measures, resource use, and other measures under the Medicare program as directed by the IMPACT Act. We will closely examine the findings of the ASPE reports and consider how they apply to our quality programs in future rulemaking, as appropriate and feasible. We look forward to working with stakeholders in this process.

During development of this measure, we assessed the relationship between the measure outcomes and SDS factors in accordance with NQF measure development guidelines as part of the 2-year NQF SDS trial period, available at: *http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=80279*. For our analysis, we used three variables that are available within or link directly to Medicare administrative claims data for evaluation of SDS factors and may capture some of the impact of community factors on patient care: Race; Medicaid dual-eligible status; and AHRQ socioeconomic status (SES) Index score. For more information on the AHRQ SES Index score, we refer readers to: *http://archive.ahrq.gov/research/findings/final-reports/medicareindicators/medicareindicators3.html*.

The results of our data analysis demonstrate no significant associations between hospital measure performance and the three tested SDS factors—patient race, patient Medicaid dual-eligible status, and patients' neighborhood AHRQ SES Index score. Based on these results, we disagree that the measure is not susceptible to performance variation due to patient and community SDS or other factors outside the control of the hospital, such as a variety of community factors or their living conditions, which may hamper the implementation of the post-discharge plan of care. At the hospital level, there was no clear relationship between median risk-standardized rates and hospitals' case mix by these three SDS factors, and the distributions of risk-standardized rates suggested that hospitals caring for a greater percentage of low SDS patients have similar rates of inpatient admission and ED visits within 30 days of hospital-based outpatient chemotherapy. Based on these findings, our final measure specifications do not risk adjust for any of these specific SDS factors. As a result, the measure does not currently adjust for SDS factors beyond those that are already accounted for as listed above (that is, age, sex, and clinical complexity).

Furthermore, based on these analyses and results, we believe this measure, as specified, effectively adjusts for patient-mix and can be publicly reported. We refer readers to *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html* for the more information on our SDS analysis and results.

Comment: Some commenters expressed concern with the validity and reliability of the measure. Some commenters specifically stated that the NQF's Cancer Project 2015–2017 Committee failed to endorse the measure, citing reliability concerns. Commenters urged CMS to expedite additional measure testing, including sensitivity and specificity testing.

Response: As stated by the commenters, the NQF's Cancer Project 2015–2017 Committee did not endorse the proposed measure due to concerns regarding reliability. However, we disagree about the concerns with the measure's reliability. We believe that this measure is sufficiently reliable to be included in the Hospital OQR Program. We conducted several assessments of reliability during development using two different approaches given data limitations during testing. We first used the test-retest method to calculate reliability from one year of data, and then used the Intraclass Correlation Coefficient (ICC) and Spearman-Brown prophecy formula to estimate the reliability based on what would be expected if the sample size was increased. The Spearman-Brown prophecy formula [28] [29] is an accepted statistical method that estimates the ICC [30] based on what would be expected if the sample size was increased, to estimate the reliability score if CMS were to use a full year of data for public reporting rather than the six months of data that we used in initial testing.

Measure reliability was first calculated using a split sample of one year of data for the test-retest method.[31] We randomly split the patient cohort at each hospital into two equal halves, calculated the measure using each half, and then calculated the agreement between these two (the ''test'' and the ''retest''). Following this test-retest methodology, we calculated the Pearson correlation between the performance rate estimates in each half-year sample to assess reliability. We found the risk-standardized admission rate (RSAR) to have a reliability of 0.41 (95 percent

[28] Spearman, C. (1910). Correlation calculated from faulty data. British Journal of Psychology, 3, 171–195.

[29] Brown, W. (1910). Some experimental results in the correlation of mental abilities. British Journal of Psychology, 3, 296–322.

[30] Landis J, Koch G, The measurement of observer agreement for categorical data. Biometrics 1977;33:159–174.

[31] Rousson V, Gasser T, Seifert B. Assessing intrarater, interrater and test–retest reliability of continuous measurements. Statistics in Medicine. 2002;21:3431–3446.

confidence interval (CI): 0.37–0.45) and the risk-standardized ED visit rate (RSEDR) to have a reliability of 0.27 (95 percent CI: 0.22–0.33) which, according to Cohen's classification, represent moderate and borderline weak-to-moderate reliability, respectively. The 95 percent CI gives us a reasonable estimate of the true reliability range.

However, our reliability estimate was arguably limited by use of only a half year of split data. We expected our reliability to be higher if we increased the amount of data we used. Therefore, after submitting the measure to NQF for endorsement review, we conducted additional calculations of the reliability testing score, this time using the ICC and the Spearman-Brown prophecy formula. The Spearman-Brown prophecy formula is an accepted statistical method that estimates the ICC based on what would be expected if the sample size was increased. It therefore provides us with an estimate of what the reliability score would be if CMS were to use a full year of data for public reporting rather than the six months of data that we used. Using the Spearman-Brown prophecy formula, we estimated that our measure will have an ICC of 0.63 (95 percent CI: 0.58–0.68) for RSAR and 0.47 percent (95 percent CI: 0.40–0.53) for RSEDR using a full year of data.

The NQF considers ICC values ranging from 0.41 to 0.60 as ''moderate'' reliability, and 0.61 to 0.80 as ''strong'' reliability.[32] Our calculated ICC values of 0.63 for RSAR and 0.47 for RSEDR are interpreted as ''strong'' and ''moderate'' reliability, respectively. Therefore, we believe the measure is sufficiently reliable.

We also disagree with the concerns regarding the validity of the measure. We interpret the commenter's concern about validity to be about the degree to which the measure is measuring what it is intended to measure (that is, construct validity). Measure testing results demonstrated the measure's validity both at the conceptual level and empirically. Conceptual (or face) validity was demonstrated based on feedback from a TEP, a Cancer Workgroup that included representatives from each of the 11 PPS-exempt cancer hospitals, public comments, and NQF MAP review process. During each phase of measure development, these groups provided input to ensure that the measure specification had face validity (that is, identified outcomes both important to the patient and related to the quality of chemotherapy administration). In addition, empirical analyses found that the most common reasons for admission (for example, pneumonia, pain, and anemia) and ED visits (for example, pain, fever, and dehydration) aligned with the diagnoses included in the measure specification. Additional details of our validity testing are provided within the materials submitted to NQF available at: *http://www.qualityforum.org/ProjectMeasures.aspx?projectID=80703*. In summary, this measure is an important signal of high quality outpatient cancer care, measures what it intends to measure by focusing on a patient-important aspect of care—avoiding potentially unnecessary ED visits and hospital admissions, and is specified in a way to appropriately differentiate between cancer hospitals providing high and low quality care for these patients.

We will consider additional measure testing, such as additional sensitivity and specify analyses, during the annual reevaluation of the measure.

Comment: One commenter encouraged CMS to release, as part of the rulemaking process, the full measure specifications for every measure proposed, as it asserted having full specifications is critical to providers for public reporting. This commenter further expressed that hospitals not having full specifications may interpret the measures in different ways. In addition, the commenter asserted that the multiple interpretations of the measure specifications in reporting means the data reported is not comparable, and, therefore, consumers cannot make fully informed decisions based on valid and reliable data.

Response: Like this commenter, we also place great importance on transparency and clarity in measure specifications. Measure specifications for proposed measures are publicly available and provided in the proposed rules. For OP–35 in particular, measure specifications can be accessed from the CY 2017 OPPS/ASC proposed rule (81 FR 45713) and on the CMS Web site (*https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html*).

Comment: Some commenters questioned the appropriateness of the measure outcome, expressing concerns with the relationship between chemotherapy and the outcome. One commenter expressed concern that OP–35 is poorly calibrated for the intended outcome because the listed causes for admissions and ED visits for cancer patients are not exclusive sequelae of outpatient chemotherapy, which may undermine the sensitivity and specificity of this measure. Some commenters expressed concern that, because the causes for admissions and ED visits are not solely the consequence of outpatient chemotherapy, they were uncertain which behavior the measure will evaluate in reality and how the results will be interpreted to infer quality. One commenter disagreed with the assumption that limiting hospital visits to those that occur within 30 days of chemotherapy ensures that the admission is due to the management of side effects and ongoing care. This commenter expressed that a variety of clinical scenarios could occur during the 30 days after chemotherapy and lead to a hospital visit for one of the 10 specified diagnoses, with some being the result of ongoing cancer care and some being the result of other issues. In addition, some commenters expressed that some causes listed in the measure numerator are not actual diagnoses because some are symptoms (nausea and pain) without a defined cause and others are based on laboratory results (anemia).

Response: Given the increase in outpatient hospital-based chemotherapy, understanding and minimizing related unplanned admissions and ED visits is a high priority. The 10 conditions that constitute the unplanned reasons for admission or ED visit are commonly cited reasons for hospital visits among patients receiving chemotherapy in the hospital outpatient setting. These 10 conditions do include symptom diagnoses, diagnoses that require lab values, and diagnoses related to infections. Hospital visits for these 10 conditions may be due to conditions related to the cancer itself or to side effects of chemotherapy, both of which affect patients' quality of care and quality of life. Admissions and ED visits for these conditions are potentially preventable through appropriately managed outpatient care and increased communication with the patient and are a potential signal of poor quality care and poor care coordination.

We recognize that by limiting the measure to these 10 potentially preventable outcome conditions, the measure will not identify admissions and ED visits from other less common potentially preventable outcome conditions, potentially limiting the sensitivity of the measure. On the other hand, we recognize that not all admissions and ED visits for these conditions over the 30-day time frame will be preventable and some may be

[32] National Quality Forum. Guidance for Measure Testing and Evaluating Scientific Acceptability of Measure Properties. (2011).

due to other factors beyond the cancer and the chemotherapy treatment, such that the highest-performing hospital is unlikely to have a rate of 0, potentially limiting the specificity of the measure. Nevertheless, to strike the best possible balance between measure sensitivity and specificity, we limited the measure to these 10 conditions over a 30-day time period for identifying admissions and ED visits after hospital outpatient chemotherapy treatment. Existing literature suggests the vast majority of adverse events occur within that time frame, as were observed during testing.[33] [34] [35] The measure does not evaluate compliance with certain care processes, procedures, or behaviors, but rather evaluates overall management of patients' symptoms and complications from chemotherapy, a reflection of outpatient care quality for these patients. The results can be inferred to illustrate potential gaps in the care of these patients and promote individual hospitals to reflect internally on how to improve the care they provide, especially for hospitals with outlying performance compared to their peers. While the goal is not to reach zero admissions and ED visits, the premise is that reporting this information will promote an improvement in patient care over time for two reasons. First, transparency achieved by publicly reporting this measure will raise hospital and patient awareness of unplanned hospital visits following chemotherapy. Second, this reporting will incentivize OPDs to incorporate quality improvement activities into their chemotherapy care planning in order to improve care coordination and reduce the number of these visits. We also believe that making OPDs aware of their performance, as well as the performance that might be expected given the OPD's case-mix is helpful in supporting efforts to improve outcomes. The measure is intended to improve symptom management and care coordination for cancer patients who are undergoing chemotherapy.

Comment: Some commenters expressed concern that the measure's 30-day timeframe is misaligned with the presentation of conditions such as febrile neutropenia, a common cause of hospitalization among patients receiving chemotherapy, and further argued that the 30-day time window would not specifically address febrile neutropenia, since this condition does not correlate with any normal cycle of neutropenic nadir and recovery. One commenter believed that patients do not visit an ED for febrile neutropenia, but rather for fever and related symptoms of infection, and therefore, the cause of the visit might or might not be a complication of chemotherapy. Some commenters supported the development of a measure that addresses infection risk in cancer patients, specifically the risk of febrile neutropenia as a surrogate for infection in patients undergoing myelosuppressive chemotherapy. These commenters recommended CMS consider adopting NQF #2930 ''Febrile Neutropenia Risk Assessment Prior to Chemotherapy'' in the Hospital OQR Program.

Response: As stated above, we limited the time period for identifying the outcomes of admissions and ED visits, which are not limited only to complications of chemotherapy, to 30 days after hospital outpatient chemotherapy treatment, as existing literature suggests the vast majority of adverse events occur within that time frame,[36] [37] [38] and we observed this during measure development testing. In addition, the TEP supported this time period because: (1) It helps link patients' experiences to the facilities that provided their recent treatment while accounting for variations in duration between outpatient treatments; (2) it supports the idea that the admission is related to the management of side effects of treatment and ongoing care, as opposed to progression of the disease or other unrelated events; and (3) clinically, 30 days after each outpatient chemotherapy treatment is a reasonable time frame to observe related side effects.

During measure development, our TEP recommended expanding the original list of conditions that constitute the unplanned reasons for admission or ED visit, which included neutropenic fever, to include both neutropenia and fever separately to avoid missing any diagnoses of neutropenic fever since diagnosis of neutropenia requires lab results, and a single code for neutropenic fever does not exist in ICD–9 or ICD–10. We agreed that it was reasonable to expand the outcome to include fever and neutropenia to capture all potentially qualifying diagnoses. Neutropenic fever (and therefore fever and neutropenia as separate conditions) can occur at any time in the 30 days post-chemotherapy, but it is more likely to occur later on within the 30-day window, rather than directly after chemotherapy infusion.[39] Specifically, neutropenia often occurs between 7 and 12 days after chemotherapy, but much depends based on individual patient characteristics and the type of chemotherapy.[40] While the time course for when neutropenic fever is expected to occur after chemotherapy may not perfectly align with the current 30-day ascertainment period, we determined that a standardized approach, utilizing the same 30-day outcome timeframe for all of the 10 outcome conditions, would ease measure calculation, usability, and interpretation.

We thank the commenter for the suggestion to develop a measure that addresses infection risk in cancer patients, and specifically to include NQF #2930 ''Febrile Neutropenia Risk Assessment Prior to Chemotherapy'' in the Hospital OQR Program. We will consider these suggestions in the future.

Comment: One commenter recommended that CMS clearly define which chemotherapies should be included in OP–35 because there are various treatment options such as IV cytotoxic drugs, oral molecularly targeted agents, and biological therapy. The commenter recommended CMS specify whether it is exclusively examining Medicare Part A and B claims data from existing administrative reporting practices or if this measure

requires any additional reporting from providers.

Response: This measure focuses on patients receiving infusion-based chemotherapy administered in a hospital outpatient department based on claims identified using Medicare Part A and B files such as ICD–9 procedure codes V58.11 (Encounter for antineoplastic chemotherapy) and 99.25 (Injection or infusion of cancer chemotherapeutic substance). We refer readers to the measure specifications, as we did in the CY 2017 OPPS/ASC proposed rule (81 FR 45722), with the code sets defining chemotherapy, available at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html*. Because this is a claims-based measure, it does not require any additional reporting from providers. Using claims data allows for consistent identification of chemotherapy administration in hospital OPDs and aligns with the NQF voluntary consensus standards [41] and CMS standards for claims-based models for publicly reported measures.[42]

Comment: One commenter requested that CMS exclude all planned inpatient admissions from the outcome to ensure that hospitals are held accountable only for those admissions that are unplanned. The commenter asserted that this modification would ensure alignment with readmission measures in the inpatient setting, which exclude planned readmissions. Another commenter recommended that CMS adjust OP–35 for those ED visits and hospitalizations which may be necessary, to avoid creating patient safety or value issues. This commenter asserted that a measure looking at the medical history of admitted patients to see whether they had received appropriate prophylactic measures to prevent toxicity and to assess the appropriateness of hospitalization or ED visits would be more meaningful than a simple count of ED visits and hospitalizations.

Response: We do not agree that it is necessary to exclude all planned inpatient admissions from the outcome to ensure that hospitals are held accountable only for those admissions that are unplanned, because the outcome is defined by 10 specific reasons for the ED visit or admission, none of which are ''elective'' reasons for admissions and therefore, all can be considered unplanned. OP–35 is an outcome measure reporting the risk-adjusted rate of potentially preventable admissions and ED visits for cancer patients receiving outpatient chemotherapy. The measure does not assess the clinical processes that are part of the pathway to providing high-quality care for patients receiving outpatient chemotherapy (for example, whether the patient had access to primary care or whether the patient was prescribed appropriate pain medications); the measure assesses the outcomes based on the care provided. We recognize the value of process measures to support the outcome measure and reinforce certain aspects of high quality outpatient care, and we may consider process measures focused on the clinical care of cancer patients in future development. Furthermore, we use a specific set of codes to identify admissions and ED visits for 10 potentially preventable symptoms—anemia, dehydration, diarrhea, emesis, fever, nausea, neutropenia, pain, pneumonia, or sepsis—none of which are ''elective'' admissions and therefore, can be considered unplanned.

We do not agree that this measure needs to adjust for ED visits and admissions that may be necessary. As stated above, we do not view these outcomes as planned outcomes. We also do not think that measuring these potentially avoidable outcomes will result in hospitals making the clinical decisions that are not in the best interest of patient or put the patient care at risk. As stated previously, the goal is not to reach zero admissions and ED visits; the purpose is to identify those hospitals whose performance is worse than average, identifying areas for improvement. We will take into consideration for future rulemaking commenter's suggestion to adopt measures that evaluate the medical history of admitted patients to see whether they had received appropriate prophylactic measures to prevent toxicity and to assess the appropriateness of hospitalization or ED visits.

Comment: Some commenters requested CMS consider additional denominator exclusions for the OP–35 measure. Two commenters expressed concerns about the measure's inclusion of patients with hematologic malignancies other than leukemia, such as lymphoma and multiple myeloma in the measure cohort. The commenters suggested that these patients are at an increased risk for many of these complications, compared to patients with solid tumors, and as a result, alternative measurement approaches may be more appropriate for these patients. Some commenters stated that OP–35 should exclude patients receiving chemotherapy for a condition/disease other than cancer, but who have a diagnosis of cancer as a result of having a history of cancer. These commenters urged CMS to ensure that the measure does not inappropriately include patients who are receiving chemotherapy and do not have a current cancer diagnosis, as such patients would be a clinically different population than patients with a current cancer diagnosis who are receiving chemotherapy. Commenters also expressed concerns that patients should only be included in the measure for a particular hospital if they have received at least two outpatient chemotherapy visits at that hospital to ensure that hospitals are only held accountable for patients for whom they are the primary provider of services.

Response: We specified the measure to be as inclusive as possible; we excluded, based on clinical input and rationale, only those patient groups for which hospital visits were not typically a quality signal or for which risk adjustment would not be adequate. For example, the measure excludes patients with leukemia because, given the high toxicity of treatment and recurrence of disease, admissions among this population do not reflect poorly managed outpatient care. Patients with leukemia have a high expected admission rate due to frequent relapse, which is not the type of admission the measure intends to capture. Feedback from early public input during measure development suggested that the exclusion of all patients with a hematologic malignancy would be too broad. Based on this feedback, we analyzed data which showed that patients with lymphoma and multiple myeloma experienced similar rates of ED visits and admissions for these potentially preventable hospitalizations when compared with patients with other cancer types. Therefore, we disagree that patients with hematologic malignancies other than leukemia, such as lymphoma and multiple myeloma, have an increased risk for many of these complications, compared to patients with solid tumors. For more information on our analysis we refer readers to: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-*

[41] National Quality Forum. National voluntary consensus standards for patient outcomes, first report for phases 1 and 2: a consensus report. *http://www.qualityforum.org/projects/Patient_Outcome_Measures_Phases1-;2.aspx*. Accessed August 19, 2010.

Instruments/HospitalQualityInits/Measure-Methodology.html. Therefore, we excluded patients with leukemia, but not other hematologic malignancies. However, as part of continued measure evaluation, we will consider reviewing rates stratified by cancer type to track the impact and inform future measure revisions.

Comment: Some commenters stated that OP–35 should exclude patients receiving chemotherapy for a condition/disease other than cancer, but who have a diagnosis of cancer as a result of having a history of cancer. These commenters urged CMS to ensure that the measure does not inappropriately include patients who are receiving chemotherapy and do not have a current cancer diagnosis, as such patients would be a clinically different population than patients with a current cancer diagnosis who are receiving chemotherapy.

Response: This measure is intended to assess the care provided to cancer patients receiving chemotherapy in the OPD. To be included in the cohort, a patient must have a diagnosis of cancer on a Medicare FFS claim during the performance period; we do not include codes for ''history of cancer'' in our code set to define cancer diagnosis. We refer readers to the measure specifications for more details about the cohort: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html*. By limiting the cohort to those with a diagnosis of cancer on a Medicare FFS claim, the measure would only include patients currently receiving chemotherapy as part of active cancer care management, and therefore, exclude patients who are receiving chemotherapy but without a current cancer diagnosis, likely a very small number of patients. However, we will continue to monitor the cohort for any future necessary measure updates.

Comment: Commenters expressed concerns that patients should only be included in the measure for a particular hospital if they have received at least two outpatient chemotherapy visits at that hospital to ensure that hospitals are only held accountable for patients for whom they are the primary provider of services.

Response: We disagree. Excluding patients who only receive one chemotherapy treatment at a facility during the performance period may unnecessarily exclude qualifying patients. Furthermore, we believe that if an OPD provides even a single chemotherapy treatment to the cancer patient, that OPD is still expected to provide appropriate care planning, treatment, and follow-up over the subsequent 30 days. In addition, our data show that nearly 95 percent of the patients who receive chemotherapy treatment in an OPD receive treatment at the same facility throughout the course of treatment.

After consideration of the public comments we received, we are finalizing the adoption of the OP–35: Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy measure for the CY 2020 payment determination and subsequent years as proposed.

b. OP–36: Hospital Visits After Hospital Outpatient Surgery Measure (NQF #2687)

(1) Background

Outpatient same-day surgery is common in the United States. Nearly 70 percent of all surgeries in the United States are now performed in the outpatient setting, with most performed as same-day surgeries at hospitals.[43] Same-day surgery offers significant patient benefits as compared with inpatient surgery, including shorter waiting times, avoidance of hospitalizations, and rapid return home.[44] Furthermore, same-day surgery costs significantly less than an equivalent inpatient surgery, and therefore, presents a significant cost saving opportunity to the health system.[45] With the ongoing shift towards outpatient surgery, assessing the quality of surgical care provided by hospitals has become increasingly important. While most outpatient surgery is safe, there are well-described and potentially preventable adverse events that occur after outpatient surgery, such as uncontrolled pain, urinary retention, infection, bleeding, and venous thromboembolism, which can result in unanticipated hospital visits. Similarly, direct admissions after surgery that are primarily caused by nonclinical patient considerations (such as lack of transport home upon discharge) or facility logistical issues (such as delayed start of surgery) are common causes of unanticipated yet preventable hospital admissions following same-day surgery. Hospital utilization following same-day surgery is an important and accepted patient-centered outcome reported in the literature. National estimates of hospital visit rates following surgery vary from 0.5 to 9.0 percent based on the type of surgery, outcome measured (admissions alone or admissions and ED visits), and timeframe for measurement after surgery.[46] [47] [48] [49] [50] [51] [52] [53] Furthermore, hospital visit rates vary among hospitals,[54] suggesting variation in surgical and discharge care quality. However, providers (hospitals and surgeons) are often unaware of their patients' hospital visits after surgery because patients often present to the ED or to different hospitals.[55] This risk-standardized measure would provide the opportunity for providers to improve the quality of care and to lower the rate of preventable adverse events that occur after outpatient surgery.

(2) Overview of Measure

We believe it is important to reduce adverse patient outcomes associated with preparation for surgery, the procedure itself, and follow-up care. Therefore, in the CY 2017 OPPS/ASC proposed rule (81 FR 45714 through 45716), we proposed to include OP–36: Hospital Visits after Hospital Outpatient Surgery in the Hospital OQR Program

for the CY 2020 payment determination and subsequent years.

We expect that the measure would promote improvement in patient care over time because measuring this area, coupled with transparency in publicly reporting scores, will make patient unplanned hospital visits (ED visits, observation stays, or unplanned inpatient admissions) after surgery more visible to providers and patients and encourage providers to engage in quality improvement activities in order to reduce these visits. This measure meets the National Quality Strategy priority of ''promoting effective communication and coordination of care.'' Many providers are unaware of the post-surgical hospital visits that occur because patients often present to the ED or to different hospitals. Reporting this outcome will illuminate problems that may not currently be visible. In addition, the outcome of unplanned hospital visits is a broad, patient-centered outcome that reflects the full range of reasons leading to hospitalization among patients undergoing same-day surgery. This risk-standardized quality measure would address this information gap and promote quality improvement by providing feedback to facilities and physicians, as well as transparency for patients on the rates and variation across facilities in unplanned hospital visits after outpatient same-day surgery.

Currently, there are no publicly available quality of care reports for providers or facilities that conduct same-day surgery in the hospital outpatient setting. Thus, this measure addresses an important quality measurement gap, and there is an opportunity to enhance the information available to patients choosing among hospitals that provide same-day outpatient surgery. Furthermore, providing outcome rates to hospitals will make visible to clinicians, meaningful quality differences and incentivize improvement.

This measure (MUC ID: 15–982) was included on a publicly available document titled ''MAP 2016 Considerations for Implementing Measures in Federal Programs: Hospitals'' on the NQF Web site at: *http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=81688* (formerly referred to as the ''list of Measures Under Consideration'') in compliance with section 1890A(a)(2) of the Act.

The measure received NQF endorsement on September 3, 2015.[56] In addition, the MAP supported the measure for program use citing the vital importance of measures that help facilities reduce unnecessary hospital visits.[57] Some members cautioned that because the measure was endorsed by NQF before the start of the SDS trial period, the measure should be reexamined during maintenance to determine whether SDS adjustments are needed.[58]

We believe that this proposed measure reflects consensus among the affected parties because the measure was subject to public comment during the MAP and measure development processes, with public commenters agreeing with the MAP's conclusions on the measure.[59] As stated above, this measure also was endorsed by the NQF.

We understand the important role that SDS plays in the care of patients. However, we continue to have concerns about holding hospitals to different standards for the outcomes of their patients of diverse SDS because we do not want to mask potential disparities or minimize incentives to improve the outcomes of disadvantaged populations. For all our measures, we routinely monitor the impact of SDS on hospitals' results. We will continue to investigate methods to ensure all hospitals are treated as fairly as possible within the program.

The NQF is currently undertaking a 2-year trial period in which new measures and measures undergoing maintenance review will be assessed to determine if risk-adjusting for sociodemographic factors is appropriate. This trial entails temporarily allowing inclusion of sociodemographic factors in the risk-adjustment approach for some performance measures. At the conclusion of the trial, NQF will issue recommendations on future permanent inclusion of sociodemographic factors. During the trial, measure developers are expected to submit information such as analyses and interpretations as well as performance scores with and without sociodemographic factors in the risk adjustment model.

Furthermore, the Office of the Assistant Secretary for Planning and Evaluation (ASPE) is conducting research to examine the impact of SDS on quality measures, resource use, and other measures under the Medicare program as directed by the IMPACT Act. We will closely examine the findings of the ASPE reports and consider how they apply to our quality programs in future rulemaking, as appropriate and feasible. We look forward to working with stakeholders in this process.

(3) Data Sources

The proposed OP–36: Hospital Visits after Hospital Outpatient Surgery measure is a claims-based measure. It uses Part A and Part B Medicare administrative claims data from Medicare FFS beneficiaries with outpatient same-day surgery. The performance period for the measure is 1 year (that is, the measure calculation includes eligible outpatient same-day surgeries occurring within a one-year timeframe). For example, for the FY 2020 payment determination, the performance period would be CY 2018 (that is, January 1, 2018 through December 31, 2018).

(4) Measure Calculation

The measure outcome is any of the following hospital visits: (1) An inpatient admission directly after the surgery; or (2) an unplanned hospital visit (ED visits, observation stays, or unplanned inpatient admissions) occurring after discharge and within 7 days of the surgery. If more than one unplanned hospital visit occurs, only the first hospital visit within the outcome timeframe is counted in the outcome.

The facility-level measure score is a ratio of the predicted to expected number of post-surgical hospital visits among the hospital's patients. The numerator of the ratio is the number of hospital visits predicted for the hospital's patients accounting for its observed rate, the number of surgeries performed at the hospital, the case-mix, and the surgical procedure mix. The denominator of the ratio is the expected number of hospital visits given the hospital's case-mix and surgical procedure mix. A ratio of less than one indicates the hospital's patients were estimated as having fewer post-surgical visits than expected compared to hospitals with similar surgical procedures and patients; and a ratio of greater than one indicates the hospital's patients were estimated as having more visits than expected.

In order to ensure the accuracy of the algorithm for attributing claims data and the comprehensive capture of hospital surgeries potentially affected by the CMS 3-day payment window policy, we

[56] MAP 2016 Considerations for Implementing Measures in Federal Programs: Hospitals. Final Report. February 15, 2016. Available at: *http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=81688.*

[57] Spreadsheet of MAP 2016 Final Recommendations. February 1, 2016. Available at: *http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=81593.*

[58] Ibid.

[59] MAP 2016 Considerations for Implementing Measures in Federal Programs: Hospitals. Final Report. February 15, 2016. Available at: *http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=81688.*

identified physician claims for same-day surgeries in the hospital setting from the Medicare Part B Standard Analytical Files (SAF) with an inpatient admission within 3 days and lacking a corresponding hospital facility claim. We then attribute the surgery identified as affected by this policy to the appropriate hospital facility using the facility provider identification from the inpatient claim.

For additional methodology details, we refer readers to the documents posted at: *http://www.cms.gov/Medicare/QualityInitiatives-Patient-AssessmentInstruments/HospitalQualityInits/Measure-Methodology.html* under ''Hospital Outpatient Surgery.''

(5) Cohort

The measure includes Medicare FFS patients aged 65 years and older undergoing same-day surgery (except eye surgeries) in hospitals.

''Same-day surgeries'' are substantive surgeries and procedures listed on Medicare's list of covered ASC procedures. Medicare developed this list to identify surgeries that can be safely performed as same-day surgeries and do not typically require an overnight stay. Surgeries on the ASC list of covered procedures do not involve or require major or prolonged invasion of body cavities, extensive blood loss, major blood vessels, or care that is either emergent or life-threatening.

Although Medicare developed this list of surgeries for ASCs, we use it for this hospital outpatient measure for two reasons. First, it aligns with our target cohort of surgeries that have a low to moderate risk profile and are safe to be performed as same-day surgeries. By only including surgeries on this list in the measure, we effectively do not include surgeries performed at hospitals that typically require an overnight stay which are more complex, higher risk surgeries. Second, we use this list of surgeries because it is annually reviewed and updated by Medicare, and includes a transparent public comment submission and review process for addition and/or removal of procedures codes. The list for 2016 is posted at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ASCPayment/ASC-Regulations-and-Notices-Items/CMS-1633-FC.html?DLPage=1&DLEntries=10&DLSort=2&DLSortDir=descending* (we refer readers to Addendum AA to this final rule with comment period, which is available via the Internet on the CMS Web site).

The measure cohort excludes eye surgeries. Although eye surgery is considered a substantive surgery, its risk profile is more representative of ''minor'' surgery, in that it is characterized by high volume and a low outcome ratio. The measure cohort also excludes procedures for patients who lack continuous enrollment in Medicare FFS Parts A and B in the 7 days after the procedure to ensure all patients have complete data available for outcome assessment.

(6) Risk Adjustment

The statistical risk-adjustment model includes 25 clinically relevant risk-adjustment variables that are strongly associated with risk of hospital visits within 7 days following outpatient surgery. The measure risk adjusts for surgical procedure complexity using two variables. First, it adjusts for surgical procedure complexity using the Work Relative Value Units (RVUs).[60] Work RVUs are assigned to each CPT procedure code and approximate procedure complexity by incorporating elements of physician time and effort. Second, it classifies each surgery into an anatomical body system group using the Agency for Healthcare Research and Quality (AHRQ) Clinical Classification System (CCS),[61] to account for organ-specific differences in risk and complications, which are not adequately captured by the Work RVU alone.

We invited public comment on our proposal to adopt the OP–36: Hospital Visits after Hospital Outpatient Surgery measure (NQF #2687) to the Hospital OQR Program for the CY 2020 payment determination and subsequent years as discussed above.

Comment: One commenter supported the proposed adoption of the OP–36: Adoption of Hospital Visits After Hospital Outpatient Surgery measure because it provides the opportunity for providers to improve their quality of care and lower the rate of preventable adverse events that occur after outpatient surgery.

Response: We thank the commenter for its support.

Comment: Many commenters recommended that OP–36 be reviewed by the NQF's SDS trial to determine whether there is a conceptual and empirical relationship between the measure's outcomes and SDS factors before it is publicly reported. Furthermore, commenters believed that OP–36 should be reviewed to determine if additional SDS risk adjustment are necessary. Some commenters were concerned that the measure may be heavily influenced by factors outside of the hospital's direct control. Many commenters specifically expressed concern that hospitals that serve a significant volume of patients in lower socioeconomic areas which may lack adequate infrastructure for appropriate follow-up care may be unfairly penalized as a result of this measure. Without the use of appropriate risk adjustment for this measure, many commenters asserted the clinical outcomes could be less reliable due to SDS confounding variables. In addition, many commenters expressed concern that patients with low SDS may have fewer options for managing their care and therefore may require additional hospital visits compared to patients with more resources. One commenter expressed concern that patient populations who do not have family or home care aides or ready access to pharmacies for medications may be more likely to return to the ED compared to patients with these benefits.

Response: We understand the important role that factors outside of the hospitals' direct control, for example socioeconomic and sociodemographic status, play in the care of patients. Patients with low SDS may have fewer options for managing their care and therefore, may require additional hospital visits compared to patients with more resources. In addition, patient populations that do not have family or home care aides, or ready access to pharmacies for medications, may be more likely to return to the ED compared to patients with these benefits, as commenter mentions. We routinely monitor the impact of sociodemographic status on hospitals' results. However, we do not believe that hospitals would necessarily be unfairly penalized as a result of this measure for reasons discussed below.

As stated previously, the Office of the Assistant Secretary for Planning and Evaluation (ASPE) is conducting research to examine the impact of sociodemographic status on quality measures, resource use, and other measures under the Medicare program as directed by the IMPACT Act. We will closely examine the findings of the ASPE reports and consider how they apply to our quality programs in future rulemaking, as appropriate and feasible. We look forward to working with stakeholders in this process.

[60] S. Coberly. The Basics; Relative Value Units (RVUs). National Health Policy Forum. January 12, 2015. Available at: *http://www.nhpf.org/library/the-basics/Basics_RVUs_01-12-15.pdf.*

[61] HCUP Clinical Classifications Software for Services and Procedures. Healthcare Cost and Utilization Project (HCUP). 2008. Agency for Healthcare Research and Quality, Rockville, MD. Available at: *https://www.hcup-us.ahrq.gov/toolssoftware/ccs_svcsproc/ccssvcproc.jsp.*

We also note that the NQF is currently undertaking a 2-year trial period in which new measures and measures undergoing maintenance review will be assessed to determine if risk adjusting for sociodemographic factors is appropriate. This trial entails temporarily allowing inclusion of sociodemographic factors in the risk-adjustment approach for some performance measures. At the conclusion of the trial, NQF will issue recommendations on future permanent inclusion of SDS factors. During the trial, measure developers are expected to submit information such as analyses and interpretations as well as performance scores with and without SDS factors in the risk-adjustment model. We intend to continue engaging in the NQF process as we consider the appropriateness of adjusting for sociodemographic factors in our outpatient quality reporting program measures.

This NQF trial period went into effect April 15, 2015,[62] meaning that projects with measure submission deadlines beforehand fell under NQF's previous policy on SDS adjustment,[63] while projects with measure submission deadlines after that date are subject to the NQF trial. Because the 2015 NQF Surgery Project's measure submission deadline was January 14, 2015, both the developer and the Surgery Standing Committee conformed to the pre-trial policy regarding inclusion of SDS factors in the risk-adjustment approach.[64] Thus, OP–36 was not part of NQF's SDS trial. At this time, we do not plan to resubmit the measure to be part of the SDS trial because the measure was already reviewed and endorsed by the NQF. We will further evaluate the role of SDS when the measure is under comprehensive reevaluation.

Consistent with the pre-trial NQF SDS guidance, we evaluated the potential effects of risk adjusting for two SDS indicators—Medicaid-dual eligibility and race. These variables are available in the CMS claims data and use of Medicaid eligibility status as a proxy for SDS is consistent with prior research as well as NQF recommendations.[65] Our results show that adjusting for these two factors at the patient level does little to change the measure scores. Unadjusted and adjusted OPD risk-standardized hospital visit (RSHV) ratios are highly correlated—Pearson correlation of 0.990 and 0.998 for adjustment for Medicaid-dual eligibility and race, respectively.[66] This suggests that including a patient-level risk adjuster for SDS will result in minimal difference in measure results after accounting for other factors already adjusted for in the model, such as age, comorbidities, and the complexity of the surgery. Thus, we are finalizing the measure as currently specified because the inclusion of SDS-related variables in the risk-adjustment model did not substantially affect measure results.

In addition, we continue to have concerns about holding hospitals to different standards for the outcomes of their patients of diverse SDS because we do not want to mask potential disparities or minimize incentives to improve the outcomes of disadvantaged populations.

In addition, we examined the distribution of measure scores by quartiles of both the percentage of dual-eligible patients and the percentage of African American patients in order to explore whether there might be differences in OPD RSHV ratios by the proportion of such patients treated at the facility. A ratio of less than one indicates the OPD's patients were estimated as having fewer post-surgical visits than expected compared to OPDs with similar surgical procedures and patients, and a ratio of greater than one indicates the OPD's patients were estimated as having more visits than expected. We do not expect the rate of hospital visits to be zero. Overall, our results showed a range of measure scores across quartiles of dual-eligible patients and of African American patients. The median RSHV ratio for all quartiles was <1 (indicating better than expected performance), demonstrating that, even among facilities with the highest proportion of dual-eligible and African American patients, many OPDs can and do perform well on the measure. Furthermore, even though the distribution of measure scores was shifted slightly higher in facilities with the highest proportion of such patients, the distributions for all quartiles are largely overlapping. Together, these two points suggest that hospitals that serve a significant volume of patients in lower socioeconomic areas that lack adequate infrastructure for appropriate follow-up care would not be unfairly penalized as a result of this measure. From these analyses, it is not clear what is causing the observed differences across hospitals with the highest and lowest proportions of dual-eligible and African American patients. One potential cause could be differences related to quality, and, as discussed above, we are particularly concerned about masking quality differences through SDS adjustments. Given these findings, we did not adjust the measure for SDS at this time. We believe that doing so will not appreciably change the measure scores and might contribute to masking disparities in care. However, as noted above, we will continue to assess the appropriateness of including SDS factors in risk adjustment to assess the reliability of the measure.

Reducing adverse outcomes is the joint responsibility of hospitals and other clinicians. Measuring hospital visits will create incentives to invest in interventions to improve outpatient care and improved transitions to post-procedure care. We recognize that the facility's performance might be affected by factors outside of the facility. However, all facilities have the opportunity to reduce the rate of hospital visits following surgeries. Because of the measure's intent to illuminate variation in quality of care across OPDs for same-day surgeries, inform patient choice, and drive quality improvement, we do not believe we should delay public reporting pending further analysis of the empirical relationship between the measure's outcomes and SDS factors.

Comment: A few commenters expressed concerns that this measure does not provide clear signals of quality or will create disincentives for seeking care in the ED when appropriate. Two commenters asserted that the measure combines admissions, observation stays and ED visits; each reflecting widely different approaches to patient-centered care and that it may not be reasonable to combine these types of hospital visits. Another commenter urged CMS to remove the ED visits and observation stays from the measure to focus only on inpatient admissions. One commenter asserted that the ''expected number of post-surgical hospital visits'' calculation will not provide sufficient assurance, particularly given issues related to risk-adjustment, that the current structure of the measure will avoid creating a disincentive for seeking appropriate

care in the emergency department. The commenter further asserted it will be methodologically difficult to come up with that expected number of visits, and further expressed that applying a measure such as this for patient-initiated services is a misstep in policy. One commenter advised CMS to monitor the use of the measure.

Response: We believe that patients with emergent medical needs will continue to seek care in an ED as needed. Providers should not have an incentive to discourage patients from seeking appropriate care for a medical problem that they feel needs to be addressed immediately since the goal of the measure is not to reach zero ED visits and the measure is risk adjusted so facilities with generally higher-risk patients will not be disadvantaged in the measure. In addition, it is not expected that patients undergoing same-day surgery would need to be placed in observation status after the procedure. We have designed the measure to capture all unplanned hospital visits that may be a signal of poor quality of care, and thereby encourage hospitals to minimize risk and the need for follow-up hospital services.

We disagree that combining admissions, observation stays and ED visits reflects widely different approaches to patient-centered care and that we should remove the ED visits and observation stays from the measure to focus only on inpatient admissions. We included ED visits and observation stays for a variety of reasons. First, hospital visits are a broad outcome that captures the full range of potentially serious adverse events related to preparing for, undergoing, and recovering from the surgery. Second, hospital visits are easily identifiable and measurable from claims data. Third, this broad outcome is consistent with a patient-centered view of care that prompts providers to fully account for and minimize to the fullest extent all acute complications, such as uncontrolled pain or urinary retention, not just those narrowly related to procedural technique. Finally, hospital visits are costly; reducing hospital visits following outpatient surgery may lead to substantial healthcare savings. As one commenter suggested, we will continue to reevaluate the measure and monitor its use.

One commenter asserted that it will be methodologically difficult to come up with the expected number of visits and will result in a misstep in policy. However, the measure's risk model is informed by the literature and expert review, and is designed to capture patient risk, not risk that might be related to quality. Our approaches to risk adjustment and calculating both predicted and expected values using hierarchical generalized linear modeling are tailored to, and appropriate for, a publicly reported outcome measure as articulated in published scientific guidelines.[67] [68] [69] In addition, these analytic methods have been widely used in other risk-adjusted outcome measures developed by CMS for quality measurement and public reporting.[70] As a result, we believe that the ''expected number of post-surgical hospital visits'' calculation is sound and will provide sufficient assurance and will not be a misstep in policy.

Comment: Two commenters asserted that beneficiaries will find procedure-specific outcome measures more valuable as beneficiaries choose outpatient facilities based on, in part, services and procedures offered.

Response: We disagree that a procedure-specific outcome measure would be more valuable. A broad range of surgical procedures are performed at OPDs, and the measure as specified provides consumers with a full picture of quality at a facility. This measure complements other outpatient quality measures already adopted in the Hospital OQR Program that focus on specific types of procedures or patients, for example the Facility 7-day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy measure. For more information on that measure, we refer readers to the CY 2015 OPPS/ASC final rule with comment period (79 FR 66948 through 66955). In addition, as part of our standard procedures, we will provide facilities with case-level information, including the surgery performed as part of confidential preview reporting to provide facilities with actionable information for quality improvement. We believe that the measure, including the preview report, will encourage hospitals to implement systems of care that will ensure quality and reduce unplanned hospitals visits in the hospital as whole.

Comment: One commenter expressed concern that the measure does not distinguish if the procedure was provided at the same hospital where the patient has the unplanned visit, making hospitals accountable for the care provided somewhere else.

Response: The measure assigns the hospital visit outcome to the facility providing the same-day outpatient surgery, not to the facility (if different) where the hospital visit took place. We refer readers to the measure specifications at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Downloads/Hospital-Visits-after-Hospital-Outpatient-Surgery-Measure.pdf.*

Comment: Some commenters recommended that CMS hold providers in both hospital outpatient and ASC settings accountable by either adding outpatient surgeries performed in ASCs to OP–36 or simultaneously instituting a similar measure in the ASC setting. Commenters argued that holding providers in both settings accountable would negate the possibility of inappropriate favoring of one setting over another to avoid the negative consequence of an inpatient admission. Two commenters argued that the availability of data on complications from outpatient hospital surgeries without the corresponding data in ASC settings will negatively affect the reputation of hospitals.

Response: We thank the commenters for their suggestion to hold providers in both hospital outpatient and ASC settings accountable. We did not and do not intend to add outpatient surgeries performed in ASCs to OP–36, because ASCs are a diverse group of facilities that often specialize in very specific subspecialties and procedures, while OPDs often perform all types of surgeries across many subspecialties. Therefore, comparing ASCs to OPDs would not be fair as ASCs specializing only in orthopedic procedures, for example, may have substantially lower rates due to the nature of the procedures they perform, compared to an OPD that performs procedures across all subspecialties.

We agree that holding both hospital outpatient and ASC settings accountable would negate the possibility of inappropriate favoring of one setting over another to avoid the negative consequence of an inpatient admission. We also acknowledge that availability of

data on complications from outpatient hospital surgeries without the corresponding data in ASC settings might negatively affect the reputation of outpatient hospitals due to inappropriate favoring of one setting over another. To address these concerns, we are currently developing two new outcome measures that specifically assess hospital visits within 7 days following orthopedic and urology procedures performed at ASCs for the ASCQR Program. The measures went through the measure development public input period, and results are available at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/CallforPublicComment.html*. To access the results scroll to the bottom of the page and select *ARCHIVED Public Comment Files between 08-18-2016 and 09-14-2016 [zip].* Once the zip file has downloaded open *Development-of-Facility-Level-Quality-Measures-of-Unplanned-Hospital-Visits-after-Selected-Ambulatory-Surgical-Center-Procedures.zip,* and select ''*TEP Summary Report for Measures of Hospital Visits after Selected ASC Procedures.pdf.*'' The measures are anticipated to undergo MAP review in December 2016. If/when these two new measures are adopted in the ASCQR Program, we believe that they will negate the possibility of inappropriate favoring of one setting over another.

Comment: One commenter expressed concerns that OP–36 does not appropriately identify planned versus unplanned readmissions. The commenter specifically noted that if, during the episode window, a planned surgery for a chronic condition resulted in the assignment of an additional acute diagnosis, the entire admission would be deemed unplanned. The commenter recommended against classifying clinically appropriate hospital admissions following outpatient surgery as low quality care.

Response: We disagree and believe that the measure appropriately identifies planned versus unplanned admissions following index procedures. We developed the algorithm that identifies planned readmissions, and applied this algorithm to the measure. We refer readers to *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Downloads/Hospital-Visits-after-Hospital-Outpatient-Surgery-Measure.pdf* for more details on this algorithm. To summarize, the algorithm uses procedure and principal discharge diagnosis codes on each hospital claim to identify admissions that are typically planned and may occur after hospital outpatient surgery. Generally, a planned admission is defined as a non-acute admission for a scheduled procedure (for example, total hip replacement or cholecystectomy). In addition, few specific and limited types of care are always considered planned (for example, major organ transplant, rehabilitation, or maintenance chemotherapy). The measure does not count planned hospital visits, or clinically appropriate visits, as an outcome because variation in planned admissions does not reflect quality differences; therefore, these visits will not signal low quality care. On the other hand, admissions for an acute illness or for complications of care, as well as all ED and observation stay hospital visits, are considered unplanned. We refer readers to the technical report for the full planned admission algorithm at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Downloads/Hospital-Visits-after-Hospital-Outpatient-Surgery-Measure.pdf*. We reassess this algorithm annually.

With regard to the commenter's concern that a planned admission might result in an acute discharge diagnosis—such as an infection from a planned procedure—and result in the hospital visit being counted as an outcome, the measure risk-adjusts for a wide variety of patient comorbidities, including chronic conditions that might increase the risk of a planned or unplanned hospital visit. We refer readers to *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Downloads/Hospital-Visits-after-Hospital-Outpatient-Surgery-Measure.pdf*.

In addition, we plan to conduct a dry run of this measure in 2017, and will assess feedback from hospitals including those related to the algorithm and planned admissions. Based on the feedback, we will consider adjusting the algorithm as needed for a future iteration of the measure.

Comment: One commenter expressed concerns regarding the proposed risk adjustment variables. The commenter stated the convoluted approach of adjusting for surgical procedure complexity using RVUs and the introduction of a complicated anatomical body system classification system make the risk-adjustment methodology unclear and difficult to understand. The commenter further expressed that the documentation of comorbid conditions on same-day surgery is very limited because of the nature of the service, and that it is problematic to depend upon extensive documentation in a same day surgery record to determine risk. This commenter asserted that surgeons who bring a patient in for a specific ambulatory-type procedure typically limit their documentation to conditions that are relevant to the specific body system related to the surgical procedure. Another commenter recommended CMS develop a more robust risk adjustment model with a higher c-statistic.

Response: We disagree that our approach of adjusting for surgical procedure complexity using RVUs and the introduction of a complicated anatomical body system classification system make the risk-adjustment methodology unclear and difficult to understand. Our approach to accounting for procedural complexity is well-documented in literature [71] and aligns with the established approach used for risk adjustment in the American College of Surgeons' National Surgical Quality Improvement Program (NSQIP).[72] To summarize, the measure risk adjusts for surgical procedural complexity using two variables. First, it adjusts for surgical procedural complexity using the Work RVUs of the procedure. Work RVUs are assigned to each CPT procedure code and approximate surgical procedural complexity by incorporating elements of physician time and effort. For patients with multiple concurrent CPT procedure codes, we risk adjust for the CPT code with the highest Work RVU value. Second, it classifies each surgery into an anatomical body system group using the AHRQ Clinical Classification System (CCS).[73] The measure uses the body system variable, in addition to the Work RVU of the surgery, to account for organ-specific difference in risk and complications which are not adequately captured by the Work RVU alone. We also collect all diagnoses from a patient's inpatient, outpatient, and physician claims from the year prior to identify comorbidities for adjustment (see page 14 of the technical report:

[72] Raval MV, Cohen ME, Ingraham AM, et al. Improving American College of Surgeons National Surgical Quality Improvement Program risk adjustment: Incorporation of a novel procedure risk score. Journal of the American College of Surgeons. Dec 2010;211(6):715–723.

[73] Healthcare Cost and Utilization Project. Clinical Classifications Software (CCS) for Services and Procedures. Last Modified: February 3, 2016. Available at: *https://www.hcup-us.ahrq.gov/toolssoftware/ccs_svcsproc/ccssvcproc.jsp.*

https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Downloads/Hospital-Visits-after-Hospital-Outpatient-Surgery-Measure.pdf). Therefore, that any potential limitation of the comorbidities listed on the say-day surgery claim itself—such as limited to the specific body system related to the surgery—will not impact our ability to collect a full comorbidity history for each patient.

We disagree that we should develop a more robust risk adjustment model with a higher c-statistic. The measure's final model c-statistic is 0.71, which already indicates good model discrimination.[74] According to NQF,[75] the purpose of the c-statistic is to capture patient risk, not perfectly predict the outcome. We did not adjust for other factors because patient risk, aside from mortality, is not associated with the measure outcome.

Comment: Some commenters expressed concern that OP–36 is a duplicative measure because they believe it overlaps with OP–32: Colonoscopy Measure: Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy. They urged CMS to limit the duplication of OP–32 and consider only one of the two measures for inclusion in this program.

Response: OP–36 is not duplicative and does not overlap with OP–32. OP–36 does not include the colonoscopy procedures that are included in OP–32. OP–32 was adopted in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66948 through 66955) and measures facility 7-day risk-standardized hospital visit rate after outpatient colonoscopy. All endoscopy procedures (that is, low-risk colonoscopy procedures like those included in OP–32) are considered non-surgical procedures based on Medicare coding (GSI code 000)[76] and are not included in the outpatient surgery (OP–36) measure cohort.

Comment: A few commenters requested clarification regarding how the measure identifies qualifying stays, particularly inpatient admissions, immediately following surgery. Two commenters requested clarification regarding whether an inpatient admission that is planned for a patient with multiple comorbidities who is receiving outpatient surgery would be considered ''a hospital visit after an outpatient surgery.'' The commenters requested further clarification on how CMS would differentiate the patient with multiple comorbidities who is receiving outpatient surgery from the patient who has an outpatient surgery and then has an immediate complication and is admitted as an inpatient. The commenters asserted that, in both cases, the patient's inpatient admission began on the same day as the surgery and the timing of the admission (prior or after surgery) would not be apparent on the claim UB–04 form because the ICD–10–PCS procedure code will be reported for the surgery.

Response: We include admissions directly after surgery in the outcome because an admission is unexpected for the procedures included in the measure, and our overall goal is to illuminate variation in unplanned hospital visits following these same-day outpatient surgeries to improve quality.

The Medicare 3-day payment window policy affects some surgeries performed at OPDs. As discussed in the CY 2012 PFS final rule with comment period (76 FR 73279 through 73286), the policy deems outpatient services (including surgical procedures) provided by a hospital or an entity wholly owned or operated by a hospital (such as an OPD) in the 3 calendar days preceding the date of a beneficiary's inpatient admission as related to the admission. For outpatient surgical procedures affected, the OPD facility claim (for the technical portion of the surgical procedure) is bundled with the inpatient claim and is not recorded in the Medicare outpatient facility claims files; the Medicare physician claim for professional services furnished is still submitted separately.[77]

To capture outpatient surgeries that resulted in a same-day admission to inpatient status, we identify professional claims (formerly called carrier claims) for surgeries with an OPD place of service code that matches to an inpatient admission within 3 days, and lacks a corresponding OPD facility claim. We then attribute the surgery identified as affected by this policy to the appropriate OPD using the facility provider identification from the inpatient claim. The measure's target cohort includes low-risk to moderate-risk surgeries that can be safely performed as same-day surgeries and do not typically require an overnight stay or an inpatient admission. In the situation of a physician who admits the patient preoperatively because the patient has multiple comorbidities and his or her anticipated length of stay is over 2 midnights, we would expect the place of service on the inpatient claim to be coded as inpatient.[78] We will further assess the approach to identifying Medicare 3-day payment window situations during the dry run of this measure in 2017.

Comment: Two commenters asserted that using physician claims data to make determinations on where the surgeries occurred leads to inaccurate determinations because it relies on the ''place of service'' coding. These commenters stated that the ''place of service'' coding is often inaccurate and will allow physicians to receive payment for the surgery whether they code it as an inpatient or an outpatient surgery.

Response: We thank the commenters for their attention to the challenges in identifying hospital outpatient-based surgeries using place of service coding. Place of service coding is used on professional claims to specify the entity where service(s) were rendered.[79] Although we expect physicians to follow coding guidance and record the correct place of service according to the guidelines, we recognize that the place of service field may contain inaccuracies due to data entry errors (unrelated to fraud/abuse). We take the approach of first identifying surgeries from Part B professional claims with an outpatient place of service code to make sure we identify surgeries billed as inpatient under the 3-day payment window policy. This policy affects some surgeries (that is, those performed at wholly owned or wholly operated entities) performed at OPDs. As discussed in the CY 2012 MPFS final rule with comment period (76 FR 73279 through 73286), the policy deems outpatient services (including surgical procedures) provided by a hospital or an entity wholly owned or operated by a hospital (such as an OPD) in the 3 calendar days preceding the date of a beneficiary's inpatient admission as related to the admission. For outpatient surgical procedures affected, the OPD facility claim (for the technical portion

[79] CY 2007 PFS proposed rule (71 FR 49062).

of the surgical procedure) is bundled with the inpatient claim and is not recorded in the Medicare hospital outpatient claims; however, the Medicare physician claim for professional services furnished is still submitted separately.[80]

The measure first attributes surgeries to an OPD if a claim is present in the Medicare Part B claims indicating an outpatient surgical procedure. We identify physician claims with outpatient hospital department or physician office place of service code in the Part B claims file. We then link Part B claims to outpatient facility claims to identify the OPD where the surgery took place. Based on prior findings by the OIG,[81] we allow the match of those with an office place of service to hospital outpatient claims for situations where a physician in a hospital-based practice assigns an office place of service. If we find no match for physician claims that indicate an outpatient place of service with outpatient facility claims, we then look for a match with inpatient claims to identify hospital admissions subject to the CMS 3-day payment policy. We identify in the professional claims surgeries in the OPD setting with an inpatient admission within 3 days and lacking a corresponding OPD facility claim. We then attribute the surgery identified as affected by this policy to the appropriate OPD using the facility provider identification from the inpatient claim.

We intend to further assess the approach to attributing outpatient surgeries during the dry run of this measure in 2017 and prior to measure implementation.

After consideration of the public comments we received, we are finalizing the adoption of the OP–36: Hospital Visits after Hospital Outpatient Surgery measure (NQF #2687) for the CY 2020 payment determination and subsequent years as proposed.

c. OP–37a-e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey Measures

(1) Background

Currently, there is no standardized survey available to collect information on the patient's overall experience for surgeries or procedures performed within a hospital outpatient department. Some HOPDs are conducting their own surveys and reporting these results on their Web sites, but there is not one standardized survey in use to assess patient experiences with care in HOPDs that would allow valid comparisons across HOPDs. Patient-centered experience measures are a component of the 2016 CMS Quality Strategy, which emphasizes patient-centered care by rating patient experience as a means for empowering patients and improving the quality of their care.[82] In addition, information on patient experience with care at a provider/facility is an important quality indicator to help providers and facilities improve services furnished to their patients and to assist patients in choosing a provider/facility at which to seek care.

(2) Overview of Measures

The Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey was developed as part of the U.S. Department of Health and Human Services' (HHS) Transparency Initiative to measure patient experiences with hospital outpatient care.[83] In 2006, CMS implemented the Hospital CAHPS (HCAHPS) Survey, which collects data from hospital inpatients about their experience with hospital inpatient care (71 FR 48037 through 48039). The HCAHPS Survey, however, is limited to data from patients who receive inpatient care for specific diagnosis-related groups for medical, surgical, and obstetric services; it does not include patients who received outpatient surgical care or procedures from ASCs or hospitals. We note that the OAS CAHPS Survey was developed to assess patients' experience of care following a procedure or surgery in a hospital outpatient department; therefore, the survey does not apply to emergency departments. Throughout the development of the OAS CAHPS Survey, CMS considered the type of data collected for HCAHPS and other existing CAHPS surveys as well as the terminology and question wording to maximize consistency across CAHPS surveys. CMS has developed similar surveys for other settings of care that are currently used in other quality reporting and value-based purchasing programs, such as the Hospital IQR Program (71 FR 68203 through 68204), the Hospital VBP Program (76 FR 26497, 26502 through 26503, and 26510), the ESRD QIP (76 FR 70269 through 70270), the HH QRP (80 FR 68709 through 68710), and the HQRP (80 FR 47141 through 47207).

The OAS CAHPS Survey contains 37 questions that cover topics such as access to care, communications, experience at the facility, and interactions with facility staff. The survey also contains two global rating questions and asks for self-reported health status and basic demographic information (race/ethnicity, educational attainment level, languages spoken at home, among others). The basic demographic information is captured in the OAS CAHPS Survey through standard AHRQ questions used to develop case-mix adjustment models for the survey. Furthermore, the survey development process followed the principles and guidelines outlined by AHRQ and its CAHPS Consortium®. The OAS CAHPS Survey received the registered CAHPS trademark in April 2015. OAS CAHPS Survey questions can be found at: *https://oascahps.org/Survey-Materials* under ''Questionnaire.''

In the CY 2017 OPPS/ASC proposed rule (81 FR 45716 through 45720), we proposed to adopt five survey-based measures derived from the OAS CAHPS Survey for the CY 2020 payment determination and subsequent years—three OAS CAHPS composite survey-based measures and two global survey-based measures (discussed below). We believe that these survey-based measures will be useful to assess aspects of care where the patient is the best or only source of information, and to enable objective and meaningful comparisons between HOPDs. We note that we made similar proposals in the ASCQR Program in section XIV.B.4.c. of the proposed rule. The three OAS CAHPS composite survey-based measures are:

- OP–37a: OAS CAHPS—About Facilities and Staff;
- OP–37b: OAS CAHPS—Communication About Procedure; and

[82] CMS National Quality Strategy 2016. Available at: *https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/qualityinitiativesgeninfo/downloads/cms-quality-strategy.pdf.*

[83] U.S. Department of Health and Human Services. *HHS Strategic Plan, Strategic Goal 4: Ensure Efficiency, Transparency, Accountability, and Effectiveness of HHS Programs.* Feb. 2016. Available at: *http://www.hhs.gov/about/strategic-plan/strategic-goal-4/index.html.*

• OP–37c: OAS CAHPS—Preparation for Discharge and Recovery.

Each of the three OAS CAHPS composite survey-based measures consists of six or more questions.

Furthermore, the two global survey-based measures are:

• OP–37d: OAS CAHPS—Overall Rating of Facility; and

• OP–37e: OAS CAHPS—Recommendation of Facility.

The two global survey-based measures are comprised of a single question each and ask the patient to rate the care provided by the hospital and their willingness to recommend the hospital to family and friends. More information about these measures can be found at the OAS CAHPS Survey Web site (*https://oascahps.org*).

The five survey-based measures (MUC IDs: X3697; X3698; X3699; X3702; and X3703) we proposed were included on the CY 2014 MUC list,[84] and reviewed by the MAP.[85] The MAP encouraged continued development of these survey-based measures; however, we note that these measures had not been fully specified by the time of submission to the MUC List.[86] The MAP stated that these are high impact measures that will improve both quality and efficiency of care and be meaningful to consumers.[87] Further, the MAP stated that given that these measures are also under consideration for the ASCQR Program, they help to promote alignment across care settings.[88] It also stated that these measures would begin to fill a gap MAP has previously identified for this program including patient reported outcomes and patient and family engagement.[89] Several MAP workgroup members noted that CMS should consider how these measures are related to other existing ambulatory surveys to ensure that patients and facilities are not overburdened.[90]

These measures have been fully developed since being submitted to the MUC List. The survey development process followed the principles and guidelines outlined by the AHRQ[91] and its CAHPS Consortium[92] in developing a patient experience of care survey, such as: Reporting on actual patient experiences; standardization across the survey instrument; administration protocol; data analysis and reporting; and extensive testing with consumers. Development also included: Reviewing surveys submitted under a public call for measures; reviewing existing literature; conducting focus groups with patients who had recent outpatient surgery; conducting cognitive interviews with patients to assess their understanding and ability to answer survey questions; obtaining stakeholder input on the draft survey and other issues that may affect implementation; and conducting a field test.

In addition, we received public input from several modes. We published a request for information in the **Federal Register** on January 25, 2013 (78 FR 5460) requesting information regarding publicly available surveys, survey questions, and measures indicating patient experience of care and patient-reported outcomes from surgeries or other procedures for consideration in developing a standardized survey to evaluate the care received in these facilities from the patient's perspective. Stakeholder input was also obtained through communications with a TEP comprised of experts on outpatient surgery, including clinicians, providers, patient advocates, and accreditation organizations. The TEP provided input and guidance on issues related to survey development, and reviewed drafts of the survey throughout development.

After we determined that the survey instrument was near a final form, we tested the effect of various data collection modes (that is, mail-only, telephone-only, or mail with telephone follow-up of non-respondents) on survey responses. In addition, we began voluntary national implementation of the OAS CAHPS Survey in January 2016.[93] In addition, while the proposed OAS CAHPS Survey-based measures are not currently NQF-endorsed, they will be submitted to the NQF for endorsement under an applicable call for measures in the near future.

In section XIX. of this final rule with comment period, for the Hospital VBP Program, we are removing the HCAHPS Pain Management dimension (which consists of three questions) in the Patient- and Caregiver-Centered Experience of Care/Care Coordination domain. For more information about the pain management questions captured in the HCAHPS Survey and their use in the Hospital VBP Program, we refer readers to section XIX.B.3. of this final rule with comment period.

The OAS CAHPS Survey also contains two questions regarding pain management. We believe pain management is an important dimension of quality, but realize that there are concerns about these types of questions. We refer readers to section XIX. of this final rule with comment period for more information on stakeholders' concerns. However, the pain management questions in the OAS CAHPS Survey are very different from those contained in the HCAHPS Survey because they focus on communication regarding pain management rather than pain control and are part of a composite measure focusing on the preparation for discharge and recovery. Specifically, the OAS CAHPS Survey pain management communication questions read:

Q: Some ways to control pain include prescription medicine, over-the-counter pain relievers or ice packs. Did your doctor or anyone from the facility give you information about what to do if you had pain as a result of your procedure?

☐ A1: Yes, definitely.

☐ A2: Yes, somewhat.

☐ A3: No.

Q: At any time after leaving the facility, did you have pain as a result of your procedure?[94]

☐ A1: Yes.

☐ A2: No.

Unlike the HCAHPS pain management questions, which directly address the adequacy of the hospital's pain management efforts, the OAS CAHPS pain management communication questions focus on the information provided to patients regarding pain management following discharge from a hospital. We continue to believe that pain control is an appropriate part of routine patient care that hospitals should manage and is an important concern for patients, their families, and their caregivers. We also note that appropriate pain management includes communication with patients about pain-related issues, setting expectations about pain, shared decision-making, and proper prescription practices. However, we also

[94] We note that this question is a control question only used to determine if the facility should have given a patient additional guidance on how to handle pain after leaving the facility. The facility is not scored based on this question.

recognize that questions remain about the ongoing prescription opioid epidemic. For these reasons, we proposed to adopt the OAS CAHPS Survey measures as described in this section, including the pain management communication questions, but will continue to evaluate the appropriateness and responsiveness of these questions to patient experience of care and public health concerns. We also welcomed feedback on these pain management communication questions for use in future revisions of the OAS CAHPS Survey.

(3) Data Sources

As discussed in the Protocols and Guidelines Manual for the OAS CAHPS Survey (*https://oascahps.org/Survey-Materials*), the survey has three administration methods: Mail-only; telephone-only; and mixed mode (mail with telephone follow-up of non-respondents). We refer readers to section XIII.D.4. of this final rule with comment period for an in-depth discussion of the data submission requirements associated with the proposed OAS CAHPS Survey measures. To summarize, to meet the OAS CAHPS Survey requirements for the Hospital OQR Program, we proposed that hospitals contract with a CMS-approved vendor to collect survey data for eligible patients at the hospitals on a monthly basis and report that data to CMS on the hospital's behalf by the quarterly deadlines established for each data collection period. Hospitals may elect to add up to 15 supplemental questions to the OAS CAHPS Survey. These could be questions hospitals develop or use from an existing survey. All supplemental questions must be placed after the core OAS CAHPS Survey questions (Questions 1 through 24). The list of approved vendors is available at: *https://oascahps.org*. We also proposed to codify the OAS CAHPS Survey administration requirements for hospitals and vendors under the Hospital OQR Program at 42 CFR 419.46(g), and refer readers to section XIII.D.4. of this final rule with comment period for more details. It should be noted that nondiscrimination requirements for effective communication with persons with disabilities and language access for persons with limited English proficiency should be considered in administration of the surveys. For more information, we refer readers to: *http://www.hhs.gov/civil-rights*.

We proposed that the data collection period for the OAS CAHPS Survey measures would be the calendar year 2 years prior to the applicable payment determination year. For example, for the CY 2020 payment determination, hospitals would be required to collect data on a monthly basis, and submit this collected data on a quarterly basis, for January 1, 2018–December 31, 2018 (CY 2018).

We further proposed that, as discussed in more detail below, hospitals will be required to survey a random sample of eligible patients on a monthly basis. A list of acceptable sampling methods can be found in the OAS CAHPS Protocols and Guidelines Manual (*https://oascahps.org/Survey-Materials*). We also proposed that hospitals would be required to collect at least 300 completed surveys over each 12-month reporting period (an average of 25 completed surveys per month). We acknowledge that some smaller hospitals may not be able to collect 300 completed surveys during a 12-month period; therefore, we proposed an exemption for facilities with lower patient censuses. Hospitals would have the option to submit a request to be exempted from performing the OAS CAHPS Survey-based measures if they treat fewer than 60 survey-eligible patients during the year preceding the data collection period. We refer readers to section XIII.B.5.c.(6) of this final rule with comment period for details on this proposal. However, we believe it is important to capture patients' experience of care at hospitals. Therefore, except as discussed in section XIII.B.5.c.(6) of this final rule with comment period below, we also proposed that smaller hospitals that cannot collect 300 completed surveys over a 12-month reporting period will only be required to collect as many completed surveys as possible, during that same time period, with surveying all eligible patients (that is, no sampling). For more information regarding these survey administration requirements, we refer readers to the OAS CAHPS Survey Protocols and Guidelines Manual at: *https://oascahps.org/Survey-Materials*.

Furthermore, we proposed that hospital eligibility to perform the OAS CAHPS Survey would be determined at the individual Medicare participating hospital level. In other words, all data collection and submission, and ultimately, also public reporting, for the OAS CAHPS Survey measures would be at the Medicare participating hospital level as identified by the hospital's CCN. Therefore, the reporting for a CCN would include all eligible patients from all eligible hospital locations of the Medicare participating hospital that is identified by the CCN.

(4) Measure Calculations

As noted above, we proposed to adopt three composite OAS CAHPS Survey-based measures (OP–37a, OP–37b, and OP–37c) and two global OAS CAHPS Survey-based measures (OP–37d and OP–37e). As with the other measures adopted for the Hospital OQR Program, a hospital's performance for a given payment determination year will be based upon the successful submission of all required data in accordance with the administrative, form, manner and timing requirements established for the Hospital OQR Program. Our proposals for OAS CAHPS data submission requirements are discussed in section XIII.D.4. of this final rule with comment period. Therefore, hospitals' scores on the OAS CAHPS Survey-based measures, discussed below, will not affect whether they are subject to the 2.0 percentage point payment reduction for hospitals that fail to report data required to be submitted on the measures selected by the Secretary, in the form and manner, and at a time, specified by the Secretary. These measure calculations will be used for public reporting purposes only.

(A) Composite Survey-Based Measures

Hospital rates on each composite OAS CAHPS Survey-based measure would be calculated by determining the proportion of ''top-box'' responses (that is ''Yes'' or ''Yes Definitely'') for each question within the composite and averaging these proportions over all questions in the composite measure. For example, to assess hospital performance on the composite measure OP–37a: OAS CAHPS—About Facilities and Staff, we would calculate the proportion of top-box responses for each of the measure's six questions, add those proportions together, and divide by the number of questions in the composite measure (that is, six).

As a specific example, we take a hospital that had 50 surveys completed and received the following proportions of ''top-box'' responses through sample calculations:

- 25 ''top-box'' responses out of 50 total responses on Question One
- 40 ''top-box'' responses out of 50 total responses on Question Two
- 50 ''top-box'' responses out of 50 total responses on Question Three
- 35 ''top-box'' responses out of 50 total responses on Question Four
- 45 ''top-box'' responses out of 50 total responses on Question Five
- 40 ''top-box'' responses out of 50 total responses on Question Six

Based on the above responses, we would calculate that hospital's measure score for public reporting as follows:

$$\text{Hospital Publicly Reported Score} = \frac{(0.5 + 0.8 + 1 + 0.7 + 0.9 + 0.8)}{6}$$

This calculation would give this example hospital a raw score of 0.78 or 78 percent for the OP–37a measure for purposes of public reporting. We note that each percentage would then be adjusted for differences in the characteristics of patients across hospitals as described in XIII.B.5.c.(7) of this final rule with comment period, below. As a result, the final percentages may vary from the raw percentage as calculated in the example above.

(B) Global Survey-Based Measures

We proposed to adopt two global OAS CAHPS Survey measures. OP–37d asks the patient to rate the care provided by the hospital on a scale of 0 to 10, and OP–37e asks about the patient's willingness to recommend the hospital to family and friends on a scale of ''Definitely No'' to ''Definitely Yes.'' Hospital performance on each of the two global OAS CAHPS Survey-based measures would be calculated by proportion of respondents providing high-value responses (that is, a 9–10 rating or ''Definitely Yes'') to the survey questions over the total number of respondents. For example, if a hospital received 45 9- and 10-point ratings out of 50 responses, this hospital would receive a 0.9 or 90 percent raw score, which would then be adjusted for differences in the characteristics of patients across hospitals as described in section XIII.B.5.c.(7) of this final rule with comment period below, for purposes of public reporting.

(5) Cohort

The OAS CAHPS Survey is administered to all eligible patients—or a random sample thereof—who had at least one outpatient surgery/procedure during the applicable month. Eligible patients, regardless of insurance or method of payment, can participate.

For purposes of each survey-based measure captured in the OAS CAHPS Survey, an ''eligible patient'' is a patient 18 years or older:

- Who had an outpatient surgery or procedure in a hospital, as defined in the OAS CAHPS Survey Protocols and Guidelines Manual (*https://oascahps.org/Survey-Materials*);
- Who does not reside in a nursing home;
- Who was not discharged to hospice care following their surgery;
- Who is not identified as a prisoner; and
- Who did not request that hospitals not release their name and contact information to anyone other than hospital personnel.

There are a few categories of otherwise eligible patients who are excluded from the measure as follows:

- Patients whose address is not a U.S. domestic address;
- Patients who cannot be surveyed because of State regulations;
- Patient's surgery or procedure does not meet the eligibility CPT or G-codes as defined in the OAS CAHPS Protocols and Guidelines Manual (*https://oascahps.org/Survey-Materials*); and
- Patients who are deceased.

(6) Exemption

We understand that hospitals with lower patient censuses may be disproportionately impacted by the burden associated with administering the survey and the resulting public reporting of OAS CAHPS Survey results. Therefore, we proposed that hospitals may submit a request to be exempted from participating in the OAS CAHPS Survey-based measures if they treat fewer than 60 survey-eligible patients during the ''eligibility period,'' which is the calendar year before the data collection period. All exemption requests will be reviewed and evaluated by CMS. For example, for the CY 2020 payment determination, this exemption request would be based on treating fewer than 60 survey-eligible patients in CY 2017, which is the calendar year before the data collection period (CY 2018) for the CY 2020 payment determination.

To qualify for the exemption, hospitals must submit a participation exemption request form, which will be made available on the OAS CAHPS Survey Web site (*https://oascahps.org*) on or before May 15 of the data collection calendar year. For example, the deadline for submitting an exemption request form for the CY 2020 payment determination would be May 15, 2018. We determined the May 15 deadline in order to align with the deadline for submitting Web-based measures, and because we believe this deadline allows hospitals sufficient time to review the previous years' patient lists and determine whether they are eligible for an exemption based on patient population size.

In addition, as discussed above, hospital eligibility to perform the OAS CAHPS Survey would be determined at the individual Medicare participating hospital level; therefore, an individual hospital that meets the exemption criteria outlined above may submit a participation exemption request form. CMS will then assess that hospital's eligibility for a participation exemption due to facility size. However, no matter the number of hospital locations of the Medicare participating hospital, all data collection and submission, and ultimately, also public reporting, for the OAS CAHPS Survey measures would be at the Medicare participating hospital level, as identified by its CCN. Therefore, the reporting for a CCN would include all eligible patients from all locations of the eligible Medicare participating hospital as identified by its CCN.

(7) Risk Adjustment

In order to achieve the goal of fair comparisons across all hospitals, we believe it is necessary and appropriate to adjust for factors that are not directly related to hospital performance, such as patient case-mix, for these OAS CAHPS Survey measures. The survey-based measures are adjusted for patient characteristics such as age, education, overall health status, overall mental health status, type of surgical procedure, and how well the patient speaks English. These factors influence how patients respond to the survey but are beyond the control of the hospital and are not directly related to hospital performance. For more information about patient-mix adjustment for these measures, we refer readers to: *https://oascahps.org/General-Information/Mode-Experiment*.

(8) Public Reporting

We will propose a format and timing for public reporting of OAS CAHPS Survey data in future rulemaking prior to implementation of the measures. Because CY 2016 is the first year of voluntary national implementation for the OAS CAHPS Survey, and we believe

using data from this voluntary national implementation will help inform the displays for public reporting of OAS CAHPS Survey data for the Hospital OQR Program, we did not propose a format or timing for public reporting of OAS CAHPS Survey data in the proposed rule.

As currently proposed, hospital locations that are part of the same Medicare participating hospital (operates under one Medicare provider agreement and one CCN) must combine data for collection and submission for the OAS CAHPS Survey across their multiple facilities. These results from multiple locations of the Medicare participating hospital would then be combined and publicly reported on the *Hospital Compare* Web site for the single Medicare participating hospital. To increase transparency in public reporting and improve the usefulness of the *Hospital Compare* Web site, we intend to note on the Web site instances where publicly reported measures combine results from two or more locations of a single multi-location Medicare participating hospital.

We invited public comments on our proposals as discussed above to adopt, for the CY 2020 payment determination and subsequent years, the five survey-based measures: (1) OP–37a: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS)—About Facilities and Staff; (2) OP–37b: OAS CAHPS—Communication About Procedure; (3) OP–37c: OAS CAHPS—Preparation for Discharge and Recovery; (4) OP–37d: OAS CAHPS—Overall Rating of Facility; and (5) OP–37e: OAS CAHPS—Recommendation of Facility.

Comment: Several commenters supported inclusion of the OP–37a-e OAS CAHPS Survey-based measures in the Hospital OQR Program. One commenter agreed with the MAP that these survey measures are ''high impact measures that will improve care quality and efficiency of care and be meaningful to consumers.'' This commenter also supported CMS' proposal to include the same measures for the ASCQR program to facilitate alignment between the programs. Another commenter supported the OAS CAHPS Survey-based measures because patient-reported outcomes are an integral part in understanding how the delivery system is performing and also helps to bridge a partnership with patients. One commenter agreed with CMS' reasons for proposing to adopt the OAS CAHPS Survey-based measures in the Hospital OQR Program, and asserted the importance of pain management communication, including communication with patients about pain-related issues, setting expectations about pain, shared decision-making and proper prescription practices. One commenter appreciated CMS' attempt to fill an important gap because there are currently no standardized surveys available to collect information on the patient's overall experience for surgeries or procedures performed within a hospital outpatient department. One commenter agreed that the OAS CAHPS Survey-based measures are an important quality indicator that can ultimately be used in combination with other measures to assist patients as they decide where to seek care, and has seen significant interest among HOPDs that want to begin collecting data voluntarily.

Response: We thank the commenters for their support.

Comment: A few commenters expressed concerns that there is very little publicly available information detailing the survey development. The commenters requested additional information regarding the OAS CAHPS Survey development process, and also requested clarification on whether the measures were developed with multi-stakeholder input.

Response: As discussed in the CY 2017 OPPS/ASC proposed rule (81 FR 45716 through 45718), background on the survey development process is publicly available on the OAS CAHPS Web site: *http://oascahps.org/*. The OAS CAHPS Survey development process followed the principles and guidelines outlined by the AHRQ [95] and its CAHPS Consortium [96] in developing a patient experience of care survey, such as: Reporting on actual patient experiences; standardization across the survey instrument; administration protocol; data analysis and reporting; and extensive testing with consumers. This process included: Reviewing surveys submitted under a public call for measures; reviewing existing literature; conducting focus groups with patients who had recent outpatient surgery; conducting cognitive interviews with patients to assess their understanding and ability to answer survey questions; obtaining stakeholder input on the draft survey and other issues that may affect implementation; conducting a field test; and conducting a test of the various data collection mode effects on survey responses .

We published a request for information on January 25, 2013 (78 FR 5459) requesting information regarding publicly available surveys, survey questions, and measures indicating patient experience of care and patient-reported outcomes from surgeries or other procedures for consideration in developing a standardized survey to evaluate the care received in these facilities from the patient's perspective. In 2013 and 2014, we conducted six focus groups with patients who had recent outpatient surgeries or procedures in an HOPD or ASC. Analysis of the focus group feedback [97] led to development of the final domain structure for the survey, and identified the following topic areas for assessment under a patient experience of care survey for these procedures: (1) Preparations for surgery; (2) check-in process; (3) facility environment; (4) staff communication; (5) discharge; (6) recovery and outcomes; and (7) overall experience.

We convened and consulted with two TEPs throughout the development and testing of the OAS CAHPS Survey.[98] In 2013, we established a 10-member TEP consisting of experts on outpatient surgery, including clinicians, providers, patient advocates, and representatives from other stakeholder organizations to provide preliminary guidance in the establishment of relevant topics and to comment on the draft versions for cognitive testing and the field test. Information about the TEP was documented in materials supporting an information collection request for the voluntary national implementation of the OAS CAHPS Survey published in the **Federal Register** (80 FR 2430 through 2431).[99] We established a second TEP in 2015 to solicit input and guidance related to national implementation protocols and the survey mode experiment.

We conducted three rounds of cognitive testing among patients who received outpatient surgery at an ASC or hospital outpatient department before finalizing the field test version of the OAS CAHPS Survey. With each round of testing, we modified the survey to

[97] Hospital Outpatient Surgery Department/Ambulatory Surgery Center Experience of Care Survey Focus Group Report (Submitted to CMS June 2013).

[98] Information about feedback from the first TEP was documented in the **Federal Register** at 80 FR 2430.

[99] Available at: *https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing-Items/CMS-10500.html*.

reflect the comments from the previous round.

The survey was tested in both the outpatient and ASC setting in 2014 (field testing) and 2015 (mode testing) and found to be reliable. We refer readers to 80 FR 2430 and the OAS CAHPS Information Collection Request Paperwork Reduction Act Package [100] for more information about field and mode testing for these measures. The field test collected data through a mixed-mode design, which consisted of a mail survey with telephone follow-up of non-respondents. We recruited a total of 36 facilities for the field test: 18 hospital outpatient departments and 18 ASCs. Approximately 116 patient records were selected from each of the 36 facilities, for a total sample of 4,179 patients. The field test data collection yielded a 46-percent adjusted response rate, or 1,863 completed surveys (31 percent computer-assisted telephone interviewing, 68 percent mail, and 0.8 percent break-offs). Once partial surveys were removed from the analysis set, 1,849 total surveys were used in the evaluation. The field test data were evaluated and analyzed to identify item-level refinements necessary for the survey instrument. The field test psychometric analysis included evaluations of individual items and composite item sets. Individual items were analyzed to report item-level missing data and item response distributions (including ceiling and floor effects), which included response variance. Composite item sets were analyzed using factor analysis and item response theory (IRT) analysis to assess dimensionality, discriminability, dimensional coverage, and subgroup response differences. Internal consistency statistics (reliability) and correlational checks for composite validity were performed to evaluate the final composite item sets. The item-level recommendations for the field test were based on the findings from the factor analyses, the internal consistency checks, and the IRT analysis. As a result, 10 questions were recommended for deletion. Reliability of the remaining measures was assessed using the Cronbach's alpha coefficient, with an estimate range from zero to one. An estimate of zero indicated no measurement consistency and one indicates perfect consistency. The cutoff criterion for the examination was 0.70, which indicated adequate consistency.[101] The composites analytically derived maintained adequate internal consistency even when reduced to Top-Box scoring and across the facility types and modes of administration.

In 2015, we conducted a mode experiment for the OAS CAHPS Survey. We refer readers to *https://oascahps.org/General-Information/Mode-Experiment* for more details. The facility sample included hospital outpatient departments and ASCs that reflect industry characteristics and was sorted to achieve implicit stratification by four facility characteristics: Single specialty or multispecialty; facility size (large, medium, or small), facility location (urban or rural), and facility ownership (public, private, or other). A total of 70 facilities (38 hospital outpatient departments and 32 ASCs) participated in the mode experiment by providing a monthly patient information file for patients served during one or more of the three sample months (July, August, and September 2015). The patient sample consisted of 13,576 patients who had an eligible surgery or procedure during a sample month and who met other survey eligibility criteria. Data collection for each sample month began approximately 21 days after the sample month closed and ended within a 6-week period after the survey was initiated. The overall response rate (for all three modes) was 39 percent. The response rate for the mail-only mode was 37 percent, the telephone-only response rate was 34 percent, and the mixed-mode response rate was 50 percent.

We began voluntary national implementation of the OAS CAHPS Survey in January 2016 and refer readers to *https://oascahps.org/General-Information/National-Implementation* for more details. Preliminary data from the voluntary reporting period (Quarter 1 data), which included 24,201 sampled patients from 74 facilities, indicate a response rate of 33 percent for both telephone and mail modes. Voluntary national implementation is ongoing.

Comment: Several commenters recommended that CMS delay implementation of OAS CAHPS measures because the measures are not NQF-endorsed, and asserted that this will significantly limit hospitals' insight into whether the measures portray hospital performance in a fair and accurate manner until they are endorsed by the NQF.

Response: We disagree with commenters' recommendation that we should delay implementation of the OAS CAHPS measures in the Hospital OQR Program. We refer readers to our discussion above regarding measures that are not NQF endorsed. The OAS CAHPS Survey has undergone rigorous testing. As discussed in the measure description, the five survey-based measures (MUC IDs: X3697; X3698; X3699; X3702; and X3703) were included on the CY 2014 MUC list,[102] and reviewed by the MAP.[103] The MAP encouraged continued development of these survey-based measures; however, we note that these measures had not been fully specified by the time of submission to the MUC List.[104] The MAP stated that these are high impact measures that will improve both quality and efficiency of care and be meaningful to consumers.[105] Further, the MAP stated that given that these measures are also under consideration for the ASCQR Program, they help to promote alignment across care settings.[106] It also stated that these measures would begin to fill a gap MAP has previously identified for this program including patient reported outcomes and patient and family engagement.[107] Several MAP workgroup members noted that CMS should consider how these measures are related to other existing ambulatory surveys to ensure that patients and facilities are not overburdened.[108]

These measures have been fully developed since being submitted to the MUC List. The survey development process followed the principles and guidelines outlined by the AHRQ [109] and its CAHPS Consortium [110] in developing a patient experience of care survey, such as: Reporting on actual patient experiences; standardization across the survey instrument; administration protocol; data analysis

and reporting; and extensive testing with consumers. Development also included: Reviewing surveys submitted under a public call for measures; reviewing existing literature; conducting focus groups with patients who had recent outpatient surgery; conducting cognitive interviews with patients to assess their understanding and ability to answer survey questions; obtaining stakeholder input on the draft survey and other issues that may affect implementation; and conducting a field test.

In addition, as discussed above, we received public input from several modes. We published a request for information in the **Federal Register** on January 25, 2013 (78 FR 5460) requesting information regarding publicly available surveys, survey questions, and measures indicating patient experience of care and patient-reported outcomes from surgeries or other procedures for consideration in developing a standardized survey to evaluate the care received in these facilities from the patient's perspective. As stated in more detail above, stakeholder input was also obtained through communications with a Technical Expert Panel (TEP) comprised of experts on outpatient surgery, including clinicians, providers, patient advocates, and accreditation organizations. The TEP provided input and guidance on issues related to survey development, and reviewed drafts of the survey throughout development.

After we determined that the survey instrument was near a final form, we tested the effect of various data collection modes (that is, mail-only, telephone-only, or mail with telephone follow-up of non-respondents) on survey responses. In addition, we began voluntary national implementation of the OAS CAHPS Survey in January 2016.[111]

Given these consensus-building efforts, we believe the measure reflects consensus among affected parties for a standardized instrument assessing patients' experience of care in the hospital setting. As such, we do not think it is necessary to delay implementation of the OAS CAHPS Survey until it achieves NQF endorsement. We believe the benefits of measure data for patients and hospitals outweigh waiting for NQF endorsement. We also note, however, that we intend to submit the OAS CAHPS Survey-based measures to NQF for endorsement under an applicable call for measures in the near future.

We also disagree with commenters' assertion that lack of NQF endorsement will limit hospitals' insight into whether the measures portray hospital performance in a fair and accurate manner. The survey was tested in both the outpatient and ASC setting in 2014 (field testing) and 2015 (mode testing) and found to be reliable. We refer readers to *https://oascahps.org/* for more information about field and mode testing for these measures. The OAS CAHPS Survey development process followed the principles and guidelines outlined by AHRQ and its CAHPS Consortium.[112] This process included reviewing existing literature; reviewing surveys submitted under a public call for measures; conducting focus groups with patients who had recent outpatient surgery; conducting cognitive interviews with patients to assess their understanding and ability to answer survey questions; obtaining stakeholder input on the draft survey and other issues that may affect implementation; conducting a field test; and conducting a test of the various data collection mode effects on survey responses.

In 2014, the field test data were evaluated and analyzed to identify item-level refinements necessary for the survey instrument. The field test psychometric analysis included evaluations of individual items and composite item sets. Individual items were analyzed to report item-level missing data and item response distributions (including ceiling and floor effects), which included response variance. Composite item sets were analyzed using factor analysis and item response theory (IRT) analysis to assess dimensionality, discriminability, dimensional coverage, and subgroup response differences. Internal consistency statistics (reliability) and correlational checks for composite validity were performed to evaluate the final composite item sets. The item-level recommendations for the field test were based on the findings from the factor analyses, the internal consistency checks, and the IRT analysis. As a result, 10 questions were recommended for deletion. Reliability of the remaining measures was assessed using the Cronbach's alpha coefficient, with an estimate range from zero to one. An estimate of zero indicated no measurement consistency and one indicates perfect consistency. The cutoff criterion for the examination was 0.70, which indicated adequate consistency.[113] The composites analytically derived maintained adequate internal consistency even when reduced to Top-Box scoring and across the facility types and modes of administration.

Based on the rigorous testing that was undertaken during the development process, we believe the OAS CAHPS Survey, and measure scores derived therefrom, are both reliable and valid. Therefore, we believe it is unnecessary to delay implementation of the OAS CAHPS Survey in the hospital outpatient setting.

Comment: Some commenters recommended CMS to convene stakeholder group of providers, consumers, venders, and other relevant parties to discuss the CAHPS survey questions holistically to address how these surveys should be distributed in the future, prioritize the development of these survey tools to a limited subset of provider settings, and determine how to manage the issue of overlapping care.

Response: We refer readers to our response above discussing measure development and stakeholder input. To reiterate, we received public input for the OAS CAHPS Survey from several modes. As stated above, we published a request for information in the **Federal Register** on January 25, 2013 (78 FR 5460). Stakeholder input was also obtained through communications with two TEPs and the MAP. However, moving forward, we will continue to seek stakeholder input on the appropriateness of procedures that are appropriate for the hospital setting as well as improving the quality of care provided in the hospital outpatient setting.

Comment: Commenters expressed concerns about the significant resources needed to collect the survey, and also expressed concerns that the CAHPS® program already includes multiple overlapping survey tools. The commenters asserted that the inclusion of another survey may lead to confusion among patients about which provider is being assessed and create excessive survey administration burden for hospitals.

Response: While we understand commenters' concerns regarding resources needed to collect the survey, and survey administration burden for hospitals, the OAS CAHPS Survey was developed for use in assessing patient experience of care for select outpatient surgical procedures. We are dedicated to

[113] Aron, A. and Aron, E.N. *Statistics for Psychology.* (1999) 2nd ed. New Jersey: Prentice Hall.

improving the quality of care provided to patients, and believe patients are a vital source of information in assessing the quality of care provided at a hospital outpatient department. We believe that the benefits of this measure, such as giving patients the opportunity to compare and assess quality of care in the outpatient setting in a standardized and comparable manner, outweigh the burdens. Regarding confusion among patients and multiple overlapping survey tools, other CAHPS surveys, such as the HCAHPS Survey, are tailored to different aspects of care provided by hospitals, such as inpatient care. In addition, the survey introduction letter provided to patients includes the date and location of the surgery or procedure that the patient received at the facility. Furthermore, patients will also be reminded of the date and location of the surgery or procedure they received during the telephone interviews. For these reasons, we do not believe there will be issues associated with overlap or confusion for these surveys.

Comment: One commenter asserted that requiring hospitals to meet the proposed target minimum number of surveys (that is, 300 completed surveys) would be difficult for smaller facilities and recommended that the target minimum number of surveys instead be set at 100 completed surveys, in alignment with the requirements from the first year of the HCAHPS Survey's use in the inpatient setting. Another commenter expressed concerns that comparing an HOPD with a small patient population to a sample of a much larger HOPD's population may weaken the statistical reliability of the survey results and comparability of facilities' scores. This commenter recommended that facilities should be measured against comparable facility size and clinical make-up, and urged CMS to increase the number of survey-eligible patients a facility can have to qualify for the exception.

Response: We are committed to ensuring high reliability in publicly reported OAS CAHPS Survey results. To make abundantly clear our policies discussed in the proposed rule, hospital outpatient departments will fall into one of three categories based on their past and projected total patient volume, will fall into one of three scenarios. In order to determine its projected total patient volume, we recommend hospitals review their accounts receivable and payable records. From these accounting documents, a facility can determine its past patient volume and project future patient volume. Acceptable methods of sampling survey-eligible patients can be found in Chapter IV-Sampling Procedures of the Protocols and Guidelines Manual at *https://oascahps.org/Survey-Materials*.

The first category includes hospitals that estimate receiving more than 300 completed surveys during the 12-month reporting period based on its past and projected total patient volume. We note that in the CY 2017 OPPS/ASC proposed rule (81 FR 45718), we stated that ''hospitals will be required to survey a random sample of eligible patients on a monthly basis.'' We also note that elsewhere in the proposed rule (81 FR 45719), we also stated that, ''the OAS CAHPS Survey is administered to all eligible patients—or a random sample thereof—who had at least one outpatient surgery/procedure during the applicable month.'' We recognize that the language is confusing and are clarifying here that hospitals that anticipate receiving more than 300 surveys have a choice. They are required to either: (1) Randomly sample their eligible patient population, or (2) survey their entire OAS CAHPS eligible patient population. In other words, random sampling is optional.

We calculated the number 300 by using the reliability criterion for the OAS CAHPS Survey measures, which is 0.8 or higher.[114] This requires facilities with large patient populations to randomly sample a sufficient number of patients to yield at least 300 completed surveys over each 12-month reporting period. This criterion allows at least 80 percent power to detect a 10 percent difference for binary survey outcome at the 0.05 significance level.[115] A reliability criterion of 0.8 is the normal standard for random sample surveys.[116] The 300 completed surveys translates into approximately 25 completed surveys per month (25 completes x 12 months = 300 completes per year). At this time, there are no plans to adjust the threshold of the target minimum of 300 completed surveys for the OAS CAHPS Survey for larger facilities that have the option to undertake random sampling. To do so could decrease the reliability of the OAS CAHPS survey results. Survey data will be collected on a monthly basis and uploaded on a quarterly basis. As stated in the Protocols and Guideline Manual, survey vendors will report the ''total patient volume,'' ''total eligible patients,'' ''number of patients sampled,'' and the ''number of completed surveys'' for each reporting period.[117] These reported patient data will be used to ensure sampling requirements are followed.

Second, if a hospital does not anticipate receiving 300 completed surveys during the 12-month reporting period based on its past and projected total patient volume, it must survey all eligible patients served during the reporting period. In other words, these smaller facilities must undertake a census of all eligible patients served; there is no option to randomly sample. Smaller facilities' OAS CAHPS survey results are not affected by the reliability issues underlying the target minimum policy because conducting a census—surveying all eligible patients in a population, as opposed to sampling and administering the survey to a portion of that eligible patient population—measures the true value of the patient population by including all eligible patients at the facility in the survey population. However, we will continue to review the data from the voluntary implementation to identify and address any issues related to the reliability and comparability of OAS CAHPS Survey-based measure rates across facilities. Thus the OAS CAHPS results for the larger facilities and the smaller facilities both achieve the statistical precision of the reliability criterion. For example, if two different facilities with large patient volumes in a particular year, both randomly sample their eligible patients and receive 300 completed surveys, they would both have met the reliability criterion during that year. As a second example, if in a particular year, one facility estimates it will receive more than 300 completed surveys in that year and samples and obtains 300 completed surveys while, during that same year, a different facility does not anticipate receiving 300 completed surveys and undertakes a census of its entire survey-eligible patients, both facilities would achieve the statistical precision of the reliability criterion for that year. As a third example, for a facility that obtained 300 completed surveys from their 1500 total eligible patients served in one year, but experienced a change in patient volume during the next year, and surveyed their entire 200 eligible patients served the next year, the facility would have met the reliability criterion during both years.

Third, if in the prior year a hospital serves less than 60 survey eligible patients, the facility can request an exemption from the OAS CAHPS

[114] Cohen, Jacob. 1977. Statistical Power Analysis for the Behavioral Sciences. New York: Academic Press.

[115] Ibid.

[116] Ibid.

[117] Outpatient and Ambulatory Surgery CAHPS Survey: ''Protocol and Guidelines Manual.'' Available for download at: *https://oascahps.org/Survey-Materials*.

Survey administration requirement because these few surveys would not provide reliable data and the burden associated with administering the survey as well as the resulting public reporting of OAS CAHPS Survey results would be disproportionately burdensome. At this time, there are no plans to adjust the threshold for the exemption. This request and related deadlines will be available on the OAS CAHPS Survey Web site (*https://oascahps.org*) on or before May 15 of the data collection calendar year as discussed in the proposed rule (81 FR 45719).

The facility-level data for both large and small facilities will be adjusted to account for patient characteristics that impact response tendencies (that is, patient-mix) and ensure fair comparisons across all facilities. As discussed in the CY 2017 OPPS/ASC proposed rule (81 FR 45720), the survey-based measures are adjusted for patient characteristics such as age, education, overall health status, overall mental health status, type of surgical procedure, and how well the patient speaks English. We refer readers to the Protocols and Guidelines Manual, available at: *https://oascahps.org/Survey-Materials*, for more information regarding the patient-mix adjustment methodology. However, we do not adjust for facility-level characteristics that are under control of the facility, for example, specialty or geographic location. During the voluntary implementation of the survey, we will continue to review the data collected to identify and address any issues related to the reliability and comparability of measure rates across facilities as appropriate. In addition, we believe the 60 survey-eligible patient exemption policy appropriately balances the benefit of ensuring that patient experience of care data is collected and publicly reported for use by patients in making decisions about their health care against the burden of requiring facilities to administer the OAS CAHPS Survey. For this reason, we do not believe it would be appropriate to increase the exemption threshold at this time.

Comment: Many commenters expressed concerns regarding the length of the OAS CAHPS Survey. A number of commenters recommended that CMS shorten the OAS CAHPS Survey in order to increase the survey completion rates, and further recommended CMS allow each facility to have more choice in the questions they include in its survey. One commenter expressed concern that the OAS CAHPS Survey's length will limit the number of completed surveys a hospital receives because patients will be overwhelmed by the number of questions in the survey or otherwise unable to complete the survey, and in turn, impact the ability of the hospital to use the survey data in quality improvement activities.

Response: The OAS CAHPS Survey is comparable in length and survey response rate to other patient experience of care surveys. For example, the HCAHPS Survey is 32 questions long, (*http://www.hcahpsonline.org/surveyinstrument.aspx*), and the response rate for the HCAHPS Survey has generally been 32 to 33 percent, (for example see: *https://www.medicare.gov/hospitalcompare/details.html?msrCd=prnt1grp1&ID=220066&stCd=MA&stName=Massachusetts*). By comparison, the OAS CAHPS Survey is 37 questions long, and the survey's 2015 mode experiment showed an overall response rate of 39 percent.[118] The mode experiment, a final step in the measurement development process, was conducted in 2015 to test the OAS CAHPS Survey questions when administered by mail-only, telephone-only, and mixed-mode (mail with telephone follow-up).

In addition, the 24 core questions of the OAS CAHPS Survey are either directly actionable (that is, give feedback to hospitals) or inform the need for patients to answer subsequent questions that are actionable. For example, Question 10, which asks whether a patient received anesthesia, establishes whether a patient should respond to Question 11 and Question 12, which provide actionable feedback to hospitals with the patient about the anesthesia process and possible side effects. We also encourage hospitals to consider adding specific questions of interest to the OAS CAHPS Survey. As noted in the CY 2017 OPPS/ASC proposed rule (81 FR 45718), HOPDs may elect to add up to 15 supplemental questions to the OAS CAHPS Survey. These could be questions HOPDs develop specifically for use alongside the OAS CAHPS Survey, or questions from an existing survey.

However, we continue to evaluate the utility of individual questions as we collect new data from the survey's national implementation and will consider different options for shortening the OAS CAHPS Survey without the loss of important data in the future. Specifically, we are contemplating removing two demographic questions—the ''gender'' and ''age'' questions—from the OAS CAHPS Survey in its next update if we determine that it is feasible, when collecting information on survey-eligible patients from facility records, that gender and age information could also be collected via these records.

Comment: One commenter requested that CMS remove or revise two questions on the OAS CAHPS Survey asking whether a doctor or anyone from the facility: (1) Gave the patient all the information needed about their procedure; and/or (2) gave the patient easy to understand instructions about preparing for their procedure. This commenter asserted that patient education is solely within the purview of the doctor's office, not the facility, and should therefore be removed from a survey assessing patients' experience of care at the facility.

Response: We disagree with the commenter's assertion that patient education is solely within the purview of the doctor's office. We believe it is the facility's responsibility to ensure that a doctor, nurse, or other facility staff member provides the patient with information about preparing for their procedure, the procedure itself, and what to expect following discharge from the hospital. Furthermore, the OAS CAHPS Survey-based measures were reviewed by two 10-member TEPs comprised of experts on outpatient surgery, including clinicians, providers, patient advocates, and representatives from other stakeholder organizations. These TEPs provided guidance in the establishment of relevant topics for assessing patient experience of care at an outpatient facility, and commented on draft versions of the survey for cognitive and field testing. These TEPs agreed with the questions as drafted, including those regarding the facility's communication with patients. Therefore, we believe it is appropriate to include these important communications between the patient and the facility about their care in the OAS CAHPS Survey.

The OAS CAHPS Survey is focused on patients' experience of care received for their ambulatory surgery or procedure. A physician/surgeon who performs surgeries/procedures at a facility is a member of that facility with both rights and responsibilities. We believe it is the facility's responsibility to ensure that someone—whether the doctor, nurse, or other facility staff member—provide patients with information about preparing for their procedure, about the procedure itself, as well as what to expect following the procedure/surgery. Therefore, we believe it is appropriate to include these

[118] Outpatient and Ambulatory Surgery CAHPS Survey: ''Mode Experiment.'' Available at: *https://oascahps.org/General-Information/Mode-Experiment.*

important communications with patients in the OAS CAHPS Survey.

Comment: One commenter requested that CMS reconsider its position on respondent confidentiality for the OAS CAHPS Survey administration to align with the HCAHPS survey, which allows for the release of patient-level data for quality improvement purposes, with the stipulation that a patient's identity should not be shared with direct care staff.

Response: The administration protocols for OAS CAHPS follow protocols for other more recent CAHPS® Surveys, restricting the release of patient-level data if the patient has not consented. For example, the Home Health Care CAHPS (HHCAHPS) Survey protocol states: ''HHCAHPS Survey approved vendors can provide responses linked to a sample patient's name and other identifying information only if the sample patient gives his or her consent on the 'Consent to Share Identifying Information' question.'' [119] For the Hospital IQR Program, because hospitals can self-administer the HCAHPS Survey, we do not state that patients' responses and identifying information will not be shared with the hospital. However, HCAHPS Surveys administered via a third-party vendor are not linked to a sample patient's name unless the patient gives his or her consent, and we encourage hospitals to undertake measures to protect patient confidentiality when self-administering the survey. We note that facilities may choose to add the ''Consent to Share'' question [120] to the OAS CAHPS Survey. This question asks whether a patient gives permission for their name to be linked to their survey responses. However, we note that each facility should consult with its own counsel to ensure compliance with applicable privacy and security laws.

Comment: One commenter recommended that CMS align the OAS CAHPS Survey with the HCAHPS Survey by: (1) Adopting the same four-point scale used in the HCAHPS Survey for ratings questions (that is, ''Always; Usually; Sometimes; or Never'' responses); (2) separating questions about nurses and doctors treating a patient into two separate sets of questions; (3) adopting the same series of questions used in the HCAHPS Survey regarding interactions with doctors and nurses; and (4) adding the same new medication questions used in the HCAHPS Survey to the OAS CAHPS Survey (Question 15: ''During this hospital stay, were you given any medicine that you had not taken before?''; Question 16: ''Before giving you any new medicine, how often did hospital staff tell you what the medicine was for?''; Question 17: ''Before giving you any new medicine, how often did hospital staff describe possible side effects in a way you could understand?'').

Response: As part of the survey development process, the OAS CAHPS Survey was aligned as appropriate with other CAHPS Surveys, including the HCAHPS Survey. However, unlike HCAHPS, which assesses patients experience in the inpatient setting; the OAS CAHPS Survey assesses patient experience of care for outpatient surgical procedures, and therefore, takes the outpatient/ambulatory setting into account and captures information about the appropriate experiences of care for this particular setting.

We note that the four-point scale response set used for some HCAHPS Survey questions, ''Always; Usually; Sometimes; or Never,'' is appropriate to use when a question includes the phrase ''how often.'' This is appropriate in the inpatient setting, where patients stay in the hospital for a longer period of time. The OAS CAHPS Survey questions use a single point in time reference for an outpatient surgery or procedure because patients spend a significantly shorter period of time in the facility. Therefore, we believe the OAS CAHPS Survey questions and response options are worded appropriately (that is, for the majority of the OAS CAHPS Survey questions, the response categories are: ''Yes, definitely;'' ''Yes, somewhat;'' or ''No.'' Response categories for other questions are: ''Yes'' or ''No'' for this setting of care and treatment situation. The OAS CAHPS Survey instrument can be found at: *https://oascahps.org/Survey-Materials.*

In the OAS CAHPS Survey, references to the doctors, nurses, and other staff at the facility are grouped together for two reasons. First, grouping assessment of the health care personnel at a facility helps reduce the overall length of the survey so that similar questions are not repeated separately for doctors and nurses. Second, the questions under section I, II, III and IV (Before Your Procedure, Facility and Staff, Communications, and Recovery) include aspects of the patient's care that could be addressed by either the doctor or someone else at the facility. Combining these professionals under a single series of questions allows the patient to report that someone provided information and explained the process without having to recall the specific individual who gave the information. This is important because the OAS CAHPS Survey is intended to assess the patient's experience of care at the facility, including, but not separating out, all the staff that work at the facility.

For these reasons, we believe it is appropriate to ask these questions in a way that reflects the care provided by doctors, nurses, and other facility staff combined. We note that during the OAS CAHPS Survey field test conducted in 2014 and the mode experiment conducted in 2015, we did not receive any indications that the respondents had any difficulty answering these questions as they are currently written. The nonresponse, which is an indication of difficulty answering a question, was very low for the two questions that combine doctors and nurses (Question 7, which is about treating the patient with courtesy and respect and Question 8, which is about making sure the patient was a comfortable as possible). For the field test, less than 0.5 percent of the respondents did not respond to these questions while 99.5 percent were able to answer these questions. For the mode experiment just over 1 percent of the respondents did not respond to the questions while nearly 99 percent were able to answer them. These nonresponse rates were very similar to the questions that were about clerks and receptionists.

While there are no plans to add questions about new medications to the OAS CAHPS Survey at this time, we will take this recommendation into consideration during future updates to the survey.

Comment: One commenter requested clarification from CMS about why the OAS CAHPS Survey does not use same administration method as the HCAHPS Survey. One commenter recommended that CMS to align the outpatient version of patient's experience of care survey with the current inpatient version from a content, timeline and administration method standpoint, and requested CMS to review these requirements to prevent duplication of effort and provide a uniform process for patients. One commenter requested that CMS compare the OAS CAHPS Survey questions to the HCAHPS survey questions.

Response: Regarding survey content and questions, the OAS CAHPS survey was designed for the outpatient/ASC setting in order to more appropriately evaluate patient experience of care there. Therefore, the content should not be and is not the same as the HCAHPS survey. We refer readers to our discussion above regarding OAS CAHPS

[119] Home Health Care CAHPS Survey: ''Protocols and Guidelines Manual.'' Available at: *https://homehealthcahps.org/Portals/0/PandGManual.pdf.*

[120] Outpatient and Ambulatory Surgery CAHPS Survey: ''Survey Materials.'' Available at: *https://oascahps.org/Survey-Materials.*

survey development. Regarding administration method, the only difference between the HCAHPS and OAS CAHPS survey administration is that for the HCAHPS survey, hospitals are allowed to either self-administer or contract with a vendor. For the OAS CAHPS survey, on the other hand, hospitals must contract with a vendor. There is no option to self-administer. However, procedures related to vendors are aligned between both surveys. Therefore, we believe that processes streamline any duplication of efforts and processes for patients.

Comment: A few commenters expressed concerns that two existing CAHPS surveys, Clinician/Group CAHPS (CG–CAHPS) and the Surgical CAHPS (S–CAHPS), already capture the information that is being assessed in the OAS CAHPS Survey. One commenter recommended that the Hospital OQR Program to use the S–CAHPS survey for measurement of patient experience before, during, and after surgery.

Response: The CG–CAHPS survey [121] assesses patients' experiences with health care providers and staff in doctors' offices, and the focus of the S–CAHPS survey [122] is to obtain a patient's experience of care received specifically from a surgeon. Neither of those surveys focus on a patient's experience of care received from an HOPD or an ASC specifically, like the OAS CAHPS survey was designed to do. We do not believe the units of analyses are the same. However, we will take these suggestions into consideration for the future.

Comment: Some commenters urged CMS to make testing and revision of the Emergency Department Patient Experiences with Care (EDPEC) Survey a priority, and asserted that patient experiences in the ED setting require unique questions that are not necessarily reflected in the OAS CAHPS Survey. Another commenter recommended that CMS finalize the EDPEC Survey, and establish expectations for compliance across all hospitals first, including publishing results from the pilot, before requiring mandatory compliance with the OAS CAHPS. One commenter urged CMS to ensure the data collected from the EDPEC and OAS CAHPS Surveys accurately reflects the quality of care provided by physicians and facilities and accounts for the nuances and differences required when providing care in the emergency department.

Response: The Emergency Department Patient Experiences with Care (EDPEC) Survey is a survey tool that is currently under development at CMS that assesses patient experiences of care in the emergency department. We have made considerable investments in developing and testing the EDPEC Survey to measure experiences of patients (18 and older) with emergency department care specifically. The survey respondents include patients admitted to the hospital following their emergency department visit and those visiting the emergency department who are discharged to the community. For additional details regarding the EDPEC Survey, we refer readers to: *https://www.cms.gov/Research-Statistics-Data-and-Systems/Research/CAHPS/ed.html*. However, the EDPEC Survey cannot be finalized at this time, because it is still under development and would need to be reviewed by the MAP prior to CMS proposing the survey. We will take commenter's suggestion into consideration that the EDPAC accurately reflects the quality of care provided by physicians and facilities and accounts for the nuances and differences required when providing care in the emergency department.

In addition, to be abundantly clear, the OAS CAHPS Survey was developed to assess the quality of care provided to patients during select surgical outpatient procedures only. Therefore, the OAS CAHPS Survey should not be administered to ED patients. The EDPEC Survey can only be administered in the emergency department setting, and not in the hospital outpatient setting or ASC setting. Regarding the commenter's concern about the OAS CAHPS Survey accurately reflecting the quality of care provided by physicians and facilities, we believe the survey accurately does this and we point readers to our discussion above detailing the survey development process and TEP input. Regarding the comment about establishing expectations for compliance, we refer readers to our previous response above regarding the different categories of compliance for the OAS CAHPS Survey as well as the measure description in the proposed rule. We interpret commenter's request for CMS to publish results from the pilot to refer to the voluntary national implementation of the OAS CAHPS Survey, and we will publish results when available. However, we do not agree that we should delay implementation of this measure pending this publication, because the valuable information that this measure will provide to patients and hospitals outweighs waiting for these results.

Comment: One commenter requested clarification from CMS regarding the inclusion of pain management-related questions in the OAS CAHPS Survey. The commenter expressed concern that the pain management communication question may negatively influence patient perceptions about their overall care and, in turn, result in negative responses throughout the survey. Another commenter expressed concern that the OAS CAHPS Survey's questions regarding communication about pain management may not reflect the true perception patients have of their experience relative pain management, and recommended CMS continue to explore ways to ensure better measurement of patients' experience with pain management.

Response: The OAS CAHPS Survey pain management communication questions focus on the information provided to patients regarding pain management following discharge from a hospital outpatient department, not the hospital outpatient department's direct control or management of patients' pain. The hospital outpatient department is responsible for providing the patient with this information if there is a possibility that the patient might have pain as a result of the procedure. Communication about possible effects during recovery is important for patients. As discussed previously, the OAS CAHPS Survey underwent a rigorous survey development process, the results of which did not indicate any negative impact to overall survey responses resulting from the inclusion of these questions regarding pain management communication. In addition, we have no reason to believe that patients' responses to the pain management communication questions would not accurately reflect their experience with the facility. Therefore, we do not believe that the pain management communication question would negatively influence patient perceptions about their overall care, resulting in negative responses throughout the survey. However, as noted in the CY 2017 OPPS/ASC proposed rule (81 FR 45718), we will continue to evaluate the appropriateness and responsiveness of these questions to patient experience of care and public health concerns.

Comment: A number of commenters expressed concern regarding the OAS CAHPS Survey pain management communication question, ''Some ways to control pain include prescription medicine, over-the-counter pain relievers or ice packs. Did your doctor

[121] Clinician and Group Survey CAHPS. Available at: *http://www.pqrscahps.org/*.

[122] American College of Surgeons. ''S–CAHPS (Consumer Assessment of Healthcare Providers and Systems Surgical Care Survey).'' Available at: *https://www.facs.org/advocacy/quality/cahps*.

or anyone from the facility give you information about what to do if you had pain as a result of your procedure?'' One commenter recommended that CMS refine this question to be clear the survey is asking whether patients received pain management information that could be applied once they left the facility, and that the information could include, but is not limited to, information about pain management using appropriate medications. Another commenter recommended reorganizing the pain management methods listed in the first question to run from non-medication pain management to prescription pain medication treatment. Another commenter recommended that CMS expand this question to include other methods of pain management, such as physical therapy because the commenter believed using a more inclusive list of pain control methods would help to further combat the over prescription of opioids for pain management.

Some commenters also expressed concerns regarding the pain management communication control question, ''At any time after leaving the facility, did you have pain as a result of your procedure?'' Specifically, a few commenters requested that CMS revise the pain management communication control question to ask whether, at any time after leaving the facility, the patient experienced pain as a result of their procedure that they felt they could not manage based on the information they received from the facility or treating physician.

Response: We thank the commenters for their recommendations. As discussed previously, the OAS CAHPS Survey underwent a rigorous survey development process, the results of which indicated that patients understand these questions as presented, and that the questions were sufficiently developed for use in the survey.[123] As discussed previously, the OAS CAHPS Survey-based measures were reviewed by two 10-member TEPs comprised of experts on outpatient surgery, including clinicians, providers, patient advocates, and representatives from other stakeholder organizations. These TEPs provided guidance in the establishment of relevant topics for assessing patient experience of care at an outpatient facility, and commented on draft versions of the survey for cognitive and field testing.

The possible treatments for pain included in the survey reflect what is tested and reflected to work, and their order is not intended to reflect a preference for any single pain treatment method, only to provide examples of types of pain management a facility may discuss with a patient prior to discharge. The examples provided in this question are also not intended to be an exhaustive list, and we acknowledge that there are many methods for addressing pain following a procedure performed at a hospital outpatient department, including physical therapy. Because this is not an exhaustive list, we do not believe it is necessary to exclude, expand, or reorganize these questions at this time. However, we will take these suggestions, including reorganizing the pain management methods, into consideration for future iterations of the survey.

Comment: Two commenters expressed concerns that the pain management communication control question raises an unrealistic expectation regarding pain control, and may potentially encourage over prescription of opioids. These commenters therefore recommended removing the pain management communication control question from the OAS CAHPS Survey.

Response: We also note that Question 16 ''At any time after leaving the facility, did you have pain as a result of your procedure?'' is a control question; in other words, an answer of ''yes'' or of ''no'' would not affect provider scores on the OAS CAHPS survey questions. The scores are based on the previous Question 15, which asked if the doctor or anyone from the facility gave the patient information about what to do if the patient had pain as a result of the procedure. We will not publicly report the data from the control question that asks if the patient had pain as a result of the procedure, rather, that question is only used to determine if the previous question should be included in the score or not. For example, if the patient reported having had pain in Question 16, then the response to Question 15 would be included in the score that is reported for the hospital.

For example, the focus of Questions 15 and 16 is to determine whether a patient who is expected to experience pain as a result of a procedure was given information from the doctor or anyone from the facility about what to do about pain. If a patient experiences pain as a result of a procedure (Question 16), it is important that the patient was provided information as to what to do about the pain (Question 15). In these instances the response to Question 15 would be included in the score. However, for some procedures conducted in a hospital outpatient department (for example colonoscopies), there is little expectation that the patient will experience pain. In these instances, a doctor or anyone from the facility may not have given a patient information about what to do about pain because such information would not be relevant. In these latter instances, the response to Question 15 would not be included in the score unless the patient response is a top-box (that is, ''Yes, definitely'') response.

We do not believe a question asking whether patients experienced pain would have an undue influence on patients' responses to the OAS CAHPS Survey or warrant its removal from the OAS CAHPS Survey. As stated above, the OAS CAHPS Survey underwent a rigorous survey development process, the results of which did not indicate any negative impact to overall survey responses resulting from the inclusion of these questions regarding pain management communication. In addition, we have no reason to believe that patients' responses to the pain management communication questions would not accurately reflect their experience with the facility. Therefore, we do not believe that the pain management communication question would negatively influence patient perceptions about their overall care, resulting in negative responses throughout the survey.

Furthermore, as stated in the CY 2017 OPPS/ASC proposed rule at 81 FR 45717 through 45718, this control question will not affect scores on the OAS CAHPS survey. Rather, scores are based on the previous Question 15, which asks if the doctor or anyone from the facility gave the patient information about what to do if the patient had pain as a result of the procedure. However, we will review the data from the voluntary national implementation and continue to evaluate the appropriateness and responsiveness of these questions, particularly for any unintended consequences.

Comment: One commenter requested clarification about whether CMS intends to publicly report HOPD scores on the pain management communication control question.

Response: We interpret the comment to refer to Question 16. Question 16, ''At any time after leaving the facility, did you have pain as a result of your procedure?'' is a control question; in other words, an answer of ''yes'' or of ''no'' would not affect provider scores

[123] A description of the field test analysis of the survey questions was documented in the **Federal Register** notice (January 16, 2015; 80 FR 2430). *https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing-Items/CMS-10500.html.*

on the OAS CAHPS Survey questions. The scores are based on the previous Question 15, which asked if the doctor or anyone from the facility gave the patient information about what to do if the patient had pain as a result of the procedure.

Comment: One commenter recommended that CMS remove the questions on the OAS CAHPS Survey asking patients whether they experienced pain, nausea, or bleeding following a procedure because the commenter believes this information is not useful to facilities in quality improvement activities, as these are all risks associated with surgery.

Response: Question 17 (''Before you left the facility, did your doctor or anyone from the facility give you information about what to do if you had nausea or vomiting?'') and Question 18 (''At any time after leaving the facility, did you have nausea or vomiting as a result of either your procedure or the anesthesia?'') are intended to assess the information provided to patients regarding what to expect following a surgery/procedure. We believe it is the facility's responsibility to ensure that the patient is aware of the potential side effect of their treatment, and, therefore, believe these questions are indicative of quality of care. As above, we note that Question 18 is a control question, so an affirmative or negative response would not be included in the provider scores on the OAS CAHPS Survey, but rather is used to determine if the provider should have given guidance on how to handle nausea or vomiting (Question 17). The information will be useful to facilities because they will be able to ensure that the information that patients need during recovery is adequately addressed by the facility staff. These questions are not reporting whether the patients experienced pain, nausea, vomiting, bleeding or signs of infection; the questions are reporting if the patients were informed what to do if they had these outcomes.

For example, the focus of Questions 17 and 18 is to determine whether a patient who might likely experience nausea or vomiting as a result of a procedure was given information from the doctor or anyone from the facility about what to do to manage these outcomes. If a patient experiences these outcomes as a result of a procedure, it is important that the patient was provided information on how to manage these outcomes. In these instances, the response to Question 17 would be included in the score. However, for some procedures conducted in a hospital (for example laser surgeries), there is little expectation of the patient experiencing nausea or vomiting and in these instances a doctor or anyone from the facility may not have given a patient information on how to manage these outcomes as such information would not be relevant. In these latter instances, the responses to Question 17 would not be included in the score unless the patient response is a top-box (that is, ''Yes, definitely'') response.

Furthermore, as stated in the CY 2017 OPPS/ASC proposed rule (81 FR 45717 through 45718), this control question will not affect scores on the OAS CAHPS survey. Rather, scores are based on the previous Question 17, which asks if the doctor or anyone from the facility gave information about what to do if the patient had nausea or vomiting. However, we will review the data from the voluntary national implementation and continue to evaluate the appropriateness and responsiveness of these questions, particularly for any unintended consequences.

Comment: One commenter urged CMS to examine the necessity and utility of the OAS CAHPS measures and adjust for all factors (for example, limited English proficiency, low health literacy) that could influence how patients respond to the survey but are beyond the control of the hospital and not directly related to hospital performance.

Response: In order to achieve the goal of fair comparisons across all hospitals, the OAS CAHPS Survey-based measures risk-adjust for factors that are not directly related to facility performance. The measures are risk-adjusted for patient case-mix, which proved to be significant predictors: age; education; overall health status; overall mental health status; type of surgical procedure; and English proficiency. Health literacy is not one of the patient characteristics used because assessing a patient's health literacy would add significant burden to the survey. The self-reported education is used as a surrogate and only requires one additional question. We refer readers to *http://www.ahrq.gov/professionals/quality-patient-safety/quality-resources/tools/perfmeasguide/perfmeaspt2a.html* for more details about the risk-adjustment.

Comment: One commenter recommended the OAS CAHPS Survey be administered only to patients receiving surgeries and certain other procedures in the HOPD setting.

Response: We agree with the commenter and refer readers to section XIII.B.5.c.(5) of this final rule with comment period (Cohort) in the measure description above as well as in the CY 2017 OPPS/ASC proposed rule (81 FR 45719). As we stated there, a criterion to be an eligible patient is one ''who had an outpatient surgery or procedure in a hospital, as defined in the OAS CAHPS Survey Protocols and Guidelines Manual (*https://oascahps.org/Survey-Materials*).'' The OAS CAHPS Survey was specifically developed to assess patients' experience of care for selected outpatient surgical procedures. The surgeries and procedures eligible for the OAS CAHPS Survey measures fall within the Category I CPT–4 range Codes for Surgery (for example, CPT codes between 10021–69990) or one of the following Category II G-codes: G0104; G0105; G0121; or G0260. All other CPT codes are considered ineligible for the OAS CAHPS Survey-based measures. We refer readers to the OAS CAHPS Protocols and Guidelines Manual for more information, which is available at: *https://oascahps.org/Survey-Materials*.

Comment: One commenter expressed concerns that additional review and consideration is needed regarding the CPT codes involving the insertion/use of Foley catheters, 51701 and 51702.

Response: For the OAS CAHPS Survey, the primary criterion for determining eligible surgeries and procedures is the CPT code.[124] OAS CAHPS-eligible surgeries and procedures fall within the range Category I Codes for Surgery (that is, CPT codes between 10021 and 69990) or one of the following Category II G-codes: G0104; G0105; G0121; or G0260. Among the 60,000 surgeries and procedures documented in the Codes for Surgery range, there are some relatively minor procedures that fall within the range that are considered ineligible for OAS CAHPS. The OAS CAHPS protocol[125] documents the ineligible CPT codes that have been excluded, but because the codes are maintained by the American Medical Association and are subject to periodic updates, the list of exclusions must be open for expansion. CMS protocols for the OAS CAHPS Survey[126] allow survey vendors to work with hospital outpatient departments to submit for consideration other specific CPT codes to be considered for exclusion. As additional exclusions are approved, the survey protocols are updated and announced. The two CPT codes in question (51701 and 51702) are currently under consideration by CMS for exclusion.

Comment: One commenter recommended that CMS delay public

[124] CPT only copyright 2015 American Medical Association. All rights reserved.

[126] *https://oascahps.org/Survey-Materials*.

reporting of hospital outpatient department measure rates on the OAS CAHPS Survey-based measures for at least one year to allow hospitals to become familiar with the measures and survey administration.

Response: As stated in the CY 2017 OPPS/ASC proposed rule (81 FR 45720), this measure was proposed for the CY 2020 payment determination and subsequent years. Therefore, hospitals would not be required to submit OAS CAHPS Survey data until CY 2018. We refer readers to section XII.D.4. of this final rule with comment period for data submission requirements. This gives hospitals an additional year to become familiar with both the OAS CAHPS Survey and its administration requirements, as well as to contract with a third-party vendor to administer the survey. We refer hospitals to the list of CMS-approved survey vendors available on the OAS CAHPS Web site (*https://oascahps.org/General-Information/Approved-Survey-Vendors*) and encourage hospitals to compare prices across vendors, as they may vary. We believe this additional year is sufficient time for hospitals to become familiar with the measures and survey administration before it is a requirement of the Hospital OQR Program and before measures data is publicly reported. Furthermore, we encourage hospitals to participate in the voluntary national implementation of the OAS CAHPS Survey to gain experience. More information can be found at: *https://oascahps.org/*.

Moreover, as stated in the CY 2017 OPPS/ASC proposed rule (81 FR 45720), we will propose a format and timing for public reporting of OAS CAHPS Survey data in future rulemaking prior to implementation of the measures. Because CY 2016 is the first year of voluntary national implementation for the OAS CAHPS Survey, and we believe using data from this voluntary national implementation will help inform the displays for public reporting of OAS CAHPS Survey data for the Hospital OQR Program, we did not propose a format or timing for public reporting of OAS CAHPS Survey data in the proposed rule.

After consideration of the public comments we received, we are finalizing the adoption of the OP–37a–e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey Measures for the CY 2020 payment determination and subsequent years as proposed with a clarification that hospitals that anticipate receiving more than 300 surveys are required to either: (1) Randomly sample their eligible patient population, or (2) survey their entire OAS CAHPS eligible patient population. We note that these measures are also being finalized in the ASCQR Program and refer readers to section XIV.B.4.c of this final rule with comment period for more details.

d. Summary of Previously Adopted and Newly Adopted Hospital OQR Program Measures for the CY 2020 Payment Determinations and Subsequent Years

The table below outlines the finalized Hospital OQR Program measure set for the CY 2020 payment determination and subsequent years, and includes both previously adopted measures and measures newly adopted in this final rule with comment period.

PREVIOUSLY FINALIZED AND NEWLY FINALIZED HOSPITAL OQR PROGRAM MEASURE SET FOR THE CY 2020 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

NQF No.	Measure name
0287	OP–1: Median Time to Fibrinolysis.†
0288	OP–2: Fibrinolytic Therapy Received Within 30 Minutes of ED Arrival.
0290	OP–3: Median Time to Transfer to Another Facility for Acute Coronary Intervention.
0286	OP–4: Aspirin at Arrival.†
0289	OP–5: Median Time to ECG.†
0514	OP–8: MRI Lumbar Spine for Low Back Pain.
N/A	OP–9: Mammography Follow-up Rates.
N/A	OP–10: Abdomen CT—Use of Contrast Material.
0513	OP–11: Thorax CT—Use of Contrast Material.
N/A	OP–12: The Ability for Providers with HIT to Receive Laboratory Data Electronically Directly into their ONC-Certified EHR System as Discrete Searchable Data.
0669	OP–13: Cardiac Imaging for Preoperative Risk Assessment for Non-Cardiac, Low-Risk Surgery.
N/A	OP–14: Simultaneous Use of Brain Computed Tomography (CT) and Sinus Computed Tomography (CT).
0491	OP–17: Tracking Clinical Results between Visits.†
0496	OP–18: Median Time from ED Arrival to ED Departure for Discharged ED Patients.
N/A	OP–20: Door to Diagnostic Evaluation by a Qualified Medical Professional.
0662	OP–21: Median Time to Pain Management for Long Bone Fracture.
0499	OP–22: Left Without Being Seen.†
0661	OP–23: Head CT or MRI Scan Results for Acute Ischemic Stroke or Hemorrhagic Stroke who Received Head CT or MRI Scan Interpretation Within 45 minutes of ED Arrival.
N/A	OP–25: Safe Surgery Checklist Use.
N/A	OP–26: Hospital Outpatient Volume on Selected Outpatient Surgical Procedures.*
0431	OP–27: Influenza Vaccination Coverage among Healthcare Personnel.
0658	OP–29: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients.**
0659	OP–30: Colonoscopy Interval for Patients with a History of Adenomatous Polyps—Avoidance of Inappropriate Use.***
1536	OP–31: Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery.***
2539	OP–32: Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy.
1822	OP–33: External Beam Radiotherapy for Bone Metastases.
N/A	OP–35: Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy.****
2687	OP–36: Hospital Visits after Hospital Outpatient Surgery.****
N/A	OP–37a: OAS CAHPS—About Facilities and Staff.****
N/A	OP–37b: OAS CAHPS—Communication About Procedure.****
N/A	OP–37c: OAS CAHPS—Preparation for Discharge and Recovery.****
N/A	OP–37d: OAS CAHPS—Overall Rating of Facility.****
N/A	OP–37e: OAS CAHPS—Recommendation of Facility.****

† We note that NQF endorsement for this measure was removed.

* OP–26: Procedure categories and corresponding HCPCS codes are located at: *https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1196289981244*.

** We note that measure name was revised to reflect NQF title.

*** Measure voluntarily collected as set forth in section XIII.D.3.b. of the CY 2015 OPPS/ASC final rule with comment period (79 FR 66946 through 66947).

**** New measure finalized for the CY 2020 payment determination and subsequent years.

6. Hospital OQR Program Measures and Topics for Future Consideration

In the CY 2017 OPPS/ASC proposed rule (81 FR 45721 through 45722), we sought public comment on future measure topics generally, electronic clinical quality (eCQM) measures implementation, and specifically the future measure concept, Safe Use of Opioids-Concurrent Prescribing eCQM, for future consideration in the Hospital OQR Program. These are discussed in detail below.

a. Future Measure Topics

We seek to develop a comprehensive set of quality measures to be available for widespread use for informed decision-making and quality improvement in the hospital outpatient setting. The current measure set for the Hospital OQR Program includes measures that assess process of care, imaging efficiency patterns, care transitions, ED throughput efficiency, the use of Health Information Technology (health IT), care coordination, patient safety, and volume. Through future rulemaking, we intend to propose new measures that help us further our goal of achieving better health care and improved health for Medicare beneficiaries who receive health care in hospital outpatient settings, while aligning quality measures across the Medicare program.

We are moving towards the use of outcome measures and away from the use of clinical process measures across the Medicare program. We invited public comments on possible measure topics for future consideration in the Hospital OQR Program. We specifically requested comment on any outcome measures that would be useful to add to the Hospital OQR Program as well as any clinical process measures that should be eliminated from the Hospital OQR Program.

Comment: One commenter requested that, in selecting future measures and topics, CMS streamline, align, focus, and collaborate on measures that matter most for improving patient care. The commenter also expressed its support for CMS' focus on outcome measures.

Response: We thank the commenter for its suggestion. As discussed in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74458 through 74460), in general, when selecting measures for the Hospital OQR Program, we take into account several considerations and goals. These include: (a) Expanding the types of measures beyond process of care measures to include an increased number of outcome measures, efficiency measures, and patients' experience-of-care measures; (b) expanding the scope of hospital services to which the measures apply; (c) considering the burden on hospitals in collecting chart-abstracted data; (d) harmonizing the measures used in the Hospital OQR Program with other CMS quality programs to align incentives and promote coordinated efforts to improve quality; (e) seeking to use measures based on alternative sources of data that do not require chart abstraction or that utilize data already being reported by many hospitals, such as data that hospitals report to clinical data registries, or all-payer claims data bases; and (f) weighing the relevance and utility of the measures compared to the burden on hospitals in submitting data under the Hospital OQR Program. We also stated that we assign priority to quality measures that assess performance on: (a) Conditions that result in the greatest mortality and morbidity in the Medicare population; (b) conditions that are high volume and high cost for the Medicare program; and (c) conditions for which wide cost and treatment variations have been reported, despite established clinical guidelines (76 FR 74458 through 74459). To the extent possible, we seek to streamline reporting, align with other hospital quality reporting and performance programs, and focus on measures that have high impact and support national priorities as reflected in the NQS and the CMS Quality Strategy. We thank the commenter for its support of our move toward adopting more outcome-based measures in the future.

Comment: Several commenters recommended increasing the number of immunization measures, specifically, adult immunization measures, in the program, including: (1) A pneumococcal immunization measure, such as NQF #0043; (2) an influenza immunization measure, such as NQF #0041; (3) an HPV vaccination catch-up measure for females ages 19–26 years and for males 19–21 years; (4) a measure for Tdap/pertussis-containing vaccine for ages 19+ years; (5) a measure for Zoster vaccination for ages 60–64 years; and (6) a measure for Zoster vaccination for ages 65+ years. Commenters noted that several of these measures are already required by the PQRS Program. One commenter recommended that CMS address all Advisory Committee on Immunization Practices (ACIP)-recommended vaccines for adults. Other commenters also strongly supported maintaining the Influenza Vaccination Coverage among Healthcare Personnel measure in the Hospital OQR Program.

Response: We acknowledge commenters' suggestions that we should include additional immunization performance measures in the Hospital OQR Program to help ensure vaccines are routinely offered and administered to patients in the hospital outpatient setting. We also refer readers to the CY 2016 PFS final rule with comment period (80 FR 71216 through 71259) for measures currently included in the PQRS Program. We will take these suggestions into consideration for future rulemaking. We thank commenters for supporting the continued inclusion of OP–27: Influenza Vaccination Coverage among Healthcare Personnel.

b. Electronic Clinical Quality Measures

We are working toward incorporating electronic clinical quality measures (eCQMs) in the Hospital OQR Program in the future. We believe automated electronic extraction and reporting of clinical quality data, potentially including measure results calculated automatically by appropriately certified health IT, would significantly reduce the administrative burden on hospitals under the Hospital OQR Program. We recognize that considerable work needs to be done by measure stewards and developers to make this possible with respect to the clinical quality measures targeted for electronic specifications (e-specifications) for the outpatient setting. This includes completing e-specifications for measures, pilot testing, reliability and validity testing, submitting for endorsement of e-specified version (if applicable) and implementing such specifications into certified EHR technology to capture and calculate the results, and implementing the systems. We continue to work to ensure that eCQMs will be smoothly incorporated into the Hospital OQR Program.

We invited public comments on future implementation of eCQMs as well

as specific future eCQMs for the Hospital OQR Program.

Comment: Some commenters supported CMS' goal to incorporate electronic clinical quality measures (eCQMs) in the Hospital OQR Program in the future. One commenter asserted that eCQMs will help quantify healthcare processes and outcomes that are associated with the ability to provide high quality health care, and the development of eCQMs increases clinical data availability and improves measure quality and outcomes. One commenter agreed with the development of outpatient eCQMs because it would better align the outpatient and inpatient hospital quality reporting programs; this commenter asserted that the outpatient areas lag behind inpatient areas in the implementation of electronic health records. Another commenter encouraged CMS to make the transition to eCQM reporting a high priority to align with the Hospital IQR Program and The Joint Commission's ORYX® Reporting Program.

Response: We thank the commenters for their support of incorporating eCQMs in the Hospital OQR Program in the future. We are evaluating eCQM implementation in the Hospital IQR Program, as well as other Medicare payment programs, and will take lessons learned in that program into consideration when crafting policy for the Hospital OQR Program. Furthermore, we consider the alignment with the Hospital IQR Program and the Joint Commission's ORYX® Reporting Program a high priority for our transition to eCQM reporting in the Hospital OQR Program, and we will take this recommendation into consideration. For additional information regarding the Joint Commission's ORYX® Reporting Program, we refer readers to: *https://www.jointcommission.org/facts_about_oryx_for_hospitals/*. We also acknowledge the commenter's concerns that outpatient areas lag behind inpatient areas in the implementation of electronic health records, and we will consider this issue as we develop eCQMs for the Hospital OQR Program.

Comment: One commenter recommended a gradual start with one measure, and recommended the Hospital OQR Program start with the ED–3 measure (Median Time from ED Arrival to ED Departure for Discharge ED Patients). The commenter expressed concerns that CMS did not take advantage of eCQM ED–3 measure to begin accepting Quality Reporting Document Architecture (QRDA–1) files for CY 2017. The commenter strongly recommended CMS show continued support for ED–3 and add it to the list of future eCQM requirements.

Response: We acknowledge the commenter's concern regarding gradually including eCQMs in the Hospital OQR Program, beginning with the inclusion of the ED–3: Median Time from ED Arrival to ED Departure for Discharge ED Patients measure. In the CY 2011 OPPS/ASC final rule with comment period (75 FR 72074), we finalized OP–18: Median Time from ED Arrival to ED Departure for Discharged ED Patients (NQF #0496), the only measure in our current measure set which is currently specified as an eCQM; it is e-specified as ED–3. The e-specification for this measure is available at: *http://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/Downloads/2014_eCQM_Specs_for_EH.zip* in the folder entitled: EH_CMS32v2_NQF0496_ED3_MedianTime. The ED-e measure could not be proposed or adopted previously due to the statutory limitations of the Hospital OQR Program. This e-measure would be required to undergo the prerulemaking process in accordance with section 1890A of the Act. This e-measure is currently on the 2016 MUC List, and we are considering it for future use in the program, because we believe it is important to encourage providers to submit this measure electronically.

Comment: A few commenters did not support CMS' goal to incorporate eCQMs in the Hospital OQR Program. One commenter asserted that requiring eCQM reporting in the quality programs would create a duplicative penalty for hospitals unable to meet Meaningful Use requirements. This commenter further argued there has not been sufficient development of eCQMs for the Hospital OQR Program. Another commenter expressed concerns that providers will not have sufficient time and information systems and technology resources to be fully prepared for reporting eCQMs. This commenter requested more flexibility from CMS, and requested decreasing required measures until the specifications have been tested and validated. This commenter also requested that data from eCQMs not be published in *Hospital Compare* until benchmarks for each measure are available.

Response: We disagree that any future requirements for electronic reporting in the Hospital OQR Program would duplicate penalties. Incorporating eCQMs is part of an effort to align various programs, including the Hospital IQR Program and Medicare and Medicaid EHR Incentive Programs, in order to reduce overall burden. Furthermore, we believe that it is appropriate to consider incorporating eCQMs because measures available now and those being developed for the future are increasingly based on electronic standards (80 FR 49696). In addition, as described in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57156), we have observed the successes of hospitals meeting the meaningful use requirements and our data show that 95 percent of hospitals already attest to successful eCQM reporting under the EHR Incentive Program.

We acknowledge the commenter's concerns that providers will not have sufficient time and information systems and technology resources to be fully prepared for reporting eCQMs. We anticipate that as EHR technology evolves and more health IT infrastructure is operational, in cooperation with the efforts of the ONC Health IT Certification Program, data elements and information systems requirements will become more standardized. Reliable, accurate data and electronic reporting are all important priorities to us. We believe that, with the advancement of technology and the use of electronic measures, even more precise, accurate, and reliable data will be captured for analysis. We also acknowledge commenters' concerns and recommendations regarding the use of eCQMs in the Hospital OQR Program, such as decreasing required measures until the specifications have been tested and validated and delaying public reporting on Hospital Compare until benchmarks for each measure are available. In addition, we understand the commenter's concerns that there has not been sufficient development of eCQMs for the Hospital OQR Program. We aim to ease the transition to reporting of electronic clinical quality measures, but any policies regarding the specific timelines and requirements related to data submission would be proposed in future rulemaking. We will consider these comments and work with stakeholders to address their concerns evaluating any eCQMs we propose to adopt in future rulemaking.

Comment: One commenter recommended that, for anesthesia measures, eCQMs should communicate across the continuum of patient care, and disparate information systems should interface between offices, clinics, hospitals, and pharmacy platforms to communicate across the patient's experience to increase patient safety, improve outcomes and decrease cost of care. This commenter recommended that these anesthesia

measures should include standardized taxonomy and fields and require providers to use these measures across various platforms to optimize communication of care and interoperability. This commenter also asserted that free text fields are more complex and require dedicated staff to abstract charts for quality reporting instead of electronic capture from the EHR of specific data fields. This commenter therefore recommended CMS make data available to all interested parties to identify trends and opportunities for improvement as data is reported.

Response: We appreciate the commenter's recommendations regarding the inclusion of e-specified anesthesia-related measures in the Hospital OQR Program. Furthermore, we acknowledge concerns about disparate information systems and conflicting data elements resulting in issues of comparability, completeness, and accuracy of eCQM data as well as concerns that e-specified anesthesia measures should include standardized taxonomy and fields, and require providers to use these measures across various platforms to optimize communication of care and interoperability. In the future, if we consider adopting e-specified measures related to patients undergoing anesthesia, we will be mindful of these concerns. Furthermore, regarding making data available to all interested parties to identify trends and opportunities for improvement as data is reported, we will consider the feasibility of this within the constraints of the HIPAA Privacy and Security Rules and other data privacy laws.

Comment: One commenter recommended the following existing Hospital OQR Program measures be slated for future eCQM development: OP–1: Median Time to Fibrinolysis; OP–2: Fibrinolytic Therapy Received Within 30 Minutes of ED Arrival; OP–3: Median Time to Transfer to Another Facility for Acute Coronary Intervention; OP–5: Median Time to ECG; OP–20: Door to Diagnostic Evaluation by a Qualified Medical Professional; and OP–21: Median Time to Pain Management for Long Bone Fracture.

Response: We will share these suggested existing Hospital OQR Program measures with the measure developers for consideration as future eCQMs and will take these comments under consideration as we develop future eCQM policy for the Hospital OQR Program.

Comment: One commenter requested that, when referencing providers within eCQMs, CMS use provider-neutral language consistent with the language used by CMS that supports inter-professional team care delivery and outcomes.

Response: We interpret provider-neutral language as language that includes eligible professionals. As defined under section 1861(r) of the Act and finalized in the EHR Incentive Programs Stage 1 final rule (75 FR 44442), an eligible professional is a doctor of medicine or osteopathy; a doctor of dental surgery or dental medicine; a doctor of podiatric medicine; a doctor of optometry; or a chiropractor), nurse practitioners, physician assistants, and other health care practitioners as health care providers. We strive to use language that eliminates bias and minimizes assumptions in their writing. In addition, hospital measures are not generally reported on the individual-level (for example, by each physician); instead they are reported by CCN (for example, hospital-wide) in order to encourage coordinated care delivery.

Comment: One commenter expressed concerns that the size and scope of CMS testing and validation for eCQMs may be too narrow for an accurate review.

Response: We thank the commenter for sharing its suggestions and concerns regarding the testing and validation for eCQMs for the future measure concept. As we have not yet developed policy for Hospital OQR Program eCQM validation, we believe the commenter is referring to the Hospital IQR Program Validation Pilot for eCQMs that was finalized in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50269 through 50273). We refer readers to FY 2015 IPPS/LTCH PPS final rule (79 FR 50269 through 50273) for our discussions of size and scope of Hospital IQR Program eCQM Validation Pilot. Additional details about the Hospital IQR Program 2015 eCQM Validation Pilot are available at: *https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1140537256076*. We also refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57173 through 57181), for a summary of results from the pilot test and our most recent eCQM validation policies in the Hospital IQR Program. We will consider these comments as we develop eCQM policy for the Hospital OQR Program.

c. Possible Future eCQM: Safe Use of Opioids-Concurrent Prescribing

Unintentional opioid overdose fatalities have become an epidemic in the last 20 years and a major public health concern in the United States.[127] HHS has made addressing opioid misuse, dependence, and overdose a priority. HHS is implementing evidence-based initiatives focused on informing prescribing practices to combat misuse and overdose deaths.[128] Several other organizations, including the Centers for Disease Control and Prevention (CDC), the Federal Interagency Workgroup for Opioid Adverse Drug Events, the National Action Plan for Adverse Drug Event Prevention, and the Substance Abuse and Mental Health Services Administration, have joined the effort. Prescribing opioids to patients already using an opioid or patients using benzodiazepines (sedation-inducing central nervous system depressant) increases their risk of respiratory depression and death.[129] These prescribing scenarios can occur in any setting including: Inpatient hospital; outpatient hospital practices; outpatient emergency departments; and other urgent care settings. With a limited evaluation focused on the patient's acute condition, the clinician in these settings may not know the patient's full medical history.[130] An analysis of national prescribing patterns shows that more than half of patients who received an opioid prescription in 2009 had filled another opioid prescription within the previous 30 days.[131] Studies of multiple claims and prescription databases have shown that between 5 and 15 percent of patients receive overlapping opioid prescriptions and 5 to 20 percent of patients receive

overlapping opioid and benzodiazepine prescriptions across all settings.[132] [133] [134]

The 2016 *CDC Guideline for Prescribing Opioids for Chronic Pain* [135] recommends that providers avoid concurrently prescribing opioids and benzodiazepines because rates of fatal overdose are 10 times higher in patients who are co-dispensed opioid analgesics and benzodiazepines than opioids alone [136] and concurrent use of benzodiazepines with opioids was prevalent in 31 percent to 51 percent of fatal overdoses.[137] ED visit rates involving both opioid analgesics and benzodiazepines increased from 11.0 in 2004 to 34.2 per 100,000 population in 2011.[138] Opioid overdose events resulting in ED use can cost the United States approximately $800 million per year.[139]

To address concerns associated with overlapping or concurrent prescribing of opioids or opioids and benzodiazepines, we are in early development of a new electronic clinical quality measure for the Hospital IQR and OQR Programs that would capture the proportion of patients 18 years of age and older who have an active prescription for an opioid and have an additional opioid or benzodiazepine prescribed to them during the qualifying care encounter. This measure is being designed to reduce preventable deaths as well as reduce costs associated with the treatment of opioid-related ED use by encouraging providers to identify patients at high risk for overdose due to respiratory depression or other adverse drug events.

We requested public comments on this future measure concept specifically for the Hospital OQR Program setting.

In addition, in order to solicit further public comment from a wide variety of stakeholders, we will also post this measure concept to the CMS Measures Management System (MMS) Call for Public Comment Web page, available at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/CallforPublicComment.html*. Readers can subscribe to receive updates through the MMS Listserv at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/MMS-Listserv.html*.

Comment: Several commenters supported the future eCQM ''Safe Use of Opioids-Concurrent Prescribing'' measure concept currently under development for the Hospital OQR Program. One commenter specifically supported the development of measures to help address the opioid epidemic. Another commenter supported the future measure concept because the large number of people receiving health care who take multiple medications, and the resulting complexity of managing those medications, makes medication reconciliation an important safety process. This commenter further asserted that effective medication reconciliation programs require a complete understanding of what the patient was prescribed and what medications the patient is actually taking, and is particularly important when prescribing opioids.

Response: We thank commenters for their support of the development of a future measure addressing safe use of opioids and concurrent prescribing. We note that the measure is still under development. However, we will consider these recommendations in our ongoing measure development activities.

Comment: Several commenters disagreed with the scope and intention of the future opioid measure concept and asserted that measures that simply assess the proportion of adults with a prescription are inadequate because they do not consider if opioid prescriptions are appropriate. One commenter asserted that clinicians should be able to use their clinical judgment and should not be punished if the clinicians sincerely believed that prescribing both classes of medication together is more beneficial than prescribing only one class of medication alone.

Response: We thank the commenters for sharing their suggestions and concerns about the scope and intention of the future opioid measure. We understand commenters' concerns about measures that assess the proportion of adults with a prescription are inadequate, and will consider this issue while we develop this future measure. During initial development of this measure, experts were interviewed and recognized that there will be clinically necessary instances where a patient with an active opioid or benzodiazepine may require a short-term prescription for a second medication. However, the 2016 *CDC Guideline for Prescribing Opioids for Chronic Pain* [140] recommends that providers avoid concurrently prescribing opioids and benzodiazepines because rates of fatal overdose are 10 times higher in patients who are co-dispensed opioid analgesics and benzodiazepines than opioids alone [141] and concurrent use of benzodiazepines with opioids was prevalent in 31 percent to 51 percent of fatal overdoses.[142] We do not expect sites to have numerators of zero, but we do intend the measure to alert providers to the risks of concurrent opioid or opioid and benzodiazepine therapy. We will continue to engage with stakeholders, including clinicians, as we develop this future measure. We note that the measure is still under development, and we will consider these recommendations in our ongoing measure development and testing activities.

Comment: Some commenters expressed concerns that the measure concept may introduce unintended consequences such as under-treatment and placing undue accountability on acute settings for long-term pain management; patients on small doses of a benzodiazepine for a chronic problem (anxiety, insomnia) might not be able to be given opioids if they have an acute injury or fracture; and creating withdrawal in a patient who has been on long standing opioids with

concurrent benzodiazepines. One commenter urged CMS to exercise caution when implementing measures that have the potential to inadvertently discourage providers from prescribing opioids to those patients who need them.

Response: We thank the commenters for sharing their suggestions and concerns about the potential of the future measure concept to introduce unintended consequences for patients using benzodiazepines. We also acknowledge commenters' concerns that the future measure concept may place undue accountability on facilities providing acute care for patients receiving long-term treatment for chronic pain, and we will take this issue into consideration as we develop the measure. We also believe it is important to understand and monitor the potential for unintended consequences, and we will take these issues into consideration to inform our ongoing measure development efforts.

Comment: One commenter recommended that CMS consider physician burden and time in developing this measure. This commenter further expressed concerns that emergency physicians do not always have access to the list of a patient's medications. Another commenter expressed concern that ED providers deliver episodic care and do not have control over the medications that their patients have been prescribed prior to arrival to the ED, and therefore performance on this measure is largely outside of the control of ED providers.

Response: We thank the commenters for sharing their concerns regarding ED physician burden and time, and concerns that performance on the measure may be largely outside the control of providers. The measure is not intended to hold facilities accountable for undocumented opioid or benzodiazepine prescriptions; if a patient's opioid or benzodiazepine medications are not recorded in the EHR because they could not be reconciled by the provider during the healthcare encounter, that patient will not be captured by the measure. While it may be difficult to gather a complete record of all medications from each patient during a healthcare encounter, we believe it is best practice to make reasonable efforts to determine what medications a patient is taking at the beginning of an encounter and document that in the clinical record. This approach aligns with The Joint Commission's National Patient Safety Goals which includes medication reconciliation as an important component of improving the safe use of medications.[143] We understand the importance of not developing and implementing measures that are overly burdensome regarding providers' time and burden, and we are committed to working with stakeholders, including providers, in developing this future measure. Although ED providers may face challenges that are unique to acute pain management, it is not reasonable to exclude them from this measure, due to the high rates of opioid prescriptions from ED settings. A study that analyzed data on ED discharges from the 2006 through 2010 National Hospital Ambulatory Medical Care Survey found that opioids were prescribed for 18.7 percent of all ED discharges, representing 21.7 million prescriptions per year.[144] Rates of opioids prescriptions in the outpatient settings may be high, but opioid prescription rates from the ED setting are also significant. Furthermore, discharge planning with the patient's primary care provider is a routine expectation for care coordination. We will consider these recommendations to inform our ongoing measure development and testing efforts.

Comment: Some commenters recommended that CMS explore the development and use of appropriate use criteria for opioid prescribing, and also recommended CMS explore measures of overuse; for example, the percentage of patients with more than a certain number of prescription fills over a time period.

Response: We appreciate the commenters' recommendations to explore appropriate use criteria for opioid prescribing, and we also will take into consideration the recommendation to explore measures of overuse in the Hospital OQR Program. We will consider these recommendations when developing a future measure addressing safe use of opioids and concurrent prescribing.

Comment: One commenter recommended that hospitals be held accountable for instances in which they initiate new combination opioid therapy or opioid-benzodiazepine therapy, and recommended that the measure not penalize hospitals for continuing home combination therapy. The commenter recommended that CMS establish a medication management plan, with pain management or primary care signing on, before sending a patient on combination therapy home.

Response: As we move through the development of this measure concept, we will consider the commenter's recommendations on holding hospitals accountable when they initiate new combination therapy, and not penalizing hospitals for continuing home combination therapy, which means treatment in which a patient is given two or more drugs (or other therapeutic agents) for a single disease. In addition, the recommendation to institute a medication management plan may help to inform our ongoing measure development.

Comment: One commenter requested clarification on how hypnotics will be viewed for purposes of this measure.

Response: We thank the commenter for requesting this clarification. Hypnotic drug products are a class of drugs used to induce and/or maintain sleep.[145] At this time, we are not including any non-benzodiazepine hypnotics in the scope of the measure. We are still developing this measure, and we will consider this comment to inform our ongoing measure development efforts.

Comment: Some commenters recommended that CMS exclude several groups from the measure, including hospice patients, cancer patients, and patients with sickle cell disease. One commenter recommended that the measure concept be limited to large quantities of medications because this would provide the option for emergency physicians to continue a patient's opioid, or opioid/benzodiazepine regimen, for a 5-day period. This commenter also encouraged CMS to consider alternative strategies that are more practical for the ED, such as better counseling on the risks and benefits of these medications, as well as investment in the development and promotion of clinical practice guidelines that focus on pain management and prescribing.

Response: We appreciate the commenters' recommendations on excluding certain populations from the measure, limiting the measure to cases involving large quantities of medications, and considering alternative strategies that are may be practical for the ED. We will take the commenters' recommendations into

Interpreting the National Hospital Ambulatory Medical Care Survey: United States Emergency Department Opioid Prescribing, 2006–2010. *American Emergency Medicine.* Wiley Periodicals, Inc. Retrieved [March 2016] from *http://onlinelibrary.wiley.com/doi/10.1111/acem.12862/abstract.*

[145] U.S. Food and Drug Administration. (2015). Sleep Disorder (Sedative-Hypnotic) Drug Information. Retrieved October 6, 2016, from *http://www.fda.gov/Drugs/DrugSafety/PostmarketDrugSafetyInformationforPatientsandProviders/ucm101557.htm.*

consideration in our measure development and testing efforts.

Comment: One commenter recommended removal of the following medication value sets: Benzodiazepines RXNORM Value Set and Schedule II and Schedule III Opioids RXNORM Value Set. This commenter expressed concerns regarding the feasibility of capturing the concept of ''medications that are active and do not end.'' The commenter also recommended that the measure solely address concurrent discharge medications.

Response: We interpret the concept of ''medications that are active and do not end'' as to refer to medications active on arrival or active home medications, which continue to remain on the patient's medications list at discharge if they were not discontinued by the provider, and that the commenter is concerned about how they would be captured in an eCQM value set. We interpret eCQM value sets as lists of specific values (terms and their codes) used to describe clinical and administrative concepts in the quality measures. They provide groupings of unique values along with a standard description or definition from one or more standard vocabularies used to describe the same clinical concept (for example, diabetes, clinical visit, demographics) within the quality measures. For more information about eCQM value sets, we refer readers to: *https://ecqi.healthit.gov/ecqm-tools/tool-library/value-set-authority-center-vsac*.

We will consider the most appropriate eCQM value sets for the measure specifications during feasibility testing. The measure concept is currently specified to address concurrent medication prescribing at discharge. We will consider these recommendations in our ongoing measure development efforts, and we thank the commenter for its suggestions.

Comment: One commenter recommended that a denominator exclusion is needed for ''Medical Reason'' for concurrent discharge medications; and to ensure accurate timeframes of data, the measurement period must be defined in the logic or within the Quality Data Model (QDM) variables.

Response: We thank the commenter for sharing its recommendation regarding excluding ''Medical Reason'' for concurrent discharge medications from the denominator and defining a measurement period in logic or QDM variables. As currently developed, the measurement period is defined as one year. We will take the commenter's recommendations into consideration in our measure development and testing efforts.

Comment: Some commenters expressed concern that the future measure concept is reliant on Prescription Drug Monitoring Programs (PDMP), and until coordinated PDMPs are in place, the measure should not be a part of a quality and patient safety initiative for emergency physician scoring. One commenter expressed concerns that the future measure concept is a poor measure for the ED given the ongoing lack of universal access to reliable PDMP data, the time it would take for ED physicians to gather this data, the potential for unintended consequences, and the relatively low number of opioid prescriptions linked to the ED setting. One commenter requested clarification on whether providers will be required to confirm opioid or benzodiazepine therapy through prescription monitoring programs, and how would this work for hospitals servicing patients from other States. Another commenter asserted that there needs to be a drug monitoring infrastructure that exchanges data with EHRs, dispensing pharmacies, and other relevant sources and compiles the data into one mechanism before CMS develops the concurrent prescribing of opioids measure. This commenter further asserted that implementing the future measure concept without taking in consideration the drug monitoring infrastructure would be premature, potentially confusing, and burdensome for facilities, and result in an inappropriate application of accountability.

Response: We interpret the commenters' use of the term PDMP to refer to a statewide electronic database, which collects designated data on substances dispensed in the State. We refer readers to *http://www.pdmpassist.org/* for information about PDMPs. We thank the commenters for sharing their concerns about the availability of PDMP data and that a drug monitoring infrastructure should be in place before we implement the proposed measure concept. The measure, as currently specified, uses data from the hospital EHR. We recognize that data on active prescriptions may not always be available, but the measure does not include undocumented prescriptions. This measure is intended to influence current prescribing practices to avoid concurrent prescriptions, but is not prescriptive of how hospitals approach this goal. The commenters' suggested practices of using PDMPs and interdisciplinary care teams are means to reach that goal. In addition, studies have shown that there are high rates of opioid prescriptions from ED settings. A study that analyzed data on ED discharges from the 2006 through 2010 National Hospital Ambulatory Medical Care Survey found that opioids were prescribed for 18.7 percent of all ED discharges, representing 21.7 million prescriptions per year.[146] Rates of opioids prescriptions in the outpatient settings may be high, but opioid prescription rates from the ED setting are also significant. We will consider these concerns to inform our ongoing measure development efforts.

Comment: One commenter urged CMS to leave the measure posted for stakeholder input for a substantial length of time (for example, more than 90 days) to allow stakeholders to conduct the necessary information-gathering. This commenter also recommended CMS engage with pharmacists in the future measure concept's development and implementation.

Response: We thank the commenter for its view and suggestion. We will continue to engage with stakeholders, including pharmacists, as we develop the future measure. We note that because this measure is still in development, additional public input opportunities exist prior to measure proposal in rulemaking, such as during MAP review and the NQF process. We also will consider allowing stakeholders more time to provide input into the development of the future measure concept.

Lastly, we invite all commenters to continue to actively engage in the measures development process for the Hospital OQR Program and other CMS quality reporting programs and encourage them to monitor the CMS Web site for future public input opportunities.

7. Maintenance of Technical Specifications for Quality Measures

CMS maintains technical specifications for previously adopted Hospital OQR Program measures. These specifications are updated as we continue to develop the Hospital OQR Program measure set. The manuals that contain specifications for the previously adopted measures can be found on the QualityNet Web site at: *https://www.qualitynet.org/dcs/ContentServer?c=*

[146] Kea, B., Fu, R., Lowe, R., et al. (2016). Interpreting the National Hospital Ambulatory Medical Care Survey: United States Emergency Department Opioid Prescribing, 2006–2010. *American Emergency Medicine.* Wiley Periodicals, Inc. Retrieved [October 2016] from *http://onlinelibrary.wiley.com/doi/10.1111/acem.12862/abstract.*

Page&pagename=QnetPublic%2FPage%2FQnetTier2&cid=1196289981244.

We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68469 through 68470), for a discussion of our policy for updating Hospital OQR Program measures, the same policy we adopted for updating Hospital IQR Program measures, which includes the subregulatory process for making updates to the adopted measures (77 FR 53504 through 53505). This policy expanded upon the subregulatory process for updating measures that we finalized in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68766 through 68767). In the CY 2017 OPPS/ASC proposed rule (81 FR 45722), we did not propose any changes to our technical specifications policies.

8. Public Display of Quality Measures

Section 1833(t)(17)(E) of the Act, requires that the Secretary establish procedures to make data collected under the Hospital OQR Program available to the public. It also states that such procedures must ensure that a hospital has the opportunity to review the data that are to be made public, with respect to the hospital prior to such data being made public. In the CY 2017 OPPS/ASC proposed rule (81 FR 45722), we formalized our current public display practices regarding timing of public display and the preview period, as discussed in more detail below. We also proposed how we will announce the preview period timeframes.

In the CY 2014 OPPS/ASC proposed rule and final rule with comment period (78 FR 43645 and 78 FR 75092), we stated that we generally strive to display hospital quality measures data on the *Hospital Compare* Web site as soon as possible after measure data have been submitted to CMS. However, if there are unresolved display issues or pending design considerations, we may make the data available on other, non-interactive, CMS Web sites (78 FR 43645). Patient-level data that is chart-abstracted are updated on *Hospital Compare* quarterly, while data from claims-based measures and measures that are submitted using a Web-based tool are updated annually. Historically, preview for the April *Hospital Compare* data release typically occurs in January, preview for the July *Hospital Compare* data release typically occurs in April, preview for the October *Hospital Compare* data release typically occurs in July, and the preview for the December *Hospital Compare* data release typically occurs in October. During the preview period, hospitals have generally had approximately 30 days to preview their data.

In the proposed rule, therefore, we proposed to publicly display data on the *Hospital Compare* Web site, or other CMS Web site, as soon as possible after measure data have been submitted to CMS, consistent with current practice. In addition, we proposed that hospitals will generally have approximately 30 days to preview their data, also consistent with current practice. Lastly, moving forward, we proposed to announce the timeframes for the preview period starting with the CY 2018 payment determination on a CMS Web site and/or on our applicable listservs.

We invited public comments on our public display proposals as discussed above.

Comment: Some commenters supported CMS' proposal to formalize the current public display and reporting practices. One commenter expressed support of CMS' efforts to ensure consumers have adequate information with which to make informed health care decisions. This commenter further expressed that formalizing the current public display and reporting practices will not only help consumers make decisions about where to get their care, but will also encourage hospitals to ensure high quality of care. Another commenter applauded CMS' move toward a more transparent process for quality reporting. This commenter further asserted that making the publication of healthcare data more transparent will better educate both patients and providers, and lead to significant changes and improvement in the delivery system.

Response: We thank the commenters for their support.

Comment: One commenter did not support CMS' proposal to formalize current public display and reporting practices, and recommended CMS revise the preview timeframe from 30 to a minimum of 60 days to allow providers sufficient time to ensure information submitted is accurate.

Response: We believe 30 days is sufficient time for hospitals to preview their data in advance of the information being made public. We also note that the 30-day preview period practice is consistent with the preview period timeframe for publicly reporting program data with the Hospital IQR Program (77 FR 53505), the Hospital Readmissions Reduction Program (76 FR 51672 through 51673), the Hospital-Acquired Condition Reduction Program (78 FR 50727 through 50728), the PPS-Exempt Cancer Hospital Quality Reporting Program (77 FR 53562 through 53563), and the Inpatient Psychiatric Facility Quality Reporting Program (77 FR 53653 through 77 FR 53654). We also note that the ASCQR Program is finalizing a similar proposal in section XIV.B.7. of this final rule with comment period. We believe that this alignment across CMS quality programs will reduce burden on facilities (78 FR 50898). Furthermore, the complexity of measures and required calculations involve a significant amount of programming resources. Implementing a longer preview period would affect our ability to publish Hospital OQR Program data in a timely manner and result in substantial delays between hospital performance and the public reporting of measure data.

While we understand that a 60-day preview period would allow hospitals more time to review their Hospital OQR Program data prior to its publication, we believe 30 days provides an appropriate balance between sufficient time to review data and timely publication, providing patients with the most up to date information for use in making decisions about their care. Implementing a longer preview period would affect our ability to publish Hospital OQR Program data in a timely manner and likely result in longer delays between hospital performance and the public reporting of measure data because the complexity of these measures and the required calculations will involve a significant amount of programming resources.

After consideration of the public comments we received, we are finalizing, as proposed starting with the CY 2018 payment determination, our proposals to: (1) Publicly display data on the *Hospital Compare* Web site, or other CMS Web site, as soon as possible after measure data have been submitted to CMS; (2) provide hospitals with approximately 30 days to preview their data; and (3) announce the timeframes for the preview period on a CMS Web site and/or on our applicable listservs.

C. Administrative Requirements

1. QualityNet Account and Security Administrator

The QualityNet security administrator requirements, including setting up a QualityNet account and the associated timelines, are unchanged from those adopted in the CY 2014 OPPS/ASC final rule with comment period (78 FR 75108 through 75109). In that final rule with comment period, we codified these procedural requirements at 42 CFR 419.46(a). In the CY 2017 OPPS/ASC proposed rule (81 FR 45722), we did not propose any changes to these requirements.

2. Requirements Regarding Participation Status

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75108 through 75109) and the CY 2016 OPPS/ASC final rule with comment period (80 FR 70519) for requirements for participation and withdrawal from the Hospital OQR Program. We also codified procedural requirements at 42 CFR 419.46(b). In the CY 2017 OPPS/ASC proposed rule (81 FR 45722), we did not propose any changes to our requirements regarding participation status.

D. Form, Manner, and Timing of Data Submitted for the Hospital OQR Program

1. Hospital OQR Program Annual Payment Determinations

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75110 through 75111) and the CY 2016 OPPS/ASC final rule with comment period (80 FR 70519 through 70520), we specified our data submission deadlines. We also codified our submission requirements at 42 CFR 419.46(c).

We also refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70519 through 70520), where we finalized our proposal to shift the quarters upon which the Hospital OQR Program payment determinations are based. Those finalized deadlines for the CY 2017 payment determination and CY 2018 payment determination and subsequent years are illustrated in the tables below.

CY 2017 PAYMENT DETERMINATION (TRANSITION PERIOD)

Patient encounter quarter	Clinical data submission deadline
Q3 2015 (July 1–September 30)	2/1/2016
Q4 2015 (October 1–December 31)	5/1/2016
Q1 2016 (January 1–March 31)	8/1/2016

CY 2018 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

Patient encounter quarter	Clinical data submission deadline
Q2 2016 (April 1–June 30)	11/1/2016
Q3 2016 (July 1–September 30)	2/1/2017
Q4 2016 (October 1–December 31)	5/1/2017
Q1 2017 (January 1–March 31)	8/1/2017

In the CY 2017 OPPS/ASC proposed rule (81 FR 45722 through 45723), we did not propose any changes to these policies.

2. Requirements for Chart-Abstracted Measures Where Patient-Level Data Are Submitted Directly to CMS for the CY 2019 Payment Determination and Subsequent Years

The following previously finalized Hospital OQR Program chart-abstracted measures require patient-level data to be submitted for the CY 2019 payment determination and subsequent years:

- OP–1: Median Time to Fibrinolysis (NQF #0287);
- OP–2: Fibrinolytic Therapy Received Within 30 Minutes of ED Arrival (NQF #0288);
- OP–3: Median Time to Transfer to Another Facility for Acute Coronary Intervention (NQF #0290);
- OP–4: Aspirin at Arrival (NQF #0286);
- OP–5: Median Time to ECG (NQF #0289);
- OP–18: Median Time from ED Arrival to ED Departure for Discharged ED Patients (NQF #0496);
- OP–20: Door to Diagnostic Evaluation by a Qualified Medical Professional;
- OP–21: Median Time to Pain Management for Long Bone Fracture (NQF #0662); and
- OP–23: Head CT Scan Results for Acute Ischemic Stroke or Hemorrhagic Stroke Patients who Received Head CT Scan Interpretation Within 45 Minutes of ED Arrival (NQF #0661).

We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68481 through 68484) for a discussion of the form, manner, and timing for data submission requirements of these measures for the CY 2014 payment determination and subsequent years.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45723), we did not propose any changes to our policies regarding the submission of chart abstracted measure data where patient-level data are submitted directly to CMS.

3. Claims-Based Measure Data Requirements for the CY 2019 Payment Determination and Subsequent Years and CY 2020 Payment Determination and Subsequent Years

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75111 through 75112), for a discussion of the general claims-based measure data submission requirements for the CY 2015 payment determination and subsequent years. In the CY 2017 OPPS/ASC proposed rule (81 FR 45723), we did not propose any changes to these policies for the CY 2019 payment determination.

However, in sections XIII.B.5.a. and b. of this final rule with comment period, we are adopting two claims-based measures beginning with the CY 2020 payment determination: OP–35: Admissions and Emergency Department Visits for Patients Receiving Outpatient Chemotherapy; and OP–36: Hospital Visits after Hospital Outpatient Surgery. The previously adopted submission requirements also apply to these measures.

There will be a total of nine claims-based measures for the CY 2020 payment determination and subsequent years:

- OP–8: MRI Lumbar Spine for Low Back Pain (NQF #0514);
- OP–9: Mammography Follow-Up Rates;
- OP–10: Abdomen CT—Use of Contrast Material;
- OP–11: Thorax CT—Use of Contrast Material (NQF #0513);
- OP–13: Cardiac Imaging for Preoperative Risk Assessment for Non-Cardiac, Low Risk Surgery (NQF #0669);
- OP–14: Simultaneous Use of Brain Computed Tomography (CT) and Sinus Computed Tomography (CT);
- OP–32: Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy (NQF #2539);
- OP–35: Admissions and Emergency Department Visits for Patients Receiving Outpatient Chemotherapy; and
- OP–36: Hospital Visits after Hospital Outpatient Surgery (NQF #2687).

In the CY 2017 OPPS/ASC proposed rule (81 FR 45723), we did not propose any changes to our claims-based measures submission policies for the CY 2020 payment determination and subsequent years.

4. Data Submission Requirements for the OP–37a–e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-Based Measures for the CY 2020 Payment Determination and Subsequent Years

As discussed in section XIII.B.5.c. of this final rule with comment period, we are adopting five survey-based measures derived from the OAS CAHPS Survey for the CY 2020 payment determination and subsequent years—three OAS CAHPS composite survey-based measures and two global survey-based measures. In this section, we proposed requirements related to survey administration and vendors. We note that we are adopting similar policies in

the ASCQR Program in section XIV.D.5. of this final rule with comment period.

a. Survey Requirements

The survey has three administration methods: Mail-only; telephone-only; and mixed mode (mail with telephone follow-up of nonrespondents). We refer readers to the Protocols and Guidelines Manual for the OAS CAHPS Survey (*https://oascahps.org/Survey-Materials*) for materials for each mode of survey administration.

For all three modes of administration, we proposed that data collection must be initiated no later than 21 days after the month in which a patient has a surgery or procedure at a hospital, and completed within 6 weeks (42 days) after initial contact of eligible patients begins. We proposed that hospitals, via their CMS-approved vendors (discussed below), must make multiple attempts to contact eligible patients unless the patient refuses or the hospital/vendor learns that the patient is ineligible to participate in the survey. In addition, we proposed that hospitals, via their CMS-approved survey vendor, collect survey data for all eligible patients using the timeline established above and report that data to CMS by the quarterly deadlines established for each data collection period unless the hospital has been exempted from the OAS CAHPS Survey requirements under the low volume exemption discussed in section XIII.B.5.c.(6) of this final rule with comment period, above. These submission deadlines would be posted on the OAS CAHPS Survey Web site (*https://oascahps.org*). Late submissions would not be accepted.

As discussed in more detail below, compliance with the OAS CAHPS Survey protocols and guidelines, including this monthly reporting requirement, will be overseen by CMS or its contractor that will receive approved vendors' monthly submissions, review the data, and analyze the results. As stated previously, all data collection and submission for the OAS CAHPS Survey measures is done at the Medicare participating hospital level, as identified by its CCN. All locations, that offer outpatient services, of each eligible Medicare participating hospital would be required to participate in the OAS CAHPS Survey. Therefore, the survey data reported using a Medicare participating hospital's CCN must include all eligible patients from all outpatient locations (whether the hospital outpatient department is on campus or off campus) of eligible Medicare participating hospital. Survey vendors acting on behalf of hospitals must submit data by the specified data submission deadlines. If a hospital's data are submitted after the data submission deadline, it will not fulfill the OAS CAHPS quality reporting requirements. We therefore strongly encourage hospitals to be fully appraised of the methods and actions of their survey vendors—especially the vendors' full compliance with OAS CAHPS Survey administration protocols—and to carefully inspect all data warehouse reports in a timely manner.

We note that the use of predictive or auto dialers in telephonic survey administration is governed by the Telephone Consumer Protection Act (TCPA) (47 U.S.C. 227) and subsequent regulations promulgated by the Federal Communications Commission (FCC) (47 CFR 64.1200) and Federal Trade Commission. We refer readers to the FCC's declaratory ruling released on July 10, 2015 further clarifying the definition of an auto dialer, available at: *https://apps.fcc.gov/edocs_public/attachmatch/FCC-15-72A1.pdf*. In the telephone-only and mixed mode survey administration methods, HOPDs and vendors must comply with the regulations discussed above, and any other applicable regulations. To the extent that any existing CMS technical guidance conflicts with the TCPA or its implementing regulations regarding the use of predictive or auto dialers, or any other applicable law, CMS expects vendors to comply with applicable law.

b. Vendor Requirements

To ensure that patients respond to the survey in a way that reflects their actual experiences with outpatient surgical care, and is not influenced by the hospital, we proposed that hospitals must contract with a CMS-approved OAS CAHPS Survey vendor to conduct or administer the survey. We believe that a neutral third-party should administer the survey for hospitals, and it is our belief that an experienced survey vendor will be best able to ensure reliable results. CAHPS survey approved vendors are also already used or required in the following CMS quality programs: the Hospital IQR Program (71 FR 68203 through 68204); the Hospital VBP Program (76 FR 26497, 26502 through 26503, and 26510); the ESRD QIP (76 FR 70269 through 70270); the HH QRP (80 FR 68709 through 68710); and the HQRP (80 FR 47141 through 47207).

Information about the list of approved survey vendors and how to authorize a vendor to collect data on a hospital's behalf is available through the OAS CAHPS Survey Web site at: *https://oascahps.org*. The Web portal has both public and secure (restricted access) sections to ensure the security and privacy of selected interactions. Hospitals will need to register on the OAS CAHPS Survey Web site (*https://oascahps.org*) in order to authorize the CMS-approved vendor to administer the survey and submit data on their behalf. Each hospital must then administer (via its vendor) the survey to all eligible patients treated during the data collection period on a monthly basis according to the guidelines in the Protocols and Guidelines Manual (*https://oascahps.org*) and report the survey data to CMS on a quarterly basis by the deadlines posted on the OAS CAHPS Survey Web site as stated above.

Moreover, we proposed to codify these OAS CAHPS Survey administration requirements for hospitals and survey vendors under the Hospital OQR Program at 42 CFR 419.46(g).

As stated previously, we encourage hospitals to participate in voluntary national implementation of the OAS CAHPS Survey that began in January 2016. This will provide hospitals the opportunity to gain first-hand experience collecting and transmitting OAS CAHPS data without the public reporting of results or Hospital OQR Program payment implications. For additional information, we refer readers to: *https://oascahps.org/General-Information/National-Implementation*.

We invited public comments on our proposals for the data submission requirements for the five proposed OAS CAHPS Survey measures for the CY 2020 payment determination and subsequent years as discussed above.

Comment: Many commenters recommended that CMS include an electronic method of administration, such as portal messages and/or email, for the OAS CAHPS Survey because electronic methods of survey administration would be more cost-effective for hospitals and more convenient for patients than administration via phone or standard mail. One commenter noted that electronic survey administration has allowed many hospitals to achieve significant cost savings in the administration of patient surveys, and asserted electronic administration may increase patient response rates. Some commenters expressed concerns that CMS has not explored and tested alternative data collection methods that may significantly decrease providers' cost in administering the survey and enhance patient participation. The commenters expressed concerns that CMS has not tested the OAS CAHPS

Survey in an online format as an alternative mode of administration of the survey.

Response: While email and Web-based survey administration modes are not available at this time, we are actively investigating these modes as possible new options for the future. This ongoing investigation includes, among other things, determining whether hospitals receive reliable email addresses from patients, whether there is adequate access to the Internet across all types of patients, and whether implementing a Web-based survey administration method would introduce bias into the survey administration process. However, we note that a previous study [147] investigating the suitability of speech-enabled interactive voice response (SE–IVR) and Web modes for publicly reported surveys of patients' experience of hospital care found lower response rates for mixed-mode administrations including a Web-based option than for mail-only and SE–IVR administrations. Portal messaging, like systems that are sometimes used to address patient questions, would require a Web portal that patients can access. If this were housed at the facility, patient confidentiality could potentially be an issue. Furthermore, as currently specified, the OAS CAHPS Survey requires that the survey be administered by an approved survey vendor. This is to ensure that patients respond to the survey in a way that reflects their actual experiences with outpatient surgical care, and is not influenced by the hospital. Removing vendors, neutral third parties, could raise issues of objectivity and bias. However, as stated above, we are actively investigating new modes of conducting this survey as possible options for the future. We believe that the data collected by this measure is so significant and important that collecting data and publicly reporting it sooner rather than later outweighs waiting for a Web-based survey administration method to be developed, tested, and implemented nationwide.

After consideration of the public comments we received, we are finalizing our proposals for the data submission requirements for the five OAS CAHPS Survey measures we are finalizing for the CY 2020 payment determination and subsequent years as proposed.

[147] Elliot, MN, Brown JA, Lehrman WG, Beckett MK, Hambarsoomian K, Giordano LA, Goldstein EH. A randomized experiment investigating the suitability of speech-enabled IVR and Web modes for publicly reported surveys of patients' experience of hospital care. Med Care Res Rev, 2013 April;70(2): 165–84.

5. Data Submission Requirements for Previously Finalized Measures for Data Submitted via a Web-Based Tool for the CY 2019 Payment Determination and Subsequent Years

The following Web-based quality measures previously finalized and retained in the Hospital OQR Program require data to be submitted via a Web-based tool (CMS' QualityNet Web site or CDC's NHSN Web site) for the CY 2018 payment determination and subsequent years:

- OP–12: The Ability for Providers with HIT to Receive Laboratory Data Electronically Directly into their ONC-Certified EHR System as Discrete Searchable Data (via CMS' QualityNet Web site);
- OP–17: Tracking Clinical Results between Visits (NQF #0491) (via CMS' QualityNet Web site);
- OP–22: Left Without Being Seen (NQF #0499) (via CMS' QualityNet Web site);
- OP–25: Safe Surgery Checklist Use (via CMS' QualityNet Web site);
- OP–26: Hospital Outpatient Volume on Selected Outpatient Surgical Procedures (via CMS' QualityNet Web site);
- OP–27: Influenza Vaccination Coverage among Healthcare Personnel (via the CDC NHSN Web site) (NQF #0431);
- OP–29: Appropriate Follow-up Interval for Normal Colonoscopy in Average Risk Patients (NQF #0658) (via CMS' QualityNet Web site);
- OP–30: Colonoscopy Interval for Patients with a History of Adenomatous Polyps—Avoidance of Inappropriate Use (NQF #0659) (via CMS' QualityNet Web site);
- OP–31: Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery (NQF #1536) (via CMS' QualityNet Web site); and
- OP–33: External Beam Radiotherapy (EBRT) for Bone Metastases (NQF #1822) (via CMS' QualityNet Web site).

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75112 through 75115) and the CY 2016 OPPS/ASC final rule with comment period (80 FR 70521) and the CMS QualityNet Web site (*https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier2&cid=1205442125082*) for a discussion of the requirements for measure data submitted via the CMS QualityNet Web site for the CY 2017 payment determination and subsequent years. In addition, we refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75097 through 75100) for a discussion of the requirements for measure data (specifically, the Influenza Vaccination Coverage Among Healthcare Personnel measure (NQF #0431)) submitted via the CDC NHSN Web site.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45724 through 45725), we did not propose any changes to our policies regarding the submission of measure data submitted via a Web-based tool.

6. Population and Sampling Data Requirements for the CY 2019 Payment Determination and Subsequent Years

We refer readers to the CY 2011 OPPS/ASC final rule with comment period (75 FR 72100 through 72103) and the CY 2012 OPPS/ASC final rule with comment period (76 FR 74482 through 74483) for discussions of our policy that hospitals may voluntarily submit aggregate population and sample size counts for Medicare and non-Medicare encounters for the measure populations for which chart-abstracted data must be submitted.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45725), we did not propose any changes to our population and sampling requirements.

7. Hospital OQR Program Validation Requirements for Chart-Abstracted Measure Data Submitted Directly to CMS for the CY 2019 Payment Determination and Subsequent Years

We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68484 through 68487) and the CY 2015 OPPS/ASC final rule with comment period (79 FR 66964 through 66965) for a discussion of finalized policies regarding our validation requirements. We also refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68486 through 68487), for a discussion of finalized policies regarding our medical record validation procedure requirements. We codified these policies at 42 CFR 419.46(e). For the CY 2018 payment determination and subsequent years, validation is based on four quarters of data ((validation quarter 1 (January 1–March 31), validation quarter 2 (April 1–June 30), validation quarter 3 (July 1–September 30), and validation quarter 4 (October 1–December 31)) (80 FR 70524).

In the CY 2017 OPPS/ASC proposed rule (81 FR 45725), we did not propose any changes to our validation requirements.

8. Extension or Exemption Process for the CY 2019 Payment Determination and Subsequent Years

We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68489), the CY 2014 OPPS/ASC final rule with comment period (78 FR 75119 through 75120), the CY 2015 OPPS/ASC final rule with comment period (79 FR 66966), the CY 2016 OPPS/ASC final rule with comment period (80 FR 70524), and 42 CFR 419.46(d) for a complete discussion of our extraordinary circumstances extension or exception process under the Hospital OQR Program.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45725), we proposed to update our extraordinary circumstances exemption (ECE) policy to extend the ECE request deadline for both chart-abstracted and Web-based measures from 45 days following an event causing hardship to 90 days following an event causing hardship. This proposal would become effective with ECEs requested on or after January 1, 2017. In the past, we have allowed hospitals to submit an ECE request form for measures within 45 days following an event that causes hardship and prevents them from providing data for measures (76 FR 74478 through 74479). In certain circumstances, however, it may be difficult for hospitals to timely evaluate the impact of certain extraordinary events within 45 days. We believe that extending the deadline to 90 days would allow hospitals more time to determine whether it is necessary and appropriate to submit an ECE request and to provide a more comprehensive account of the extraordinary circumstance in their ECE request form to CMS. For example, if a hospital has suffered damage due to a hurricane on January 1, it would have until March 31 to submit an ECE form via the QualityNet Secure Portal, mail, email, or secure fax as instructed on the ECE form.

This timeframe (90 calendar days) also aligns with the ECE request deadlines for the Hospital VBP Program (78 FR 50706), the Hospital-Acquired Condition Reduction Program (80 FR 49580), and the Hospital Readmissions Reduction Program (80 FR 49542 through 49543). We note that in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57181 through 81 FR 57182; 81 FR 57230 through 57231), we finalized a deadline of 90 days following an event causing hardship for the Hospital IQR Program (in non-eCQM circumstances) and for the LTCH QRP Program. In section XIV.D.6. of this final rule with comment period, we also are also finalizing a deadline of 90 days following an event causing hardship for the ASCQR Program.

We invited public comments on our proposal to extend the submission deadline for an extraordinary circumstances extension or exemption to within 90 days of the date that the extraordinary circumstance occurred, effective January 1, 2017, for the CY 2019 payment determination and subsequent years, as discussed above.

Comment: Commenters supported CMS' proposal to change the extraordinary circumstances extension request deadline from 45 days to 90 days following an event causing hardship. The commenters asserted that extending the deadline for filing from 45 to 90 days will allow facilities to respond to the event and ensure patient safety before submitting the request for an extension or exemption.

Response: We thank the commenters for their support.

After consideration of the public comments received, we are finalizing our proposal to extend the submission deadline for requests for an extraordinary circumstances extension or exemption to within 90 days of the date that the extraordinary circumstance occurred, effective January 1, 2017, for the CY 2019 payment determination and subsequent years, as proposed.

9. Hospital OQR Program Reconsideration and Appeals Procedures for the CY 2019 Payment Determination and Subsequent Years—Clarification

We are making one clarification to our reconsideration and appeals procedures. We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68487 through 68489), the CY 2014 OPPS/ASC final rule with comment period (78 FR 75118 through 75119), and the CY 2016 OPPS/ASC final rule with comment period (80 FR 70524) for a discussion of our reconsideration and appeals procedures. Currently, a hospital must submit a reconsideration request to CMS via the QualityNet Web site no later than the first business day of the month of February of the affected payment year (78 FR 75118 through 75119). A hospital that is dissatisfied with a decision made by CMS on its reconsideration request may file an appeal with the Provider Reimbursement Review Board (78 FR 75118 through 75119). Beginning with the CY 2018 payment determination, however, hospitals must submit a reconsideration request to CMS via the QualityNet Web site by no later than the first business day on or after March 17 of the affected payment year (80 FR 70524). We codified the process by which participating hospitals may submit requests for reconsideration at 42 CFR 419.46(f). We also codified language at § 419.46(f)(3) regarding appeals with the Provider Reimbursement Review Board.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45725), we clarified our policy regarding appeals procedures. Specifically, if a hospital fails to submit a timely reconsideration request to CMS via the QualityNet Web site by the applicable deadline, then the hospital will not subsequently be eligible to file an appeal with the Provider Reimbursement Review Board. This clarification will be effective January 1, 2017 for the CY 2017 payment determination and subsequent years.

We did not receive any public comments on our clarification to our reconsideration and appeals procedures. In summary, for the CY 2017 payment determination and subsequent years, we clarify that if a hospital fails to submit a timely reconsideration request to CMS via the QualityNet Web site by the applicable deadline, then the hospital will not subsequently be eligible to file an appeal with the Provider Reimbursement Review Board.

E. Payment Reduction for Hospitals That Fail To Meet the Hospital OQR Program Requirements for the CY 2017 Payment Determination

1. Background

Section 1833(t)(17) of the Act, which applies to subsection (d) hospitals (as defined under section 1886(d)(1)(B) of the Act), states that hospitals that fail to report data required to be submitted on the measures selected by the Secretary, in the form and manner, and at a time, specified by the Secretary will incur a 2.0 percentage point reduction to their Outpatient Department (OPD) fee schedule increase factor; that is, the annual payment update factor. Section 1833(t)(17)(A)(ii) of the Act specifies that any reduction applies only to the payment year involved and will not be taken into account in computing the applicable OPD fee schedule increase factor for a subsequent payment year.

The application of a reduced OPD fee schedule increase factor results in reduced national unadjusted payment rates that apply to certain outpatient items and services provided by hospitals that are required to report outpatient quality data in order to receive the full payment update factor and that fail to meet the Hospital OQR Program requirements. Hospitals that meet the reporting requirements receive the full OPPS payment update without

the reduction. For a more detailed discussion of how this payment reduction was initially implemented, we refer readers to the CY 2009 OPPS/ASC final rule with comment period (73 FR 68769 through 68772).

The national unadjusted payment rates for many services paid under the OPPS equal the product of the OPPS conversion factor and the scaled relative payment weight for the APC to which the service is assigned. The OPPS conversion factor, which is updated annually by the OPD fee schedule increase factor, is used to calculate the OPPS payment rate for services with the following status indicators (listed in Addendum B to the proposed rule, which is available via the Internet on the CMS Web site): ''J1,'' ''J2,'' ''P,'' ''Q1,'' ''Q2,'' ''Q3,'' ''R,'' ''S,'' ''T,'' ''V,'' or ''U.'' Payment for all services assigned to these status indicators will be subject to the reduction of the national unadjusted payment rates for hospitals that fail to meet Hospital OQR Program requirements, with the exception of services assigned to New Technology APCs with assigned status indicator ''S'' or ''T.'' We refer readers to the CY 2009 OPPS/ASC final rule with comment period (73 FR 68770 through 68771) for a discussion of this policy.

The OPD fee schedule increase factor is an input into the OPPS conversion factor, which is used to calculate OPPS payment rates. To reduce the OPD fee schedule increase factor for hospitals that fail to meet reporting requirements, we calculate two conversion factors—a full market basket conversion factor (that is, the full conversion factor), and a reduced market basket conversion factor (that is, the reduced conversion factor). We then calculate a reduction ratio by dividing the reduced conversion factor by the full conversion factor. We refer to this reduction ratio as the ''reporting ratio'' to indicate that it applies to payment for hospitals that fail to meet their reporting requirements.

Applying this reporting ratio to the OPPS payment amounts results in reduced national unadjusted payment rates that are mathematically equivalent to the reduced national unadjusted payment rates that would result if we multiplied the scaled OPPS relative payment weights by the reduced conversion factor. For example, to determine the reduced national unadjusted payment rates that applied to hospitals that failed to meet their quality reporting requirements for the CY 2010 OPPS, we multiplied the final full national unadjusted payment rate found in Addendum B of the CY 2010 OPPS/ASC final rule with comment period by the CY 2010 OPPS final reporting ratio of 0.980 (74 FR 60642).

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68771 through 68772), we established a policy that the Medicare beneficiary's minimum unadjusted copayment and national unadjusted copayment for a service to which a reduced national unadjusted payment rate applies would each equal the product of the reporting ratio and the national unadjusted copayment or the minimum unadjusted copayment, as applicable, for the service. Under this policy, we apply the reporting ratio to both the minimum unadjusted copayment and national unadjusted copayment for services provided by hospitals that receive the payment reduction for failure to meet the Hospital OQR Program reporting requirements. This application of the reporting ratio to the national unadjusted and minimum unadjusted copayments is calculated according to § 419.41 of our regulations, prior to any adjustment for a hospital's failure to meet the quality reporting standards according to § 419.43(h). Beneficiaries and secondary payers thereby share in the reduction of payments to these hospitals.

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68772), we established the policy that all other applicable adjustments to the OPPS national unadjusted payment rates apply when the OPD fee schedule increase factor is reduced for hospitals that fail to meet the requirements of the Hospital OQR Program. For example, the following standard adjustments apply to the reduced national unadjusted payment rates: The wage index adjustment; the multiple procedure adjustment; the interrupted procedure adjustment; the rural sole community hospital adjustment; and the adjustment for devices furnished with full or partial credit or without cost. Similarly, OPPS outlier payments made for high cost and complex procedures will continue to be made when outlier criteria are met. For hospitals that fail to meet the quality data reporting requirements, the hospitals' costs are compared to the reduced payments for purposes of outlier eligibility and payment calculation. We established this policy in the OPPS beginning in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60642). For a complete discussion of the OPPS outlier calculation and eligibility criteria, we refer readers to section II.G. of this final rule with comment period.

2. Reporting Ratio Application and Associated Adjustment Policy for CY 2017

In the CY 2017 OPPS/ASC proposed rule (81 FR 45726 through 45727), we proposed to continue our established policy of applying the reduction of the OPD fee schedule increase factor through the use of a reporting ratio for those hospitals that fail to meet the Hospital OQR Program requirements for the full CY 2017 annual payment update factor. For the CY 2017 OPPS, the proposed reporting ratio is 0.980, calculated by dividing the proposed reduced conversion factor of 73.411 by the proposed full conversion factor of 74.909. We proposed to continue to apply the reporting ratio to all services calculated using the OPPS conversion factor. For the CY 2017 OPPS, we proposed to apply the reporting ratio, when applicable, to all HCPCS codes to which we have proposed status indicator assignments of ''J1,'' ''J2,'' ''P,'' ''Q1,'' ''Q2,'' ''Q3,'' ''Q4,'' ''R,'' ''S,'' ''T,'' ''V,'' and ''U'' (other than new technology APCs to which we have proposed status indicator assignment of ''S'' and ''T''). We proposed to continue to exclude services paid under New Technology APCs. We proposed to continue to apply the reporting ratio to the national unadjusted payment rates and the minimum unadjusted and national unadjusted copayment rates of all applicable services for those hospitals that fail to meet the Hospital OQR Program reporting requirements. We also proposed to continue to apply all other applicable standard adjustments to the OPPS national unadjusted payment rates for hospitals that fail to meet the requirements of the Hospital OQR Program. Similarly, we proposed to continue to calculate OPPS outlier eligibility and outlier payment based on the reduced payment rates for those hospitals that fail to meet the reporting requirements.

We invited public comments on these proposals. We did not receive any public comments on these proposals. In this final rule with comment period, we are clarifying that the reporting ratio does not apply to codes with status indicator ''Q4'' because services and procedures coded with status indicator ''Q4'' are either packaged or paid through the Clinical Laboratory Fee Schedule and are never paid through the OPPS. Otherwise, we are finalizing application of the reporting ratio as proposed. For the CY 2017 OPPS, the final reporting ratio is 0.980, calculated by dividing the final reduced conversion factor of $75.001 by the final full conversion factor of $73.501.

XIV. Requirements for the Ambulatory Surgical Center Quality Reporting (ASCQR) Program

A. Background

1. Overview

We refer readers to section XIII.A.1. of this final rule with comment period for a general overview of our quality reporting programs.

2. Statutory History of the ASCQR Program

We refer readers to section XIV.K.1. of the CY 2012 OPPS/ASC final rule with comment period (76 FR 74492 through 74494) for a detailed discussion of the statutory history of the ASCQR Program.

3. Regulatory History of the ASCQR Program

We refer readers to section XV.A.3. of the CY 2014 OPPS/ASC final rule with comment period (78 FR 75122), section XIV.4. of the CY 2015 OPPS/ASC final rule with comment period (79 FR 66966 through 66987), and section XIV. of the CY 2016 OPPS/ASC final rule with comment period (80 FR 70526 through 70537) for an overview of the regulatory history of the ASCQR Program.

B. ASCQR Program Quality Measures

1. Considerations in the Selection of ASCQR Program Quality Measures

We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68493 through 68494) for a detailed discussion of the priorities we consider for ASCQR Program quality measure selection. In the CY 2017 OPPS/ASC proposed rule (81 FR 45727), we did not propose any changes to this policy.

2. Policies for Retention and Removal of Quality Measures From the ASCQR Program

We previously adopted a policy that quality measures adopted for an ASCQR Program measure set for a previous payment determination year be retained in the ASCQR Program for measure sets for subsequent payment determination years, except when they are removed, suspended, or replaced as indicated (76 FR 74494 and 74504; 77 FR 68494 through 68495; 78 FR 75122; 79 FR 66967 through 66969). In the CY 2017 OPPS/ASC proposed rule (81 FR 45727), we did not propose any changes to this policy.

We refer readers to the CY 2015 OPPS/ASC final rule with comment period (79 FR 66967 through 66969) and 42 CFR 416.320 for a detailed discussion of the process for removing adopted measures from the ASCQR Program. In the CY 2017 OPPS/ASC proposed rule (81 FR 45727), we did not propose any changes to this process.

3. ASCQR Program Quality Measures Adopted in Previous Rulemaking

In the CY 2012 OPPS/ASC final rule with comment period (76 FR 74492 through 74517), we implemented the ASCQR Program effective with the CY 2014 payment determination. In the CY 2012 OPPS/ASC final rule with comment period (76 FR 74496 through 74511), we adopted five claims-based measures for the CY 2014 payment determination and subsequent years, two measures with data submission directly to CMS via an online data submission tool for the CY 2015 payment determination and subsequent years, and one process of care, preventive service measure submitted via an online data submission tool to CDC's National Health Safety Network (NHSN) for the CY 2017 payment determination and subsequent years. In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75124 through 75130), we adopted three chart-abstracted measures with data submission to CMS via an online data submission tool for the CY 2017 payment determination and subsequent years. In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66984 through 66985), we excluded one of these measures, ASC–11: Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery (NQF #1536), from the CY 2017 payment determination measure set and allowed for voluntary data collection and reporting for the CY 2017 payment determination and subsequent years. In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66970 through 66979), we adopted one additional claims-based measure for the CY 2018 payment determination and subsequent years. In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70526 through 70537), we did not adopt any additional measures for the CY 2019 payment determination and subsequent years.

The previously finalized measure set for the ASCQR Program for the CY 2019 payment determination and subsequent years is listed below.

ASCQR Program Measure Set Previously Finalized for the CY 2019 Payment Determination and Subsequent Years

ASC No.	NQF No.	Measure name
ASC–1	0263	Patient Burn.
ASC–2	0266	Patient Fall.
ASC–3	0267	Wrong Site, Wrong Side, Wrong Patient, Wrong Procedure, Wrong Implant.
ASC–4	†0265	All-Cause Hospital Transfer/Admission.
ASC–5	†0264	Prophylactic Intravenous (IV) Antibiotic Timing.
ASC–6	N/A	Safe Surgery Checklist Use.
ASC–7	N/A	ASC Facility Volume Data on Selected ASC Surgical Procedures.*
ASC–8	0431	Influenza Vaccination Coverage Among Healthcare Personnel.
ASC–9	0658	Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients.
ASC–10	0659	Endoscopy/Polyp Surveillance: Colonoscopy Interval for Patients with a History of Adenomatous Polyps—Avoidance of Inappropriate Use.
ASC–11	1536	Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery.**
ASC–12	2539	Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy.

† We note that NQF endorsement for this measure was removed.

* Procedure categories and corresponding HCPCS codes are located at: *http://qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier2&cid=1228772475754*.

** Measure voluntarily collected effective beginning with the CY 2017 payment determination as set forth in section XIV.E.3.c. of the CY 2015 OPPS/ASC final rule with comment period (79 FR 66984 through 66985).

4. ASCQR Program Quality Measures for the CY 2020 Payment Determination and Subsequent Years

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75124) for a detailed discussion of our approach to measure selection for the ASCQR Program. In the CY 2017 OPPS/ASC proposed rule (81 FR 45728 through 45734), we proposed to adopt a total of seven measures for the CY 2020 payment determination and subsequent years: Two measures collected via a CMS online data submission tool and five Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-based measures. The two measures that require data to be submitted directly to CMS via an online data submission tool are: (1) ASC–13: Normothermia Outcome; and (2) ASC–14: Unplanned Anterior Vitrectomy. The five proposed survey-based measures (ASC–15a–e) are collected via the OAS CAHPS Survey. These measures are discussed in detail below.

a. ASC–13: Normothermia Outcome

(1) Background

Impairment of thermoregulatory control due to anesthesia may result in perioperative hypothermia. Perioperative hypothermia is associated with numerous adverse outcomes, including: Cardiac complications; [148] surgical site infections; [149] impaired coagulation; [150] and colligation of drug effects; [151] as well as post-anesthetic shivering and thermal discomfort. When intraoperative normothermia is maintained, patients experience fewer adverse outcomes and their overall care costs are lower.[152] Several methods to maintain normothermia are available. While there is no literature currently available on variation in rates of normothermia among ASC facilities, variability in maintaining normothermia has been demonstrated in other clinical care settings.[153] This measure provides the opportunity for ASCs to improve quality of care and lower the rates of anesthesia-related complications in the ASC setting.

(2) Overview of Measure

We believe it is important to monitor the rate of anesthesia-related complications in the ASC setting because many surgical procedures performed at ASCs involve anesthesia. Therefore, we proposed to adopt the ASC–13: Normothermia Outcome measure, which is based on aggregate measure data collected by the ASC and submitted via a CMS online data submission tool (QualityNet), in the ASCQR Program for the CY 2020 payment determination and subsequent years. We expect the measure will promote improvement in patient care over time, because measurement coupled with transparency in publicly reporting of measure information would make patient outcomes following procedures performed under general or neuraxial anesthesia more visible to ASCs and patients and incentivize ASCs to incorporate quality improvement activities to reduce perioperative hypothermia and associated complications where necessary.

Section 1890A of the Act requires the Secretary to establish a prerulemaking process with respect to the selection of certain categories of quality and efficiency measures. Under section 1890A(a)(2) of the Act, the Secretary must make available to the public by December 1 of each year a list of quality and efficiency measures that the Secretary is considering for the Medicare program. The proposed ASC–13 measure was included on a publicly available document entitled ''List of Measures under Consideration for December 1, 2014.'' [154] The MAP reviewed the measure (MUC ID: X3719) and conditionally supported it for the ASCQR Program, pending completion of reliability testing and NQF review and endorsement.[155] The MAP agreed that this measure is highly impactful and meaningful to patients. It stated that anesthetic-induced thermoregulatory impairment may cause perioperative hypothermia, which is associated with adverse outcomes including significant morbidity (decrease in tissue metabolic rate, myocardial ischemia, surgical site infections, bleeding diatheses, prolongation of drug effects) and mortality. As an intermediate outcome measure, the workgroup agreed that this measure moves towards an outcome measure that fills the workgroup identified gap of anesthesia-related complications.[156]

Furthermore, sections 1833(i)(7)(B) and 1833(t)(17)(C)(i) of the Act, when read together, require the Secretary, except as the Secretary may otherwise provide, to develop measures appropriate for the measurement of the quality of care furnished by ASCs that reflect consensus among affected parties and, to the extent feasible and practicable, that include measures set forth by one or more national consensus building entities. However, we note that section 1833(i)(7)(B) of the Act does not require that each measure we adopt for the ASCQR Program be endorsed by a national consensus building entity, or by the NQF specifically. Further, under section 1833(i)(7)(B) of the Act, section 1833(t)(17)(C)(i) of the Act applies to the ASCQR Program, except as the Secretary may otherwise provide. Under this provision, the Secretary has further authority to adopt non-endorsed measures. As stated in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74465 and 74505), we believe that consensus among affected parties can be reflected through means other than NQF endorsement, including consensus achieved during the measure development process, consensus shown through broad acceptance and use of measures, and consensus through public comment. We believe this proposed measure meets these statutory requirements.

The proposed ASC–13 measure is not NQF-endorsed. However, this measure is maintained by the ASC Quality Collaboration,[157] an entity recognized within the community as an expert in measure development for the ASC setting. We believe that this measure is appropriate for the measurement of quality care furnished by ASCs, because procedures using anesthesia are commonly performed in ASCs and, as discussed above, maintenance of

[148] Frank SM, Fleisher LA, Breslow MJ, et al. Perioperative maintenance of normothermia reduces the incidence of morbid cardiac events: A randomized clinical trial. *JAMA.* 1997;277(14): 1127–1134.

perioperative normothermia can signify important issues in the care being provided by ASCs. While the Normothermia Outcome measure is not NQF-endorsed, we believe this measure reflects consensus among affected parties, because the MAP, which represents stakeholder groups, reviewed and conditionally supported the measure for use in the ASCQR Program. The MAP agreed that this measure ''is highly impactful and meaningful to patients'' and that, as an intermediate outcome measure, the Normothermia Outcome measure moves towards an outcome measure that fills the workgroup-identified gap of anesthesia-related complications. Moreover, we believe this measure is reliable because reliability testing completed by the measure steward comparing ASC-reported normothermia rates and re-abstracted normothermia rates found the difference from originally submitted and re-abstracted normothermia rates ranged from −1.6 percent to 0.9 percent, with a 95 percent confidence interval of −0.9 percent, 0.5 percent. Because this confidence interval includes zero, there is no evidence that the submitted and abstracted rates are statistically different at the $p = 0.05$ level. Therefore, we believe there is strong evidence that the Normothermia Outcome measure is reliable.

(3) Data Sources

This measure is based on aggregate measure data collected via chart-abstraction by the ASC and submitted via a CMS online data submission tool (that is, QualityNet).

We proposed that the data collection period for the proposed ASC–13 measure would be the calendar year 2 years prior to the applicable payment determination year. For example, for the CY 2020 payment determination, the data collection period would be CY 2018. We also proposed that ASCs submit these data to CMS during the time period of January 1 to May 15 in the year prior to the affected payment determination year. For example, for the CY 2020 payment determination, the submission period would be January 1, 2019 to May 15, 2019. We refer readers to section XIV.D.3.b. of this final rule with comment period for a more detailed discussion of the requirements for data submitted via a CMS online data submission tool.

(4) Measure Calculation

The outcome measured in the proposed ASC–13 measure is the percentage of patients having surgical procedures under general or neuraxial anesthesia of 60 minutes or more in duration who are normothermic within 15 minutes of arrival in the post-anesthesia care unit (PACU). The numerator is the number of surgery patients with a body temperature equal to or greater than 96.8 degrees Fahrenheit/36 degrees Celsius recorded within 15 minutes of arrival in the PACU. The denominator is all patients, regardless of age, undergoing surgical procedures under general or neuraxial anesthesia of greater than or equal to 60 minutes in duration.

(5) Cohort

The measure includes all patients, regardless of age, undergoing surgical procedures under general or neuraxial anesthesia of greater than or equal to 60 minutes' duration.

The measure excludes: Patients who did not have general or neuraxial anesthesia; patients whose length of anesthesia was less than 60 minutes; and patients with physician/advanced practice nurse/physician assistant documentation of intentional hypothermia for the procedure performed. Additional methodology and measure development details are available at: *http://www.ascquality.org/qualitymeasures.cfm* under ''ASC Quality Collaboration Measures Implementation Guide.''

(6) Risk Adjustment

The measure is not risk-adjusted.

We invited public comments on our proposal to adopt the ASC–13: Normothermia Outcome measure for the CY 2020 payment determination and subsequent years as discussed above.

Comment: Many commenters supported adoption of the proposed ASC–13 measure because impairment of thermoregulatory control due to anesthesia may result in perioperative hypothermia, which has been associated with numerous adverse outcomes, and commenters believe this measure would promote improvement in patient care outcomes. Some commenters supported adoption of the proposed ASC–13 measure because the commenters believe this measure will promote improvement in patient care over time, and incentivize ASCs to engage in more quality improvement activities through public reporting of measure performance data.

Response: We thank commenters for their support.

Comment: A number of commenters did not support adoption of the proposed ASC–13 measure because they believe there is a lack of evidence of a performance gap in this area for ASCs.

Response: While we acknowledge there is currently a lack of evidence regarding a performance gap in normothermia outcomes, we believe the serious adverse outcomes associated with perioperative hypothermia, coupled with the frequency of procedures using anesthesia being performed in ASCs, warrant proactive monitoring of normothermia outcomes in the ASC setting. In addition, we note that some evidence suggests variability in normothermia maintenance in other clinical settings.[158] We also believe the resulting publicly reported data on normothermia outcomes will help inform patient decision-making, and incentivize ASCs to engage in quality improvement efforts.

Comment: A few commenters did not support adoption of the proposed ASC–13 measure because the measure is chart-abstracted and because the measure is not NQF-endorsed.

Response: In selecting measures for the ASCQR Program, we weigh the relevance and utility of measures against the potential burden to ASCs resulting from the measure's adoption. While we understand the commenters' concerns regarding the burden of chart-abstracting measures, we believe the benefits of including it in the ASCQR Program and publicly reporting normothermia outcome data for use in patient decision-making and incentivizing ASCs to engage in quality improvement efforts to reduce rates of perioperative hypothermia outweigh the burden associated with collecting aggregate data on patients treated at an ASC.

In addition, as we discuss above, section 1833(t)(17)(C)(i) of the Act does not require that each measure we adopt for the ASCQR Program be endorsed by a national consensus building entity, or the NQF specifically. Further, under section 1833(i)(7)(B) of the Act, section 1833(t)(17)(C)(i) of the Act applies to the ASCQR Program, except as the Secretary may otherwise provide. Under this provision, the Secretary has further authority to adopt non-endorsed measures. While we strive to adopt NQF-endorsed measures when possible, we believe the requirement that measures reflect consensus among affected parties can be achieved in other ways, including through the measure development process, through broad acceptance and use of the measure, and through public comments. As noted in the CY 2017 OPPS/ASC proposed rule (81 FR 45728), ASC–13 is maintained by

[158] Frank SM, Beattie C, Christopherson R, et al. Unintentional Hypothermia is associated with Postoperative Myocardial Ischemia: The Perioperative Ischemia Randomized Anesthesia Trial Study Group. Anesthesiology 1993;78(3):468–476.

the ASC Quality Collaboration, an entity recognized within the community as an expert in measure development for the ASC setting. In addition, this measure is already publicly reported as part of the ASC Quality Collaboration's quarterly Quality Report. Furthermore, the MAP, which represents stakeholder groups, reviewed and conditionally supported the measure for use in the ASCQR Program. Therefore, we believe the measure reflects consensus among affected parties.

Comment: One commenter asserted that, because the proposed ASC–13 measure only tracks post-operative temperature and not perioperative temperature, it is an inappropriate or imprecise quality measure, and therefore, should not be included in the ASCQR Program measure set.

Response: We disagree with the commenter's assertion that only tracking patient temperature immediately following anesthesia end time results in an imprecise or inappropriate quality measure. The field testing conducted for the ASC–13 measure found that, under its current specifications, the measure is able to distinguish levels of performance across facilities, thereby demonstrating its precision as a quality measure. We therefore believe the measure as currently specified is appropriate for use in the ASCQR Program, because we believe it will incentivize ASCs to engage in quality improvement efforts around patients' return to normothermia. One of the central goals of the ASCQR Program is to drive improvement in the quality of care provide in the ASC setting, and we, therefore, believe the measure's focus on return to normothermia within 15 minutes of arrival in the PACU is appropriate for assessing ASC performance on this measure. However, we will continue to assess the appropriateness and precision of this measure as currently specified as a driver of quality improvement.

Comment: One commenter noted that a similar measure was previously used for inpatient surgical procedures and subsequently retired based on sustained improvement in normothermia following general anesthesia. The commenter recommended that the ASCQR Program take a similar approach by adopting the proposed ASC–13 measure and then retiring the measure once there is validation of sustained normothermia compliance.

Response: We thank the commenter for its recommendation and note that the ASCQR Program has previously adopted policies regarding the retention and removal of quality measures (76 FR 74494 and 74504; 77 FR 68494 through 68495; 78 FR 75122; 79 FR 66967 through 66969). One of these criteria is an assessment of whether a measure is ''topped out,'' or when measure performance is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made (79 FR 66968). As we noted in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70527), the benefits of removing a measure from the ASCQR Program will be assessed on a case-by-case basis. We will evaluate all measures adopted for the ASCQR Program against these criteria as a whole in determining whether to suspend or remove a previously adopted measure from the ASCQR Program measure set.

Comment: One commenter urged CMS to ensure that the proposed ASC–13 measure population exclude procedures where propofol is administered because propofol is not general anesthesia. The commenter further recommended that CMS exclude non-surgical procedures, such as endoscopy, from this measure.

Response: Depending on the dose administered, propofol may in fact be used for moderate sedation, monitored anesthesia care, and the induction/maintenance of general anesthesia. The ASC–13 measure only includes procedures performed under general or neuraxial anesthesia of 60 minutes or more in duration and, as a result, only procedures in which propofol is used as a general anesthetic for 60 minutes or more would be included in this measure. We refer readers to the measure methodology where this is discussed, *http://www.ascquality.org/qualitymeasures.cfm*, under ''ASC Quality Collaboration Measures Implementation Guide.'' While these instances may be rare, we believe it is appropriate to include procedures where propofol is used as a general anesthetic in this measure, because those procedures are subject to the same patient outcome concerns regarding maintenance of normothermia as procedures performed using other anesthetics. We also note that the majority of endoscopy procedures do not involve general anesthesia, and would, therefore, be excluded from the measure. However, nonsurgical procedures performed under general or neuraxial anesthesia of 60 minutes or more in duration would be included in the measure. Again, while these procedures may be rare, we believe it is important to capture patient outcome data for these procedures in order to incentivize quality improvement among ASCs in normothermia maintenance.

Comment: One commenter noted that the 2015 Surgical Standing Committee convened by NQF approved a change in the definition of normothermia from 36 degrees Celsius/96.8 degrees Fahrenheit to 35.5 degrees Celsius/95.9 degrees Fahrenheit, and that NQF endorsed this changed definition in September 2015. The commenter also expressed concern that adopting the Normothermia Outcome measure in the ASCQR Program using a less current definition of ''normothermia'' may result in misalignment in quality measurement across federal healthcare quality programs. The commenter therefore recommended CMS adopt the proposed Normothermia Outcome measure with one modification, to use the more current definition of ''normothermia.''

Response: We thank the commenter for its recommendation. We believe the commenter is referring to the 2014 Surgery Project at NQF, which released its final report in December of 2015. This report is available at: *http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=81394*. We interpret the commenter's reference to a ''change in the definition of normothermia'' to refer to a different, recently endorsed measure, NQF #2681: Perioperative Temperature Management, which uses a temperature threshold of 35.5 degrees Celsius/95.9 degrees Fahrenheit, as opposed to the 36 degrees Celsius/96.8 degree Fahrenheit threshold used in the ASC–13 measure. We believe using the higher temperature threshold for normothermia is still clinically appropriate. This higher temperature threshold has been used as the definition of normothermia in a number of journal articles and best practices reviews,[159] and is maintained in the American Society of PeriAnesthesia Nurses' Clinical Guideline for the Prevention of Unplanned Perioperative Hypothermia.[160] Furthermore, we believe maintaining a higher temperature threshold for normothermia under the ASC–13 measure will provide greater incentive for ASCs to engage in quality improvement in this area by encouraging facilities to engage in more proactive perioperative temperature maintenance in order to shorten patients' time for return to normothermia. In addition, the MAP agreed that this measure ''is highly impactful and meaningful to patients.''

[159] Kurz, A. Thermal care in the perioperative period. *Best Pract Res Clin Anesthesiol.* 2008;22:39–62.

[160] Hoover VD et al. ASPAN's evidence-based clinical practice guideline for the promotion of perioperative normothermia: Second edition. *J Perianesth Nurs.* 2010 Dec; 25(6):346–365.

Therefore, we believe finalizing the measure along with the measure's definition of normothermia as proposed is appropriate. However, we appreciate commenters' concerns that this measure may have an unclear performance gap and that this measure's lower bound for normothermia does not match the lower bound for normothermia in NQF #2681, a measure we recently finalized for inclusion in the quality category of the Merit-based Incentive Payment System. We will engage the measure steward in harmonization efforts. We will discuss our continued evaluation of this measure in a future year's rulemaking.

After consideration of the public comments we received, we are finalizing our proposal to adopt the ASC–13: Normothermia Outcome measure for the ASCQR Program for the CY 2020 payment determination and subsequent years as proposed. We will discuss our continued evaluation of this measure in a future year's rulemaking.

b. ASC–14: Unplanned Anterior Vitrectomy

(1) Background

An unplanned anterior vitrectomy is performed when vitreous inadvertently prolapses into the anterior segment of the eye during cataract surgery. Cataracts are a leading cause of blindness in the United States, with 24.4 million cases in 2010.[161] Each year, approximately 1.5 million patients undergo cataract surgery to improve their vision.[162] While unplanned anterior vitrectomy rates are relatively low, complications from this procedure may result in poor visual outcomes and other complications, including retinal detachment.[163] Cataract surgery is the most common surgery performed in ASCs; therefore, this measure is of interest to the ASC Program.[164]

(2) Overview of Measure

Based on the prevalence of cataract surgery in the ASC setting, we believe it is important to minimize adverse patient outcomes associated with cataract surgery. Therefore, we proposed to adopt the ASC–14: Unplanned Anterior Vitrectomy measure in the ASCQR Program for the CY 2020 payment determination and subsequent years. We expect the measure would promote improvement in patient care over time, because measurement coupled with transparency in publicly reporting measure information would make the rate of this unplanned procedure at ASCs more visible to both ASCs and patients and would incentivize ASCs to incorporate quality improvement activities to reduce the occurrence of unplanned anterior vitrectomies. The measure also addresses the MAP-identified priority measure area of procedure complications for the ASCQR Program.[165]

The ASC–14 measure we proposed was included on a publicly available document entitled ''List of Measures under Consideration for December 1, 2014.'' [166] The MAP reviewed this measure (MUC ID: X3720) and conditionally supported it for the ASCQR Program, pending completion of reliability testing and NQF review and endorsement.[167] The MAP agreed that this measure is highly impactful and meaningful to patients.[168] It stated that according to the National Eye Institute report in 2002, more than half of U.S. residents over 65 years have a cataract.[169] Furthermore, cataracts are a leading cause of blindness, with more than 1.5 million cataract surgeries performed annually to improve the vision of those with cataracts.[170] Unplanned anterior vitrectomy is a recognized adverse intraoperative event during cataract surgery occurring in two to four percent of all cases,[171] with some research showing that rates of unplanned anterior vitrectomy are higher among less experienced surgeons.[172] The MAP continued to state that an anterior vitrectomy, the repair of a rupture in a mainly liquid portion of the eye, is generally an unplanned complication of a cataract surgery.[173] The MAP agreed that this is an outcome measure that fills the workgroup identified priority gap of procedure complications.[174]

The proposed ASC–14 measure is not NQF-endorsed. However, this measure is maintained by the ASC Quality Collaboration,[175] an entity recognized within the community as an expert in measure development for the ASC setting of care. We believe that this measure is appropriate for the measurement of quality care furnished by ASCs, because cataract surgery is commonly performed in ASCs and, as discussed above, complications such as unplanned anterior vitrectomy can signify important issues in the care being provided by ASCs. While the Unplanned Anterior Vitrectomy measure is not NQF endorsed, we believe this measure reflects consensus among affected parties, because the MAP, which represents stakeholder groups, reviewed and conditionally supported the measure for use in the ASCQR Program. The MAP stated that the Unplanned Anterior Vitrectomy measure is ''highly impactful and meaningful to patients'' because cataracts are a leading cause of blindness among Americans and an unplanned anterior vitrectomy is a generally unplanned complication of the surgery intended to help restore patients' vision. Furthermore, we believe the measure is reliable because reliability testing performed by the measure steward found that the difference from originally submitted and re-abstracted vitrectomy rates was zero for 92 percent of ASCs reviewed. Therefore, we believe there is strong evidence that the Unplanned Anterior Vitrectomy measure is reliable.

(3) Data Sources

This measure is based on aggregate measure data collected via chart-abstraction by the ASC and submitted via a CMS online data submission tool (that is, QualityNet).

We proposed that the data collection period for the proposed ASC–14 measure would be the calendar year 2 years prior to the applicable payment determination year. For example, for the CY 2020 payment determination, the data collection period would be CY 2018. We also proposed that ASCs submit these data to CMS during the time period of January 1 to May 15 in the year prior to the affected payment determination year. For example, for the CY 2020 payment determination, the submission period would be January 1, 2019 to May 15, 2019. We refer readers to section XIV.D.3.b. of this final rule with comment period for a more detailed discussion of the requirements for data submitted via a CMS online data submission tool.

(4) Measure Calculation

The outcome measured in the proposed ASC–14 measure is the percentage of cataract surgery patients who have an unplanned anterior vitrectomy. The numerator for this measure is all cataract surgery patients who had an unplanned anterior vitrectomy. The denominator is all cataract surgery patients.

(5) Cohort

There are no additional inclusion or exclusion criteria for the proposed ASC–14 measure. Additional methodology and measure development details are available at: *http://www.ascquality.org/qualitymeasures.cfm,* under ''ASC Quality Collaboration Measures Implementation Guide.''

(6) Risk Adjustment

This measure is not risk-adjusted.

We invited public comments on our proposal to adopt the ASC–14: Unplanned Anterior Vitrectomy measure for the CY 2020 payment determination and subsequent years as discussed above.

Comment: Many commenters supported adoption of the proposed ASC–14 measure because cataract surgery is frequently performed in the ASC setting, and adoption of this measure will promote improvement in patient care over time and incentivize ASCs to engage in more quality improvement activities through public reporting of measure performance data. Some commenters asserted this measure has significant potential to reduce the rate of unplanned vitrectomies by encouraging ASCs to arrange mentoring relationships between newer and more senior doctors practicing at the ASC in order to engage in knowledge-sharing and, in turn, improve performance. Commenters also noted there is little burden associated with reporting on the measure, because the patient is still in the ASC when the complication occurs and the patient's ASC record will include the relevant information that will be reported.

Response: We thank the commenters for their support.

Comment: Some commenters did not support adoption of the proposed ASC–14 measure because the commenters believe chart-abstracted measures are too burdensome for ASCs and the measure is not NQF-endorsed. One commenter recommended that CMS focus on higher priority measures that impact a greater number of ASC patients.

Response: In selecting measures for the ASCQR Program, we weigh the relevance and utility of measures against the potential burden to ASCs resulting from the measure's adoption. We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68493 through 68494) for a detailed discussion of the priorities we consider for ASCQR Program quality measure selection. While we understand the commenters' concerns regarding the burden of chart-abstracting measures, we believe the benefits of including the measure in the ASCQR Program and publicly reporting unplanned anterior vitrectomy data for use in patient decision-making and incentivizing ASCs to engage in quality improvement efforts to reduce rates of unplanned anterior vitrectomy outweigh the burden associated with collecting aggregate data on patients treated at an ASC.

In addition, as we discuss above, section 1833(t)(17)(C)(i) of the Act does not require that each measure we adopt for the ASCQR Program be endorsed by a national consensus building entity, or the NQF specifically. Further, under section 1833(i)(7)(B) of the Act, section 1833(t)(17)(C)(i) of the Act applies to the ASCQR Program, except as the Secretary may otherwise provide. Under this provision, the Secretary has further authority to adopt non-endorsed measures. While we strive to adopt NQF-endorsed measures when possible, we believe the requirement that measures reflect consensus among affected parties can be achieved in other ways, including through the measure development process, through broad acceptance and use of the measure, and through public comments. As noted in the CY 2017 OPPS/ASC proposed rule (81 FR 45730), ASC–14 is maintained by the ASC Quality Collaboration, an entity recognized within the community as an expert in measure development for the ASC setting. In addition, this measure is already publicly reported as part of the ASC Quality Collaboration's quarterly Quality Report. Furthermore, the MAP, which represents stakeholder groups, reviewed and conditionally supported the measure for use in the ASCQR Program. We therefore believe the measure reflects consensus among affected parties.

We further believe this measure addresses a high-priority concern affecting a large number of ASC patients. As noted previously, cataracts are a leading cause of blindness in the United States. As stated at in the proposed rule (81 FR 45729), each year, approximately 1.5 million patients undergo cataract surgery to improve their vision, and cataract surgery is the most common surgery performed in ASCs. In addition, as stated in the proposed rule (81 FR 45729), the MAP stated that the Unplanned Anterior Vitrectomy measure is ''highly impactful and meaningful to patients'' because cataracts are a leading cause of blindness among Americans and an unplanned anterior vitrectomy is a generally unplanned complication of the surgery intended to help restore patients' vision. While rates of unplanned anterior vitrectomy are relatively low, we believe that the severity of the complications associated with this unplanned procedure, combined with the frequency of cataract surgery in the ASC setting, highlights the importance of tracking and preventing these outcomes for patients treated in the ASC setting.

Comment: One commenter recommended CMS revise the CPT coding for this procedure to distinguish between planned and unplanned anterior vitrectomies rather than adopting a chart-abstracted measure on this issue.

Response: We appreciate the commenter's recommendation to collect unplanned anterior vitrectomy data through a set of modified CPT codes, but believe collecting this measure data through chart abstraction will enable us to provide patients with this data more quickly and without undertaking the time-intensive and resource-intensive process of modifying and implementing modified CPT codes.

After consideration of the public comments we received, we are finalizing our proposal to adopt the ASC–14: Unplanned Anterior Vitrectomy measure for the ASCQR

Program for the CY 2020 payment determination and subsequent years as proposed.

c. ASC–15a–e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey Measures

(1) Background

Currently, there is no standardized survey available to collect information on the patient's overall experience for surgeries or procedures performed within an ASC. Some ASCs are conducting their own surveys and reporting these results on their Web sites, but there is not one standardized survey in use to assess patient experiences with care in ASCs that would allow valid comparisons across ASCs. Patient-centered experience of care measures are a component of the 2016 CMS Quality Strategy, which emphasizes patient-centered care by rating patient experience as a means for empowering patients and improving the quality of their care.[176] In addition, information on patient experience with care at a provider/facility is an important quality indicator to help providers and facilities improve services furnished to their patients and to assist patients in choosing a provider/facility at which to seek care.

(2) Overview of Measures

The OAS CAHPS Survey was developed as part of HHS' Transparency Initiative to measure patient experiences with ASC care.[177] In 2006, CMS implemented the Hospital CAHPS (HCAHPS) Survey, which collects data from hospital inpatients about their experience with hospital inpatient care (71 FR 48037 through 48039). The HCAHPS Survey, however, is limited to data from patients who receive inpatient care for specific diagnosis-related groups for medical, surgical, and obstetric services; it does not include patients who received outpatient surgical care from ASCs or HOPDs. Throughout the development of the OAS CAHPS Survey, CMS considered the type of data collected for HCAHPS and other existing CAHPS surveys as well as the terminology and question wording to maximize consistency across CAHPS surveys. CMS has developed similar surveys for other settings of care that are currently used in other quality reporting and value-based purchasing programs, such as the Hospital IQR Program (71 FR 68203 through 68204), the Hospital VBP Program (76 FR 26497, 26502 through 26503, and 26510), the ESRD QIP (76 FR 70269 through 70270), the Home Health QRP (80 FR 68709 through 68710), and the Hospice QRP (80 FR 47141 through 47207).

The OAS CAHPS Survey contains 37 questions that cover topics such as access to care, communications, experience at the facility, and interactions with facility staff. The survey also contains two global rating questions and asks for self-reported health status and basic demographic information (race/ethnicity, educational attainment level, languages spoken at home, among others). The basic demographic information captured in the OAS CAHPS Survey are standard AHRQ questions used to develop case-mix adjustment models for the survey. Furthermore, the survey development process followed the principles and guidelines outlined by the AHRQ and its CAHPS® Consortium. The OAS CAHPS Survey received the registered CAHPS trademark in April 2015. OAS CAHPS Survey questions can be found at: *https://oascahps.org/Survey-Materials* under ''Questionnaire.''

We proposed to adopt five survey-based measures derived from the OAS CAHPS Survey for the CY 2020 payment determination and subsequent years: Three OAS CAHPS composite survey-based measures and two global survey-based measures (discussed below). We believe that these survey-based measures will be useful to assess aspects of care where the patient is the best or only source of information, and to enable objective and meaningful comparisons between ASCs. We note that we made similar proposals in the Hospital OQR Program in section XIII.B.5.c. of the proposed rule. The three OAS CAHPS composite survey-based measures are:

- ASC–15a: OAS CAHPS—About Facilities and Staff;
- ASC–15b: OAS CAHPS—Communication About Procedure; and
- ASC–15c: OAS CAHPS—Preparation for Discharge and Recovery.

Each of the three OAS CAHPS composite survey-based measures consists of six or more questions. Furthermore, the two global survey-based measures are:

- ASC–15d: OAS CAHPS—Overall Rating of Facility; and
- ASC–15e: OAS CAHPS—Recommendation of Facility.

The two global survey-based measures are comprised of a single question each and ask the patient to rate the care provided by the ASC and their willingness to recommend the ASC to family and friends. More information about these measures can be found at the OAS CAHPS Survey Web site (*https://oascahps.org*).

The five survey-based measures (MUC IDs: X3697; X3698; X3699; X3702; and X3703) we proposed were included on the CY 2014 MUC list,[178] and reviewed by the MAP.[179] The MAP encouraged continued development of these survey-based measures; however, we note that these measures had not been fully specified by the time of submission to the MUC List.[180] The MAP stated that these are high impact measures that will improve both quality and efficiency of care and be meaningful to consumers.[181] Further, the MAP stated that given that these measures are also under consideration for the Hospital OQR Program, they help to promote alignment across care settings.[182] It also stated that these measures would begin to fill a gap MAP has previously identified for this program including patient-reported outcomes and patient and family engagement.[183] Several MAP workgroup members noted that CMS should consider how these measures are related to other existing ambulatory surveys to ensure that patients and facilities aren't overburdened.[184]

These measures have been fully developed since submission to the MUC List. The survey development process followed the principles and guidelines outlined by the AHRQ [185] and its CAHPS® Consortium [186] in developing a patient experience of care survey, such as: Reporting on actual patient experiences; standardization across the

survey instrument, administration protocol, data analysis, and reporting; and extensive testing with consumers. Development also included: Reviewing surveys submitted under a public call for measures; reviewing existing literature; conducting focus groups with patients who had recent outpatient surgery; conducting cognitive interviews with patients to assess their understanding and ability to answer survey questions; obtaining stakeholder input on the draft survey and other issues that may affect implementation; and conducting a field test.

In addition, we received public input from several modes. We published a request for information in the **Federal Register** on January 25, 2013 (78 FR 5460) requesting information regarding publicly available surveys, survey questions, and measures indicating patient experience of care and patient-reported outcomes from surgeries or other procedures for consideration in developing a standardized survey to evaluate the care received in these facilities from the patient's perspective. Stakeholder input was also obtained through communications with a TEP comprised of experts on outpatient surgery, including clinicians, providers, patient advocates, and accreditation organizations. The TEP provided input and guidance on issues related to survey development, and reviewed drafts of the survey throughout development.

After we determined that the survey instrument was near a final form, we tested the effect of various data collection modes (that is, mail-only, telephone-only, or mail with telephone follow-up of nonrespondents) on survey responses. We began voluntary national implementation of the OAS CAHPS Survey in January 2016.[187]

In addition, while the proposed OAS CAHPS Survey-based measures are not currently NQF-endorsed, they will be submitted to the NQF for endorsement under an applicable call for measures in the near future.

In section XIX. of the proposed rule (81 FR 45755 through 45757), for the Hospital VBP Program, we proposed to remove the three Pain Management dimension questions of the HCAHPS Survey from the total Hospital VBP Program performance score. For more information about the pain management questions captured in the HCAHPS Survey and their use in the Hospital VBP Program, we refer readers to section XIX.B.3. of this final rule with comment period.

The OAS CAHPS Survey also contains two questions regarding pain management. We believe pain management is an important dimension of quality, but realize that there are concerns about these types of questions. However, the pain management questions in the OAS CAHPS Survey are very different from those contained in the HCAHPS Survey because they focus on communication regarding pain management rather than pain control and are part of a composite measure focusing on the preparation for discharge and recovery. Specifically, the OAS CAHPS Survey pain management communication questions read:

Q: Some ways to control pain include prescription medicine, over-the-counter pain relievers or ice packs. Did your doctor or anyone from the facility give you information about what to do if you had pain as a result of your procedure?

☐ A1: Yes, definitely.

☐ A2: Yes, somewhat.

☐ A3: No.

Q: At any time after leaving the facility, did you have pain as a result of your procedure? [188]

☐ A1: Yes.

☐ A2: No.

Unlike the HCAHPS pain management questions, which directly address the adequacy of the hospital's pain management efforts, such as prescribing opioids, the OAS CAHPS pain management communication questions focus on the information provided to patients regarding pain management following discharge from an ASC. We continue to believe that pain control is an appropriate part of routine patient care that ASCs should manage and is an important concern for patients, their families, and their caregivers. We also note that appropriate pain management includes communication with patients about pain-related issues, setting expectations about pain, shared decision-making, and proper prescription practices. For these reasons, we proposed to adopt the OAS CAHPS Survey measures as described in this section, including the pain management communication questions, but will continue to evaluate the appropriateness and responsiveness of these questions to patient experience of care and public health concerns. We also welcomed feedback on these pain management communication questions for use in future revisions of the OAS CAHPS Survey.

(3) Data Sources

As discussed in the Protocols and Guidelines Manual for the OAS CAHPS Survey (*https://oascahps.org/Survey-Materials*), the survey has three administration methods: Mail-only; telephone-only; and mixed mode (mail with telephone follow-up of non-respondents). We refer readers to section XIV.D.5. of this final rule with comment period for an in-depth discussion of the data submission requirements associated with the proposed OAS CAHPS Survey measures. To summarize, to meet the OAS CAHPS Survey requirements for the ASCQR Program, we proposed that ASCs contract with a CMS-approved vendor to collect survey data for eligible patients at the ASCs on a monthly basis and report that data to CMS on the ASC's behalf by the quarterly deadlines established for each data collection period. ASCs may elect to add up to 15 supplemental questions to the OAS CAHPS Survey. These could be questions ASCs develop or use from an existing survey. All supplemental questions must be placed after the core OAS CAHPS Survey questions (Questions 1 through 24). The list of approved vendors is available at: *https://oascahps.org*.

We also proposed to codify the OAS CAHPS Survey administration requirements for ASCs and vendors under the ASCQR Program at 42 CFR 416.310(e), and refer readers to section XIV.D.5. of this final rule with comment period for more details. It should be noted that non-discrimination requirements for effective communication with persons with disabilities and language access for persons with limited English proficiency should be considered in administration of the surveys. For more information, we refer readers to: *http://www.hhs.gov/civil-rights*.

We proposed that the data collection period for the OAS CAHPS Survey measures would be the calendar year 2 years prior to the applicable payment determination year. For example, for the CY 2020 payment determination, ASCs would be required to collect data on a monthly basis, and submit this collected data on a quarterly basis, for January 1, 2018–December 31, 2018 (CY 2018).

We further proposed that, as discussed in more detail below, ASCs will be required to survey a random sample of eligible patients on a monthly basis. A list of acceptable random sampling methods can be found in the OAS CAHPS Protocols and Guidelines

[187] Outpatient and Ambulatory Surgery CAHPS Survey. ''National Implementation'' Available at: *https://oascahps.org/General-Information/National-Implementation*.

[188] We note that this question is a control question only used to determine if the facility should have given a patient additional guidance on how to handle pain after leaving the facility. The facility is not scored based on this question.

Manual (*https://oascahps.org/Survey-Materials*). We also proposed that ASCs would be required to collect at least 300 completed surveys over each 12-month reporting period (an average of 25 completed surveys per month). We acknowledge that some smaller ASCs may not be able to collect 300 completed surveys during a 12-month period; therefore, we proposed an exemption for facilities with lower patient censuses. ASCs would have the option to submit a request to be exempted from performing the OAS CAHPS Survey if they treat fewer than 60 survey-eligible patients during the year preceding the data collection period. We refer readers to section XIV.B.4.c.(6) of this final rule with comment period for details on this proposal. However, we believe it is important to capture patients' experience of care at ASCs. Therefore, except as discussed in section XIV.B.4.c.(6) of this final rule with comment period, below, we also proposed that smaller ASCs that cannot collect 300 completed surveys over a 12-month reporting period will only be required to collect as many completed surveys as possible during that same time period, with surveying all eligible patients (that is, no sampling). For more information regarding these survey administration requirements, we refer readers to the OAS CAHPS Survey Protocols and Guidelines Manual (*https://oascahps.org/Survey-Materials*).

Furthermore, we proposed that ASC eligibility to perform the OAS CAHPS Survey would be determined at the individual ASC level. In other words, an individual ASC that meets the exemption criteria outlined in section XIV.B.4.c.(6) of this final rule with comment period, below, may submit a participation exemption request form, regardless of whether it operates under an independent CCN or shares a CCN with other facilities. CMS will then assess that ASC's eligibility for a participation exemption due to facility size independent of any other facilities sharing its CCN. However, all data collection and submission, and ultimately, also public reporting, for the OAS CAHPS Survey measures would be at the CCN level. Therefore, the reporting for a CCN would include all eligible patients from all eligible ASCs covered by the CCN.

(4) Measure Calculations

As noted above, we proposed to adopt three composite OAS CAHPS Survey-based measures (ASC–15a, ASC–15b, and ASC–15c) and two global survey-based measures (ASC–15d and ASC–15e). An ASC's performance for a given payment determination year will be based upon the successful submission of all required data in accordance with the data submission requirements discussed in section XIV.D.5. of this final rule with comment period. Therefore, ASCs' scores on the OAS CAHPS Survey-based measures, discussed below, will not affect whether they are subject to the 2.0 percentage point payment reduction for ASCs that fail to meet the reporting requirements of the ASCQR Program. These measure calculations will be used for public reporting purposes only.

(A) Composite Survey-Based Measures

ASC rates on each composite OAS CAHPS Survey-based measure would be calculated by determining the proportion of ''top-box'' responses (that is, ''Yes'' or ''Yes Definitely'') for each question within the composite and averaging these proportions over all questions in the composite measure. For example, to assess ASC performance on the composite measure ASC–15a: OAS CAHPS—About Facilities and Staff, we would calculate the proportion of top-box responses for each of the measure's six questions, add those proportions together, and divide by the number of questions in the composite measure (that is, six).

As a specific example, we take an ASC that had 50 surveys completed and received the following proportions of ''top-box'' responses through sample calculations:

- 25 ''top-box'' responses out of 50 total responses on Question One
- 40 ''top-box'' responses out of 50 total responses on Question Two
- 50 ''top-box'' responses out of 50 total responses on Question Three
- 35 ''top-box'' responses out of 50 total responses on Question Four
- 45 ''top-box'' responses out of 50 total responses on Question Five
- 40 ''top-box'' responses out of 50 total responses on Question Six

Based on the above responses, we would calculate that facility's measure score for public reporting as follows:

$$\text{ASC Publicly Reported Score} = \frac{(0.5 + 0.8 + 1 + 0.7 + 0.9 + 0.8)}{6}$$

This calculation would give this example ASC a raw score of 0.78 or 78 percent for the ASC–15a measure for purposes of public reporting. We note that each percentage would then be adjusted for differences in the characteristics of patients across ASCs as described in section XIV.B.4.c.(7) of this final rule with comment period. As a result, the final ASC percentages may vary slightly from the raw percentage as calculated in the example above.

(B) Global Survey-Based Measures

We also proposed to adopt two global OAS CAHPS Survey measures. ASC–15d asks the patient to rate the care provided by the ASC on a scale of 0 to 10, and ASC–15e asks about the patient's willingness to recommend the ASC to family and friends on a scale of ''Definitely No'' to ''Definitely Yes.''

ASC performance on each of the two global OAS CAHPS Survey-based measures would be calculated by proportion of respondents providing high-value responses (that is, a 9–10 rating or ''Definitely Yes'') to the survey questions over the total number of respondents. For example, if an ASC received 45 9- and 10-point ratings out of 50 responses, this ASC would receive a 0.9 or 90 percent raw score, which would then be adjusted for differences in the characteristics of patients across ASCs as described in section XIV.B.4.c.(7) of this final rule with comment period, for purposes of public reporting.

(5) Cohort

The OAS CAHPS Survey is administered to all eligible patients—or a random sample thereof—who had at least one outpatient surgery/procedure during the applicable month. Eligible patients, regardless of insurance or method of payment, can participate. For purposes of each survey-based measure captured in the OAS CAHPS Survey, an ''eligible patient'' is a patient 18 years or older:

- Who had an outpatient surgery or procedure in an ASC, as defined in the OAS CAHPS Survey administration manual (*https://oascahps.org/Survey-Materials*);
- Who does not reside in a nursing home;

- Who was not discharged to hospice care following their surgery;
- Who is not identified as a prisoner; and
- Who did not request that ASCs not release their name and contact information to anyone other than ASC personnel.

There are a few categories of otherwise eligible patients who are excluded from the measure as follows:

- Patients whose address is not a U.S. domestic address;
- Patients who cannot be surveyed because of State regulations;
- Patient's surgery or procedure does not meet the eligibility CPT or G-codes as defined in the OAS CAHPS Survey Protocols and Guidelines Manual (*https://oascahps.org/Survey-Materials*) (referred to in the proposed rule as the ''OAS CAHPS Survey Manual administration manual''); and
- Patients who are deceased.

(6) Exemption

We understand that facilities with lower patient censuses may be disproportionately impacted by the burden associated with administering the survey and the resulting public reporting of OAS CAHPS Survey results. Therefore, we proposed that ASCs may submit a request to be exempted from performing the OAS CAHPS Survey-based measures if they treat fewer than 60 survey-eligible patients during the ''eligibility period,'' which is the calendar year before the data collection period. For example, for the CY 2020 payment determination, this exemption request would be based on treating fewer than 60 survey-eligible patients in CY 2017, which is the calendar year before the data collection period (CY 2018) for the CY 2020 payment determination. All exemption requests will be reviewed and evaluated by CMS.

To qualify for the exemption, we proposed that ASCs must submit a participation exemption request form, which will be made available on the OAS CAHPS Survey Web site (*https://oascahps.org*) on or before May 15 of the data collection year. For example, the deadline for submitting an exemption request form for the CY 2020 payment determination would be May 15, 2018. We determined the May 15 deadline in order to align with the deadline for submitting Web-based measures, and because we believe this deadline allows ASCs sufficient time to review the previous years' patient lists and determine whether they are eligible for an exemption based on patient population size.

We note that ASCs with fewer than 240 Medicare claims (Medicare primary and secondary payer) per year during an annual reporting period for a payment determination year are not required to participate in the ASCQR Program for the subsequent annual reporting period for that applicable payment determination year (42 CFR 416.305(c)). For example, an ASC as identified by National Provider Identifier (NPI) with fewer than 240 Medicare claims in CY 2017 (for the CY 2019 payment determination year) would not be required to participate in the ASCQR Program in CY 2018 (for the CY 2020 payment determination year).

In addition, as discussed above, ASC eligibility to perform the OAS CAHPS Survey would be determined at the individual ASC level. In other words, an individual ASC that meets the exemption criteria outlined in section XIV.B.4.c.(6) of this final rule with comment period, below, may submit a participation exemption request form, regardless of whether it operates under an independent CCN or shares a CCN with other facilities. However, all data collection and submission, and ultimately, also public reporting, for the OAS CAHPS Survey measures would be at the CCN level. Therefore, the reporting for a CCN would include all eligible patients from all eligible ASCs covered by the CCN.

(7) Risk Adjustment

In order to achieve the goal of fair comparisons across all ASCs, we believe it is necessary and appropriate to adjust for factors that are not directly related to ASC performance, such as patient case-mix, for these OAS CAHPS Survey measures. The survey-based measures are adjusted for patient characteristics such as age, education, overall health status, overall mental health status, type of surgical procedure, and how well the patient speaks English. These factors influence how patients respond to the survey, but are beyond the control of the ASC and are not directly related to ASC performance. For more information about risk adjustment for these measures, we refer readers to: *https://oascahps.org/General-Information/Mode-Experiment*.

(8) Public Reporting

We will propose a format and timing for public reporting of OAS CAHPS Survey data in future rulemaking prior to implementation of the measures. Because CY 2016 is the first year of voluntary national implementation for the OAS CAHPS Survey, and we believe using data from this voluntary national implementation will help inform the displays for public reporting of OAS CAHPS Survey data for the ASCQR Program, we did not propose a format or timing for public reporting of OAS CAHPS Survey data in the proposed rule.

As currently proposed, ASCs that share the same CCN must combine data for collection and submission for the OAS CAHPS Survey across their multiple facilities. These results would then be publicly reported on the *Hospital Compare* Web site as if they apply to a single ASC. To increase transparency in public reporting and improve the usefulness of the *Hospital Compare* Web site, we intend to note on the Web site instances where publicly reported measures combine results from two or more ASCs.

We invited public comments on our proposals as discussed above to adopt for the CY 2020 payment determination and subsequent years, the five survey-based measures: (1) ASC–15a: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS)—About Facilities and Staff; (2) ASC–15b: OAS CAHPS—Communication About Procedure; (3) ASC–15c: OAS CAHPS—Preparation for Discharge and Recovery; (4) ASC–15d: OAS CAHPS—Overall Rating of Facility; and (5) ASC–15e: OAS CAHPS—Recommendation of Facility.

Comment: Many commenters supported adoption of the proposed ASC–15a–e survey-based measures based on an understanding that these measures capture patient experience of care data, apply to ASCs broadly, and are also proposed for adoption in the ASCQR Program. Some commenters noted adopting these measures will establish a baseline for standardized collection of patient experience of care data, and allow for meaningful comparisons across ASCs on patient experience of care. Commenters also noted that the ASC–15a–e survey-based measures are important quality indicators that can be used in combination with other measures to assist patients in deciding where to seek care. One commenter expressed specific support for the inclusion of risk-adjustment factors in the OAS CAHPS Survey-based measures.

Response: We thank the commenters for their support.

Comment: One commenter requested additional information regarding the OAS CAHPS Survey development process.

Response: As discussed in the CY 2017 OPPS/ASC proposed rule (for example, 81 FR 45730 through 45732), background on the OAS CAHPS Survey, including the survey development process, is publicly available on the

OAS CAHPS Web site: *http://oascahps.org/*. The OAS CAHPS Survey development process followed the principles and guidelines outlined by the AHRQ [189] and its CAHPS Consortium [190] in developing a patient experience of care survey, such as: Reporting on actual patient experiences; standardization across the survey instrument; administration protocol; data analysis and reporting; and extensive testing with consumers. This process included reviewing existing literature; reviewing surveys submitted under a public call for measures; conducting focus groups with patients who had recent outpatient surgery; conducting cognitive interviews with patients to assess their understanding and ability to answer survey questions; obtaining stakeholder input on the draft survey and other issues that may affect implementation; conducting a field test; and conducting a test of the various data collection mode effects on survey responses.

We published a request for information on January 25, 2013 (78 FR 5459) requesting information regarding publicly available surveys, survey questions, and measures indicating patient experience of care and patient-reported outcomes from surgeries or other procedures for consideration in developing a standardized survey to evaluate the care received in these facilities from the patient's perspective. In 2013 and 2014, we conducted six focus groups with patients who had recent outpatient surgeries or procedures in a hospital outpatient department or ASC. Analysis of the focus group feedback [191] led to development of the final domain structure for the survey, and identified the following topic areas for assessment under a patient experience of care survey for these procedures: (1) Preparations for surgery; (2) check-in process; (3) facility environment; (4) staff communication; (5) discharge; (6) recovery and outcomes; and (7) overall experience.

We convened and consulted with two TEPs throughout the development and testing of the OAS CAHPS Survey.[192] In 2013, we established a 10-member TEP consisting of experts on outpatient surgery, including clinicians, providers, patient advocates, and representatives from other stakeholder organizations to provide preliminary guidance in the establishment of relevant topics and to comment on the draft versions for cognitive testing and the field test. Information about the TEP was documented in materials supporting an information collection request for the voluntary national implementation of the OAS CAHPS Survey published in the **Federal Register** (80 FR 2430 through 2431).[193] We established a second TEP in 2015 to solicit input and guidance related to national implementation protocols and the survey mode experiment.

We conducted three rounds of cognitive testing among patients who received outpatient surgery at an ASC or hospital outpatient department before finalizing the field test version of the OAS CAHPS Survey. With each round of testing, we modified the survey to reflect the comments from the previous round.

The survey was tested in both the outpatient and ASC setting in 2014 (field testing) and 2015 (mode testing) and found to be reliable. We refer readers to 80 FR 2430 and the OAS CAHPS Information Collection Request Paperwork Reduction Act Package [194] for more information about field and mode testing for these measures. The field test collected data through a mixed-mode design, which consisted of a mail survey with telephone follow-up of non-respondents. We recruited a total of 36 facilities for the field test: 18 Hospital outpatient departments and 18 ASCs. Approximately 116 patient records were selected from each of the 36 facilities, for a total sample of 4,179 patients. The field test data collection yielded a 46 percent adjusted response rate, or 1,863 completed surveys (31 percent computer-assisted telephone interviewing, 68 percent mail, and 0.8 percent break-offs). Once partial surveys were removed from the analysis set, 1,849 total surveys were used in the evaluation. The field test data were evaluated and analyzed to identify item-level refinements necessary for the survey instrument. The field test psychometric analysis included evaluations of individual items and composite item sets. Individual items were analyzed to report item-level missing data and item response distributions (including ceiling and floor effects), which included response variance. Composite item sets were analyzed using factor analysis and item response theory (IRT) analysis to assess dimensionality, discriminability, dimensional coverage, and subgroup response differences. Internal consistency statistics (reliability) and correlational checks for composite validity were performed to evaluate the final composite item sets. The item-level recommendations for the field test were based on the findings from the factor analyses, the internal consistency checks, and the IRT analysis. As a result, 10 questions were recommended for deletion. Reliability of the remaining measures was assessed using the Cronbach's alpha coefficient, with an estimate range from zero to one. An estimate of zero indicated no measurement consistency and one indicates perfect consistency. The cutoff criterion for the examination was 0.70, which indicated adequate consistency.[195] The composites analytically derived maintained adequate internal consistency even when reduced to Top-Box scoring and across the facility types and modes of administration.

In 2015, we conducted a mode experiment for the OAS CAHPS Survey. We refer readers to *https://oascahps.org/General-Information/Mode-Experiment* for more details. The facility sample included hospital outpatient departments and ASCs that reflect industry characteristics and was sorted to achieve implicit stratification by four facility characteristics: Single specialty or multispecialty; facility size (large, medium, or small), facility location (urban or rural), and facility ownership (public, private, or other). A total of 70 facilities (38 hospital outpatient departments and 32 ASCs) participated in the mode experiment by providing a monthly patient information file for patients served during one or more of the three sample months (July, August, and September 2015). The patient sample consisted of 13,576 patients who had an eligible surgery or procedure during a sample month and who met other survey eligibility criteria.

[195] Aron, A. and Aron, E.N. *Statistics for Psychology*. (1999) 2nd ed. New Jersey: Prentice Hall.

Data collection for each sample month began approximately 21 days after the sample month closed and ended within a 6-week period after the survey was initiated. The overall response rate (for all three modes) was 39 percent. The response rate for the mail-only mode was 37 percent, the telephone-only response rate was 34 percent, and the mixed-mode response rate was 50 percent.

We began voluntary national implementation of the OAS CAHPS Survey in January 2016 and refer readers to *https://oascahps.org/General-Information/National-Implementation* for more details. Preliminary data from the voluntary reporting period (Quarter 1 data), which included 24,201 sampled patients from 74 facilities, indicate a response rate of 33 percent for both telephone and mail modes. Voluntary national implementation is ongoing.

Comment: Some commenters did not support adoption of the proposed ASC–15a–e survey-based measures because these measures have not been endorsed by a consensus-based measurement evaluation body. The commenters asserted that moving forward with the non-endorsed measures could result in publication of unreliable measure scores, and urged CMS to delay implementation of these measures until NQF endorsement is received. One commenter recommended CMS implement the OAS CAHPS Survey in the Hospital OQR Program first to demonstrate its reliability before requiring ASCs to implement the survey.

Response: We note that section 1833(t)(17)(C)(i) of the Act does not require that each measure we adopt for the ASCQR Program be endorsed by a national consensus building entity, or the NQF specifically. Further, under section 1833(i)(7)(B) of the Act, section 1833(t)(17)(C)(i) of the Act applies to the ASCQR Program, except as the Secretary may otherwise provide. Under this provision, the Secretary has further authority to adopt non-endorsed measures. While we strive to adopt NQF-endorsed measures when possible, we believe the requirement that measures reflect consensus among affected parties can be achieved in other ways, including through the measure development process, through broad acceptance and use of the measure, and through public comments. As discussed in the measure description above, the MAP has reviewed the measure.

In addition, we received public input from several modes. We published a request for information in the **Federal Register** on January 25, 2013 (78 FR 5460) requesting information regarding publicly available surveys, survey questions, and measures indicating patient experience of care and patient-reported outcomes from surgeries or other procedures for consideration in developing a standardized survey to evaluate the care received in these facilities from the patient's perspective. As stated in more detail above, stakeholder input was also obtained through communications with a TEP comprised of experts on outpatient surgery, including clinicians, providers, patient advocates, and accreditation organizations. The TEP provided input and guidance on issues related to survey development, and reviewed drafts of the survey throughout development. Given these consensus-building efforts, we believe the measure reflects consensus among affected parties for a standardized instrument assessing patients' experience of care in the ASC setting. As such, we do not think it is necessary to delay implementation of the OAS CAHPS Survey until it achieves NQF endorsement. We also believe it is unnecessary to delay implementation of the OAS CAHPS Survey in the ASC setting until its reliability is demonstrated in the hospital outpatient department setting, because the survey was tested in both settings in 2014 (field testing) and 2015 (mode testing) and found to be reliable, as discussed above and again below. We also note, however, that we intend to submit the OAS CAHPS Survey-based measures to NQF for endorsement under an applicable call for measures in the near future.

We also disagree with the commenters' assertion that moving forward with a non-endorsed measure could result in publication of unreliable measure scores. The survey was tested in both the outpatient and ASC setting in 2014 (field testing) and 2015 (mode testing) and found to be reliable. We refer readers to *https://oascahps.org/* for more information about field and mode testing for these measures. The OAS CAHPS Survey development process followed the principles and guidelines outlined by AHRQ and its CAHPS Consortium.[196] This process included reviewing existing literature; reviewing surveys submitted under a public call for measures; conducting focus groups with patients who had recent outpatient surgery; conducting cognitive interviews with patients to assess their understanding and ability to answer survey questions; obtaining stakeholder input on the draft survey and other issues that may affect implementation; conducting a field test; and conducting a test of the various data collection mode effects on survey responses.

In 2014, the field test data were evaluated and analyzed to identify item-level refinements necessary for the survey instrument. The field test psychometric analysis included evaluations of individual items and composite item sets. Individual items were analyzed to report item-level missing data and item response distributions (including ceiling and floor effects), which included response variance. Composite item sets were analyzed using factor analysis and item response theory (IRT) analysis to assess dimensionality, discriminability, dimensional coverage, and subgroup response differences. Internal consistency statistics (reliability) and correlational checks for composite validity were performed to evaluate the final composite item sets. The item-level recommendations for the field test were based on the findings from the factor analyses, the internal consistency checks, and the IRT analysis. As a result, 10 questions were recommended for deletion. Reliability of the remaining measures was assessed using the Cronbach's alpha coefficient, with an estimate range from zero to one. An estimate of zero indicated no measurement consistency and one indicates perfect consistency. The cutoff criterion for the examination was 0.70, which indicated adequate consistency.[197] The composites analytically derived maintained adequate internal consistency even when reduced to Top-Box scoring and across the facility types and modes of administration.

Based on the rigorous testing that was undertaken during the development process, we believe the OAS CAHPS Survey, and measure scores derived therefrom, are both reliable and valid. Therefore, we believe it is unnecessary to delay implementation of the OAS CAHPS Survey in the ASC setting.

Comment: Many commenters asserted that requiring ASCs to meet the proposed target minimum number of surveys (that is, 300 completed surveys) would be difficult for participating ASCs because they are small businesses and implementing a high target minimum will require ASCs to ramp up quickly to administer the OAS CAHPS Survey. Other commenters stated that past experience with facility-specific surveys indicates ASCs will experience

[196] Agency for Healthcare Research and Quality. ''The CAHPS Program.'' Available at: *https://ahrq.gov/cahps/index.html.*

[197] Aron, A. and Aron, E.N. *Statistics for Psychology.* (1999) 2nd ed. New Jersey: Prentice Hall.

low completion rates on the OAS CAHPS Survey. The commenters therefore recommended CMS consider lowering this target minimum or, in the alternative, consider implementing scaled target minimums based on facility size. A number of commenters recommended that the target minimum instead be set at 100 completed surveys, in alignment with the requirements from the first year of the HCAHPS Survey's use in the inpatient setting. One commenter recommended CMS assess ASCs' performance based on the number of surveys sent to patients. A number of commenters recommended that CMS increase the threshold for an exception to administering the OAS CAHPS Survey based on a small patient population from 60 survey-eligible patients to 100 survey eligible-patients in the year preceding the performance period.

Other commenters recommended that CMS remove the proposed 60 survey-eligible patient threshold from the OAS CAHPS Survey proposals. The commenters noted an ASC is exempt from the requirements of the ASCQR Program if it submits fewer than 240 Medicare primary and secondary claims per year, and requested CMS clarify the circumstances under which this proposal would exclude an ASC eligible to participate in the ASCQR Program from the requirement to administer the OAS CAHPS Survey.

Two commenters asserted that comparing an ASC with a small patient population to a sample of a much larger ASC's population may weaken the statistical reliability of the survey results and comparability of facilities' scores.

Response: We are committed to ensuring high reliability in publicly reported OAS CAHPS Survey results. To make abundantly clear our policies discussed in the proposed rule, ASCs will fall into one of three categories based on their past and projected total patient volume. In order to determine its projected total patient volume, we recommend ASCs review their accounts receivable and payable records. From these accounting documents, a facility can determine its past patient volume and project future patient volume. Acceptable methods of sampling survey-eligible patients can be found in Chapter IV-Sampling Procedures of the Protocols and Guidelines Manual at *https://oascahps.org/Survey-Materials*.

The first category includes ASCs that estimate receiving more than 300 completed surveys during the 12-month reporting period based on its past and projected total patient volume. We note that in the proposed rule (81 FR 45732), we stated that ''ASCs will be required to survey a random sample of eligible patients on a monthly basis.'' We also note that elsewhere in the proposed rule (81 FR 45733), we also stated that, ''the OAS CAHPS Survey is administered to all eligible patients—or a random sample thereof—who had at least one outpatient surgery/procedure during the applicable month.'' We recognize that the language is confusing and are clarifying here that ASCs that anticipate receiving more than 300 surveys have a choice. They are required to either: (1) randomly sample their eligible patient population, or (2) survey their entire OAS CAHPS eligible patient population. In other words, random sampling is optional.

We calculated the number 300 by using the reliability criterion for the OAS CAHPS Survey measures, which is 0.8 or higher.[198] This which requires facilities with large patient populations to randomly sample a sufficient number of patients to yield at least 300 completed surveys over each 12-month reporting period. This criterion allows at least 80 percent power to detect a 10 percent difference for binary survey outcome at the 0.05 significance level.[199] A reliability criterion of 0.8 is the normal standard for random sample surveys.[200] The 300 completed surveys translates into approximately 25 completed surveys per month (25 completes $\times$ 12 months = 300 completes per year). At this time, there are no plans to adjust the threshold of the target minimum of 300 completed surveys for the OAS CAHPS Survey for larger facilities that have the option to undertake random sampling. To do so could decrease the reliability of the OAS CAHPS survey results. Survey data will be collected on a monthly basis and uploaded on a quarterly basis. Survey vendors will report the ''total patient volume,'' ''total eligible patients,'' ''number of patients sampled,'' and the ''number of completed surveys'' for each reporting period.[201] These reported patient data will be used to ensure sampling requirements are followed.

Second, if an ASC does not anticipate receiving 300 completed surveys during the 12-month reporting period based on its past and projected total patient volume, it must survey all eligible patients served during the reporting period. In other words, these smaller facilities must undertake a census of all eligible patients served; there is no option to randomly sample. Smaller facilities' OAS CAHPS survey results are not affected by the reliability issues underlying the target minimum policy because conducting a census—surveying all eligible patients in a population, as opposed to sampling and administering the survey to a portion of that eligible patient population—measures the true value of the patient population by including all eligible patients at the facility in the survey population. However, we will continue to review the data from the voluntary implementation to identify and address any issues related to the reliability and comparability of OAS CAHPS Survey-based measure rates across facilities. Thus, the OAS CAHPS results for the larger facilities and the smaller facilities both achieve the statistical precision of the reliability criterion. For example, if two different facilities with large patient volumes in a particular year both randomly sample their eligible patients and receive 300 completed surveys, they would both have met the reliability criterion during that year. If in a particular year one facility estimates it will receive more than 300 completed surveys in that year and samples and obtains 300 completed surveys while, during that same year, a different facility does not anticipate receiving 300 completed surveys and undertakes a census of its entire survey-eligible patients, both facilities would achieve the statistical precision of the reliability criterion for that year. As a third example, for a facility that obtained 300 completed surveys from their 1500 total eligible patients served in one year, but experienced a change in patient volume during the next year and surveyed their entire 200 total eligible patients served the next year, the facility would have met the reliability criterion during both years.

Third, if in the prior year an ASC serves less than 60 survey eligible patients, the facility can request an exemption from the OAS CAHPS Survey administration requirement because these few surveys would not provide reliable data and the burden associated with administering the survey as well as the resulting public reporting of OAS CAHPS Survey results would be disproportionately burdensome. At this time, there are no plans to adjust the threshold for the exemption. This request and related deadlines will be available on the OAS CAHPS Survey Web site (*https://oascahps.org*) on or before May 15 of the

[200] Ibid.

[201] Outpatient and Ambulatory Surgery CAHPS Survey: ''Protocol and Guidelines Manual.'' Available for download at: *https://oascahps.org/Survey-Materials*.

data collection calendar year as discussed in the proposed rule (81 FR 45733).

However, we agree with the commenters that the proposed 60 survey-eligible patient threshold is unlikely to exclude ASCs that would otherwise be eligible for the ASCQR Program from the OAS CAHPS Survey administration requirements. As noted by commenters, ASCs with fewer than 240 Medicare claims (Medicare primary and secondary payer) per year during an annual reporting period for a payment determination year are not required to participate in the ASCQR Program for the subsequent annual reporting period for that applicable payment determination year (42 CFR 416.305(c)). Therefore, it is unlikely that an ASC would qualify for an exemption from the OAS CAHPS Survey without also being exempted from the ASCQR Program. However, this would also likely be the case if we adopted a 100 survey-eligible patient threshold. We currently lack data regarding the interaction between the ASCQR Program's programmatic threshold and the OAS CAHPS Survey's survey-eligible patient threshold. Because it may be possible for an ASC to treat enough patients to be eligible for the ASCQR Program but not treat 60 survey-eligible patients, we believe it is appropriate to maintain the OAS CAHPS Survey administration threshold at this time. To be clear, an ASC that would not need to report data for any measures in the ASCQR Program if it has less than 240 Medicare claims (Medicare primary and secondary payer) in the year prior to the data collection year for the applicable payment determination, would also not be required to submit a participation exemption request form or administer the OAS CAHPS Survey for the same time period.

The facility-level data for both large and small facilities will be adjusted to account for patient characteristics that impact response tendencies (that is, patient-mix) and ensure fair comparisons across all facilities. As discussed in the CY 2017 OPPS/ASC proposed rule (81 FR 45720), the survey-based measures are adjusted for patient characteristics such as age, education, overall health status, overall mental health status, type of surgical procedure, and how well the patient speaks English. We refer readers to the Protocols and Guidelines Manual, available at: *https://oascahps.org/Survey-Materials* for information regarding the patient-mix adjustment methodology. However, we do not adjust for facility-level characteristics that are under control of the facility, for example, specialty or geographic location. During the voluntary implementation of the survey, we will continue to review the data collected to identify and address any issues related to the reliability and comparability of measure rates across facilities as appropriate. In addition, we believe the proposed 60 survey-eligible patient exemption policy appropriately balances the benefit of ensuring that patient experience of care data is collected and publicly reported for use by patients in making decisions about their health care against the burden of requiring facilities to administer the OAS CAHPS Survey. For this reason, we do not believe it would be appropriate to increase the exemption threshold at this time.

Comment: A number of commenters did not support adoption of the proposed OAS CAHPS Survey-based measures due to the administrative and financial burdens associated with implementing the OAS CAHPS Survey. The commenters asserted that ASCs, as small businesses, cannot afford the staff needed to gather the required measure data, and that diverting available resources to address these reporting requirements may result in diminishing quality of care for ASCs' patients or cause ASCs to withdraw from the ASCQR Program. One commenter noted that ASCs are already paid at lower rates than hospital outpatient departments for the same procedures and this requirement would further reduce ASCs' resources available for quality improvement activities. Commenters asserted that most ASCs will treat more than 60 but fewer than 300 survey-eligible patients in a given year, and as a result, smaller ASCs will incur significant costs to administer the survey and receive far fewer completed surveys than the target minimum.

Response: In selecting measures for the ASCQR Program, we weigh the relevance and utility of measures against the potential burden to ASCs resulting from the measure's adoption. We refer readers to the CY 2013 OPPS/ASC final rule with comment period for a discussion of our considerations in the selection of ASCQR Program quality measures (77 FR 68493 through 68494). While we understand the commenters' concerns regarding the administrative and financial burdens associated with implementing the OAS CAHPS Survey and OAS CAHPS Survey-based measures in the ASCQR Program, we believe the benefits of capturing patient experience of care data in the ASC setting outweigh the administrative burden associated with administering the survey. We are dedicated to improving the quality of care provided to patients, and believe patients are a vital source of information in assessing the quality of care provided at an ASC.

Furthermore, collection of the patient's perspectives of care data is similar for other CAHPS surveys, such as the Home Health Care CAHPS (HHCAHPS) Survey,[202] In-Center Hemodialysis CAHPS (ICH CAHPS),[203] and Hospice CAHPS.[204] ASCs would follow the same model where providers contract with approved survey vendors for the data collection and implementation of the survey. We post the list of the approved OAS CAHPS vendors on *https://oascahps.org*, and we encourage ASCs to contact vendors for cost and service information pertaining to OAS CAHPS as there may be differences among vendors. In addition, as discussed in the proposed rule (81 FR 45737), the survey has three administration methods: mail-only; telephone-only; and mixed mode (mail with telephone follow-up of non-respondents). We refer readers to the Protocols and Guidelines Manual for the OAS CAHPS Survey (*https://oascahps.org/Survey-Materials*) for materials for each mode of survey administration. While ASCs/vendors must make multiple attempts to contact eligible patients unless the patient refuses or the ASC/vendor learns that the patient is ineligible to participate in the survey, ASCs/vendors may conduct the OAS CAHPS survey in one or more of the survey modes of telephone only, mail only, or mail with telephone follow-up. We note that generally, the mail only mode is the most economical choice.

Comment: Some commenters noted that many ASCs already have a different survey in place to assess patient satisfaction and quality of care, and stated their belief that adding another survey requiring the ASC to contract with a third party vendor would not improve the quality control measures already in place at the ASC. One commenter requested clarification as to whether ASCs may continue to administer their own facility-specific patient experience of care surveys using the same tools and administration

[202] Home Health Care CAHPS Survey: ''Protocol and Guidelines Manual.'' Available for download at: *https://homehealthcahps.org/Portals/0/PandGManual.pdf.*

[203] In-Center Hemodialysis CAHPS Survey: ''Protocol and Guidelines Manual.'' Available for download at: *https://ichcahps.org/Portals/0/ICH_SurveyAdminManual.pdf.*

methods they use now if the ASC–15a-e survey-based measures are finalized.

Response: Currently, there is no standardized survey available to collect information on the patient's overall experience for surgeries or procedures performed within an ASC. Some ASCs are conducting their own surveys and reporting these results on their Web sites, but there is not one standardized survey in use to assess patient experiences with care in ASCs that would allow valid comparisons across ASCs. Patient-centered experience of care measures are a component of the 2016 CMS Quality Strategy, which emphasizes patient-centered care by rating patient experience as a means for empowering patients and improving the quality of their care.[205]

Through inclusion in the ASCQR Program and public reporting of survey results, both ASCs and patients will be able to learn. ASCs can assess their own quality and see how their quality compares to other ASCs, and patients can compare measures and make informed decisions about their healthcare. We believe this provides additional incentives for ASCs to engage in quality improvement activities.

While an ASC may continue to administer its own facility-specific patient experience of care survey, that survey administration would not satisfy the requirements of the ASC–15a-e survey-based measures. In order to meet the survey administration requirements for these measures, the ASC must administer the OAS CAHPS Survey in accordance with the requirements listed in the OAS CAHPS Survey Protocols and Guidelines Manual.[206]

We encourage ASCs to consider adding specific questions of interest to the OAS CAHPS Survey instead, rather than administering a second, standalone, survey to patients. As noted in the CY 2017 OPPS/ASC proposed rule (81 FR 45732), ASCs may elect to add up to 15 supplemental questions to the OAS CAHPS Survey. These could be questions ASCs develop specifically for use alongside the OAS CAHPS Survey, or questions from an existing survey. All supplemental questions must be placed after the core OAS CAHPS Survey questions (Questions 1 through 24).

Comment: Another commenter suggested that CMS delay public reporting of ASC measure rates for at least one year to allow ASCs to become familiar with the measures and survey administration.

Response: As stated in the CY 2017 OPPS/ASC proposed rule (81 FR 45728), this measure was proposed for the CY 2020 payment determination and subsequent years. Therefore, ASCs would not be required to submit OAS CAHPS Survey results until CY 2018. This gives ASCs an additional year to become familiar with both the OAS CAHPS Survey and its administration requirements, as well as contract with a third-party vendor to administer the survey. We refer ASCs to the list of CMS-approved survey vendors available on the OAS CAHPS Web site (*https://oascahps.org/General-Information/Approved-Survey-Vendors*) and encourage ASCs to compare prices across vendors, as they may vary. We believe this additional year is sufficient time for ASCs to become familiar with the measures and survey administration before it is a requirement of the ASCQR Program and is publicly reported. Furthermore, we encourage ASCs to participate in the voluntary national implementation of the OAS CAHPS Survey to gain experience. More information can be found at: *https://oascahps.org*.

Moreover, as stated in the proposed rule (81 FR 45734), we will propose a format and timing for public reporting of OAS CAHPS Survey data in future rulemaking prior to implementation of the measures. Because CY 2016 is the first year of voluntary national implementation for the OAS CAHPS Survey, and we believe using data from this voluntary national implementation will help inform the displays for public reporting of OAS CAHPS Survey data for the ASCQR Program, we did not propose a format or timing for public reporting of OAS CAHPS Survey data in the proposed rule.

Comment: One commenter recommended that CMS instead provide ASCs with a sample survey document to use in their practices, which ASCs could enter into a CMS database for review. The commenter believed such an alternative would provide CMS with patient experience of care data without imposing undue burdens on ASCs, and give ASCs greater control over the data submission process.

Response: At present, there is no standardized survey available to collect information on the patient's overall experience for surgeries or procedures performed within an ASC. Implementing the OAS CAHPS Survey in the ASCQR Program will enable patients to compare patient experience of care data across multiple ASCs as part of their healthcare decision-making. In addition, we believe implementing the OAS CAHPS Survey in the ASCQR Program will incentivize ASCs to factor patient experience of care into their quality improvement efforts more proactively. Implementing a shorter ''sample survey'' would not enable the same apples-to-apples comparison as a fully tested survey, and we believe allowing ASCs to administer the survey by any means chosen rather than according to the OAS CAHPS Protocol and Guidelines Manual [207] could affect the reliability of a facility's scores. As currently specified, the OAS CAHPS Survey requires that the survey be administered by an approved survey vendor. This is to ensure that patients respond to the survey in a way that reflects their actual experiences with ASC care, and is not influenced by the ASC. Removing vendors, neutral third parties, could raise issues of objectivity and bias.

Comment: One commenter did not support adoption of the proposed ASC–15a–e survey-based measures because the commenter believes the OAS CAHPS Survey assesses only patient satisfaction with their care, not the quality of care provided, and is therefore inappropriate for use in the ASCQR Program.

Response: We disagree with the commenter's assertion that the OAS CAHPS Survey does not assess the quality of care provided at a facility. Studies show a relationship between the clinical quality of care provided at a facility and patients' experience of care.[208] [209] The OAS CAHPS Survey is specifically designed to measure patient experience of care in the hospital outpatient and ambulatory surgical center settings, and we believe patient experience of care is an important indicator of the quality of care provided at a facility. As noted above, patients are the best source for certain information about the quality of care.

Comment: One commenter requested additional information regarding the definition of ''completed surveys'' for the OAS CAHPS Survey.

Response: We refer readers to Exhibit 9.1 ''Steps for Determining Whether a

Questionnaire Meets Completeness Criteria'' on in the Protocol and Guidelines manual, available at: *https://oascahps.org/Survey-Materials.*

Exhibit 9.1
Steps for Determining Whether a Questionnaire Meets Completeness Criteria

Sum the number of questions that have been answered by the respondent that are applicable to all patients. These include questions 1–10 and 13–24.

R = total number of questions answered

Divide the total number of questions answered by 22, which is the total number of questions applicable to all patients, and then multiple by 100 to determine the percentage.

Percentage Complete = (R / 22) x 100

If the Percentage Complete is greater than or equal to 50 percent, then assign the applicable survey completed disposition code (code 110 or 120) to indicate that the case meets the definition of a completed survey. Otherwise, assign the disposition code for breakoff (code 310) to the case.

A survey administered under the OAS CAHPS Survey Protocols and Guidelines is considered to be ''complete'' if the patient answered at least half of the questions applicable to all patients.[210] There are a total of 22 questions that are applicable to all patients—Questions 1 through 10 and Questions 13 through 24. A survey is considered complete when at least 11 of these questions are answered by the patient.

Comment: One commenter expressed concerns about using the survey results in payment determinations, particularly in instances where a facility has a low response rate. A few commenters stated that patient response is out of the control of the facility, and asserted that facilities should not be penalized for patients' decision not to complete the survey.

Response: We agree with commenters that patient response is largely out of the control of the facility. However, we clarify we did not propose to penalize ASCs for patients' decision not to complete the survey. Payment implications under the ASCQR Program are tied to the successful and timely reporting of required quality measure data. An ASC will not receive a payment reduction based on performance under the ASC–15a–e measures if the ASC administers the survey according to the OAS CAHPS Survey Protocol and Guidelines Manual[211] and submits that data to CMS by the data submission deadline, regardless of the number of completed surveys the facility receives. Results will be used for public reporting only.

Comment: One commenter noted that the patient population for ASCs is different than that of hospitals, and there is little data available about this population's willingness to complete CAHPS surveys.

Response: We acknowledge the commenter's concern regarding the current lack of data on ASC patient response rates to patient experience of care surveys. As noted previously (81 FR 45730), before development of the OAS CAHPS Survey, there was no standardized survey available to collect information on the patient's overall experience for surgeries or procedures performed within an ASC. However, the field and mode testing of the OAS CAHPS Survey, as discussed in the above responses, indicates that ASCs will receive a reasonable response rate. For the mode experiment in 2015, which included 13,576 patients from 70 facilities (38 hospital outpatient departments and 32 ASCs), the overall response rate across all modes tested was 39 percent. The response rate for ASCs was slightly higher (39.6 percent) than the response rates for the hospital outpatient departments (38.6 percent) for the mode experiment. The response rate for the mail-only mode was 37 percent; the telephone-only response rate was 34 percent; and the mixed-mode response rate was 50 percent. For the field test in 2014, which was mixed-mode only and included 4, 179 patients from 36 facilities (18 hospital outpatient departments and 18 ASCs), the response rate was 46 percent. The overall response rate for the 18 participating ASCs was slightly higher (47 percent) than the response rate for the hospital outpatient departments.[212] Therefore, we believe ASCs will receive a reasonable response rate under the OAS CAHPS Survey.

Comment: One commenter expressed concern that the survey administration period for the OAS CAHPS Survey extends too far beyond the time after a patient's procedure.

Response: Both the field test (2014) and the mode experiment (2015) were conducted using monthly survey administration. The monthly sampling ensures that patient records are evenly distributed throughout the year without possible seasonal bias. As stated in the proposed rule (81 FR 45738), to meet the OAS CAHPS Survey requirements for the ASCQR Program, we proposed that ASCs contract with a CMS approved vendor to collect survey data for eligible patients at the ASCs on a monthly basis and report that data to CMS on the ASC's behalf by the

[210] Outpatient and Ambulatory Surgery CAHPS Survey: ''Protocol and Guidelines Manual.'' Available for download at: *https://oascahps.org/Survey-Materials.*

[211] Outpatient and Ambulatory Surgery CAHPS Survey: ''Protocol and Guidelines Manual.'' Available for download at: *https://oascahps.org/Survey-Materials.*

[212] *https://oascahps.org/General-Information/Mode-Experiment.*

quarterly deadlines established for each data collection period. While we require that the OAS CAHPS Survey be collected on a monthly basis, we are clarifying here that facilities can sample and implement the survey more frequently than monthly as long as the reporting of data is provided based on a monthly sampling plan. Information on sampling more frequently than monthly can be found in the OAS CAHPS Protocols and Guidelines Manual which is available at: *https://oascahps.org/Survey-Materials*. Under the OAS CAHPS Protocols and Guidelines Manual,[213] ASCs may choose to have their vendors select the sample and implement the survey more frequently as long as the monthly targets are met and the patient sample is distributed throughout the month. Therefore, if ASCs are concerned with the timeframe, they may survey more frequently.

Comment: One commenter recommended that CMS align the OAS CAHPS Survey with the HCAHPS Survey by: (1) Adopting the same four-point scale used in the HCAHPS Survey for ratings questions (that is, ''Always; Usually; Sometimes; or Never'' responses); and (2) adopting the same new medication questions used in the HCAHPS Survey to the OAS CAHPS Survey (Question 15: ''During this hospital stay, were you given any medicine that you had not taken before?''; Question 16: ''Before giving you any new medicine, how often did hospital staff tell you what the medicine was for?''; Question 17: ''Before giving you any new medicine, how often did hospital staff describe possible side effects in a way you could understand?'').

Response: As part of the survey development process, the OAS CAHPS Survey was aligned as appropriate with other CAHPS Surveys, including the HCAHPS Survey. However, the OAS CAHPS Survey assesses patient experience of care for outpatient surgical procedures, and therefore, takes the outpatient/ambulatory setting into account and captures information about the appropriate experiences of care for this particular setting.

We note that the four-point scale response set used for some HCAHPS Survey questions, ''Always; Usually; Sometimes; or Never,'' is appropriate to use when a question includes the phrase ''how often.'' This is appropriate in the inpatient setting, where patients stay in the hospital for a longer period of time. The OAS CAHPS Survey questions use a single point in time reference for an outpatient surgery or procedure because patients spend a significantly shorter period of time in the facility. Therefore, we believe the OAS CAHPS Survey questions and response options are worded appropriately (that is, for the majority of the OAS CAHPS Survey questions, the response categories are: ''Yes, definitely,'' ''Yes, somewhat,'' or ''No.'' Response categories for other questions are: ''Yes'' or ''No'' for this setting of care and treatment situation.

While there are no plans to add questions about new medications to the OAS CAHPS Survey at this time, we will take this recommendation into consideration during future updates to the survey.

Comment: One commenter expressed concern that the OAS CAHPS Survey groups patients' assessment of care provided by doctors and nurses together because the commenter believes this will provide less meaningful information to providers and patients. The commenter recommended that CMS develop separate questions regarding nurses' care, focusing on the nursing staff's effect on the patient's surgical experience and discharge instructions to better measure the role of nurses in patient experience of care.

Response: In the OAS CAHPS Survey, references to the doctors, nurses, and other staff at the facility are grouped together for two reasons. First, grouping assessment of the healthcare personnel at a facility helps reduce the overall length of the survey so that similar questions are not repeated separately for doctors and nurses. Second, the questions listed under sections I, II, III, and IV (Before Your Procedure; Facility and Staff; Communications; and Recovery) include aspects of the patient's care that could be addressed by either the doctor or another healthcare professional at the facility. Combining these professionals under a single series of questions allows the patient to report that someone provided information and explained the process without having to recall the specific individual who gave the information. This is important because the OAS CAHPS Survey is intended to assess the patient's experience of care at the facility, including, but not separating out, all the staff that work at the facility. For these reasons, we believe it is appropriate to ask these questions in a way that reflects the care provided by doctors, nurses, and other facility staff combined. We note that during the OAS CAHPS Survey field test conducted in 2014 and the mode experiment conducted in 2015, we did not receive any indications that the respondents had any difficulty answering these questions as they are currently written. The nonresponse, which is an indication of difficulty answering a question, was very low for the two questions that combine doctors and nurses (Question 7, which is about treating the patient with courtesy and respect and Question 8, which is about making sure the patient was a comfortable as possible). For the field test, less than 0.5 percent of the respondents did not respond to these questions while 99.5 percent were able to answer these questions. For the mode experiment just over 1 percent of the respondents did not respond to the questions while nearly 99 percent were able to answer them. These nonresponse rates were very similar to the questions that were about clerks and receptionists.

Comment: One commenter expressed concern that CMS did not propose to include the Consumer Assessment of Healthcare Providers and Systems Surgical Care Survey (S–CAHPS) in the ASCQR Program alongside the OAS CAHPS Survey. The commenter stated the S–CAHPS Survey, developed by AHRQ in collaboration with a broad array of surgical groups, addresses critical gaps in the assessment of surgical care such as informed consent, shared decision-making, anesthesia care, post-operative instructions, and access, all of which are issues consumers find to be very important in seeking surgical care. The commenter therefore recommended CMS include the S–CAHPS Survey in the ASCQR Program in addition to the OAS CAHPS Survey. Another commenter recommended CMS adopt the S–CAHPS Survey for the ASCQR Program instead of the OAS CAHPS Survey because the S–CAHPS Survey is NQF-endorsed for the measurement of patient experience of care before, during, and after surgery.

Response: The focus of S–CAHPS is to obtain a patient's experience of care received from a surgeon,[214] whereas the focus of OAS CAHPS is to obtain data on a patient's experience of care received from a facility, specifically from an ambulatory surgery center or an ASC. Therefore, the units of analyses are not the same. We also refer readers to our discussions above regarding non-NQF endorsed measures. Furthermore, in order for a measure to be proposed for adoption into the ASCQR Program, it must first be put on the MUC list and reviewed by the MAP. The S–CAHPS

[213] Outpatient and Ambulatory Surgery CAHPS Survey: ''Protocol and Guidelines Manual.'' Available for download at: *https://oascahps.org/Survey-Materials.*

[214] American College of Surgeons. ''S–CAHPS (Consumer Assessment of Healthcare Providers and Systems Surgical Care Survey).'' Available at: *https://www.facs.org/advocacy/quality/cahps.*

Survey has not been submitted to the MAP for consideration as a measure for the ASCQR Program, and therefore, cannot be proposed or adopted for the program at this time. However, we will take these recommendations into consideration for the future.

Comment: Two commenters requested that CMS reconsider its position on respondent confidentiality for the OAS CAHPS Survey administration to align with the HCAHPS survey, which allows for the release of patient-level data for quality improvement purposes, with the stipulation that a patient's identity should not be shared with direct care staff. One commenter stated that very few patients return to an ASC for another surgical procedure within three months of the index surgery, and that ASC patients should therefore not be considered to have an ''ongoing relationship'' with the ASC where they received care. Another commenter noted that maintaining this confidentiality would pose challenges to identification and formal investigation of potential grievances and limit facilities' ability to map specific ratings to other patient-level encounter variables for quality improvement initiatives. Commenter asserted that ASCs must be able to work confidentially with the OAS CAHPS Survey results in order to study the patient experience and drive quality improvement efforts.

Response: The administration protocols for OAS CAHPS follow protocols for other more recent CAHPS® Surveys, restricting the release of patient-level data if the patient has not consented. For example, the Home Health Care CAHPS (HHCAHPS) Survey protocol states: ''HHCAHPS Survey approved vendors can provide responses linked to a sample patient's name and other identifying information only if the sample patient gives his or her consent on the 'Consent to Share Identifying Information' question.'' [215] For the Hospital IQR Program, because hospitals can self-administer the HCAHPS Survey, we do not state that patients' responses and identifying information will not be shared with the hospital. However, HCAHPS Surveys administered via a third-party vendor are not linked to a sample patient's name unless the patient gives his or her consent, and we encourage hospitals to undertake measures to protect patient confidentiality when self-administering the survey. We note that facilities may choose to add the ''Consent to Share'' question [216] to the OAS CAHPS Survey. This question asks whether a patient gives permission for their name to be linked to their survey responses. However, we note that each facility should consult with its own counsel to ensure compliance with applicable privacy and security laws.

Comment: Two commenters expressed concern that if the OAS CAHPS Survey results are reported at the CCN level, the results will be more difficult for patients to use in selecting a facility for their care, and of less value to individual facilities for performance improvement purposes. The commenters recommended that CMS collect and report ASC–15a-e measure data at the NPI level, as is done for other ASCQR Program measures.

Response: Survey results are collected and reported at the CCN level because the OAS CAHPS Survey was tested at the CCN level. However, we thank the commenters for their recommendation to report OAS CAHPS Survey-based measure data at the NPI level for patient ease and individual facility performance improvement purposes. We will consider the feasibility of requiring ASCs to collect and report OAS CAHPS Survey data at the NPI level in future rulemaking.

Comment: Many commenters expressed concerns regarding the length of the OAS CAHPS Survey. A number of commenters asserted that the OAS CAHPS Survey's length impairs ASCs' ability to add their own questions to the survey because the resulting survey would be too long to receive a reasonable response rate. The commenters also expressed concern that the OAS CAHPS Survey's length will limit the number of completed surveys an ASC receives because patients will be overwhelmed by the number of questions in the survey or otherwise unable to complete the survey, and in turn impact the ability of the ASC to use the survey data in quality improvement activities.

These commenters recommended CMS shorten the OAS CAHPS Survey in order to increase survey completion rates, and further recommended CMS allow each facility to have more choice in the questions they include in their survey. A number of commenters specifically recommended that CMS shorten the required patient experience items to allow ASCs to add their own questions and collect targeted information to enhance patient experience at their own facilities. Numerous commenters also recommended that CMS shorten the ''About You'' section of the OAS CAHPS Survey to include only those items either required by law or collected for use in patient-mix adjustment.

Response: The OAS CAHPS Survey is comparable in length and survey response rate to other patient experience of care surveys. For example, the HCAHPS Survey is 32 questions long,[217] and the response rate for the HCAHPS Survey has generally been 32 to 33 percent.[218] By comparison, the OAS CAHPS Survey is 37 questions long, and the survey's 2015 mode experiment showed an overall response rate of 39 percent.[219] The mode experiment was conducted to test the OAS CAHPS Survey questions when administered by mail-only, telephone-only, and mixed-mode (mail with telephone follow-up).

With regard to the concern that response rates would be negatively affected by any supplemental questions, we found that the response rates for the field test in 2014 were good for ASCs (47 percent for the mixed-mode) and that earlier version of the survey included 12 additional questions that have since been removed from the OAS CAHPS Survey.

While we appreciate commenters' recommendation that facilities be allowed to choose which questions to administer, the survey instrument was developed in order to provide a more complete picture of patients' experience of care in the ASC setting. We believe allowing facilities to administer a selection of the survey items to patients would impair the assessment of a facility's quality of care, and would also inhibit the comparison of performance across facilities and the reliability of a facility's scores. As currently specified, the OAS CAHPS Survey requires that the survey be administered by an approved survey vendor. As previously discussed, this is to ensure that patients respond to the survey in a way that reflects their actual experiences with ASC care, and is not influenced by the ASC. Removing vendors, neutral third parties, could raise issues of objectivity and bias. In addition, the 24 core questions of the OAS CAHPS Survey are either directly actionable (that is, give feedback to hospitals) or inform the need for patients to answer subsequent

[215] Home Health Care CAHPS Survey: ''Protocols and Guidelines Manual.'' Available at: *https://homehealthcahps.org/Portals/0/PandGManual.pdf.*

[216] Outpatient and Ambulatory Surgery CAHPS Survey: ''Survey Materials.'' Available at: *https://oascahps.org/Survey-Materials.*

[217] *http://www.hcahpsonline.org/surveyinstrument.aspx.*

[218] For example, see: *https://www.medicare.gov/hospitalcompare/details.html?msrCd=prnt1grp1&ID=220066&stCd=MA&stName=Massachusetts.*

[219] Outpatient and Ambulatory Surgery CAHPS Survey: ''Mode Experiment.'' Available at: *https://oascahps.org/General-Information/Mode-Experiment.*

questions that are actionable. For example, Question 10, which asks whether a patient received anesthesia, establishes whether a patient should respond to Questions 11 and 12, which provide actionable feedback to ASCs regarding their communication with the patient about the anesthesia process and possible side effects. We also encourage ASCs to consider adding specific questions of interest to the OAS CAHPS Survey. As noted in the CY 2017 OPPS/ASC proposed rule (81 FR 45732), ASCs may elect to add up to 15 supplemental questions to the OAS CAHPS Survey. These could be questions ASCs develop specifically for use alongside the OAS CAHPS Survey, or questions from an existing survey.

However, we also acknowledge commenters' concerns about the length of the OAS CAHPS Survey and their recommendations to shorten sections of the survey, such as the ''About You'' section. We continue to evaluate the utility of individual questions as we collect new data from the survey's voluntary national implementation, and will consider different options for shortening the OAS CAHPS Survey without the loss of important data in the future. Specifically, we are contemplating removing two demographic questions—the ''gender'' and ''age'' questions—from the OAS CAHPS Survey in its next update, if we determine that it is feasible, when collecting information on survey-eligible patients from facility records, that gender and age information could also be collected via these records.

Comment: One commenter requested that CMS remove or revise two questions on the OAS CAHPS Survey asking whether a doctor or anyone from the facility: (1) Gave the patient all the information needed about their procedure; and/or (2) gave the patient easy to understand instructions about preparing for their procedure. The commenter asserted that patient education is solely within the purview of the doctor's office, not the facility, and should therefore be removed from a survey assessing patients' experience of care at the facility.

Response: We disagree with the commenter's assertion that patient education is solely within the purview of the doctor's office. We believe it is the facility's responsibility to ensure that a doctor, nurse, or other facility staff member provides the patient with information about preparing for their procedure, the procedure itself, and what to expect following discharge from the ASC. The OAS CAHPS Survey-based measures were reviewed by two 10-member TEPs comprised of experts on outpatient surgery, including clinicians, providers, patient advocates, and representatives from other stakeholder organizations. These TEPs provided guidance in the establishment of relevant topics for assessing patient experience of care at an outpatient facility, and commented on draft versions of the survey for cognitive and field testing. These TEPs agreed with the questions as drafted, including those regarding the facility's communication with patients. Therefore, we believe it is appropriate to include these important communications between the patient and the facility about their care in the OAS CAHPS Survey.

The OAS CAHPS Survey is focused on patients' experience of care received for their ambulatory surgery or procedure. A physician/surgeon who performs surgeries/procedures at a facility is a member of that facility with both rights and responsibilities. We believe it is the facility's responsibility to ensure that someone—whether the doctor, nurse, or other facility staff member—provide patients with information about preparing for their procedure, about the procedure itself, as well as what to expect following the procedure/surgery. Therefore, we believe it is appropriate to include these important communications with patients in the OAS CAHPS Survey.

Comment: One commenter requested clarification from CMS regarding the inclusion of pain management-related questions in the OAS CAHPS Survey. The commenter expressed concern that the pain management communication questions may negatively influence patient perceptions about their overall care and, in turn, result in negative responses throughout the survey. Another commenter expressed concern that the OAS CAHPS Survey's questions regarding communication about pain management may not reflect the true perception patients have of their experience relative to pain management, and recommended CMS continue to explore ways to ensure better measurement of patients' experience with pain management.

Response: The OAS CAHPS Survey pain management communication questions focus on the information provided to patients regarding pain management following discharge from an ASC, not the ASC's direct control or management of patients' pain. The ASC is responsible for providing the patient with this information if there is a possibility that the patient might have pain as a result of the procedure. Communication about possible effects during recovery is an important factor for patients. As discussed previously, the OAS CAHPS Survey underwent a rigorous survey development process, the results of which did not indicate any negative impact to overall survey responses resulting from the inclusion of these questions regarding pain management communication. In addition, we have no reason to believe that patients' responses to the pain management communication questions would not accurately reflect their experience with the facility. Therefore, we do not believe that the pain management communication question would negatively influence patient perceptions about their overall care, resulting in negative responses throughout the survey. However, as noted in the CY 2017 OPPS/ASC proposed rule (81 FR 45732), we will continue to evaluate the appropriateness and responsiveness of these questions to patient experience of care and public health concerns.

Comment: A number of commenters expressed concern regarding the OAS CAHPS Survey pain management communication question, ''Some ways to control pain include prescription medicine, over-the-counter pain relievers or ice packs. Did your doctor or anyone from the facility give you information about what to do if you had pain as a result of your procedure?'' One commenter recommended that CMS refine this question to be clear the survey is asking whether patients received pain management information that could be applied once they left the facility, and that the information could include, but is not limited to, information about pain management using appropriate medications. Another commenter recommended reorganizing the pain management methods listed in the first question to run from non-medication pain management to prescription pain medication treatment. One commenter recommended that CMS expand this question to include other methods of pain management, such as physical therapy, because the commenter believed using a more inclusive list of pain control methods would help to further combat the over prescription of opioids for pain management.

Some commenters also expressed concerns regarding the pain management communication control question, ''At any time after leaving the facility, did you have pain as a result of your procedure?'' Specifically, a few commenters requested that CMS revise the pain management communication control question to ask whether, at any time after leaving the facility, the patient experienced pain as a result of their procedure that they felt they could

not manage based on the information they received from the facility or treating physician.

Response: We thank the commenters for their recommendations. As discussed previously, the OAS CAHPS Survey underwent a rigorous survey development process, the results of which indicated that patients understand these questions as presented, and that the questions sufficiently developed for use in the survey.[220] As discussed previously, the OAS CAHPS Survey-based measures were reviewed by two 10-member TEPs comprised of experts on outpatient surgery, including clinicians, providers, patient advocates, and representatives from other stakeholder organizations. These TEPs provided guidance in the establishment of relevant topics for assessing patient experience of care at an ASC, and commented on draft versions of the survey for cognitive and field testing. The possible treatments for pain included in the survey reflect what is tested and reflected to work, and their order is not intended to reflect a preference for any single pain treatment method, only to provide examples of types of pain management a facility may discuss with a patient prior to discharge. The examples provided in this question are also not intended to be an exhaustive list, and we acknowledge that there are many methods for addressing pain following a procedure performed at an ASC, including physical therapy. Because this is not an exhaustive list, we do not believe it is necessary to exclude, expand, or reorganize these questions at this time. However, we will take these suggestions, including reorganizing the pain management methods, into consideration for future iterations of the survey.

Comment: Two commenters expressed concerns that the pain management communication control question raises an unrealistic expectation regarding pain control, and may potentially encourage over prescription of opioids. These commenters therefore recommended removing the pain management communication control question from the OAS CAHPS Survey.

Response: We also note that Question 16 ''At any time after leaving the facility, did you have pain as a result of your procedure?'' is a control question; in other words, an answer of ''yes'' or of ''no'' would not affect provider scores on the OAS CAHPS survey questions. The scores are based on the previous Question 15, which asked if the doctor or anyone from the facility gave the patient information about what to do if the patient had pain as a result of the procedure. We will not publicly report the data from the control question that asks if the patient had pain as a result of the procedure, rather, that question is only used to determine if the previous question should be included in the score or not. For example, if the patient reported having had pain in Question 16, then the response to Question 15 would be included in the score that is reported for the ASC.

For example, the focus of Questions 15 and 16 is to determine whether a patient who is expected to experience pain as a result of a procedure was given information from the doctor or anyone from the facility about what to do about pain. If a patient experiences pain as a result of a procedure (Question 16), it is important that the patient was provided information as to what to do about the pain (Question 15). In these instances, the response to Question 15 would be included in the score. However, for some procedures conducted in an ASC (for example colonoscopies), there is little expectation of the patient experiencing pain. In these instances, a doctor or anyone from the facility may not have given a patient information about what to do about pain as such information would not be relevant. In these latter instances, the response to Question 15 would not be included in the score unless the patient response is a top-box (that is, ''Yes, definitely'') response.

We do not believe a question asking whether patients experienced pain would have an undue influence on patients' responses to the OAS CAHPS Survey or warrant its removal from the OAS CAHPS Survey. As stated above, the OAS CAHPS Survey underwent a rigorous survey development process, the results of which did not indicate any negative impact to overall survey responses resulting from the inclusion of these questions regarding pain management communication. In addition, we have no reason to believe that patients' responses to the pain management communication questions would not accurately reflect their experience with the facility. Therefore, we do not believe that the pain management communication question would negatively influence patient perceptions about their overall care, resulting in negative responses throughout the survey.

Furthermore, as stated in the proposed rule (81 FR 45732), this control question will not affect scores on the OAS CAHPS survey. Rather, scores are based on the previous Question 15, which asks if the doctor or anyone from the facility gave the patient information about what to do if the patient had pain as a result of the procedure. However, we will review the data from the voluntary national implementation and continue to evaluate the appropriateness and responsiveness of these questions, particularly for any unintended consequences.

Comment: One commenter requested clarification about whether CMS intends to publicly report ASC scores on the pain management communication control question.

Response: We interpret the comment to refer to Question 16, ''At any time after leaving the facility, did you have pain as a result of your procedure?'' As stated above, this question is a control question, meaning that an answer of ''yes'' or ''no'' would not affect scores on the OAS CAHPS survey questions. Rather, scores are based on the previous Question 15, which asks if the doctor or anyone from the facility gave the patient information about what to do if the patient had pain as a result of the procedure.

Comment: One commenter recommended that CMS remove the questions on the OAS CAHPS Survey asking patients whether they experienced pain, nausea, or bleeding following a procedure, because the commenter believes this information is not useful to facilities in quality improvement activities, as these are all risks associated with surgery.

Response: Question 17 (''Before you left the facility, did your doctor or anyone from the facility give you information about what to do if you had nausea or vomiting?'') and Question 18 (''At any time after leaving the facility, did you have nausea or vomiting as a result of either your procedure or the anesthesia?'') are intended to assess the information provided to patients regarding what to expect following a surgery/procedure. We believe it is the facility's responsibility to ensure that the patient is aware of the potential side effect of their treatment, and, therefore, believe these questions are indicative of quality of care. As above, we note that Question 18 is a control question, so an affirmative or negative response would not be included in the provider scores on the OAS CAHPS Survey, but rather is used to determine if the provider should have given guidance on how to handle nausea or vomiting (Question

[220] A description of the field test analysis of the survey questions was documented in the **Federal Register** notice on January 16, 2015 (80 FR 2430 through 2431). Available at: *https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing-Items/CMS-10500.html.*

17). The information will be useful to facilities because they will be able to ensure that the information that patients need during recovery is adequately addressed by the facility staff. These questions are not reporting whether the patients experienced pain, nausea, vomiting, bleeding or signs of infection; the questions are reporting if the patients were informed what to do if they had these outcomes.

For example, the focus of questions 17 and 18 is to determine whether a patient who might likely experience nausea or vomiting as a result of a procedure was given information from the doctor or anyone from the facility about what to do to manage these outcomes. If a patient experiences these outcomes as a result of a procedure, it is important that the patient was provided information on how to manage these outcomes. In these instances, the response to Question 17 would be included in the score. However, for some procedures conducted in an ASC (for example laser surgeries), there is little expectation of the patient experiencing nausea or vomiting and in these instances a doctor or anyone from the facility may not have given a patient information on how to manage these outcomes as such information would not be relevant. In these latter instances the responses to Question 17 would not be included in the score unless the patient response is a top-box (that is, ''Yes, definitely'') response.

Furthermore, as stated in the proposed rule (81 FR 45732), this control question will not affect scores on the OAS CAHPS survey. Rather, scores are based on the previous Question 17, which asks if the doctor or anyone from the facility gave information about what to do if the patient had nausea or vomiting. However, we will review the data from the voluntary national implementation and continue to evaluate the appropriateness and responsiveness of these questions, particularly for any unintended consequences.

Comment: One commenter recommended that CMS include an item in the OAS CAHPS Survey assessing whether patients felt they were provided sufficient and timely access to medical innovation and technology during their care in the ASC setting.

Response: We thank the commenter for its recommendation as well as similar concerns from other commenters and will take this recommendation into consideration while balancing the survey's length during the next OAS CAHPS Survey update.

After consideration of the public comments we received, we are finalizing our proposal to adopt the ASC–15a–e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-based measures for the ASCQR Program for the CY 2020 payment determination and subsequent years as proposed with a clarification that ASCs that anticipate receiving more than 300 surveys are required to either: (1) randomly sample their eligible patient population, or (2) survey their entire OAS CAHPS eligible patient population. We note that these measures are also being finalized in the Hospital OQR Program and refer readers to section XIII.B.5.c. of this final rule with comment period for more details.

Including the proposals we are finalizing, the measure set for the ASCQR Program CY 2020 payment determination and subsequent years is listed below.

ASCQR Program Measure Set Previously Finalized and Newly Finalized for the CY 2020 Payment Determination and Subsequent Years

ASC #	NQF #	Measure name
ASC–1	0263	Patient Burn.
ASC–2	0266	Patient Fall.
ASC–3	0267	Wrong Site, Wrong Side, Wrong Patient, Wrong Procedure, Wrong Implant.
ASC–4	†0265	All-Cause Hospital Transfer/Admission.
ASC–5	†0264	Prophylactic Intravenous (IV) Antibiotic Timing.
ASC–6	N/A	Safe Surgery Checklist Use.
ASC–7	N/A	ASC Facility Volume Data on Selected ASC Surgical Procedures.*
ASC–8	0431	Influenza Vaccination Coverage among Healthcare Personnel.
ASC–9	0658	Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients.
ASC–10	0659	Endoscopy/Polyp Surveillance: Colonoscopy Interval for Patients with a History of Adenomatous Polyps-Avoidance of Inappropriate Use.
ASC–11	1536	Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery.**
ASC–12	2539	Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy.
ASC–13	N/A	Normothermia Outcome.***
ASC–14	N/A	Unplanned Anterior Vitrectomy.***
ASC–15a	N/A	OAS CAHPS—About Facilities and Staff.***
ASC–15b	N/A	OAS CAHPS—Communication About Procedure.***
ASC–15c	N/A	OAS CAHPS—Preparation for Discharge and Recovery.***
ASC–15d	N/A	OAS CAHPS—Overall Rating of Facility.***
ASC–15e	N/A	OAS CAHPS—Recommendation of Facility.***

† We note that NQF endorsement for this measure was removed.

** Measure voluntarily collected effective beginning with the CY 2017 payment determination as set forth in section XIV.E.3.c. of the CY 2015 OPPS/ASC final rule with comment period (79 FR 66984 through 66985).

***New measure finalized for the CY 2020 payment determination and subsequent years.

5. ASCQR Program Measure for Future Consideration

In the CY 2013 OPPS/ASC final rule with comment period, we set forth our considerations in the selection of ASCQR Program quality measures (77 FR 68493 through 68494). We seek to develop a comprehensive set of quality measures to be available for widespread use for making informed decisions and quality improvement in the ASC setting (77 FR 68496). We also seek to align these quality measures with the National Quality Strategy (NQS), the CMS Strategic Plan (which includes the

CMS Quality Strategy), and our other quality reporting and value-based purchasing (VBP) programs, as appropriate. Accordingly, as we stated in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66979), in considering future ASCQR Program measures, we are focusing on the following NQS and CMS Quality Strategy measure domains: Make care safer by reducing harm caused in the delivery of care; strengthen person and family engagement as partners in their care; promote effective communication and coordination of care; promote effective prevention and treatment of chronic disease; work with communities to promote best practices of healthy living; and make care affordable.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45735), we invited public comments on one measure developed by the ASC Quality Collaboration for potential inclusion in the ASCQR Program in future rulemaking: the Toxic Anterior Segment Syndrome (TASS) measure.

TASS, an acute, noninfectious inflammation of the anterior segment of the eye, is a complication of anterior segment eye surgery that typically develops within 24 hours after surgery.[221] The TASS measure assesses the number of ophthalmic anterior segment surgery patients diagnosed with TASS within 2 days of surgery. Although most cases of TASS can be treated, the inflammatory response associated with TASS can cause serious damage to intraocular tissues, resulting in vision loss.[222] Prevention requires careful attention to solutions, medications, and ophthalmic devices and to cleaning and sterilization of surgical equipment because of the numerous potential etiologies.[223] Despite a recent focus on prevention, cases of TASS continue to occur, sometimes in clusters.[224] With millions of anterior segment surgeries being performed in the United States each year, measurement and public reporting have the potential to serve as an additional tool to drive further preventive efforts.

This issue is of interest to the ASCQR Program because cataract surgery is an anterior segment surgery commonly performed at ASCs. In addition, the TASS measure addresses the MAP-identified priority measure area of procedure complications for the ASCQR Program.

The TASS measure was included on the 2015 MUC list [225] and reviewed by the MAP. The MAP conditionally supported the measure (MUC ID: 15–1047), noting the high value and urgency of this measure, given many new entrants to the ambulatory surgical center space, as well as the clustering outbreaks of TASS. The MAP cautioned that the measure should be reviewed and endorsed by NQF before adoption into the ASCQR Program, so that a specialized standing committee can evaluate the measure for scientific acceptability.[226] A summary of the MAP recommendations can be found at: *http://www.qualityforum.org/Projects/im/MAP/2016_Final_Recommendations.aspx*.

The TASS measure is used to assess the number of ophthalmic anterior segment surgery patients diagnosed with TASS within 2 days of surgery. The numerator for this measure is all anterior segment surgery patients diagnosed with TASS within 2 days of surgery. The denominator for this measure is all anterior segment surgery patients. The specifications for this measure for the ASC setting can be found at: *http://www.ascquality.org/qualitymeasures.cfm*, under ''Implementation Guide.''

We invited public comments on the possible inclusion of this measure in the ASCQR Program measure set in the future.

Comment: A number of commenters agreed that TASS is a serious complication of anterior segment eye surgery, and that the high volume of eye procedures performed in the United States each year highlights the importance of measures that can support best practices in instrument sterilization and reprocessing. The commenters also noted that incidences of TASS are attributable to the ASC, prevention is actionable by the facility, and published guidelines regarding cleaning and sterilizing of surgical instruments to help improve quality and prevent TASS are available. The commenters also stated that measuring the incidence of TASS may aid in better tracking and understanding the prevalence of TASS.

Response: We thank the commenters for their comments and insights regarding future inclusion of the TASS measure in the ASCQR Program. We will take these comments into consideration if we propose to adopt the TASS measure for the ASCQR Program in the future.

Comment: A few commenters did not support future adoption of the TASS measure because the occurrence of TASS is not necessarily attributable to the ASC, and as a result ASCs may lack the ability to reduce cases of TASS. Some commenters recommended that CMS wait until the NQF has reviewed and endorsed the TASS measure before adopting this measure for the ASCQR Program.

Response: We thank the commenters for sharing their concerns regarding future inclusion of the TASS measure in the ASCQR Program. As stated above, we believe that ASCs could reduce cases of TASS by prevention, which requires careful attention to solutions, medications, and ophthalmic devices and to cleaning and sterilization of surgical equipment because of the numerous potential etiologies.[227] With millions of anterior segment surgeries being performed in the United States each year, we believe that measurement and public reporting have the potential to serve as an additional tool to drive further preventive efforts. However, we will take these comments into consideration if we propose to adopt the TASS measure for the ASCQR Program in the future.

6. Maintenance of Technical Specifications for Quality Measures

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74513 through 74514), where we finalized our proposal to follow the same process for updating the ASCQR Program measures that we adopted for the Hospital OQR Program measures, including the subregulatory process for making updates to the adopted measures. In the CY 2013 OPPS/ASC final rule with comment period (77 FR 68496 through 68497), the CY 2014 OPPS/ASC final rule with comment period (78 FR 75131), and the

CY 2015 OPPS/ASC final rule with comment period (79 FR 66981), we provided additional clarification regarding the ASCQR Program policy in the context of the previously finalized Hospital OQR Program policy, including the processes for addressing nonsubstantive and substantive changes to adopted measures. In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70531), we provided clarification regarding our decision to not display the technical specifications for the ASCQR Program on the CMS Web site, but stated that we will continue to display the technical specifications for the ASCQR Program on the QualityNet Web site. In addition, our policies regarding the maintenance of technical specifications for the ASCQR Program are codified at 42 CFR 416.325. In the CY 2017 OPPS/ASC proposed rule (81 FR 45735), we did not propose any changes to our policies regarding the maintenance of technical specifications for the ASCQR Program.

7. Public Reporting of ASCQR Program Data

In the CY 2012 OPPS/ASC final rule with comment period (76 FR 74514 through 74515), we finalized a policy to make data that an ASC submitted for the ASCQR Program publicly available on a CMS Web site after providing an ASC an opportunity to review the data to be made public. In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70531 through 70533), we finalized our policy to publicly display data by the National Provider Identifier (NPI) when the data are submitted by the NPI and to publicly display data by the CCN when the data are submitted by the CCN. In addition, we codified our policies regarding the public reporting of ASCQR Program data at 42 CFR 416.315 (80 FR 70533). In this final rule with comment period, we are formalizing our current public display practices regarding timing of public display and the preview period, as discussed in more detail below and finalizing how we will announce the preview period timeframes.

Our regulations at 42 CFR 416.315 state that data that an ASC submits for the ASCQR Program will be made publicly available on a CMS Web site. We currently make the data available on at least a yearly basis and strive to publicly display data as soon as possible. Furthermore, as previously stated in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74514 through 74515), we are required to give ASCs an opportunity to preview their data before it is made public. Historically, preview for the April *Hospital Compare* data release typically occurs in January, preview for the July *Hospital Compare* data release typically occurs in April, preview for the October *Hospital Compare* data release typically occurs in July, and the preview for the December *Hospital Compare* data release typically occurs in October. During the preview period, ASCs have generally had approximately 30 days to preview their data. In the CY 2017 OPPS/ASC proposed rule (81 FR 45735 through 45736), therefore, we proposed to publicly display data on the *Hospital Compare* Web site, or other CMS Web site, as soon as possible after measure data have been submitted to CMS, consistent with current practice. In addition, we proposed that ASCs will generally have approximately 30 days to preview their data, also consistent with current practice.

Lastly, moving forward, we proposed to announce the timeframes for each preview period starting with the CY 2018 payment determination on a CMS Web site and/or on our applicable listservs.

We invited public comments on our proposals regarding the timing of public display and the preview period as discussed above.

Comment: A number of commenters supported CMS' proposal to give ASCs 30 days to preview their quality data before it is publicly reported on Hospital Compare because commenters agree doing so will increase data transparency and better educate patients and providers regarding ASC's performance under the ASCQR Program. The commenters encouraged CMS to publicly display ASCQR Program data as soon as possible, because doing so will help consumers make more informed decisions about their care and encourage facilities to ensure high quality of care.

Response: We thank the commenters for their support.

Comment: One commenter urged CMS to align preview period policies across its inpatient and outpatient quality reporting programs in order to reduce confusion and frustration of providers participating in more than one quality reporting program.

Response: By adopting a 30-day preview period, the ASCQR Program will align the duration of its preview period for publicly reporting program data with the Hospital IQR Program (77 FR 53505), the Hospital Readmissions Reduction Program (76 FR 51672 through 51673), the Hospital-Acquired Condition Reduction Program (78 FR 50727 through 50728), the PPS-Exempt Cancer Hospital Quality Reporting Program (77 FR 53562 through 53563), and the Inpatient Psychiatric Facility Quality Reporting Program (77 FR 53654). We also note that we are finalizing a similar proposal under the Hospital OQR Program and refer readers to section XIII.C.8. of this final rule with comment period for more details.

Comment: One commenter urged CMS to finalize a preview period that is reliably and consistently 30 days in length because ASCs need predictability in the preview period in order to appropriately plan staffing and ensure the data are accessed quickly and distributed to the appropriate parties for review in a timely fashion. Another commenter recommended that CMS establish a set timeline for the release of preview reports and consistent preview periods, because doing so will ensure greater quality in data reporting and reduce unnecessary costs for facilities in reviewing program data.

Response: We agree with the commenters, and believe adopting a consistent preview period will benefit ASCs' planning and review of ASCQR Program measure data. We also understand commenters' concern that allowing variability in the duration of the preview period may impact ASCs' ability to plan and prepare for the preview period. While we currently intend to provide a consistent 30-day preview period for ASCQR Program data year-after-year, we believe that retaining some flexibility in this timeline is important in order to ensure that measure data are available for public reporting in a timely fashion. While there may be some variability in the specific dates of a preview period due to data processing and report development issues, we currently publish notifications regarding the availability of preview reports for facilities' review before publication of ASCQR Program measure data through the QualityNet Web site (*https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier1&cid=1138115987249*) and direct communication to ASCs. We intend to continue providing ASCs with this advance notice of the preview period because we believe doing so provides ASCs with sufficient time to identify and procure resources needed to ensure timely and accurate review of their ASCQR Program data.

Comment: One commenter suggested that CMS allow a preview period of 60 days for ASCs, rather than the proposed 30-day preview period, because ASCs are generally small providers without dedicated quality measurement personnel on staff. The commenter stated that a 60-day preview period would allow a more appropriate amount

of time for ASCs to retrieve reports and review their data before its publication.

Response: While we understand that a 60-day preview period would allow ASCs more time to review their ASCQR Program data prior to its publication, we believe 30 days provides balance between sufficient time for ASCs to review their data and timely publication. Implementing a longer preview period would affect our ability to publish ASCQR Program data in a timely manner, and likely result in longer delays between ASC performance and public reporting of measure data. We believe that implementing a 30-day preview period, in conjunction with the revised May 15 data submission deadline for data submitted via a CMS online data submission tool (discussed in more detail below), will enable us to publicly report ASCs' performance data significantly faster, providing patients with the most up-to-date information for use in making decisions about their care. Furthermore, 30 days aligns the ASCQR Program with other CMS quality reporting programs as discussed above.

Comment: One commenter requested that CMS provide additional information on the length of time it takes to appeal a misclassification and how CMS intends to address misclassifications within the 30-day preview period.

Response: We interpret the commenter's reference to ''misclassifications'' to mean errors in an ASC's ASCQR Program data. With regards to errors spotted during the preview period, ASCs are directed to contact CMS if there are inaccuracies with regards to measure calculations. ASCs are responsible for ensuring that the underlying measure data are accurate, however, because the preview period is not an opportunity to make corrections to the underlying data.

While the preview period does not serve as a corrections period, ASCs can edit any measure data submitted via an online data submission tool up until the data submission deadline for that measure (80 FR 70533). In addition, although we understand that ASCs cannot currently change QDCs on claims once submitted, or edit measure quality data submitted via an online data submission tool after the submission deadline was passed, we believe it is the responsibility of each ASC to ensure that its data, as reported to CMS, are accurate (80 FR 70533).

After consideration of the public comments we received, we are finalizing our proposals regarding the timing of public display and the preview period for the ASCQR Program as proposed.

C. Administrative Requirements

1. Requirements Regarding QualityNet Account and Security Administrator

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75132 through 75133) for a detailed discussion of the QualityNet security administrator requirements, including setting up a QualityNet account, and the associated timelines, for the CY 2014 payment determination and subsequent years. In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70533), we codified the administrative requirements regarding maintenance of a QualityNet account and security administrator for the ASCQR Program at 42 CFR 416.310(c)(1)(i). In the CY 2017 OPPS/ASC proposed rule (81 FR 45736), we did not propose any changes to these policies.

2. Requirements Regarding Participation Status

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75133 through 75135) for a complete discussion of the participation status requirements for the CY 2014 payment determination and subsequent years. In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70534), we codified these requirements regarding participation status for the ASCQR Program at 42 CFR 416.305. In the CY 2017 OPPS/ASC proposed rule (81 FR 45736), we did not propose any changes to these policies.

D. Form, Manner, and Timing of Data Submitted for the ASCQR Program

1. Requirements Regarding Data Processing and Collection Periods for Claims-Based Measures Using Quality Data Codes (QDCs)

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75135) for a complete summary of the data processing and collection periods for the claims-based measures using QDCs for the CY 2014 payment determination and subsequent years. In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70534), we codified the requirements regarding data processing and collection periods for claims-based measures using QDCs for the ASCQR Program at 42 CFR 416.310(a)(1) and (2). In the CY 2017 OPPS/ASC proposed rule (81 FR 45736), we did not propose any changes to these requirements.

2. Minimum Threshold, Minimum Case Volume, and Data Completeness for Claims-Based Measures Using QDCs

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75135 through 75137) for a complete discussion of the minimum thresholds, minimum case volume, and data completeness for successful reporting for the CY 2014 payment determination and subsequent years. In the CY 2016 OPPS/ASC final rule with comment period (80 FR 75035), we codified our policies regarding the minimum threshold and data completeness for claims-based measures using QDCs for the ASCQR Program at 42 CFR 416.310(a)(3). We also codified our policy regarding the minimum case volume at 42 CFR 416.305(c). In the CY 2017 OPPS/ASC proposed rule (81 FR 45736), we did not propose any changes to these policies.

3. Requirements for Data Submitted Via an Online Data Submission Tool

In the CY 2017 OPPS/ASC proposed rule (81 FR 45736 through 45737), we proposed changes to requirements for data submitted via a CMS online data submission tool (*QualityNet.org*). In the CY 2017 OPPS/ASC proposed rule (81 FR 45736), we did not propose any changes to our policies regarding data submitted via a non-CMS online data submission tool (CDC NHSN Web site), but are summarizing those policies for context below.

a. Requirements for Data Submitted Via a Non-CMS Online Data Submission Tool

We refer readers to CY 2014 OPPS/ASC final rule with comment period (78 FR 75139 through 75140) and CY 2015 OPPS/ASC final rule with comment period (79 FR 66985 through 66986) for our requirements regarding data submitted via a non-CMS online data submission tool (CDC NHSN Web site). We codified our existing policies regarding the data collection time periods for measures involving online data submission and the deadline for data submission via a non-CMS online data submission tool at 42 CFR 416.310(c)(2). Currently, we only have one measure (ASC–8: Influenza Vaccination Coverage among Healthcare Personnel) that is submitted via a non-CMS online data submission tool.

In the CY 2015 OPPS/ASC final rule with comment period, we finalized a submission deadline of May 15 of the year when the influenza season ends for ASC–8: Influenza Vaccination Coverage among Healthcare Personnel (79 FR 66985 through 66986). In the CY 2017

OPPS/ASC proposed rule (81 FR 45736), we did not propose any changes to these requirements.

b. Requirements for Data Submitted Via a CMS Online Data Submission Tool

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75137 through 75139) for our requirements regarding data submitted via a CMS online data submission tool. We are currently using the QualityNet Web site as our CMS online data submission tool: *https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetHomepage&cid=1120143435383*.

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75137 through 75139), we finalized the data collection time period for quality measures for which data are submitted via a CMS online data submission tool to cover services furnished during the calendar year 2 years prior to the payment determination year. We also finalized our policy that these data will be submitted during the time period of January 1 to August 15 in the year prior to the affected payment determination year. In the CY 2016 OPPS/ASC final rule with comment period, we codified our existing policies regarding the data collection time periods for measures involving online data submission and the deadline for data submission via a CMS online data submission tool at 42 CFR 416.310(c)(1)(ii). In the CY 2017 OPPS/ASC proposed rule (81 FR 45737), we proposed to change the submission deadline from August 15 in the year prior to the affected payment determination year to May 15 in the year prior to the affected payment determination year for all data submitted via a CMS online data submission tool in the ASCQR Program for the CY 2019 payment determination and subsequent years. We also proposed to make a corresponding change to the regulation text at § 416.310(c)(1)(ii) to reflect this policy.

We previously proposed a similar policy to adopt a May 15 submission deadline for all data submitted via a CMS online data submission tool in the CY 2016 OPPS/ASC proposed rule (80 FR 38345). However, we did not finalize that proposal due to public comments received indicating that a May 15 deadline would increase ASC administrative burden by giving ASCs less time to collect and report data, and noting previous technical issues with data submission that required extension of the data submission deadline (80 FR 70535).

However, we believe the May 15 data submission deadline would align the ASCQR Program with the Hospital OQR Program submission deadline (80 FR 70521 through 70522) for data submitted via a CMS online data submission tool. Furthermore, the proposed submission deadlines for measures submitted via a CMS online data submission tool would align the above-listed measures with the submission deadline for ASC–8, resulting in a single deadline for all data submitted via an online data submission tool by ASCs (via CMS and non-CMS online data submission tools). We believe this single deadline would reduce the administrative burden associated with submitting and tracking multiple data submission deadlines for the ASCQR Program. In addition, we believe implementing the proposed May 15 deadline will enable public reporting of these data by December of the same year, thereby enabling us to provide the public with more up-to-date information for use in making decisions about their care. Thus, we believe the benefits of implementing the proposed May 15 submission deadline for data submitted via a CMS online data submission tool outweigh previously stated stakeholder concerns with this deadline.

Therefore, we proposed that data collected for a quality measure for which data are submitted via a CMS online data submission tool must be submitted during the time period of January 1 to May 15 in the year prior to the payment determination year for the CY 2019 payment determination and subsequent years. For example, for the CY 2017 data collection period, ASCs have January 1, 2018 through May 15, 2018 to submit their data for the CY 2019 payment determination.

This policy would apply to the following measures for the CY 2019 payment determination and subsequent years:

- ASC–6: Safe Surgery Checklist Use;
- ASC–7: ASC Facility Volume Data on Selected ASC Surgical Procedures;
- ASC–9: Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients (NQF #0658);
- ASC–10: Endoscopy/Polyp Surveillance: Colonoscopy Interval for Patients with a History of Adenomatous Polyps-Avoidance of Inappropriate Use (NQF #0659); and
- ASC–11: Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery (NQF #1536).[228]

[228] We note that ASC–11 is a voluntary measure for the CY 2017 payment determination and subsequent years. This proposal would mean that ASCs that choose to submit data for this measure also would need to submit such data between January 1 and May 15 for the CY 2019 payment determination and subsequent years.

In addition, this policy would apply to the following measures for the CY 2020 payment determination and subsequent years that we finalized above:

- ASC–13: Normothermia Outcome, and
- ASC–14: Unplanned Anterior Vitrectomy.

Lastly, we also proposed to make corresponding changes to the regulation at 42 CFR 416.310(c)(1)(ii) to replace the date ''August 15'' with the date ''May 15.''

We invited public comments on our proposals to change the data submission time period and make corresponding changes to the regulation text for data submitted via a CMS online data submission tool as discussed above.

Comment: Some commenters supported CMS' proposal to move the reporting deadlines for data submitted via a CMS online data submission tool to May 15 because doing so would make ASC quality data available to the public as soon as possible each year and would therefore help stakeholders compare quality among facilities.

Response: We thank the commenters for their support.

Comment: Some commenters did not support the proposal to adopt a May 15 deadline for all data submitted via a CMS online data submission tool for the CY 2019 payment determination and subsequent years, because the commenters believe shortening the data submission time period for these measures will increase ASCs' burden and lead to confusion for ASCs. These commenters further asserted that changing the longstanding data submission deadline for measure data submitted during CY 2017 in this rulemaking may lead to ASCs inadvertently missing the earlier deadline and thereby forfeiting their full payment update. Commenters recommended that CMS retain the current data submission deadlines for data submitted via a CMS online data submission tool or, in the alternative, align the data submission deadline for measures submitted via a CMS online data submission tool on August 15.

Response: While we acknowledge that ASCs may undergo a period of adjustment while changing their reporting processes to meet the May 15 data submission deadline, we believe that aligning the data submission deadlines for measure data submitted via a CMS online data submission tool

will ultimately streamline and reduce administrative burden on ASCs by reducing the total number of data submission deadlines under the ASCQR Program. Furthermore, one of the primary goals of the ASCQR Program is to publicly report ASC performance data, and moving the data submission deadline for all data submitted via a CMS online data submission tool to May 15 will enable us to publicly report ASCs' performance data by December of the same year. We believe this modified public reporting timeline will provide patients with the most up-to-date information for use in making decisions about their care. Therefore, we believe that any associated burden will be outweighed by the importance of making the public aware of performance data as timely as possible.

We also understand commenters' concerns that shortening the data submission time period for these measures may lead to some confusion for ASCs, but note that this policy affects data submitted for CY 2019 payment determinations, which will be reported during CY 2018. To be clear, this policy will not affect data collected during CY 2016 data collection period and reported during CY 2017 for CY 2018 payment determinations. Therefore, ASCs have an additional year under the current August 15 data submission deadline before the updated May 15 deadline will go into effect. As stated in the CY 2017 OPPS/ASC proposed rule (81 FR 45737), for example, for the CY 2017 data collection period, ASCs have January 1, 2018 through May 15, 2018 to submit their data for the CY 2019 payment determination. We believe this delay will provide ASCs with sufficient time to become familiar with the updated deadline and adjust their data reporting processes accordingly.

Comment: One commenter noted that technical difficulties have delayed ASC reporting in the past, and this commenter was concerned that similar issues could arise each time new measures are incorporated into ASC reporting.

Response: We acknowledge that we have delayed reporting deadlines for the ASCQR Program in the past due to technical issues.[229] However, we have since resolved those concerns, and do not anticipate any further technical issues as a result of expanding the ASCQR Program measure set.

After consideration of the public comments we received, we are finalizing our proposals to change the submission deadline to May 15 in the year prior to the affected payment determination year for all data submitted via a CMS online data submission tool in the ASCQR Program for the CY 2019 payment determination and subsequent years as proposed. We are also finalizing corresponding changes to the regulation at 42 CFR 416.310(c)(1)(ii) to replace the date ''August 15'' with the date ''May 15'' as proposed.

4. Claims-Based Measure Data Requirements for the CY 2019 Payment Determination and Subsequent Years

We refer readers to the CY 2015 OPPS/ASC final rule with comment period (79 FR 66985) and the CY 2016 OPPS/ASC final rule with comment period (80 FR 70536) for our previously adopted policies regarding data processing and collection periods for claims-based measures for the CY 2018 payment determination and subsequent years. In addition, in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70536), we codified these policies at 42 CFR 416.310(b). In the CY 2017 OPPS/ASC proposed rule (81 FR 45737), we did not propose any changes to these requirements.

5. Data Submission Requirements for ASC–15a–e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-Based Measures for the CY 2020 Payment Determination and Subsequent Years

As discussed in section XIV.B.4.c. of this final rule with comment period, above, we are adopting five survey-based measures derived from the OAS CAHPS Survey for the CY 2020 payment determination and subsequent years: Three OAS CAHPS composite survey-based measures and two global survey-based measures. In this section of the CY 2017 OPPS/ASC proposed rule (81 FR 45737 through 45738), we proposed requirements related to survey administration and vendors. We note that we are adopting similar policies in the Hospital OQR Program in section XIII.B.5.c. of this final rule with comment period.

a. Survey Requirements

The survey has three administration methods: mail-only; telephone-only; and mixed mode (Mail with telephone follow-up of non-respondents). We refer readers to the Protocols and Guidelines Manual for the OAS CAHPS Survey (*https://oascahps.org/Survey-Materials*) for materials for each mode of survey administration.

For all three modes of administration, we proposed that data collection must be initiated no later than 21 days after the month in which a patient has a surgery or procedure at an ASC and completed within 6 weeks (42 days) after initial contact of eligible patients begins. We proposed that ASCs, via their CMS-approved vendors (discussed below), must make multiple attempts to contact eligible patients unless the patient refuses or the ASC/vendor learns that the patient is ineligible to participate in the survey. In addition, we proposed that ASCs, via their CMS-approved survey vendor, collect survey data for all eligible patients—or a random sample thereof—using the timeline established above and report that data to CMS by the quarterly deadlines established for each data collection period unless the ASC has been exempted from the OAS CAHPS Survey requirements under the low volume exemption discussed in section XIV.B.4.c.(6) of this final rule with comment period, above. These submission deadlines will be posted on the OAS CAHPS Survey Web site (*https://oascahps.org*). Late submissions will not be accepted.

Compliance with the OAS CAHPS Survey protocols and guidelines, including this monthly reporting requirement, will be overseen by CMS or its contractor that will receive approved vendors' monthly submissions, review the data, and analyze the results. As stated previously, all data collection and submission for the OAS CAHPS Survey measures is done at the CCN level, and all eligible ASCs in a CCN would be required to participate in the OAS CAHPS Survey. Therefore, the survey data reported for a CCN must include all eligible patients from all eligible ASCs covered by the CCN. Survey vendors acting on behalf of ASCs must submit data by the specified data submission deadlines. If an ASC's data are submitted after the data submission deadline, it will not fulfill the OAS CAHPS quality reporting requirements. Therefore, we encourage ASCs to be fully appraised of the methods and actions of their survey vendors—especially the vendors' full compliance

[229] ''2013–16–ASC: ASC Web-Based Measures Deadline Extended to August 23.'' Published July 18, 2013. Available at: *https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1228772879036*. (Delay due to obtaining access to the QualityNet Secure Portal and going through security requirements. Deadline extended by seven days). ''2015–39–ASC: Important Update—Submission Deadline Extended for Reporting Data Online into QualityNet and NHSN.'' Published July 31, 2015. Available at: *https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1228774593984*. (Delay because program is in initial implementation years).

with OAS CAHPS Survey Administration protocols—and to carefully inspect all data warehouse reports in a timely manner.

We note that the use of predictive or auto dialers in telephonic survey administration under certain circumstances is governed by the Telephone Consumer Protection Act (TCPA) (47 U.S.C. 227) and subsequent regulations promulgated by the Federal Communications Commission (FCC) (47 CFR 64.1200) and Federal Trade Commission. We refer readers to the FCC's declaratory ruling released on July 10, 2015 further clarifying the definition of an auto dialer, available at: *https://apps.fcc.gov/edocs_public/attachmatch/FCC-15-72A1.pdf*. In the telephone-only and mixed mode survey administration methods, ASCs and vendors must comply with the regulations discussed above, and any other applicable regulations. To the extent that any existing CMS technical guidance conflicts with the TCPA or its implementing regulations regarding the use of predictive or auto dialers, or any other applicable law, CMS expects vendors to comply with applicable law.

b. Vendor Requirements

To ensure that patients respond to the survey in way that reflects their actual experiences with outpatient surgical care, and are not influenced by the ASC, we proposed that ASCs must contract with a CMS-approved OAS CAHPS Survey vendor to conduct or administer the survey. We believe that a neutral third-party should administer the survey for ASCs and it is our belief that an experienced survey vendor will be best able to ensure reliable results. OAS CAHPS Survey-approved vendors are also already used or required in the following CMS quality programs: The Hospital IQR Program (71 FR 68203 through 68204), the Hospital VBP Program (76 FR 26497, 26502 through 26503, and 26510), the ESRD QIP (76 FR 70269 through 70270), the HH QRP (80 FR 68709 through 68710), and the HQRP (70 FR 47141 through 47207).

Information about the list of approved survey vendors and how to authorize a vendor to collect data on an ASC's behalf is available through the OAS CAHPS Survey Web site at: *https://oascahps.org*. The Web portal has both public and secure (restricted access) sections to ensure the security and privacy of selected interactions. ASCs will need to register on the OAS CAHPS Survey Web site (*https://oascahps.org*) in order to authorize the CMS-approved vendor to administer the survey and submit data on their behalf. Each ASC must then administer (via its vendor) the survey to all eligible patients treated during the data collection period on a monthly basis according to the guidelines in the Protocols and Guidelines Manual (*https://oascahps.org/Survey-Materials*) and report the survey data to CMS on a quarterly basis by the deadlines posted on the OAS CAHPS Survey Web site as stated above.

Moreover, we also proposed to codify these OAS CAHPS Survey administration requirements for ASCs and survey vendors under the ASCQR Program at 42 CFR 416.310(e).

As stated previously, we encourage ASCs to participate in voluntary national implementation of the OAS CAHPS Survey that began in January 2016. This will provide ASCs the opportunity to gain first-hand experience collecting and transmitting OAS CAHPS data without the public reporting of results or ASCQR Program payment implications. For additional information, we refer readers to: *https://oascahps.org/General-Information/National-Implementation*.

We invited public comments on our proposals for the data submission requirements for the five proposed OAS CAHPS Survey-based measures for the CY 2020 payment determination and subsequent years as discussed above.

Comment: One commenter expressed concern that under the proposed ASC–15a–e survey-based measures, an ASC could meet its obligations under the measure by contracting with a CMS-approved, third-party vendor to administer the survey but still receive a reduction in their reimbursements if that vendor does not administer the survey properly or submit the required data to CMS by the data submission deadline.

Response: We acknowledge that it is possible an ASC could fail to meet the requirements under the ASC–15a–e survey-based measures if its vendor fails to administer the survey properly or submit the required data to CMS by the data submission deadline. However, we continue to believe that a neutral third-party should administer the survey for ASCs and it is our belief that an experienced survey vendor will be best able to ensure reliable results. We encourage all ASCs to be fully apprised of the methods and actions of their survey vendors—especially the vendors' full compliance with the OAS CAHPS Survey Administration protocols—and to carefully inspect all data warehouse reports in a timely manner. After the survey vendor submits the data to the OAS CAHPS Data Center, we strongly recommend that hospitals promptly review their two OAS CAHPS feedback reports and submit corrections under the process outlined in the OAS CAHPS Protocol and Guidelines Manual.[230] These reports enable a hospital to ensure that its survey vendor has submitted the data on time, the data has been accepted into the OAS CAHPS Data Center, and the data accepted into the OAS CAHPS Data Center are complete and accurate.

Finally, we note that submission of complete, accurate, and timely data is the responsibility of the ASC. ASCs should check-in regularly with survey vendors to ensure that vendors are properly submitting timely survey data.

Comment: Many commenters recommended that CMS include an electronic method of administration, such as portal messages and/or email, for the OAS CAHPS Survey because electronic methods of survey administration would be more cost effective for ASCs and more convenient for patients than administration via phone or standard mail. One commenter noted electronic survey administration has allowed many ASCs to achieve significant cost savings in the administration of patient surveys, and asserted electronic administration may increase patient response rates. Another commenter noted that recent releases by the U.S. Census Bureau and the National Telecommunications & Information Administration of the U.S. Department of Commerce show that the use of information technology is already prevalent and expanding rapidly amongst all Americans regardless of age, sex, educational attainment, household income, and employment status. One commenter noted that many survey vendors already offer electronic survey options to their customers.

One commenter expressed concern that the proposed OAS CAHPS Survey administration methods may result in biased reporting because older patients are more likely to respond to mail-based or telephone-based surveys than younger patients. The commenter also noted electronic survey administration can reduce facility costs with the reduction of paper use and postage requirements, while also decreasing the time to receiving feedback from patients following their treatment at an ASC. The commenter therefore recommended CMS include electronic administration methods, portal messages and/or email as a method of administration for the OAS CAHPS Survey.

[230] Outpatient and Ambulatory Surgery CAHPS Survey: ''Protocol and Guidelines Manual.'' Available for download at: *https://oascahps.org/Survey-Materials*.

Response: While email and Web-based survey administration modes are not available at this time, we are actively investigating these modes as possible new options for the future. This ongoing investigation includes, among other things, determining whether ASCs receive reliable email addresses from patients, whether there is adequate access to the Internet across all types of patients, and whether implementing a Web-based survey administration method would introduce bias into the survey administration process. However, we note that a previous study investigating the suitability of speech-enabled interactive voice response (SE–IVR) and Web modes for publicly reported surveys of patients' experience of hospital care found lower response rates for mixed-mode administrations including a Web-based option than for mail-only and SE–IVR administration modes.[231] Portal messaging, like systems that are sometimes used to address patient questions, would require a Web portal that patients can access. If this were housed at the facility, patient confidentiality could potentially be an issue. Furthermore, as currently specified, the OAS CAHPS Survey requires that the survey be administered by an approved survey vendor. This is to ensure that patients respond to the survey in a way that reflects their actual experiences with outpatient surgical care, and is not influenced by the hospital. Removing vendors, neutral third parties, could raise issues of objectivity and bias. However, as stated above, we are actively investigating new modes of conducting this survey as possible options for the future. We believe that the data collected by this measure is so significant and important that collecting data and publicly reporting it sooner rather than later outweighs waiting for a Web-based survey administration method to be developed, tested, and implemented nationwide.

Comment: A few commenters expressed concerns regarding the proposed survey administration requirements. One commenter stated that requiring survey vendors make multiple calls to patients regarding the OAS CAHPS Survey may be excessively intrusive to patients, particularly when coupled with a mailed survey. Another commenter asserted that requiring multiple mailings would add considerable expense to survey costs incurred by ASCs in administering the OAS CAHPS Survey. One commenter expressed concern that the OAS CAHPS Survey administration requirement that ASCs, via their CMS-approved vendor, contact a patient multiple times would be very burdensome for ASCs with a diminishing return. These commenters recommended that CMS remove the requirement that ASCs attempt to contact a patient multiple times from the survey administration requirements in order to minimize the burden imposed on ASCs.

Response: As stated in the proposed rule (81 FR 45737), we proposed that ASCs, via their CMS-approved vendors, must make multiple attempts to contact eligible patients unless the patient refuses or the ASC/vendor learns that the patient is ineligible to participate in the survey. We are finalizing this proposal in section XIV.C.5.a. of this final rule with comment period, above. This is also reflected in the OAS CAHPS Survey Protocols and Guidelines. Under the telephone-only and mixed mode survey administration requirements, the vendor does not leave a message for the patient when calling to administer the survey. Further, under the mixed mode with telephone follow-up survey administration, only one follow-up telephone call is made. We believe these administration requirements impose minimal survey response burdens on patients or burdens on ASCs.

The use of a second mailing to improve response rates and reduce survey error comes from survey methodological literature,[232] and is the standard for CAHPS Survey implementation.[233] Data from the OAS CAHPS Survey Mode Experiment in 2015 showed that in a sample size of 3,510 patients, including both mail-only and mixed-mode survey administration, the response rate to the first mailing was approximately 25 percent. By contrast, the final response rate for the mail-only sample after the second mailing was 37 percent. We believe this 12-percent increase highlights the importance of requiring a second mailing in improving survey response rates. In addition to lowering response rates, which can lead to potential bias in the data, we believe implementing a single mailing survey administration option would require increases in the initial sample size for survey administration in order to achieve 300 completed surveys. Thus, we believe the cost savings from not requiring a second mailing would be reduced due to the need for an increased sample size for the initial mailing for reliability.

After consideration of the public comments we received, we are finalizing our proposals for the data submission requirements for the five OAS CAHPS Survey-based measures for the CY 2020 payment determination and subsequent years, as proposed. We also are finalizing, as proposed, to codify these OAS CAHPS Survey administration requirements for ASCs and survey vendors under the ASCQR Program at 42 CFR 416.310(e).

6. Extraordinary Circumstances Extensions or Exemptions for the CY 2019 Payment Determination and Subsequent Years

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53642 through 53643) and the CY 2014 OPPS/ASC final rule with comment period (78 FR 75140 through 75141) for a complete discussion of the ASCQR Program's procedures for extraordinary circumstance extensions or exemptions (ECE) requests for the submission of information required under the ASCQR Program.[234] In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70537), we codified our policies regarding extraordinary circumstances extensions or exemptions at 42 CFR 416.310(d).

In the CY 2017 OPPS/ASC proposed rule (81 FR 45738 through 45739), we proposed one modification to the ASCQR Program's extraordinary circumstances extensions or exemptions policy for the CY 2019 payment determination and subsequent years. Specifically, we proposed to extend the time to submit a request form from within 45 days of the date that the extraordinary circumstance occurred to within 90 days of the date that the extraordinary circumstance occurred. We believe this extended deadline is necessary, because in certain circumstances it may be difficult for ASCs to timely evaluate the impact of an extraordinary event within 45 calendar days. We believe that extending the deadline to 90 calendar days will allow ASCs more time to determine whether it is necessary and appropriate to submit an ECE request and to provide a more comprehensive account of the ''event'' in their forms to

[231] Elliott MN, Brown JA, Lehrman WG, Beckett MK, Hambarsoomian K, Giordano LA, Goldstein EH. A Randomized Experiment Investigating the Suitability of Speech-Enabled IVR and Web Modes for Publicly Reported Surveys of Patients' Experience of Hospital Care. Med Res Rev. 2013 April;70(2):165–184.

[232] Dillman, D. A. 1978. *Mail and Telephone Surveys: The Total Design Method.* New York: Wiley & Sons.

[233] ''Outpatient and Ambulatory Surgery.'' Available at: *https://oascahps.org.*

[234] In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66987), we stated that we will refer to the process as the ''Extraordinary Circumstances Extensions or Exemptions'' process rather than the ''Extraordinary Circumstances Extensions or Waivers'' process.

CMS. For example, if an ASC has suffered damage due to a hurricane on January 1, it would have until March 31 (90 days) to submit an ECE form via the QualityNet Secure Portal, mail, email, or secure fax as instructed on the ECE form. This proposed timeframe (90 calendar days) also aligns with the ECE request deadlines for the Hospital VBP Program (78 FR 50706), the HAC Reduction Program (80 FR 49580), and the Hospital Readmissions Reduction Program (80 FR 48542). We note that, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57181 through 57182; 81 FR 57231), we finalized a deadline of 90 days following an event causing hardship for the Hospital IQR Program (in non-eCQM circumstances) and for the LTCH QRP Program. In section XIII.D.8. of this final rule with comment period, we are also finalizing a similar deadline of 90 days following an event causing hardship for the Hospital OQR Program.

In addition, we proposed to make a corresponding change to the regulation text at 42 CFR 416.310(d)(1). Specifically, we proposed to state that ASCs may request an extension or exemption within 90 days of the date that the extraordinary circumstance occurred.

We invited public comments on our proposals to extend the submission deadline for an extraordinary circumstances extension or exemption and make corresponding changes to the regulation text to reflect this policy as discussed above.

Comment: Commenters supported CMS' proposal to extend the deadline for submission of an ECE request from within 45 days of the extraordinary event to within 90 days of the extraordinary event because this proposal would give ASCs more time to determine whether it is appropriate to submit a request and would align the ASCQR Program with many of CMS' other quality reporting and value-based purchasing programs.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal to extend the time to submit a request form to within 90 days of the date that the extraordinary circumstance occurred for the CY 2019 payment determination and subsequent years as proposed. We also are finalizing, as proposed, a corresponding change to the regulation text at 42 CFR 416.310(d)(1).

7. ASCQR Program Reconsideration Procedures

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53643 through 53644) and the CY 2014 OPPS/ASC final rule with comment period (78 FR 75141) for a complete discussion of the ASCQR Program's requirements for an informal reconsideration process. In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70537), we finalized one modification to these requirements: that ASCs must submit a reconsideration request to CMS by no later than the first business day on or after March 17 of the affected payment year. We codified this policy at 42 CFR 416.330. In the CY 2017 OPPS/ASC proposed rule (81 FR 45736), we did not propose any changes to this policy.

E. Payment Reduction for ASCs That Fail To Meet the ASCQR Program Requirements

1. Statutory Background

We refer readers to section XV.C.1. of the CY 2014 OPPS/ASC final rule with comment period (78 FR 75131 through 75132) for a detailed discussion of the statutory background regarding payment reductions for ASCs that fail to meet the ASCQR Program requirements.

2. Reduction to the ASC Payment Rates for ASCs That Fail To Meet the ASCQR Program Requirements for a Payment Determination Year

The national unadjusted payment rates for many services paid under the ASC payment system equal the product of the ASC conversion factor and the scaled relative payment weight for the APC to which the service is assigned. Currently, the ASC conversion factor is equal to the conversion factor calculated for the previous year updated by the multifactor productivity (MFP)-adjusted CPI–U update factor, which is the adjustment set forth in section 1833(i)(2)(D)(v) of the Act. The MFP-adjusted CPI–U update factor is the Consumer Price Index for all urban consumers (CPI–U), which currently is the annual update for the ASC payment system, minus the MFP adjustment. As discussed in the CY 2011 MPFS final rule with comment period (75 FR 73397), if the CPI–U is a negative number, the CPI–U would be held to zero. Under the ASCQR Program, any annual update will be reduced by 2.0 percentage points for ASCs that fail to meet the reporting requirements of the ASCQR Program. This reduction applied beginning with the CY 2014 payment rates. For a complete discussion of the calculation of the ASC conversion factor, we refer readers to section XII.G. of this final rule with comment period.

In the CY 2013 OPPS/ASC final rule with comment period (77 FR 68499 through 68500), in order to implement the requirement to reduce the annual update for ASCs that fail to meet the ASCQR Program requirements, we finalized our proposal that we would calculate two conversion factors: a full update conversion factor and an ASCQR Program reduced update conversion factor. We finalized our proposal to calculate the reduced national unadjusted payment rates using the ASCQR Program reduced update conversion factor that would apply to ASCs that fail to meet their quality reporting requirements for that calendar year payment determination. We finalized our proposal that application of the 2.0 percentage point reduction to the annual update may result in the update to the ASC payment system being less than zero prior to the application of the MFP adjustment.

The ASC conversion factor is used to calculate the ASC payment rate for services with the following payment indicators (listed in Addenda AA and BB to the proposed rule, which are available via the Internet on the CMS Web site): ''A2,'' ''G2,'' ''P2,'' ''R2,'' and ''Z2,'' as well as the service portion of device-intensive procedures identified by ''J8.'' We finalized our proposal that payment for all services assigned the payment indicators listed above would be subject to the reduction of the national unadjusted payment rates for applicable ASCs using the ASCQR Program reduced update conversion factor.

The conversion factor is not used to calculate the ASC payment rates for separately payable services that are assigned status indicators other than payment indicators ''A2,'' ''G2,'' ''J8,'' ''P2,'' ''R2,'' and ''Z2.'' These services include separately payable drugs and biologicals, pass-through devices that are contractor-priced, brachytherapy sources that are paid based on the OPPS payment rates, and certain office-based procedures, certain radiology services and diagnostic tests where payment is based on the MPFS nonfacility PE RVU-based amount, and a few other specific services that receive cost-based payment. As a result, we also finalized our proposal that the ASC payment rates for these services would not be reduced for failure to meet the ASCQR Program requirements because the payment rates for these services are not calculated using the ASC conversion factor and, therefore, not affected by reductions to the annual update.

Office-based surgical procedures (performed more than 50 percent of the time in physicians' offices) and separately paid radiology services (excluding covered ancillary radiology services involving certain nuclear medicine procedures or involving the use of contrast agents) are paid at the lesser of the MPFS nonfacility PE RVU-based amounts or the amount calculated under the standard ASC ratesetting methodology. Similarly, in section XII.D.2.b. of the CY 2015 OPPS/ASC final rule with comment period (79 FR 66933 through 66934), we finalized our proposal that payment for the new category of covered ancillary services (that is, certain diagnostic test codes within the medical range of CPT codes for which separate payment is allowed under the OPPS and when they are integral to an ASC covered surgical procedure) will be at the lesser of the MPFS nonfacility PE RVU-based amounts or the rate calculated according to the standard ASC ratesetting methodology. In the CY 2013 OPPS/ASC final rule with comment period (77 FR 68500), we finalized our proposal that the standard ASC ratesetting methodology for this type of comparison would use the ASC conversion factor that has been calculated using the full ASC update adjusted for productivity. This is necessary so that the resulting ASC payment indicator, based on the comparison, assigned to these procedures or services is consistent for each HCPCS code, regardless of whether payment is based on the full update conversion factor or the reduced update conversion factor.

For ASCs that receive the reduced ASC payment for failure to meet the ASCQR Program requirements, we believe that it is both equitable and appropriate that a reduction in the payment for a service should result in proportionately reduced coinsurance liability for beneficiaries. Therefore, in the CY 2013 OPPS/ASC final rule with comment period (77 FR 68500), we finalized our proposal that the Medicare beneficiary's national unadjusted coinsurance for a service to which a reduced national unadjusted payment rate applies will be based on the reduced national unadjusted payment rate.

In that final rule with comment period, we finalized our proposal that all other applicable adjustments to the ASC national unadjusted payment rates would apply in those cases when the annual update is reduced for ASCs that fail to meet the requirements of the ASCQR Program (77 FR 68500). For example, the following standard adjustments would apply to the reduced national unadjusted payment rates: the wage index adjustment; the multiple procedure adjustment; the interrupted procedure adjustment; and the adjustment for devices furnished with full or partial credit or without cost. We believe that these adjustments continue to be equally applicable to payment for ASCs that do not meet the ASCQR Program requirements.

In the CY 2014, CY 2015, and CY 2016 OPPS/ASC final rules with comment periods (78 FR 75132; 79 FR 66981 through 66982; and 80 FR 70537 through 70538, respectively), we did not make any changes to these policies.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45739 through 45740), we did not propose any changes to these policies.

XV. Transplant Outcomes: Restoring the Tolerance Range for Patient and Graft Survival

A. Background

Solid organ transplant programs in the United States are subject to a specialized system of oversight that includes: (1) An organized national system of organ donation and allocation, including a national database that allows for the tracking of transplants and transplant outcomes; (2) formalized policy development, program inspection, and peer review processes under the aegis of the Organ Procurement and Transplantation Network (OPTN); (3) Medicare Conditions of Participation (CoPs) that hold transplant programs accountable for patient and graft (organ) survival for at least 1 year after each recipient's transplant; and (4) a CMS system of onsite survey and certification for Medicare-participating transplant centers. These features mean that transplant programs have been in the vanguard of efforts to hold health care providers accountable not only for acceptable processes, but for patient outcomes as well.

Congress established the framework for a national organ transplantation system in 1984, and the Health Resources and Services Administration (HRSA) and CMS then operationalized the system as a national model of accountable care in the area of solid organ transplantation.[235] The 1984 National Organ and Transplantation Act (NOTA)[236] created the OPTN and Organ Procurement Organizations (OPOs), among other provisions. NOTA also required the establishment of a registry that includes such information respecting patients and transplant procedures as the Secretary deems necessary to an ongoing evaluation of the scientific and clinical status of organ transplantation.[237] The Scientific Registry of Transplant Recipients (SRTR) has served this purpose since 1987. The registry supports the ongoing evaluation of the scientific and clinical status of solid organ transplantation, including kidney, heart, liver, lung, intestine, and pancreas. Data in the SRTR are collected by the OPTN from hospitals and OPOs. The SRTR contains current and past information about the full continuum of transplant activity related to organ donation and wait-list candidates, transplant recipients, and survival statistics. This information is used to help develop evidence-based policy, to support analysis of transplant programs and OPOs, and to encourage research on issues of importance to the transplant community.[238]

The SRTR contains detailed information regarding: (1) Donor characteristics (for example, age, hypertension, diabetes, stroke, and body mass index); (2) organ characteristics (for example, both warm and cold ischemic time); and (3) recipient characteristics (for example, age, race, gender, body mass index, and hypertension status). The SRTR is administered by the Chronic Disease and Research Group of the Minneapolis Medical Research Foundation under a contract with HRSA. The SRTR data are then used to construct the risk profile of a transplant program's organ transplants. The risk models allow the SRTR to calculate an expected survival rate for both patients and grafts (organs) over various periods of time.

Every 6 months, the SRTR publishes a Program Specific Report (PSR) for each transplant program. Each report covers a rolling, retrospective, 2.5-year period. For example, the PSR reports the aggregate number of patient deaths and graft failures that occurred within 1 year after each transplant patient's receipt of an organ. The PSR also compares the actual number of such events with the risk-adjusted number that would be expected, and reports the resulting ratio of observed to expected events (O/E). An O/E ratio of 1.0, for example, means that the transplant program's outcomes were equal to the national outcomes for a patient, donor, and organ risk profile that reasonably matched the risk profile of that particular transplant program, for

[238] Available at: *http://srtr.org/who.aspx.*

the time period under consideration. An O/E ratio of 1.5 means that the patient deaths or graft failures were 150 percent of the risk-adjusted expected number.[239]

On March 30, 2007, we issued a final rule that set out CoPs for solid organ transplant programs (''Medicare Program: Hospital Conditions of Participation: Requirements for Approval and Re-approval of Transplant Centers to Perform Organ Transplants'' (72 FR 15198)). The CoPs for data submission, clinical experience, and outcome requirements are codified at 42 CFR 482.80 and 482.82. The regulations specified that a program would not be in compliance with the CoPs for patient and graft survival if three thresholds were all crossed: (1) The O/E ratio exceeded 1.5; (2) the results were statistically significant ($p<.05$); and (3) the results were numerically meaningful (that is, the number of observed events minus the expected number is greater than 3). If all three thresholds were crossed over in a single SRTR report, the program was determined to not be in compliance with the CMS standard.

The above three criteria were the same as those used at that time by the OPTN to ''flag'' programs that the OPTN considered to merit deeper inquiry with regard to transplant program performance. However, we implemented the Medicare outcomes requirements in a manner that would assure that a flagged transplant program would first have an opportunity to become engaged with the OPTN peer review process, and improve outcomes, before there was significant CMS involvement. We did so by classifying outcomes that crossed over all three thresholds in a single (most recent) SRTR report (that is, a ''single flag'') as a lower level deficiency (that is, a ''standard-level'' deficiency in CMS terms). A standard-level deficiency requires a hospital to undertake improvement efforts, but continued Medicare participation is not at risk solely due to a single standard-level deficiency. Only programs flagged twice (in two SRTR reports, including the most recent report) within a 2.5-year period have been cited for a ''condition-level'' deficiency where Medicare termination is at risk. Approximately 79 (29.3 percent) of the 270 transplant programs (of all types of solid organs) that were flagged once in the 8-year period from the July 2007 SRTR report through the July 2015 report were not flagged again within a 2.5-year period. The CMS ''two-flag'' approach for citation of a condition-level deficiency allowed an opportunity for the OPTN to take timely action after the first time a program was flagged, and allowed the transplant programs some time to work with the OPTN peer review process and possibly improve outcomes quickly. As a result, almost a third of once flagged programs (29.3 percent) did not require any significant CMS involvement because they were not flagged a second time within a rolling 2.5 year period.

We also determined to make quality improvement the cornerstone of CMS' enforcement of the outcomes standard.[240] Through the ''mitigating factors'' provisions in the regulations for transplant programs at 42 CFR 488.61(g), we allowed a 210-day period for transplant programs with a condition-level outcomes deficiency to implement substantial improvements and demonstrate compliance with more recent data than the data in the available SRTR reports. Further, for programs that were unable to demonstrate compliance by the end of the 210-day period, but were on the right track and had strong institutional support from the hospital to make the necessary improvements for achieving compliance, we generally offered to enter into a voluntary ''Systems Improvement Agreement'' (SIA) with that hospital. An SIA provides a transplant program with additional time (generally 12 months) during which the hospital engages in a structured regimen of quality improvement. The transplant program also has an opportunity to demonstrate compliance with the CMS outcomes requirements before the end of the SIA period. In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50334 through 50344 and 50359 through 50361), we further defined the mitigating factors and SIA processes at 42 CFR 488.61(f), (g), and (h). (We note that, in section XVII.B. of this final rule with comment period, we discuss finalization of a proposal to make additional revisions to § 488.61(h)(2) to clarify provisions relating to a signed SIA remaining in force.)

Through July 2015, we completed the mitigating factors review process for 145 programs that had been cited for condition-level patient or graft volume or outcome requirements that fell below the relevant CMS standards. Of that number, 83 programs (57.2 percent) were approved by the end of the 210-day review process on the basis of program improvements, combined with recent outcomes from which CMS concluded that the program was in present-day compliance. Another 45 programs (31.0 percent) were offered and completed a year-long SIA, while 17 programs (11.7 percent) terminated Medicare participation. CMS tracking data indicate that approximately 90 percent of programs that engaged in an SIA were able to complete the quality improvement regimen and continue Medicare participation after the end of the SIA period.

One-year post-transplant outcomes have improved since 2007 for all organ types, resulting in 1-year post-transplant survival rates that are among the highest in U.S. history for all types of solid organs. For adult kidneys, 1-year graft survival increased nationally from 92.9 percent in CY 2007 to 94.8 percent in 2014, while 1-year patient survival increased nationally from 96.4 percent to 96.9 percent. During this time, 1-year patient survival increased nationally for heart recipients from 88.5 percent to 89.5 percent, for liver recipients from 87.7 percent to 90.8 percent, and for lung recipients from 80.4 percent to 85.7 percent.

Because the CMS outcomes requirement is based on a transplant program's outcomes in relation to the risk-adjusted national average, as national outcomes have improved, it has become much more difficult for an individual transplant program to meet the CMS outcomes standard. This is explained in more detail in section XVI. of this final rule with comment period. We are concerned that transplant programs may elect not to use certain available organs out of fear that such use would adversely affect their outcome statistics, despite the risk adjustment model accounting for differences in both donor organ quality and recipient health. We observed, for example, that the percent of adult kidneys donated and recovered—but not used—increased from 16.6 percent in CY 2006 to 18.3 percent in CY 2007 to 18.7 percent in CY 2014 and 19.3 percent in CY 2015. Even if the number of recovered adult kidneys had remained the same, these percentages of unused kidneys would be of concern. However, the number of recovered kidneys is also increasing, thereby enlarging the impact of the discard rate. The combined effect of (a) more recoveries and (b) a higher percent of unused organs means that the absolute number of recovered but unused adult kidneys increased from 2,632 in CY 2007, for example, to 2,888 in CY 2014 and to 3,159 in CY 2015.

We appreciate that some of the single-year sharp increase in the percent of

[239] Dickinson, D.M., Arrington, C.J., *et al.*, 2008, ''SRTR program-specific reports on outcomes: A guide for the new reader,'' *American Journal of Transplantation,* Vol. 8 (4 PART 2), pp. 1012–1026.

[240] Hamilton, T.E. 2008, ''Improving Organ Transplantation in the U.S.—A Regulatory Perspective,'' *American Journal of Transplantation.* Vol. 8 (12), pp. 2404–2405.

unused adult kidneys that occurred between CY 2006 and CY 2007 (from a previously consistent 16.6 percent rate in the 3 years prior to 2007, to 18.3 percent in 2007) may have been due to many factors, and not just any potential impact that the new CMS outcomes CoP may have had. The CMS regulation, for example, was gradually phased in. The regulation did not take effect until June 28, 2007, and transplant programs had until December 26, 2007 to register with CMS for certification under the new regulation. Other changes also occurred in 2007 that may have had a substantial impact.

In particular, in December 2006, the UNOS, under contract with HRSA, made a new OPTN organ donor data collection and matching system available for voluntary use and improved the data in the system. The OPTN voted to make such use mandatory effective April 30, 2007. The stated goal of the system was to ''facilitate and expedite organ placement.''[241] The system provided for a national list to be generated for each organ, with offers made to patients at transplant centers based on the order of patients on this list. The design of the system made it possible to send multiple offers simultaneously to different transplant programs, in priority order. As the authors of a later study concluded, ''This initially led to an extraordinary increase in the volume of unwanted offers to many centers.''[242]

However, with substantial feedback from transplant programs, the system was improved and provided transplant programs with much more information regarding the available organs and donor characteristics. For example, the system allowed for programs to add more screening criteria, such as differentiation between local and import (for example, national) values, and screening for donors after cardiac death (DCD) with differentiation between local and import offers. In 2008, additional screening features were added, such as maximum acceptable cold ischemic time (CIT), maximum donor body mass index (BMI), and donor history of hypertension, diabetes, and coronary artery disease, among others. Such improvements were designed to allow centers to restrict organ offers to those individuals who the program was most likely to accept. After the introduction of such additional system improvements, the percent of adult kidneys from deceased donors, that were not used, held at an average of 18.2 percent over the next 4 years. More recently, however, the average discard rate has resumed an upward trend, rising to 18.7 percent in CY 2014 and 19.3 percent in CY 2015. We are not aware of any studies that have specifically examined transplant program organ acceptance and discard patterns in relation to their perceptions regarding the CMS organ transplant CoPs. However, we believe that the increased percent of unused adult kidneys, combined with an increase in the number of recovered organs, creates an imperative to action, given the lifesaving benefits of organ transplantation.

Further concerns arise when we examine the use of what historically have been known as ''expanded criteria donor (ECD)'' organs. ECD organs are organs that are deemed transplantable but experience lower rates of functional longevity compared to most other organs. For instance, with the ECD kidneys, characteristics that historically defined an ECD kidney include age of donor at or greater than 60 years, or kidneys from donors who were aged 50–59 years who also had experienced two of the following: Cerebrovascular accident as the cause of death; preexisting hypertension; or terminal serum creatinine greater than 1.5 mg/dl.

Although the SRTR risk-adjustment methods take into account the factors that comprise an ECD designation, ECD kidneys have been the only category of adult kidneys that experienced a decline in the number that were recovered for organ transplantation, from 3,249 in CY 2007 to 2,833 in CY 2015. Acceptance rates for ECD kidneys also declined, from 56.2 percent in CY 2007 to 51.0 percent in CY 2015. There is some evidence that this decline is influenced by other factors, such as the higher costs to the hospital that are associated with ECD kidney use. ECD kidney selection also requires greater sophistication on the part of a transplant program to be able, in a timely manner, to distinguish between the finer features of an ECD kidney that might be appropriate to use compared with one that involves too much risk. Therefore, ECD kidney use may have been a particularly sensitive indicator of risk aversion. We note that, in 2014, the OPTN replaced the ECD kidney designations and implemented a more sophisticated system of adult kidney classification (the kidney donor profile index, KDPI). We believe this new system should help in the decision-making process for kidney acceptance, but may have limited effect on undue risk aversion.

B. Revisions to Performance Thresholds

For the reasons described above, in the CY 2017 OPPS/ASC proposed rule (81 FR 45742 through 45743), we proposed to change the performance threshold at §§ 482.80(c)(2)(ii)(C) and 482.82(c)(2(ii)(C) from 1.5 to 1.85. We stated in the preamble of the March 30, 2007 final rule (72 FR 15220) that ''If we determine in the future that any of the three thresholds is too low or too high, we will propose changes in the threshold through the rulemaking process.'' In the proposed rule, we followed through on that commitment.

The current relevant standard specifies that outcomes would not be acceptable if the ratio of observed patient deaths or graft failures divided by the risk-adjusted expected number, or ''O/E,'' exceeds 1.5. The expected number is based on the national average, adjusted for the patient, organ, and donor risk profile of a transplant program's actual clientele for individuals who received a transplant in the 2.5-year period under consideration in each SRTR report. As the national performance has improved, it has become more difficult for transplant programs to maintain compliance with this CoP. In 2007, for example, an adult kidney transplant program was in compliance with the CMS outcomes standard if there were no more than 10.7 graft losses within 1 year out of 100 transplants. By 2014, that number had decreased to 7.9, a 26-percent reduction in graft losses 7 years later. Similarly, the number of patient deaths that could occur while maintaining compliance with the CoP declined from 5.4 to 4.6 out of every 100 adult kidney transplant recipients. We believe that a change in the threshold from 1.5 to 1.85 would restore the approximate compliance levels for adult kidney transplants that were allowed in 2007 when national performance was not so high. More specifically, a 1.85 threshold would mean that up to 9.7 graft losses out of 100 transplants (within 1 year of transplant) would remain within the new CMS outcomes range (which is slightly fewer than the 10.7 allowed in 2007 but more than the 7.9 allowed in 2015), and up to 5.7 patient deaths out of 100 transplants (within 1 year of transplant) would remain within the CMS range (compared to 5.4 in 2007 and 4.6 in 2015). Through restoring rough parity to 2007 graft failure rates, we hope to encourage transplant centers

[241] Massie AB, Zeger SL, Montgomery RA, Segev DL. The effects of DonorNet 2007 on kidney distribution equity and efficiency. *American Journal of Transplantation,* Vol. 9, pp. 1550–1557.

[242] Gerber DA., Arrington CJ, Taranto SE., Baker T, Sung RS. DonorNet and the Potential Effects on Organ Utilization. *American Journal of Transplantation,* Vol. 10, pp. 1081–1089. Article first published online: 22 MAR 2010. DOI: 10.1111/j.1600–6143.2010.03036.x.

to use more of the increasing number of viable organs.

For consistency and to avoid unneeded complexity, we proposed to use the same 1.85 threshold for all organ types and for both graft and patient survival. We appreciate that a case could instead be made for having different thresholds for different organ types, or a different threshold for graft versus patient survival. For example, if the only consideration was to restore the 2007 effective impact, the threshold for patient survival on the part of heart transplant recipients would be changed to 1.63, while the liver and lung threshold would be 2.00. Similarly, the new threshold for adult kidney graft survival would be 2.02 but for adult kidney patient survival a new threshold would be 1.77. Arguments also may be made for a variety of other thresholds, such as keeping the 1.5 threshold for heart, liver, and lung, on the grounds that there is more statistical room for improvement in outcomes for those types of organs compared to rates for adult kidney survival (which are already quite high). However, instead of a myriad of thresholds, we proposed to adopt a consistent 1.85 threshold for all organ types, and for both graft and patient survival. This is a number that is approximately mid-range between the number that would restore the adult kidney graft tolerance range to the 2007 level, and the number that would do so for adult kidney patient survival. We believe this approach is less confusing than the alternatives, and that it would be advisable to implement the new 1.85 threshold now in a consistent and clear manner, and then to study the effects, before proceeding further. For future consideration, we also may explore other approaches that are aimed at optimizing the effective use of available organs instead of adjusting the CMS outcomes threshold further, such as the potential that a balancing measure (focused specifically on effective use of organs) may be appropriate (which we discuss in section XXIII. (Economic Analyses) of this final rule with comment period).

We also note that the OPTN is examining its own flagging criteria under its new Bayesian methodology, out of concern that the OPTN may be flagging an excessive number of programs for review and contributing to undue risk aversion. The OPTN flagging criteria, both before and after adoption of the new Bayesian methodology, have resulted in more programs being flagged than are cited by CMS. We view this as a purposeful and desirable positioning of CMS as a backstop to the OPTN. We believe that our proposed change would help ensure that, if OPTN also changed its criteria for outcomes review and as a result flagged fewer programs, those programs that are then flagged would still have the opportunity to first engage with the peer review process of the OPTN and might never be in a situation of being cited by CMS.

We invited public comment on this issue. Specifically, we invited comment on whether this proposal is effectively balancing our dual goals of improved beneficiary outcomes and increased beneficiary access. We also reiterate our statement from the March 30, 2007 final rule, that if we find that the thresholds are too low or too high, we will propose changes in future rulemaking.

Comment: Many commenters supported CMS' proposal to raise the threshold for observed/expected events (1-year patient deaths and graft failures) from 1.5 to 1.85 for all organ types. One commenter believed that changing the threshold to 1.85 would appropriately balance the need for outcome requirements standards in the transplant CoPs, while ensuring that the thresholds do not hinder beneficiary access to available organs. Other commenters stated that the proposed change would encourage greater access to transplantation for higher-risk patients who could still benefit from a transplant, thereby improving health outcomes and quality of life and decreasing costs. One commenter stated that the change would help to make solid organs available to patients who need them by not penalizing hospitals that perform higher-risk transplant procedures. Another commenter stated that this proposal is consistent with the OPTN's evaluation of proposed revisions to its criteria for performance review as part of an effort to reduce disincentives to transplant and encourage innovation. One commenter stated that the original threshold was based on the threshold for OPTN Membership and Professional Standards Committee (MPSC) peer review of potentially underperforming transplant centers, was never intended as a regulatory criterion, and that the threshold has always been too stringent, resulting in a high number of false positive citations. This commenter also supported CMS' decision not to adopt the SRTR Bayesian methodology for flagging underperforming transplant centers.

Response: We appreciate the commenters' support for our proposal to increase the threshold for observed/expected events from 1.5 to 1.85 for all organ types in the transplant outcome requirements standards.

Comment: One commenter believed that the proposed changes would bring relevant OPTN policies and CMS standards into alignment. The commenter urged CMS to continue to develop policies and requirements that align current or future standards in an expeditious manner and/or develop regulatory provisions in alignment with OPTN policy that would ensure that changes to OPTN policy are automatically reflected in CMS' standards. The commenter believed that this action would allow the transplant community to ensure that limited resources are focused more on efforts to successfully complete transplants for candidates on a waiting list than on ensuring compliance with multiple, inconsistent standards and requirements.

Response: We appreciate the commenter's support. We agree that future coordination between CMS and OPTN, where appropriate, will support efforts toward more successful transplantations.

Comment: A few commenters stated that a recent study documented a ''survival benefit'' for transplants as opposed to dialysis, even in transplant centers with low performance ratings. One commenter requested that CMS acknowledge this study and use the information to support the development of policies that reduce barriers that currently limit transplant centers in this and future rulemakings. Another commenter believed that transplant outcomes should be considered in the context of patient outcomes in the absence of transplantation. The commenter opined that variations in transplant center performance ratings are clinically insignificant when compared with the outcomes of patients who are not transplanted. The commenter further stated that, for this reason, any regulation that has the potential to reduce access to transplantation, whether by increasing risk aversion or otherwise, warrants careful scrutiny.

Response: We acknowledge the significant issues that are associated with dialysis treatment. We note that the outcome measures within the CoPs establish minimum quality standards for protecting the health and safety of transplant recipients in Medicare-certified facilities.

Comment: A few commenters believed that the proposed increase in the O/E threshold to 1.85 continues to limit access to transplantations. One commenter expressed concern that the proposed change would only impact a few transplant programs and that the increase in the threshold would not

provide a meaningful increase in access to transplantations. Some commenters requested that CMS increase the threshold to at least 2.0. One commenter stated that the threshold of 2.0 more closely approximates the performance threshold for graft survival in 2007. Other commenters opined that the O/E threshold adopted in 2007 has always been too stringent, and that a threshold of at least 2.0 strikes a suitable balance.

Response: At this time, we believe that it is most advisable to implement the proposed 1.85 threshold and study the impacts and effects of that revision. We will consider further changes in the future if data suggest that the threshold is too low or too high.

Comment: A few commenters expressed support for a recent Survey and Certification Memorandum (S & C 16–24—Hospitals) that provided guidance that Medicare approval will generally not be at risk solely due to noncompliance with the outcome standards at 42 CFR 482.80 and 482.82, as long as a transplant program's O/E ratio is within 185 percent of the risk-adjusted expected number.

Response: We believe that this comment is outside the scope of the proposed rule. However, we note that the requirements of this finalized provision will supersede this Survey and Certification Memorandum, and we will consider issuing an updated memorandum in the future if necessary.

Comment: A few commenters stated that, while they supported the proposal to revise the transplant outcome requirements standards, clear data will be required to assess the effects of this change both on organ utilization and patient outcomes. Another commenter noted that future analysis will be required to assess whether the change results in increases in the number of organs transplanted and decreases in organ wastage.

Response: We agree with the commenters.

Comment: One commenter stated that multiple published reports highlight the impact of regulatory thresholds on risk aversion and reduced rates of transplantation and patient listing. The commenter also stated that reports of regulatory oversight reveal a sustained negative impact on transplant activity with no identified decrease in outcomes based on the flagging methodologies.

Response: We understand that these perceptions are present in the transplant community. We proposed the change to the outcome requirements standard in part to address and acknowledge these perceptions regarding risk aversion. However, on a whole, the outcome measures for transplant centers do provide minimal standards of acceptable quality to protect the health and safety of beneficiaries.

Comment: One commenter stated that CMS should work with HRSA to ensure that less egregious deviations from expected practice are handled through the OPTN review process.

Response: We appreciate the commenter's recommendation. However, we believe this comment is outside the scope of the proposed rule.

Comment: One commenter appreciated that CMS acknowledged the need to ensure that SRTR and CMS' requirements are consistent and supported the proposed changes. The commenter recommended that additional attention be given to the current ''disconnect'' between OPO and transplant center outcome measures. The commenter believed that CMS' regulations indirectly discourage OPOs from increasing the recovery of organs from older, ''marginal donors'' because this practice reduces organs transplanted per donor, which will reduce the incentive to aggressively pursue all donors. The commenter stated that these regulations incentivize OPOs to maximize organ retrieval from multi-organ donors, without consideration of whether the organs retrieved are appropriate for transplantation or whether transplantation of these organs will result in positive patient outcomes. The commenter stated that, by contrast, transplant centers are required to meet stringent post-transplant recipient outcome requirements, regardless of donor organ quality. The commenter believed that acceptance of these organs that result in a higher transplant rate, while good for OPOs and patients, may actually hurt the centers if the rate of graft failure is excessive.

Response: We appreciate the commenter's observations. However, we believe that these issues and observations are outside the scope of the proposed rule.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to revise the performance threshold specified at §§ 482.80(c)(2)(ii)(C) and 482.82(c)(2(ii)(C) from 1.5 to 1.85.

XVI. Organ Procurement Organizations (OPOs): Changes to Definitions; Outcome Measures; and Documentation Requirements

A. Background

1. Organ Procurement Organizations (OPOs)

Organ procurement organizations (OPOs) are vital partners in the procurement, distribution, and transplantation of human organs in a safe and equitable manner for all potential transplant recipients. The role of OPOs is critical to ensuring that the maximum possible number of transplantable human organs are available to seriously ill patients who are on a waiting list for an organ transplant. OPOs are responsible for the identification of eligible donors, recovering organs from deceased donors, reporting information to the UNOS and OPTN, and compliance with all CMS outcome and process performance measures.

2. Statutory Provisions

Section 1138(b) of the Act provides the statutory qualifications and requirements that an OPO must meet in order for organ procurement costs to be paid under the Medicare program or the Medicaid program. Among other provisions, section 1138(b) of the Act also specifies that an OPO must operate under a grant made under section 371(a) of the Public Health Service Act (PHS Act) or must be certified or recertified by the Secretary as meeting the standards to be a qualified OPO within a certain time period. Congress has provided that payment may be made for organ procurement cost ''only if'' the OPO meets the performance related standards prescribed by the Secretary. Under these authorities, we established Conditions for Coverage (CfCs) for OPOs that are codified at 42 CFR part 486 and set forth the certification and recertification processes for OPOs.

Section 1102 of the Act gives the Secretary the authority to make and publish such rules and regulations as may be necessary to the efficient administration of the functions that the Secretary is charged with performing under the Act. Moreover, section 1871 of the Act gives the Secretary broad authority to establish regulations that are necessary to carry out the administration of the Medicare program.

3. HHS Initiatives Related to OPO Services

The Advisory Committee on Organ Transplantation (ACOT) was established under the authority of section 222 of the

PHS Act, as amended, and regulations under 42 CFR 121.12. A 2012 recommendation by ACOT stated: ''ACOT recognizes that the current CMS and HRSA/OPTN structure creates unnecessary burdens and inconsistent requirements on transplant centers (TCs) and organ procurement organizations (OPOs) and that the current system lacks responsiveness to advances in TC and OPO performance metrics. The ACOT recommends that the Secretary direct CMS and HRSA to confer with the OPTN, SRTR, the OPO community, and TC representatives to conduct a comprehensive review of regulatory and other requirements, and to promulgate regulatory and policy changes to requirements for OPOs and TCs that unify mutual goals of increasing organ donation, improving recipient outcomes, and reducing organ wastage and administrative burden on TCs and OPOs. These revisions should include, but not be limited to, improved risk adjustment methodologies for TCs and a statistically sound method for yield measures for OPOs.'' [243]

4. Requirements for OPOs

To be an OPO, an entity must meet the applicable requirements of both the Social Security Act and the PHS Act. Among other requirements, the OPO must be certified or recertified by the Secretary as an OPO. To receive payment from the Medicare and Medicaid programs for organ procurement costs, the entity must have an agreement with the Secretary. In addition, under section 1138(b) of the Act, an OPO must meet performance standards prescribed and designated by the Secretary. Among other things, the Secretary is required to establish outcome and process performance measures based on empirical evidence, obtained through reasonable efforts, of organ donor potential and other related factors in each service area of the qualified OPO. An OPO must be a member of and abide by the rules and requirements of the OPTN that have been approved by the Secretary (section 1138(b)(1)(D) of the Act; 42 CFR 486.320).

B. Proposed and Finalized Provisions

1. Definition of ''Eligible Death''

Transplant hospitals and OPOs report data to the OPTN and those data are transmitted on a monthly basis to the SRTR contractor. The OPTN establishes the types and frequencies of the data to be submitted by the OPOs to the SRTR through its policies. The OPTN and SRTR collect and analyze the data pursuant to the HRSA mission to increase organ donation and transplantation. Periodically, the OPTN revises its OPO data reporting policies based on methodologies and clinical practice improvements that enable them to draw more accurate conclusions about donor and organ suitability for transplantation. When the CMS OPO regulations were published on May 31, 2006, the definition for ''eligible death'' at § 486.302 was in alignment with the OPTN definitions at that time. This ''eligible death'' definition has been used by CMS since May 31, 2006 to calculate and determine compliance with the OPO outcomes measures at § 486.318.

The OPTN has approved changes to its ''eligible death'' definition, which is scheduled to go into effect on January 1, 2017. The changes to the OPTN definition [244] are predicted to increase the availability of transplantable organs by: Increasing the maximum age for donation from 70 years of age to 75; replacing the automatic exclusion of patients with Multi-System Organ Failure (MSOF) with clinical criteria for each organ type that specifies such type's suitability for procurement; and implementing policies allowing recovery and transplantation of organs from an HIV positive donor into an HIV positive recipient, consistent with the HIV Organ Policy Equity Act (HOPE Act) (November 21, 2013, Pub. L. 113–51).

The existing definition of ''eligible death'' under the May 31, 2006 CfCs (71 FR 31046 through 31047; 42 CFR 486.302) would not be consistent with this OPTN revised definition. Existing § 486.302 defines this term as ''the death of a patient 70 years old or younger, who ultimately is legally declared brain dead according to hospital policy, independent of family decision regarding donation or availability of next-of-kin, independent of medical examiner or coroner involvement in the case, and independent of local acceptance criteria or transplant center practice . . . ,'' and who does not exhibit active infections or other conditions, including HIV. The definition also sets out several additional general exclusion criteria, including MSOF. If there are inconsistent definitions, the resultant changes in data reported to the OPTN by the OPOs, would inhibit the SRTR's ability to produce the data required by CMS to evaluate OPOs' conformance with § 486.318.

Therefore, in order to ensure more consistent requirements, in the CY 2017 OPPS/ASC proposed rule (81 FR 45743 through 45744), we proposed to replace the current definition for ''eligible death'' at § 486.302 with the upcoming revised OPTN definition of ''eligible death.'' The CMS definition would be revised to include donors up to the age of 75 and replace the automatic exclusion of potential donors with MSOF with the clinical criteria listed in the definition, that specify the suitability for procurement. We requested public comments on our proposed definition. We indicated that if, as a result of the public comments we receive on the proposal, additional changes are necessary to this definition, we will work with the OPTN to harmonize the definition.

Comment: One commenter noted that the changes to the ''eligible death'' definition were approved by the OPTN Board of Directors in June 2013. According to the commenter, following the passage of the HOPE Act on November 21, 2013, a workgroup was formed to review OPTN policies and make recommendations for policy changes to allow for research as outlined in the HOPE Act. The commenter stated that this workgroup considered including patients with HIV as part of the ''eligible death'' definition. However, according to the commenter, because the components of the ''eligible death'' definitions were developed as a comparative metric for OPO performance and are not intended to affect acceptance or allocation, the workgroup recommended no changes to the ''eligible death'' definition components. The commenter believed that the definitions will not impact the use of HIV organs within a HOPE Act research study.

Response: We appreciate the commenter's input. We have retained an exclusion for HIV if the organ is not being recovered for an HIV positive transplant recipient under the definition of ''eligible death.'' We have added the phrase ''consistent with the HIV Organ Policy Equity Act (the HOPE Act)'' to paragraph (8) of the definition of ''eligible death'' under § 486.302 for clarity.

Comment: Several commenters supported the proposed revision to the definition of ''eligible death'' at § 486.302 to be consistent with the revised OPTN definition of ''eligible death.''

Response: We appreciate the commenters' support.

[244] Alcorn, James B. (2013). ''Summary of actions taken at OPTN/UNOS Board of Directors Meeting: June 24–25, 2013.'' Available at: *https://optn.transplant.hrsa.gov/media/1277/policynotice_20130701.pdf.*

Comment: One commenter, while supporting the overall effort to align definitions, stated that the new definition of ''eligible death'' is intended to improve reporting consistency and clinical refinement in determination of organ suitability for transplantation. However, the commenter believed that the associated measure itself falls short of meeting the statutory requirements for recertification based on performance measures because the commenter believed that the proposed outcome measures may not be based on empirical data as required by the statute.

Response: We appreciate the commenter's overall support. However, we do not agree that adoption of the OPTN yield metric falls short of statutory requirements for performance measures for OPOs. We believe that the revised measure is based on empirical evidence and will enable more precise measurement of OPO performance because of the multiple risk adjustments that are applied to each individual donation service area (DSA), including environmental factors and patient population.

Comment: Several commenters supported CMS' proposed regulatory changes, which would extend the benefits of transplantation to individuals with both HIV and ESRD by allowing recovery and transplantation of kidneys from HIV positive donors into HIV positive recipients. One commenter stated that the possibility of renal transplantation in HIV donors was explored by an association several years ago and that it was recently suggested that there is potential for approximately 500 people on the donor list who are HIV positive to receive organs from HIV positive people every year.

Response: We appreciate the commenters' support.

Comment: One commenter believed that the proposed changes will promote consistency in requirements between OPTN and CMS and ultimately allow for more transplantable organs and clear requirements between the two organizations. Several commenters stated that the proposed changes to the ''eligible death'' definition (as well as the proposed aggregate donor yield metric and transport documentation) are necessary updates to reflect advances in technology and promote greater utilization of organs.

Response: We appreciate the commenters' support.

Comment: One commenter stated that the donation rate metric is a fundamentally appropriate measure of OPO performance and supported efforts to identify a measure that is an accurate and validated measure. The commenter also supported data collection under the new definition of ''eligible death,'' but disagreed with the proposed adoption of this measure for OPO performance assessment.

Response: We appreciate the commenter's input. The commenter did not provide specifics as to why the commenter disagreed with the proposed adoption of the measure. Therefore, we are unable to respond to the commenter's disagreement.

Comment: One commenter recommended that CMS adopt a donation rate metric defined as a ratio of actual donors over a surrogate measure for the pool of possible organ donors. The commenter believed that the best donation rate measure currently available is the proposed OPTN measure of donation rate and supported the use of this measure while current efforts of OPTN, SRTR, and AOPO members are completed. The commenter noted that the potential for stronger measures of donation rate are on the horizon, and suggested that the measure be named, but not defined in the regulations. The commenter believed that this would allow for a more fluid adoption of improved measures once completed and established by the donation and transplant community.

Response: We appreciate the commenter's recommendation. However, we did not propose to include a donation rate metric as a new outcome measure, and therefore consider this comment to be outside the scope of the proposed rule. We will continue to evaluate the effectiveness of the performance measures for OPOs and will propose changes to the regulations if necessary.

Comment: One commenter supported any regulatory proposals for OPOs that would encourage or expect them to evaluate all potential deaths as a possibility for organ donation regardless of the definition of ''eligible death'' or the number of organs that can be recovered. The commenter requested that CMS continue to reevaluate OPO metrics for performance because organ recovery is so variable throughout the country.

Response: We appreciate the commenter's support. We will continue to evaluate OPO performance measures.

After consideration of the public comments we received, we are finalizing our proposal to replace the current definition of ''eligible death'' at § 486.302 with the revised OPTN definition of ''eligible death.'' The CMS revised definition includes donors up to the age of 75 and replaces the automatic exclusion of potential donors with MSOF with the clinical criteria listed in the definition, that specify the suitability for procurement.

2. Aggregate Donor Yield for OPO Outcome Performance Measures

At the time of publication of the May 31, 2006 OPO regulations, outcome measures specified at §§ 486.318(a)(3)(i) and (ii) and §§ 486.318(b)(3)(i) and (ii) were consistent with yield calculations then utilized by the SRTR. These CMS standards measure the number of organs transplanted per standard criteria donor and expanded criteria donor (donor yield). We have received feedback that the use of this measure has created a hesitancy on the part of OPOs to pursue donors for only one organ due to the impact on the CMS yield measure.

In 2012 (incorrectly referenced in the proposed rule as ''2014''), the SRTR, based upon the use of empirical data, changed the way it calculates aggregate donor yield after extensive research and changes to risk-adjustment criteria. The revised metric, currently in use by the OPTN/SRTR, risk-adjusts based on 29 donor medical characteristics and social complexities. We believe the OPTN/SRTR yield metric accurately predicts the number of organs that may be procured per donor, and each OPO is measured based on the donor pool in its DSA. This methodology is a more accurate measure for organ yield performance and accounts for differences between donor case-mixes across DSAs.

Therefore, in the CY 2017 OPPS/ASC proposed rule (81 FR 45744), we proposed to revise our regulations at § 486.318(a)(3) and § 486.318(b)(3) to be consistent with the current OPTN/SRTR aggregate donor yield metric. We also stated that we intend to revisit and revise the other OPO measures at a future date.

Comment: One commenter noted that the date for the implementation of SRTR's OPO donor yield models was incorrect and stated that this was first produced and used by the OPTN in 2012.

Response: We appreciate the commenter for recognizing the misstatement. We have revised the preamble language of this final rule with comment period to reflect the 2012 date.

Comment: Several commenters supported consistency between the OPTN and CMS in the use of the current SRTR donor yield metric to evaluate OPO performance. The commenters encouraged CMS to operationalize the use of these measures in a way that would provide the OPTN sufficient time to work with an OPO to improve donor yield after they are initially flagged, but

prior to engagement with CMS. The commenters believed that this action would be consistent with the current application of CMS' performance requirements for transplant programs.

Response: We appreciate the commenters' support. While we also appreciate the suggested operationalization for use of these measures, we must measure OPO performance as specified by the regulations. There is delay between our publication of the final rule and its effective date in order to provide an opportunity for OPOs to prepare for the new standard. In addition to the aggregate donor yield measure, there are two other outcome measures pertaining to the donation rate within the OPO CfCs. Measure one is the donation rate of eligible donors as a percentage of eligible deaths, and measure two is the observed donation rate compared to the expected donation rate. We will continue to evaluate our OPO performance measures and will propose additional changes in the future if we believe additional changes are warranted.

Comment: Several commenters supported the proposed methodology for more accurate measures for organ yield performance and accounting for differences between donor case-mixes across DSAs.

Response: We appreciate the commenters' support.

Comment: One commenter expressed concern regarding the utilization of the OPTN proposed definition of ''eligible death'' as a measure of donation potential. The commenter stated that the utilization of these data as part of an overall donation metric does not adhere to the requirement to use empirical evidence to measure OPO potential and performance.

Response: We disagree that the OPTN Yield Metric does not meet the statutory requirement for the development of OPO measures utilizing empirical data. The OPTN Yield Metric was developed based upon, and utilizes, actual data submitted by the OPOs to the OPTN and, therefore, is based on observation or experience.

Comment: One commenter noted that current OPO outcome measures one and two utilize eligible death as part of the calculation and believed the implementation of a revised definition mid-cycle impairs the ability for an OPO to track and adjust its performance as needed to remain compliant. The commenter supported inclusion of the proposed donation metric outlined, but requested that this measure be defined in subregulatory documents to allow for refinement as needed based on changes in the donation and transplantation community.

Response: We appreciate the commenter's support. While we also appreciate the suggested operationalization for use of these measures, we must measure OPO performance as specified in the regulations. There is a delay between our publication of the final rule and its effective date in order to provide an opportunity for OPOs to prepare for the new standard. In addition to the aggregate donor yield measure, there are two other outcome measures pertaining to the donation rate within the OPO CfCs. Measure one is the donation rate of eligible donors as a percentage of eligible deaths, and measure two is the observed donation rate compared to the expected donation rate. We will continue to evaluate our OPO performance measures and will propose additional changes in the future if we believe additional changes are warranted.

Comment: One commenter stated that the current certification cycle for OPOs will be complete in 2018 and, therefore, the new definitions will be implemented within an existing performance cycle. The commenter believed that the required timeframes for data review and evaluation would not be met, based on the adoption of a new definition of ''eligible death'' and a new yield metric for the current certification cycle. The commenter requested clarification on how the data collection timeframes and designation cycle would be reconciled.

Response: We understand that the OPO community has concerns with the implementation of a new definition in the middle of a certification cycle. However, we believe that the change is imperative to support increased organ availability, and we will make any needed adjustments in interpretation through the mid-cycle change. OPOs will continue to receive 6-month data reports indicating compliance and noncompliance with the outcome measures. Each OPO's performance will be measured based on the current definition and yield measures for the time period ending December 31, 2016. The new definition and yield measure will be effective on January 1, 2017. The June 2017 OPO data reports will be based on the new definition and yield metric. OPOs will receive two data reports based on the new definition and yield measure prior to the 2018 survey cycle. We will review both reports during the 2018 survey cycle.

Comment: One commenter requested clarification of the update to the final rule published in December 2013, which changed requirements for OPOs to meet only two of the three outcome measures. The commenter stated that it was unclear if this requirement will remain in place for this next review certification cycle with the proposed revised measures and requested that these facts be considered prior to formalizing changes that may impact the donation and transplantation community in a negative manner.

Another commenter questioned whether, under the proposed revisions, the existing requirement to meet two of the three measures would continue. The commenter supported the CMS 2013 final rule (78 FR 74826) that modified the requirement at § 486.318 to specify that two of the three measures must be met for recertification. The commenter agreed with CMS' statement in that final rule that the requirement to automatically decertify an OPO for failure to meet all three measures was unnecessarily stringent. The commenter stated that, in the absence of a process to review mitigating factors or consider corrective action, as well as given ongoing concerns about the outcome measures themselves, a threshold of compliance with two of the three measures was appropriate.

Response: We appreciate the commenters' concern. The proposed change to Measure 3 will not impact the requirement at § 486.318(a) that states that ''with the exception of OPOs operating exclusively in noncontiguous States, Commonwealths, Territories, or possessions, an OPO must meet two out of the three outcome measures.'' The proposed change also will not impact the requirement at § 486.318(b) that states that ''for OPOs operating exclusively in noncontiguous States, Commonwealths, Territories, or possessions, an OPO must meet two out of the three outcome measures.''

Comment: One commenter believed that CMS intended to replace the three current yield measures with one proposed O/E measure and requested that this be clarified in the final rule with comment period. The commenter noted that current regulations require OPOs to meet two out of three yield measures defined as: (1) The number of organs transplanted per standard criteria donor; (2) the number of organs transplanted per expanded criteria donor; and (3) the number of organs used for research per donor. The commenter supported the concept of replacing these three yield measures with an aggregate O/E measure. However, the commenter also urged CMS to adopt larger regulatory reform that includes process improvement and corrective action opportunities. The

commenter supported, in the context of such a regulatory structure, a CMS requirement that OPOs meet both the donation rate and the yield measures to remain in compliance.

Response: We thank the commenter for expressing this concern. In the proposed rule, we did not clearly articulate our intention to retain the requirement that the number of organs for research per donor continues to be included as one of the yield measure criteria. It was not our intention to eliminate this requirement, and we have revised the regulation text in this final rule with comment period to retain the number of organs for research per donor as a yield measure criterion. The requirements in the 2006 final rule at §§ 486.318(a)(3)(iii) and (b)(3)(iii) have been renumbered as §§ 486.318(a)(3)(ii) and (b)(3)(ii), respectively, in this final rule with comment period due to the reduction in the total number of yield measure criteria included in §§ 486.318(a)(3) and (b)(3). Because there will only be two yield measure criteria under §§ 486.318(a)(3) and (b)(3), the language in the proposed rule that ''at least 2 of the 3 yield measures specified are more than 1 standard deviation below the national mean'' has been removed and replaced with language that now reads ''The OPO data reports, averaged over the 4 years of the recertification cycle, must meet the rules and requirements of the most current OPTN aggregate donor yield measure.'' In response to the commenter's request for CMS to adopt larger regulatory reform, while we understand the concerns raised by the commenter, we believe that the recommendations are outside the scope of the proposed rule.

Comment: One commenter recommended that CMS' definition of the yield measure refer to the OPTN Observed to Expected Risk-Adjusted Process and not to a detailed description of the current methodology.

Response: We appreciate the commenter's observation regarding the detailed description of the components of the revised definition. In accordance with statutory requirements, we must include outcome measures as a regulation.

Comment: One commenter recommended that the number of organs used for research be eliminated from the performance measures. The commenter stated that the measure is imprecisely defined, influenced by physical proximity to research clearinghouse agencies, and conflicts with the organ yield measure.

Response: We appreciate the commenter's input. In the proposed rule (81 FR 45776), our proposed amendments to §§ 486.318(a)(3) and (b)(3) did not propose to eliminate the performance measure on research. Our regulation is consistent with the Pancreatic Islet Cell Transplantation Act which requires that pancreata used for islet cell research be counted for OPO certification.

Comment: One commenter stated that the current proposed changes present modest progress in improving definitions for and measures of OPO performance. However, the commenter believed that the most pressing and significant components of regulatory reform have not been addressed. The commenter further stated that regulatory change was needed to develop and implement outcome measures that have technical integrity, are meaningful and understandable, and drive towards increasing the number of transplants that save more lives, through a defined process for continuous improvement in establishing risk-adjusted, verifiable and meaningful measures of performance, that are not misaligned with transplant program outcome measures.

Specifically, the commenter recommended that CMS:

- Establish a process of continuous OPO performance measurement and monitoring over a rolling 36-month period, updated in 6 month intervals.
- Establish a preemptive review and corrective action process to be implemented before an OPO falls out of compliance with outcome measures.
- Establish a process for OPOs that fall out of compliance with outcome measures, to include the ability to request a review of mitigating factors and/or the ability to enter a formal corrective action process.
- Define two distinct OPO outcome measures in the regulation (the Donation Measure and the Yield Measure). Define the methodology for calculating the outcome measures outside of the regulation to allow for future refinement and adjustment of the calculation as needed and as the data and science advance.
- Establish OPTN/SRTR oversight responsibilities for development, ongoing review and refinement of the two OPO outcome measure algorithms and calculations, with enhanced OPO representation. This oversight group should include equal OPO and transplant representation.

Response: While we understand the concerns raised by the commenter, we believe that the recommendations are outside the scope of the proposed rule. However, we will consider these comments for future rulemaking.

Comment: One commenter stated that the current yield metrics provide alternative performance thresholds for OPOs operating exclusively in noncontiguous U.S. States, commonwealths, territories, or possessions. The commenter expressed concern that, while the proposed OPTN/SRTR yield metric includes in the risk model a variable for geographic location, the unique challenges faced by these OPOs may not be sufficiently identified and accounted for in the current risk model. The commenter asked what provisions CMS would include for appropriate evaluation for OPOs operations exclusively in these regions.

Response: Due to the specificity of the risk adjustments in the proposed yield metric, which are based on 29 risk factors regarding donor medical characteristics and social complexities, the metric accurately predicts the number of organs that may be procured per donor, and each OPO is measured based on the donor pool in its DSA. This methodology is a more accurate measure for organ yield performance and accounts for differences among donor case-mixes across DSAs.

Comment: One commenter stated that the proposed changes would further advance efforts to foster quality improvement by modernizing the quantitative criteria for both performance standards for transplant centers and the conditions of participation for OPOs.

Response: We appreciate the commenter's support.

Comment: One commenter noted that the OPTN system compares each OPO's actual donor yield with its expected donor yield, given the characteristics of the OPO's donor pool and that the OPTN's Membership and Professional Standards Committee will monitor results and review OPOs that meet each of the following three criteria:

- Observed (O) transplants per 100 donors minus Expected (E) transplants per 100 donors is less than -10, that is, more than 10 fewer organs transplanted than expected per 100 donors.
- O divided by E (O/E) is less than 0.9, that is, more than 10 percent fewer transplanted organs than expected.
- O/E is statistically significantly lower than 1.0 using a two-sided p-value of less than 0.05.

Response: We appreciate the commenter's input.

Comment: One commenter recommended that measures be defined outside of the regulations to allow for refinement as needed, based on changes in the donation and transplantation community. The commenter also

requested that donor yield measures and its utilization of this measure should include the ability for OPOs to submit corrective action plans similar to what is allowed in the OPTN construct, noting mitigating factors as needed if found to be noncompliant.

Response: We appreciate the commenter's input. However, in order to ensure adequate notice and to provide the public an opportunity to participate in establishing the legal standards, we establish the OPO performance measures by regulation.

After consideration of the public comments we received, we are finalizing our proposal to revise our regulations at §§ 486.318(a)(3) and (b)(3) to be consistent with the current OPTN/SRTR aggregate donor yield metric.

3. Organ Preparation and Transport—Documentation With the Organ

In the CY 2017 OPPS/ASC proposed rule (81 FR 45744), we proposed to revise § 486.346(b), which currently requires that an OPO send complete documentation of donor information to the transplant center along with the organ. The regulation specifically lists documents that must be copied and sent by the OPO to include: Donor evaluations; the complete record of the donor's management; documentation of consent; documentation of the pronouncement of death; and documentation for determining organ quality. This requirement has resulted in an extremely large volume of donor record materials being copied and sent to the transplant centers by the OPOs with the organ. However, all these data can now be accessed by the transplant center electronically. The OPOs utilize an intercommunicative Web-based system to enter data that may be received and reviewed electronically by transplant centers.

Therefore, we proposed to revise § 486.346(b) to no longer require that paper documentation, with the exception of blood typing and infectious disease information, be sent with the organ to the receiving transplant center. We also proposed a revision to § 486.346(b) to make it consistent with current OPTN policy which requires that blood type source documentation and infectious disease testing results be physically sent in hard copy with the organ. The reduction in the amount of hard copy documentation that is packaged and shipped with each organ would increase OPO transplant coordinators' time, allowing them to focus on donor management and organ preparation. This proposal would not restrict the necessary donor information sent to transplant hospitals because all other donor information could be accessed electronically by the transplant center.

Comment: One commenter noted a discrepancy pertaining to the entity to which OPOs submit data and advised CMS that transplant hospitals and OPOs report data to the OPTN and those data are transmitted on a monthly basis to the SRTR contractor.

Response: We appreciate the commenter's recognition of the discrepancy. We have revised the preamble language in this final rule with comment period to provide that transplant hospitals and OPOs report data to the OPTN and that those data are transmitted on a monthly basis to the SRTR contractor.

Comment: One commenter noted a policy citation discrepancy between OPTN and CMS' proposal to revise § 486.346(b) to make it consistent with current OPTN policy at 16.5.A. Organ Documentation, which requires that blood type source documentation and infectious disease testing results be physically sent in hard copy with the organ. The commenter applauded CMS' proposal to align both OPTN and CMS requirements. The commenter stated that the issues of not utilizing current technology, inefficient use of time, and unnecessary misdirection of resources away from donors and their families were brought to light during numerous discovery observations made during the development of the OPTN electronic tracking and transport project. According to the commenter, the OPTN policy change was designed to limit physical paperwork sent with the organ down to key elements, ABO results and infectious disease results, and expressed full support for the proposed CMS change.

Response: We appreciate the commenter's input and clarification. We have revised the preamble language of this final rule with comment period to remove the specific reference citations to an OPTN policy.

Comment: Several commenters supported the proposal to revise § 486.346(b) to no longer require that paper documentation, with the exception of blood typing and infectious disease information, be sent with the organ to the receiving transplant center. In addition, one commenter supported the revision for documentation requirements for donor records to be in alignment with OPTN policy.

Response: We appreciate the commenters' support.

Comment: One commenter supported the provisions to reduce the administrative burden of copying records that are available electronically. The commenter suggested that CMS require a minimum timeframe for preservation of electronic access to the records for the transplant centers. The commenter also suggested that the OPOs complete a specified data set in the electronic system and that transplant centers have access to any of the records that have been typically included in the packet accompanying the organ. Another commenter also supported the proposal and stated its appreciation for CMS' efforts to streamline the process by reducing paperwork burdens.

Response: We appreciate the commenters' support. The commenter's suggestion regarding a retention timeframe is outside the scope of the proposed rule.

After consideration of the public comments we received, we are adopting as final without modification the revision of § 486.346(b) to make it consistent with current OPTN policy, which requires that blood type source documentation and infectious disease testing results be the only records required to be physically sent in hard copy with the organ.

XVII. Transplant Enforcement Technical Corrections and Other Revisions to 42 CFR 488.61

A. Technical Correction to Transplant Enforcement Regulatory References

In the CY 2017 OPPS/ASC proposed rule (81 FR 45744), we proposed a technical correction to preamble and regulatory language we recently adopted regarding enforcement provisions for organ transplant centers. In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50338), we inadvertently made a typographical error in the final citations in a response to a commenter and stated, ''[i]n the final regulation, at § 488.61(f)(1) and elsewhere, we therefore limit the mitigating factors provision to deficiencies cited for noncompliance with the data submission, clinical experience, or outcomes requirements specified at § 488.80 and § 488.82.'' However, the transplant center data submission, clinical experience, and outcomes requirements are actually specified at 42 CFR 482.80 and 482.82, and not within Part 488; moreover, Part 488 does not contain a § 488.80 or § 488.82. We wish to correct this typographical error; the response should read as follows: ''In the final regulation, at § 488.61(f)(1) and elsewhere, we therefore limit the mitigating factors provision to deficiencies cited for noncompliance with the data submission, clinical experience, or outcomes requirements specified at § 482.80 and § 482.82.''

We also proposed to amend § 488.61(f)(1) which was added in that final rule (79 FR 50359) to correct the same incorrect citations.

Comment: One commenter supported CMS' vigilance to address needed technical corrections and clarifications.

Response: We appreciate the commenter's support.

After consideration of the public comments we received, we are finalizing our proposals to make technical corrections to the preamble language and regulatory text of § 488.61(f) in the FY 2015 IPPS/LTCH PPS final rule regarding enforcement provisions for organ transplant centers described above.

B. Other Revisions to 42 CFR 488.61

Under current § 488.61(f)(3), transplant programs must notify CMS of their intent to request mitigating factors approval within 10 days and the time period for submission of mitigating factor materials is 120 days. Current § 488.61(f)(3) does not specify how these time periods are to be computed.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45745), we proposed to amend § 488.61(f)(3) to extend the due date for programs to notify CMS of their intent to request mitigating factors approval from 10 days to 14 calendar days, and to clarify that the time period for submission of the mitigating factors information is calculated in calendar days (that is, 120 calendar days).

In addition, as part of our improvement efforts, in the proposed rule, we proposed to revise § 488.61(h)(2) to clarify that a signed SIA with a transplant program remains in force even if a subsequent SRTR report indicates that the transplant program has restored compliance with the Medicare CoPs, except that CMS, in its sole discretion, may shorten the timeframe or allow modification to any portion of the elements of the SIA in such a case.

Comment: One commenter opposed the proposal that a signed Systems Improvement Agreement remain in force even if a subsequent SRTR report indicates that the program has regained compliance with the CoPs because continuing the SIA would result in staff and financial implications and possible loss of referrals. One commenter supported the proposal and one commenter indicated that it understood CMS' proposal to revise § 488.61(h)(2) to provide that a signed SIA remains in force even if a subsequent SRTR report indicates that the transplant program has regained compliance.

Response: We believe that our estimated cost for a transplant SIA program of $250,000 is reasonable, as it is based on reports from programs that have actually completed such agreements in the past. We appreciate that the costs may be higher (or lower), depending on the extent of the improvements the hospital identifies as needed and chooses to undertake. We believe that the additional portion of the proposed rule, which includes the ability for CMS to shorten or modify the timeframes of the SIA provides an opportunity for CMS to end the SIA early if the program has regained compliance and has procedures in place to ensure that compliance is maintained. We will determine whether the program has procedures for maintaining compliance on a case-by-case basis prior to ending the SIA.

Comment: A few commenters supported the proposed revisions to 42 CFR 488.61 to clarify and extend the timeframe to submit a letter of intent and other materials to apply for mitigating factors.

Response: We appreciate the commenters' support.

Comment: One commenter supported CMS' proposal to extend and clarify the timeframes for transplant centers to notify the agency of the intent to request a mitigating factors approval and submit the relevant data for review. Specifically, the commenter agreed that CMS should extend the notification period from 10 days to 14 calendar days and clarify that the timeframe to submit mitigating factors materials is 120 calendar days.

Response: We appreciate the commenter's support.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to amend § 488.61(f)(3) to extend the due date for programs to notify CMS of their intent to request mitigating factors approval from 10 days to 14 calendar days, and to clarify that the time period for submission of the mitigating factors information is calculated in calendar days (that is, 120 calendar days). In addition, we are finalizing our proposal to revise § 488.61(h)(2) to clarify that a signed SIA with a transplant program remains in force even if a subsequent SRTR report indicates that the transplant program has restored compliance with the Medicare CoPs, except that CMS, in its sole discretion, may shorten the timeframe or allow modification to any portion of the elements of the SIA in such a case.

XVIII. Changes to the Medicare and Medicaid Electronic Health Record (EHR) Incentive Programs

A. Background

The American Recovery and Reinvestment Act of 2009 (ARRA) (Pub. L. 111–5), which included the Health Information Technology for Economic and Clinical Health Act (HITECH Act), amended Titles XVIII and XIX of the Act to authorize incentive payments and Medicare payment adjustments for eligible professionals (EPs), eligible hospitals, critical access hospitals (CAHs), and Medicare Advantage (MA) organizations to promote the adoption and meaningful use of certified EHR technology (CEHRT). Sections 1848(o), 1853(l) and (m), 1886(n), and 1814(l) of the Act provide the statutory basis for the Medicare incentive payments made to meaningful EHR users. These provisions govern EPs, MA organizations (for certain qualifying EPs and hospitals that meaningfully use CEHRT), subsection (d) hospitals and CAHs respectively.

Sections 1848(a)(7), 1853(l) and (m), 1886(b)(3)(B), and 1814(l) of the Act also establish downward payment adjustments, beginning with calendar or fiscal year 2015, for EPs, MA organizations, subsection (d) hospitals, and CAHs that are not meaningful users of CEHRT for certain associated EHR reporting periods.

In the October 16, 2015 **Federal Register**, we published a final rule titled ''Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Stage 3 and Modifications to Meaningful Use in 2015 Through 2017'' (80 FR 62761 through 62955), hereinafter referred to as the ''2015 EHR Incentive Programs Final Rule,'' [245] which in part aligned the Modified Stage 2 measures with Stage 3 measures, aligned EHR reporting periods with the calendar year, and aligned aspects of the EHR Incentive Programs with other CMS quality reporting programs.

On October 14, 2016, we posted on our Web site the Medicare Program; Merit-based Incentive Payment System (MIPS) and Alternative Payment Model (APM) Incentive under the Physician Fee Schedule, and Criteria for Physician-Focused Payment Models final rule with comment period (CMS–5517–FC) (hereinafter referred to as the ''2016 MIPS and APMs final rule with

[245] We also published two correction notices for the 2015 EHR Incentive Programs Final Rule, making corrections and correcting amendments (81 FR 11447 through 11449; 81 FR 34908 through 34909).

comment period'').[246] The 2016 MIPS and APMs final rule with comment period establishes the MIPS, a new program for certain Medicare-enrolled practitioners. MIPS consolidates components of three existing programs, the Physician Quality Reporting System (PQRS), the Physician Value-Based Payment Modifier (VM), and the Medicare EHR Incentive Program for EPs, and focuses on quality—both a set of evidence-based, specialty-specific standards as well as practice-based improvement activities; cost; and use of CEHRT to support interoperability and advanced quality objectives in a single, cohesive program that avoids redundancies.

B. Summary of Final Policies Included in This Final Rule With Comment Period

In this final rule with comment period, we are adopting final policies based on the proposals in the CY 2017 OPPS/ASC proposed rule (81 FR 45745 through 45753) to continue advancement of certified EHR technology utilization, focusing on interoperability and data sharing. We proposed to eliminate the Clinical Decision Support (CDS) and Computerized Provider Order Entry (CPOE) objectives and measures for eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program for Modified Stage 2 and Stage 3 for 2017 and subsequent years. We also proposed to reduce the thresholds of a subset of the remaining objectives and measures in Modified Stage 2 for 2017 and in Stage 3 for 2017 and 2018 for eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program. In addition, we proposed to update the Modified Stage 2 and Stage 3 measures with a new naming convention to allow for easier reference to a given measure (81 FR 45748 and 45752). These proposed changes would not apply to eligible hospitals and CAHs that attest to meaningful use under their State's Medicaid EHR Incentive Program. These eligible hospitals and CAHs would continue to attest to their State Medicaid agencies on the measures and objectives finalized in the 2015 EHR Incentive Programs Final Rule.

In the CY 2017 OPPS/ASC proposed rule, we did not expressly address the effect these proposals would have on eligible hospitals and CAHs that are eligible to participate in both the Medicare and Medicaid EHR Incentive Programs. These hospitals may be eligible for an incentive payment under Medicare for meaningful use of CEHRT or subject to the Medicare payment reduction for failing to demonstrate meaningful use; in addition, they may be eligible to earn a Medicaid incentive payment for meaningful use. We refer to these hospitals in this section of the final rule with comment period as ''dual-eligible'' hospitals. As discussed in our responses to the comments below, we are finalizing these proposed changes to the objectives and measures for 2017 and 2018 for all eligible hospitals and CAHs that submit an attestation to CMS, including dual-eligible hospitals that are eligible to participate in both the Medicare and Medicaid EHR Incentive Programs. We also are making further, minor, refinements to the new naming conventions.

We proposed to change the EHR reporting period in 2016 to any continuous 90 day period within CY 2016 for all returning EPs, eligible hospitals and CAHs that have previously demonstrated meaningful use in the Medicare and Medicaid EHR Incentive Programs (81 FR 45753). For the reasons discussed in section XVIII.D.1. of this final rule with comment period, we are finalizing a 90-day EHR reporting period in both CYs 2016 and 2017 for all returning participants.

We proposed to require EPs, eligible hospitals and CAHs that have not successfully demonstrated meaningful use in a prior year and are seeking to demonstrate meaningful use for the first time in 2017 to avoid the 2018 payment adjustment by attesting by October 1, 2017 to the Modified Stage 2 objectives and measures(81 FR 45753 through 45754). In this final rule with comment period, we are adopting this requirement as proposed.

We proposed a one-time significant hardship exception from the 2018 payment adjustment for certain EPs who are new participants in the EHR Incentive Program in 2017 and are transitioning to MIPS in 2017, as well as an application process (81 FR 45754 through 45755). In this final rule with comment period, we are finalizing this policy as proposed.

We proposed to change the policy on measure calculations for actions outside the EHR reporting period for the Medicare and Medicaid EHR Incentive Programs (81 FR 45755). We are adopting a final policy that, for all meaningful use measures, unless otherwise specified, actions included in the numerator must occur within the EHR reporting period if that period is a full calendar year, or if it is less than a full calendar year, within the calendar year in which the EHR reporting period occurs. In addition, we are finalizing that this requirement applies beginning in calendar year 2017.

C. Revisions to Objectives and Measures for Eligible Hospitals and CAHs

In the CY 2017 OPPS/ASC proposed rule (81 FR 45746 through 45753), we made two proposals regarding the objectives and measures of meaningful use for eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program. One of these proposals would eliminate the Clinical Decision Support (CDS) and Computerized Provider Order Entry (CPOE) objectives and measures for eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program for 2017 and subsequent years in an effort to reduce reporting burden for eligible hospitals and CAHs. The second proposal would reduce the reporting thresholds for a subset of the remaining Modified Stage 2 objectives and measures for 2017 and Stage 3 objectives and measures for 2017 and 2018 to Modified Stage 2 thresholds. We note that the Stage 3 Request/Accept Summary of Care measure under the Health Information Exchange objective is a new measure in Stage 3, therefore the proposed reduction in the threshold is not based on Modified Stage 2 thresholds.

In the proposed rule, our goal was to propose changes to the objectives and measures of meaningful use that we expect would reduce administrative burden and enable hospitals and CAHs to focus more on patient care.

We invited public comment on our proposals.

Comment: Commenters stated that having two different sets of meaningful use requirements, one for State Medicaid and one for Medicare would be a reporting burden for health systems that have providers that participate in both the Medicare and Medicaid EHR Incentive Programs. They stated that the best way to reduce the administrative burden would be to align all programs to the same threshold requirements and the same measures (or as close as possible) because there are many different programs to report to now, including the EHR Incentive Program for Medicaid providers and MIPS, for Medicare EPs, and each is proposed to have similar, but different measures.

Response: The MACRA requires the establishment of the MIPS for eligible clinicians, which is a new program that

[246] The 2016 MIPS and APMs final rule with comment period also has been posted on the *Regulations.gov* Web site at: *https://www.regulations.gov/document?D=CMS-2016-0060-3921*, and is expected to be published in the **Federal Register** on November 4, 2016.

includes aspects of three existing programs (PQRS, VM, and the Medicare EHR Incentive Program for EPs) and will have an effect on Part B payments to MIPS eligible clinicians beginning in CY 2019. Under section 101(b) of the MACRA, the payment adjustment for EPs under the Medicare EHR Incentive Program will end after CY 2018. The MACRA did not make changes to the Medicare EHR Incentive Program for eligible hospitals and CAHs or to the Medicaid EHR Incentive Program, and thus our ability to adopt modifications to this program for hospitals remains constrained by the relevant provisions of the HITECH Act. Both the MIPS and the Medicare EHR Incentive Program for eligible hospitals and CAHs have different statutory requirements, which limit our ability to align the measures and thresholds between these two programs.

Comment: Several commenters supported the flexibility proposed but believed the requirements remained burdensome and complicated, which could have a negative effect on the quality of patient care.

Some commenters expressed concerns about meeting the requirements through relatively untested technology and functionalities related to application programming interfaces (APIs) and continue to have concerns about practicability of the Modified Stage 2 objectives and measures as well as the Stage 3 objectives and measures, including the ability of providers to satisfy the objectives and measures. Some commenters recommended allowing for a testing period in which providers would not incur penalties, thereby allowing new technologies to become more widely available and facilitate greater use.

Many commenters also expressed concern about the potential impact the timing of the rule will have on their success and indicated there may be a heavy reporting burden for providers.

Response: We recognize clinical workflows and maintaining documentation may require modifications upon implementation of the requirements in this final rule with comment period for eligible hospitals and CAHs attesting under Medicare and Medicaid. However, we believe the modifications will be minimal and the reporting burden may be reduced, as we are eliminating the CDS and CPOE objectives and associated measures (although the functionalities supporting these measures are still required in CEHRT). In addition, we are reducing the thresholds for a subset of remaining measures. We believe these final policies will help reduce administrative burdens and allow providers to focus more on patient care.

We believe that interoperability and EHR functionalities will continue to advance prior to and after implementation of the technology certified to the 2015 Edition, which should increase providers' success in meeting the objectives and associated measures of the program. Furthermore, healthcare providers that experience significant issues with their technology vendors may submit an application for a significant hardship exception from the Medicare payment adjustment.

We also recognize the commenters' concerns regarding the timing of the publication of this final rule with comment period. For 2016, we proposed to shorten the EHR reporting period based on stakeholders' concerns that additional time was needed to update CEHRT systems, implement APIs for Stage 3 and transition to MIPS for certain EPs. In addition, we proposed certain Medicare EPs who are new participants in 2017 and who are transitioning to MIPS in 2017 may apply for a one-time significant hardship exception from the 2018 payment adjustment.

Comment: A few commenters requested confirmation on whether dual-eligible hospitals will be able to attest to the Medicare meaningful use requirements with CMS, and if State Medicaid programs will be able to rely on the Medicare attestations to determine Medicaid EHR Incentive Program payment eligibility.

Response: Dual-eligible hospitals attesting to CMS via such systems as the Hospital IQR Program reporting portal (81 FR 45754) will attest based on the revised objectives and measures established in this final rule with comment period for 2017 and 2018. State Medicaid agencies will be able to rely on these Medicare attestations to determine whether these hospitals qualify for incentive payments under the Medicaid EHR Incentive Program. Medicaid-only hospitals and dual-eligible hospitals that choose to attest directly to a State for the State's Medicaid EHR Incentive Program will continue to attest to the measures and objectives as finalized in the 2015 EHR Incentive Programs Final Rule (80 FR 62762 through 62955).

Comment: One commenter recommended that the proposed changes to meaningful use should apply in 2016 instead of 2017 as proposed.

Response: We disagree that the removal of the CDS and CPOE objectives and measures or reduction of thresholds for a subset of the remaining objectives and measures should begin in CY 2016 as this would require upgrades to our attestation system within a short period of time, which would be costly and difficult to implement.

We also note that we received a few comments indicating opposition to CMS having direct access to a facility's EHR for data abstraction, the States' inability to confirm duplicate payment status and obtain national data necessary to run and monitor the Medicaid EHR Incentive Program, and application of the same proposed advancing care information requirements for both Medicare clinicians participating in MIPS and Medicaid clinicians participating in the Medicaid EHR Incentive Program. We are not addressing these comments because we consider them to be outside the scope of the proposed rule.

1. Removal of the Clinical Decision Support (CDS) and Computerized Provider Order Entry (CPOE) Objectives and Measures for Eligible Hospitals and CAHs

We proposed to amend 42 CFR 495.22 (by revising § 495.22(e) and by adding a new § 495.22(f)) and by revising 42 CFR 495.24 to eliminate the CDS and CPOE objectives and associated measures (currently found at 42 CFR 495.22(e)(2)(iii) and (e)(3)(iii)) and 42 CFR 495.24(d)(3)(ii) and (d)(4)(ii)) for eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program beginning with the EHR reporting period in calendar year 2017. In the proposed rule (81 FR 45745), we indicated this proposal would not apply to eligible hospitals and CAHs attesting under a State's Medicaid EHR Incentive Program due to the burden of updating technology and reporting systems which would incur both additional costs and time. In the 2015 EHR Incentive Programs Final Rule (80 FR 62782 through 62783), we finalized a methodology for evaluating whether objectives and measures have become topped out and, if so, whether a particular objective or measure should be considered for removal from the EHR Incentive Program. We applied the following two criteria, which are similar to the criteria used in the Hospital IQR and Hospital VBP Programs (79 FR 50203): (1) Statistically indistinguishable performance at the 75th and 99th percentile, and (2) performance distribution curves at the 25th, 50th, and 75th percentiles are compared to the required measure threshold. Through this analysis it was determined the CPOE objective and measures were topped out (81 FR 45746).

We also proposed to remove the CDS objective and its associated measures which do not have percentage-based thresholds (hospitals attest ''yes/no'' to these measures) and therefore, cannot be measured by statistical analysis. However, we noted that 99 percent of eligible hospitals and CAHs have successfully attested ''yes'' to meeting these measures based on attestation data for 2015 and believe that the high level of successful attestation indicates achievement of widespread adoption of this objective and its associated measures among eligible hospitals and CAHs.

In the 2015 EHR Incentive Programs Final Rule, we also established that, for measures that were removed, the technology requirements would still be a part of the definition of CEHRT. We noted in the proposed rule (81 FR 45746) that the CDS and CPOE objectives and associated measures that we proposed to remove for eligible hospitals and CAHs would still be required as part of the eligible hospital's or CAH's CEHRT. However, eligible hospitals and CAHs attesting to meaningful use under Medicare would not be required to report on those measures under this proposal.

We invited public comment on our proposals.

Comment: Several commenters supported the elimination of the CDS and CPOE objectives and associated measures as they agreed that it would decrease administrative burden, improve provider satisfaction, and would no longer provide useful performance information.

Response: We thank the commenters for their support. As we stated in the proposed rule (81 FR 45746), we proposed the removal of these objectives and associated measures to reduce the reporting burden on providers for measures already achieving widespread adoption and with the goal to reduce administrative burden and allow a greater focus on patient care. As noted in the proposed rule (81 FR 45746), performance data for the objectives and associated measures have already achieved widespread adoption and are now considered topped out based on high performance.

Comment: One commenter suggested that CMS consider ''sidelining'' CDS as a temporary measure. A few commenters disagreed with the proposal to eliminate the CDS measure because it contributes to improving quality and patient care. The commenters expressed concern that the functionality would no longer be used, which would jeopardize other patient centered uses associated with CDS leading to regression in facilities which made progress in this area.

Response: We reiterate that the technology requirements for CDS would still be a required part of the definition of CEHRT for provider use. We encourage providers to continue to use functionalities that are important to their patient base or practice even if reporting on performance is no longer required for the EHR Incentive Programs.

Comment: A few commenters requested clarification on whether dually eligible hospitals need to attest to the CPOE and CDS measures in order to receive their Medicaid EHR Incentive payment.

Response: As previously mentioned, in this final rule with comment period we are aligning the removal of the CPOE and CDS objectives and measures for dual-eligible hospitals that attest to CMS for both Medicare and Medicaid. Therefore, dual-eligible hospitals attesting to CMS will attest based on the revised objectives and measures established in this final rule with comment period and will not attest to the CPOE and CDS objectives and measures. However, eligible hospitals and CAHs attesting to a State Medicaid agency will attest to the objectives and measures as established in the 2015 EHR Incentive Programs Final Rule, which include the CDS and CPOE objectives and measures.

After consideration of the public comments we received, we are finalizing our proposal to remove the CDS and CPOE objectives and measures. In summary, we are finalizing the removal of the CDS and CPOE objectives and measures beginning in 2017 for eligible hospitals and CAHs attesting to CMS, including dual-eligible hospitals that are attesting to CMS for both the Medicare and Medicaid EHR Incentive Programs.

2. Reduction of Measure Thresholds for Eligible Hospitals and CAHs for 2017 and 2018

In the CY 2017 OPPS/ASC proposed rule (81 FR 45746 through 45748), we proposed to reduce a subset of the thresholds for eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program for EHR reporting periods in calendar year 2017 for Modified Stage 2 and in calendar years 2017 and 2018 for Stage 3. As previously noted, this proposal would not apply to eligible hospitals and CAHs attesting under a State's Medicaid EHR Incentive Program. We believe this proposal would reduce the hospital and CAH reporting burden, allowing eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program to focus more on providing quality patient care, as well as focus on updating and optimizing CEHRT functionalities to sufficiently meet the requirements of the EHR Incentive Program and prepare for Stage 3 of meaningful use. In addition, we proposed to update the Modified Stage 2 measures with a new naming convention to allow for easier reference to a given measure (81 FR 45747).

We note that section 1886(n)(3)(A) of the Act requires the Secretary to seek to improve the use of EHRs and health care quality over time by requiring more stringent measures of meaningful use. We intend to adopt more stringent measures in future rulemaking and will continue to evaluate the program requirements and seek input from eligible hospitals and CAHs on how the measures could be made more stringent in future years of the EHR Incentive Programs.

We invited public comment on our proposals.

Comment: Many commenters agreed with reducing thresholds for eligible hospitals for the remaining Modified Stage 2 measures in 2017 and Stage 3 measures in 2017 and 2018 because it would reduce administrative burden, resolve some of the challenges in meeting thresholds, and allow providers to best utilize health IT in their practice.

Response: We thank the commenters for their support. As we stated in the proposed rule (81 FR 45746 through45753), we believe that reducing thresholds would decrease administrative burdens in order for the healthcare providers to focus on providing more quality patient care and updating and optimizing CEHRT functionalities to meet the requirements and prepare for Stage 3. We agree with commenters regarding some of the threshold challenges that hospitals have experienced, and therefore considered the concerns via written correspondence and proposed a reduction in thresholds accordingly.

Comment: A few commenters expressed concern that the threshold reduction proposals for Stage 2 and 3 objectives will slow progress to improve health care quality through use of CEHRT. A few commenters stated the threshold reduction proposals for selected objectives and measures may not be sufficient and hospitals will still struggle to meet them, such as objectives and measures that require patient action.

Response: We disagree that the threshold reduction proposals will slow progress in terms of improving health care quality or advancements in the use of CEHRT. Our proposal was intended

to be responsive to concerns we have received from various stakeholders regarding the additional work required to effectively implement technologies and workflows to meet current thresholds. We note the threshold reductions are generally at the Modified Stage 2 level, which would maintain current requirements and are not believed to hinder progress on interoperability or improving patient care. Instead, we believe this will allow for greater focus on updating and optimizing EHR functionalities in preparation for Stage 3 and the implementation of technology certified to the 2015 Edition. As we stated in the proposed rule (81 FR 45747), we recognize the fact that eligible hospitals and CAHs may need additional time to educate patients on how to use health information technology and we believe that reducing the thresholds for 2017 and 2018 would provide additional time for eligible hospitals and CAHs to determine the best ways to communicate the importance for patients to access their medical information. If we reduce these measures even further, we believe this would stifle innovation in health IT and not encourage the widespread adoption of CEHRT.

a. Changes to the Objectives and Measures for Modified Stage 2 (42 CFR 495.22) in 2017

In the proposed rule, for EHR reporting periods in calendar year 2017, we proposed to modify the threshold of the Modified Stage 2 View, Download or Transmit (VDT) measure under the Patient Electronic Access objective established in the 2015 EHR Incentive Programs Final Rule (80 FR 62846 through 62848), and this proposed modification would apply to eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program. We also proposed to update the Modified Stage 2 measures with a new naming convention to allow for easier reference to a given measure, and to align with the measure nomenclature proposed for the MIPS. For the reasons previously stated, these proposals would not apply to eligible hospitals and CAHs attesting under a State's Medicaid EHR Incentive Program.

Specifically, we proposed to revise section 495.22(e) to specify that the current Modified Stage 2 meaningful use objectives and measures apply for EPs for 2015 through 2017, for eligible hospitals and CAHs attesting under a State's Medicaid EHR Incentive Program for 2015 through 2017, and for eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program for 2015 and 2016. We proposed to add a new § 495.22(f) that includes the meaningful use objectives and measures with the proposed modifications discussed below that would be applicable only to eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program for an EHR reporting period in calendar year 2017. We also proposed a new naming convention for certain measures (shown in the table at 81 FR 45748) as well as minor conforming changes to §§ 495.22(a), (c)(1), and (d)(1).

We did not receive any public comments specific to the proposed updated naming conventions for those measures in Modified Stage 2, and therefore are finalizing the proposed updated naming conventions with further minor refinements. The naming conventions are included in the table below.

Patient Electronic Access (VDT) (42 CFR 495.22(f)(8)(ii)(B))

View, Download or Transmit (VDT): At least 1 patient (or patient-authorized representative) who is discharged from the inpatient or emergency department (POS 21 or 23) of an eligible hospital or CAH during the EHR reporting period views, downloads or transmits to a third party his or her health information during the EHR reporting period.

- Denominator: Number of unique patients discharged from the inpatient or emergency department (POS 21 or 23) of the eligible hospital or CAH during the EHR reporting period.
- Numerator: The number of patients (or patient-authorized representatives) in the denominator who view, download, or transmit to a third party their health information.
- Threshold: The numerator and denominator must be reported and the numerator must be equal to or greater than 1.
- Exclusion: Any eligible hospital or CAH that is located in a county that does not have 50 percent or more of its housing units with 4Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period.
- Proposed Modification to the VDT Measure Threshold

For eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program, we proposed to reduce the threshold of the VDT measure from more than 5 percent to at least one patient. We proposed to reduce the threshold because we have heard from stakeholders including hospitals and hospital associations that they have faced significant challenges in implementing the objectives and measures that require patient action. These challenges included, but are not limited to, patients who have limited knowledge of, proficiency with, and access to information technology, as well as patients declining to access the portals provided by the eligible hospital or CAH to view, download, and transmit their health information via this platform.

We invited public comment on our proposals.

Comment: Several commenters supported the reduction in this threshold to at least one patient because it provides additional time to accustom patients to electronic access of their health information and enhance their portal with additional functionalities.

Response: We thank commenters for their support. As we stated in the proposed rule (81 FR 45747), we recognize the fact that eligible hospitals and CAHs may need additional time to educate patients on how to use health information technology, and we believe that reducing the thresholds for 2017 and 2018 would provide additional time for eligible hospitals and CAHs to determine the best ways to communicate the importance for patients to access their medical information.

Comment: One commenter expressed concern about this measure because it requires patient action and it includes factors outside of the commenter's control because some patients do not want to view their information or have access to the Internet.

Response: We thank the commenter for the feedback. We believe that providers do have a role in educating patients about the importance of engaging with their health information to build understanding and more informed decision making about their health and their care. We believe providers can also play an essential role in improving patients' health literacy. We also acknowledged the concerns stakeholders have had with patient action measures in the proposed rule, which led us to propose a reduction in threshold for measures such as VDT. We believe the reduction in threshold will allow providers additional time to determine the best ways to educate patients on the importance of accessing their health care information, and assist them to access their health information electronically. As technology continues to advance, we believe that more patients will have access to the Internet, allowing them to access their health information through the various formats provided by the eligible hospitals and CAHs.

After consideration of the public comments we received, we are finalizing the proposed reduction to the VDT measure threshold. Specifically, we are finalizing the VDT measure threshold as equal to or greater than one patient for Modified Stage 2 in 2017 for eligible hospitals and CAHs attesting to CMS. This includes dual-eligible hospitals that are attesting to CMS for both the Medicare and Medicaid EHR Incentive Programs. This reduced threshold does not apply to eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program.

The objective and measure are as follows:

Patient Electronic Access (VDT) (42 CFR 495.22(f)(8)(ii)(B))

Objective: Provide patients the ability to view online, download, or transmit their health information within 36 hours of hospital discharge.

View, Download or Transmit (VDT): At least 1 patient (or patient-authorized representative) who is discharged from the inpatient or emergency department (POS 21 or 23) of an eligible hospital or CAH during the EHR reporting period views, downloads or transmits to a third party his or her health information during the EHR reporting period.

- Denominator: Number of unique patients discharged from the inpatient or emergency department (POS 21 or 23) of the eligible hospital or CAH during the EHR reporting period.
- Numerator: The number of patients (or patient-authorized representatives) in the denominator who view, download, or transmit to a third party their health information.
- Threshold: The numerator and denominator must be reported and the numerator must be equal to or greater than 1.
- Exclusion: Any eligible hospital or CAH that is located in a county that does not have 50 percent or more of its housing units with 4Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period.

MODIFIED STAGE 2 OBJECTIVES AND MEASURES IN 2017 FOR ELIGIBLE HOSPITALS AND CAHS ATTESTING TO CMS

Objective	Previous measure name/ reference	Measure name	Threshold requirement
Protect Patient Health Information	Measure	Security Risk Analysis	Yes/No attestation.
CDS (Clinical Decision Support) * ..	Measure 1	Clinical Decision Support Interventions.	Five CDS.
	Measure 2	Drug Interaction and Drug-Allergy Checks.	Yes/No.
CPOE (Computerized Provider Order Entry) *.	Measure 1	Medication Orders	>60%
	Measure 2	Laboratory Orders	>30%
	Measure 3	Radiology Orders	>30%
Electronic Prescribing **	Measure	e-Prescribing	>10%
Health Information Exchange	Measure	Health Information Exchange	>10%
Patient Specific Education	Eligible Hospital/CAH Measure	Patient-Specific Education	>10%
Medication Reconciliation	Measure	Medication Reconciliation	>50%
Patient Electronic Access	Eligible Hospital/CAH Measure 1	Provide Patient Access	>50%
	Eligible Hospital/CAH Measure 2	View, Download or Transmit (VDT) ***.	At least 1 patient.
Public Health Reporting	Immunization Reporting	Immunization Registry reporting	Public Health Reporting to 3 Registries.
	Syndromic Surveillance Reporting	Syndromic Surveillance Reporting.	
	Specialized Registry Reporting	Specialized Registry Reporting.	
	Electronic Reportable Laboratory Result Reporting.	Electronic Reportable Laboratory Result Reporting.	

* We note that we are finalizing our policy to remove CDS and CPOE for eligible hospitals and CAHs attesting to CMS in section XVIII.C. of this final rule with comment period.

** We note that, in the proposed rule (81 FR 45748), we referred to this objective as "eRx (electronic prescribing)".

*** We note that in the proposed rule (81 FR 45748), we referred to this measure as the "View Download Transmit Measure".

b. Changes to the Objectives and Measures for Stage 3 (42 CFR 495.24) in 2017 and 2018

For EHR reporting periods in 2017 and 2018, we proposed to modify a subset of the Stage 3 measure thresholds established in the 2015 EHR Incentive Programs Final Rule (80 FR 62829 through 62871) that are currently codified at 42 CFR 495.24, and these proposed modifications would apply to eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program. For the reasons previously stated, these proposed modifications would not apply to eligible hospitals and CAHs attesting under a State's Medicaid EHR Incentive Program. We also proposed, beginning in 2017, in proposed 42 CFR 495.24(c) and (d), to update the measures for EPs, eligible hospitals and CAHs with a new naming convention to allow for easier reference to a given measure, and to align with the measure nomenclature proposed for the MIPS (we refer readers to the table in the proposed rule at 81 FR 45752).

We did not receive any public comments specific to the updated naming conventions for those measures in Stage 3, and therefore are finalizing the proposed updated naming conventions with further minor refinements. The naming conventions are included in the table below.

We invited public comment on our proposals.

Comment: A few commenters stated that the electronic prescribing threshold is too high and recommended that it remain at 10 percent for Stage 3 as the measure is still extremely new for hospitals.

One commenter stated that including controlled substances should continue to be optional since provider and vendor readiness issues are still being addressed. The commenter sought clarification on the flexibility to include or exclude controlled substances depending on a provider's situation. The commenter also expressed disappointment that CMS did not

propose revisions to the additional Stage 3 measure thresholds, specifically electronic prescribing and patient-generated health data. The commenter urged CMS to modify these thresholds in the final rule with comment period.

Response: We are not maintaining the Stage 2 10 percent threshold for the electronic prescribing measure for eligible hospitals and CAHs for Stage 3 because the attestation data through March 2015 indicates that eligible hospitals in Stage 2 met the threshold in the 1st (30 percent), 2nd (53 percent) and 3rd (80 percent) quartile (*https://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/Downloads/AttestationPerformanceData_Feb2015.pdf* (page 27)). We believe an increase is warranted based on this attestation data indicating hospitals were successful in meeting the threshold.

We would like to clarify that providers have flexibility to include or exclude controlled substances in the denominator for the Stage 3 electronic prescribing objective and measure. We refer commenters to the discussion in the 2016 MIPS and APMs proposed rule (81 FR 28227) regarding this topic, which was finalized as proposed in the 2016 MIPS and APMs final rule with comment period.

(1) Objective: Patient Electronic Access to Health Information (42 CFR 495.24(c)(5))

Objective: The eligible hospital or CAH provides patients (or patient-authorized representatives) with timely electronic access to their health information and patient-specific education.

Provide Patient Access: For more than 50 percent of all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23): (1) The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and (2) the provider ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the application programming interfaces (APIs) in the provider's CEHRT.

- Denominator: The number of unique patients discharged from an eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period.
- Numerator: The number of patients in the denominator (or patient-authorized representatives) who are provided timely access to health information to view online, download, and transmit to a third party and to access using an application of their choice that is configured meet the technical specifications of the API in the provider's CEHRT.
- Threshold: The resulting percentage must be more than 50 percent in order for a provider to meet this measure.
- Exclusion: Any eligible hospital or CAH that is located in a county that does not have 50 percent or more of its housing units with 4Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period.
- Proposed Modification to the Provide Patient Access Threshold for Eligible Hospitals and CAHs Attesting Under the Medicare EHR Incentive Program

We proposed to reduce the threshold for the Provide Patient Access measure for eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program from more than 80 percent to more than 50 percent. In the 2015 EHR Incentive Programs Final Rule (80 FR 62846), we finalized that providers in Stage 3 would be required to offer all four functionalities (view, download, transmit and access through an API) to their patients.

We continued to hear from health IT vendors through correspondence regarding concerns about the implementation of APIs for Stage 3, indicating, in part that application development is in a fledgling state, and thus it might be very difficult for hospitals to be ready to achieve the 80 percent threshold by the time Stage 3 is required starting in January 2018 and that API requirements outlined in the 2015 EHR Incentive Programs Final Rule could place an excessive burden on hospitals because application development has not been entirely market tested and widely accepted amongst the entire industry. Vendors also expressed concerns around the likely issues surrounding compatibility and varying API interface functionalities that could possibly hinder interoperability among certified EHR technology. We proposed to reduce the threshold based on the concerns voiced by these vendors and believe the Modified Stage 2 threshold of more than 50 percent is reasonable.

We invited public comment on our proposals.

Comment: Many commenters supported the reduction of the Provide Patient Access threshold to greater than 50 percent because it would provide greater flexibility.

Response: We thank commenters for their support. We believe through reducing the threshold to greater than 50 percent we are providing eligible hospitals and CAHs with increased flexibility and additional time needed to communicate and educate the importance for patience to access their medical information.

Comment: One commenter requested clarification on whether providers are obligated to make only the API available, and not also the application(s) that could use the API.

Response: For health care providers to implement an API under this measure, they would need to fully enable the API functionality in such a way that any application chosen by a patient would enable them to gain access to their individual health information. The information provided in the application should be configured to meet the technical specifications of the API. We refer the commenter to the 2015 EHR Incentive Programs Final Rule (80 FR 64842) for additional information on API requirements.

Comment: A few commenters stated that not all patients electronically access their health information based on a variety of factors such as technology literacy and access of technology, and the provider should be able to make the decision on how health information is communicated to their patients. The commenters recommended that CMS propose additional methods of meeting this objective that better reflect differences in patient literacy and levels of access.

Response: We acknowledged in the proposed rule the difficulties stakeholders had with the Provide Patient Access measure which led us to propose a reduction in this threshold. We do not believe we need to propose additional methods of meeting this objective. We previously stated in the 2015 EHR Incentive Programs Final Rule that providers may still provide patients with paper based educational materials and information, if the provider deems such an action beneficial and of use to the patient. We would simply no longer require or allow providers to manually count and report on these paper-based exchanges beginning in Stage 3 (80 FR 62783 through 62784).

Patient-Specific Education: The eligible hospital or CAH must use clinically relevant information from CEHRT to identify patient-specific educational resources and provide electronic access to those materials to more than 10 percent of unique patients discharged from the eligible hospital or CAH inpatient or emergency department

(POS 21 or 23) during the EHR reporting period.

• Denominator: The number of unique patients discharged from an eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period.

• Numerator: The number of patients in the denominator who were provided electronic access to patient-specific educational resources using clinically relevant information identified from CEHRT during the EHR reporting period.

• Threshold: The resulting percentage must be more than 10 percent in order for a provider to meet this measure.

• Exclusions: Any eligible hospital or CAH will be excluded from the measure if it is located in a county that does not have 50 percent or more of their housing units with 4Mbps broadband availability according to the latest information available from the FCC at the start of the EHR reporting period.

• Proposed Modification to the Patient Specific Education Measure threshold for Eligible Hospitals and CAHs Attesting Under the Medicare EHR Incentive Program

We proposed to reduce the threshold for the Patient-Specific Education measure for eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program from more than 35 percent to more than 10 percent. We continued to receive written correspondences from hospitals and hospital associations expressing their concerns that the vast majority of patients ask for and are given patient education materials at the time of discharge, usually in print form. These stakeholders indicated that they believe patients benefit from this information at the time of their interaction with the healthcare professionals in the inpatient or emergency department settings of the hospital. Requiring hospitals to make patient education materials available electronically, which would be accessed after the patient is discharged, requires hospitals to set up a process and workflow that these stakeholders describe as administratively burdensome and the benefit would be diminished for patients who have limited knowledge of, proficiency with or access to information technology or patients who request paper based educational resources.

We invited public comment on our proposal.

Comment: Several commenters supported the reduction of the threshold to greater than 10 percent and indicated this will reduce reporting burden.

Response: We thank commenters for their support. As noted in the proposed rule (81 FR 45749), we believe this reduction in threshold will provide hospitals the ability to continue to meet the needs of their patients while allowing additional time for advancements on workflows and processes to make patient-educational materials available electronically after discharge.

Comment: A few commenters believed that the reduction in the threshold does not address concerns that patient education must be tailored to meet the needs of the patients, which may not include electronic methods, and urged CMS to consider alternative methods of meeting this objective.

Response: As previously stated, we do not believe we need to propose additional methods for meeting this objective. We previously stated in the 2015 EHR Incentive Programs Final Rule that providers may still provide patients with paper based educational materials and information, if the provider deems such an action beneficial and of use to the patient. We would simply no longer require or allow providers to manually count and report on these paper-based exchanges beginning in Stage 3 (80 FR 62783 through 62784).

After consideration of the public comments we received, we are finalizing the reduction to the thresholds. Specifically, we are finalizing for the Provide Patient Access measure a threshold of more than 50 percent and for the Patient-Specific Education measure a threshold of more than 10 percent for eligible hospitals and CAHs attesting to CMS, including dual-eligible hospitals that are attesting to CMS for both the Medicare and Medicaid EHR Incentive Programs. These reduced thresholds do not apply to eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program.

The objective and measures are as follows:

Objective: Patient Electronic Access to Health Information (42 CFR 495.24(c)(5))

Objective: The eligible hospital or CAH provides patients (or patient-authorized representatives) with timely electronic access to their health information and patient-specific education.

Provide Patient Access: For more than 50 percent of all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23): (1) The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and (2) the provider ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the application programming interfaces (APIs) in the provider's CEHRT.

• Denominator: The number of unique patients discharged from an eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period.

• Numerator: The number of patients in the denominator (or patient-authorized representatives) who are provided timely access to health information to view online, download, and transmit to a third party and to access using an application of their choice that is configured to meet the technical specifications of the API in the provider's CEHRT.

• Threshold: The resulting percentage must be more than 50 percent in order for a provider to meet this measure.

• Exclusion: Any eligible hospital or CAH that is located in a county that does not have 50 percent or more of its housing units with 4Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period.

Patient-Specific Education: The eligible hospital or CAH must use clinically relevant information from CEHRT to identify patient-specific educational resources and provide electronic access to those materials to more than 10 percent of unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period.

• Denominator: The number of unique patients discharged from an eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period.

• Numerator: The number of patients in the denominator who were provided electronic access to patient-specific educational resources using clinically relevant information identified from CEHRT during the EHR reporting period.

• Threshold: The resulting percentage must be more than 10 percent in order for a provider to meet this measure.

• Exclusions: Any eligible hospital or CAH will be excluded from the measure if it is located in a county that does not have 50 percent or more of their housing units with 4Mbps broadband availability according to the latest information available from the FCC at the start of the EHR reporting period.

(2) Objective: Coordination of Care Through Patient Engagement (42 CFR 495.24(c)(6))

Objective: Use CEHRT to engage with patients or their authorized representatives about the patient's care.

As finalized in the 2015 EHR Incentive Programs Final Rule (80 FR 62861), we maintain that providers must attest to the numerator and denominator for all three measures, but would only be required to successfully meet the threshold for two of the three measures to meet the Coordination of Care through Patient Engagement Objective.

We invited public comment on our proposals.

Comment: One commenter stated it is premature to include measure 3 (Patient Generated Health Data measure) as a requirement which requires provider use of certified EHR functionality that supports receiving patient-generated data or data from nonclinical settings and recommended that CMS either remove this measure or reduce the threshold to at least one patient.

Response: We are not removing or reducing the threshold for this measure. We note that, for the Coordination of Care through Patient Engagement objective, providers must attest to the numerators and denominators for all three measures, but must only meet the thresholds for two of three measures, which provides flexibility in meeting the objective. We also refer readers to the 2015 EHR Incentive Programs Final Rule in which we state the types of data that will count in the numerator are broad, which we believe will assist providers in meeting the threshold of greater than 5 percent.

View, Download or Transmit (VDT): During the EHR reporting period, at least one unique patient (or their authorized representatives) discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) actively engages with the electronic health record made accessible by the provider and engages in one of the following: (1) View, download or transmit to a third party their health information; or (2) access their health information through the use of an API that can be used by applications chosen by the patient and configured to the API in the provider's CEHRT; or (3) a combination of (1) and (2).

- Denominator: The number of unique patients discharged from an eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period.
- Numerator: The number of unique patients (or their authorized representatives) in the denominator who have viewed online, downloaded, or transmitted to a third party the patient's health information during the EHR reporting period and the number of unique patients (or their authorized representatives) in the denominator who have accessed their health information through the use of an API during the EHR reporting period.
- Threshold: The numerator must be at least one patient in order for an eligible hospital or CAH to meet this measure.
- Exclusion: Any eligible hospital or CAH will be excluded from the measure if it is located in a county that does not have 50 percent or more of their housing units with 4Mbps broadband availability according to the latest information available from the FCC at the start of the EHR reporting period.
- Proposed Modification to the View, Download or Transmit (VDT) Threshold

As discussed above, under the Modified Stage 2 Objectives and Measures, we proposed to reduce the threshold of the View, Download or Transmit (VDT) measure for eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program from more than 5 percent to at least one patient. We proposed to reduce the threshold for Stage 3 because we had heard from stakeholders including hospitals and hospital associations that they have faced significant challenges in implementing the objectives and measures that require patient action. These challenges included, but are not limited to, patients who have limited knowledge of, proficiency with and access to information technology as well as patients declining to access the portals provided by the eligible hospital or CAH to view, download, and transmit their health information via this platform.

We invited public comment on our proposal.

Comment: Several commenters supported the reduction of the threshold to at least one patient because it provides eligible hospitals and CAHs with greater flexibility.

Response: We thank commenters for their support. The reduction of this threshold takes into consideration the challenges voiced by providers on ''patient action'' including ''opting out,'' limitation of knowledge, and limitation of access. We believe the reduction will allow additional time for providers to teach patients the importance of accessing their health information while increasing participation.

Comment: A few commenters disagreed with CMS' proposal to retain the Stage 3 requirements which included use of APIs to connect any app of the patient's choice to the EHR in support of patient engagement and coordination of care through patient engagement objectives and believed the use of APIs was premature. The commenters requested that CMS make the API an option or not require it as part of the measure.

Response: We proposed to reduce the threshold for the VDT measure under the Coordination of Care Through Patient Engagement objective and the Provide Patient Access measure under the Patient Electronic Access to Health Information objective in response to concerns voiced by stakeholders and specific to concerns voiced about implementation of APIs in Stage 3 and difficulty in implementing objectives and measures that require patient action. We continue to believe that patient access to their electronic health information is a high priority for the EHR Incentive Programs and enabling an API will generate innovation and allow patients to access information in a manner that best suits their needs. We also note that for the Coordination of Care through Patient Engagement Objective (which includes the VDT measure and Patient Generated Health Data measure), providers must attest to the numerators and denominators of all three measures, but must only meet the thresholds for two of three measures, providing flexibility. We are not making changes to the current requirement of providing API functionality as part of the measure. However, due to the concerns voiced by stakeholders on the implementation of this technology, we are extending the 90-day EHR reporting period to include 2017 to allow additional time to test and implement this Stage 3 requirement. We address the extension of a 90-day EHR reporting period for 2017 in further detail in section XVIII.D.1. of this final rule with comment period.

Secure Messaging: For more than 5 percent of all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or the patient-authorized representative), or in response to a secure message sent by the patient (or the patient-authorized representative).

- Denominator: The number of unique patients discharged from an eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period.
- Numerator: The number of patients in the denominator for whom a secure electronic message is sent to the patient

(or patient-authorized representative) or in response to a secure message sent by the patient (or patient-authorized representative), during the EHR reporting period.

• Threshold: The resulting percentage must be more than 5 percent in order for an eligible hospital or CAH to meet this measure.

• Exclusion: Any eligible hospital or CAH will be excluded from the measure if it is located in a county that does not have 50 percent or more of their housing units with 4Mbps broadband availability according to the latest information available from the FCC at the start of the EHR reporting period.

• Proposed Modification to the Secure Messaging Threshold for Eligible Hospitals and CAHs Attesting Under the Medicare EHR Incentive Program

We proposed to reduce the threshold of the Secure Messaging measure for eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program from more than 25 percent to more than 5 percent.

We proposed to reduce the threshold because we had heard from stakeholders, including hospitals and hospital associations, that for patients who are in the hospital for an isolated incident the hospital may not have significant reason for a follow up secure message. In addition, we had heard concerns from these same stakeholders that these same patients may decline to access the messages received through this platform. They have expressed concern over not being able to meet this threshold as a result of their patients' limited knowledge of, proficiency with, and access to information technology.

We invited public comment on our proposal.

Comment: Several commenters supported the reduction of the threshold to more than 5 percent because it would provide greater flexibility and agree that it would take more time for patients to become more willing to use secure messaging.

Response: We thank commenters for their support. As we stated in the proposed rule (81 FR 45750), we believe that, with time, patients will become more willing to use secure messaging as a means to communicate and eligible hospitals and CAHs will be able to positively influence their patients in their use.

Comment: A few commenters expressed concerns with the limitations of existing vendor tools and systems used in secure messaging, as well as patient capabilities to comply with the requirements of secure messaging including patient technology literacy which could result in a patient not receiving critical care. A few commenters requested that CMS eliminate this measure for hospitals as the expectation for the hospital to follow up with patients is inefficient and an administrative burden.

Response: We acknowledge the concerns expressed by commenters on being able to meet the threshold. We proposed to reduce the threshold to more than 5 percent which we believe is attainable and allows providers additional time to educate patients on the benefits of secure messaging as a form of healthcare provider to patient communication. We also believe that EHR technology will continue to evolve and produce innovative functionalities to benefit providers and patients alike.

We decline to eliminate this measure for hospitals because we believe there is value in communication between members of the care team and a patient post discharge. This provides an opportunity to enhance coordination of care, transitions of care between providers, and improve health outcomes.

After consideration of the public comments we received, we are finalizing the reduction to the thresholds. Specifically, for Stage 3 in 2017 and 2018, we are finalizing the threshold for the View, Download or Transmit (VDT) measure as at least one patient and the threshold for the Secure Messaging Measure as more than 5 percent for eligible hospitals and CAHs attesting to CMS, including dual-eligible hospitals that are attesting to CMS for both the Medicare and Medicaid EHR Incentive Programs. These reduced thresholds do not apply to eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program.

The objective and measures are as follows:

Objective: Coordination of Care Through Patient Engagement (42 CFR 495.24(c)(6))

Objective: Use CEHRT to engage with patients or their authorized representatives about the patient's care.

Providers must attest to the numerator and denominator for all three measures, but are only required to successfully meet the threshold for two of the three measures to meet the Coordination of Care through Patient Engagement Objective.

View, Download or Transmit (VDT): During the EHR reporting period, at least one unique patient (or their authorized representatives) discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) actively engages with the electronic health record made accessible by the provider and engages in one of the following: (1) View, download or transmit to a third party their health information; or (2) access their health information through the use of an API that can be used by applications chosen by the patient and configured to the API in the provider's CEHRT; or (3) a combination of (1) and (2).

• Denominator: The number of unique patients discharged from an eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period.

• Numerator: The number of unique patients (or their authorized representatives) in the denominator who have viewed online, downloaded, or transmitted to a third party the patient's health information during the EHR reporting period and the number of unique patients (or their authorized representatives) in the denominator who have accessed their health information through the use of an API during the EHR reporting period.

• Threshold: The numerator must be at least one patient in order for an eligible hospital or CAH to meet this measure.

• Exclusion: Any eligible hospital or CAH will be excluded from the measure if it is located in a county that does not have 50 percent or more of their housing units with 4Mbps broadband availability according to the latest information available from the FCC at the start of the EHR reporting period.

Secure Messaging: For more than 5 percent of all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or the patient-authorized representative), or in response to a secure message sent by the patient (or the patient-authorized representative).

• Denominator: The number of unique patients discharged from an eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period.

• Numerator: The number of patients in the denominator for whom a secure electronic message is sent to the patient (or patient-authorized representative) or in response to a secure message sent by the patient (or patient-authorized representative), during the EHR reporting period.

• Threshold: The resulting percentage must be more than 5 percent in order for an eligible hospital or CAH to meet this measure.

• Exclusion: Any eligible hospital or CAH will be excluded from the measure if it is located in a county that does not have 50 percent or more of their housing units with 4Mbps broadband availability according to the latest information available from the FCC at the start of the EHR reporting period.

(3) Objective: Health Information Exchange (HIE) (42 CFR 495.24(c)(7))

Objective: The eligible hospital or CAH provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and incorporates summary of care information from other providers into their EHR using the functions of CEHRT.

As finalized in the 2015 EHR Incentive Programs Final Rule (80 FR 62861), we maintain that providers must attest to the numerator and denominator for all three measures, but are only required to successfully meet the threshold for two of the three measures to meet the Health Information Exchange Objective.

Comment: Many commenters supported the exchange of patient data to ensure better coordination of care between providers.

Response: We thank the commenters for their support. We agree that technology and access will continue to increase over time, which we believe will lead to expansion in the exchange of patient health information between health care providers.

Comment: A few commenters noted that the threshold reduction for each measure is not sufficient to address core concerns which are outside the control of hospitals such as functionality, data blocking and interoperability issues, as adoption of health IT is not universal among all care providers.

Response: We acknowledged the concerns in the proposed rule and believe the reduction in threshold is reasonable. We are encouraged by the continued advancement in health information exchange, as well as feedback by various stakeholders providing that the majority of hospitals are involved in some form of health information exchange. In May 2016, ONC published a report noting that the percentage of hospitals engaging in health information exchange through electronic means has increased from 50 percent in 2011 to over 80 percent in 2015 with more than 85 percent of hospitals sending patient health information electronically in CY 2015.[247] However, the report also notes that one primary barrier to increasing health information exchange identified by hospitals is a lack of trading partners that have adopted and implemented certified health IT systems. To support flexibility in this transition, we note that hospitals exchanging health information may leverage a wide range of exchange methods to accommodate the range of health IT adoption in the industry. We further note that CMS and ONC continue to support the expansion of health information exchange in the industry and are in alignment with other CMS programs, to continue to increase adoption among a wider range of healthcare providers. In addition, we refer readers to the new EHR contracting guide on the ONC Web site which is a resource that will help providers address data blocking and other challenges as they continue to adopt and leverage health IT to improve the way they deliver care.[248]

Finally, we reiterate the fact that providers continue to have the option to apply for a hardship exception for circumstances related to health IT issues that are outside of a provider's control and impact their ability to demonstrate meaningful use.

Send a Summary of Care: For more than 10 percent of transitions of care and referrals, the eligible hospital or CAH that transitions or refers their patient to another setting of care or provider of care: (1) Creates a summary of care record using CEHRT; and (2) electronically exchanges the summary of care record.

• Denominator: Number of transitions of care and referrals during the EHR reporting period for which the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) was the transferring or referring provider.

• Numerator: The number of transitions of care and referrals in the denominator where a summary of care record was created using certified EHR technology and exchanged electronically.

• Threshold: The percentage must be more than 10 percent in order for an eligible hospital or CAH to meet this measure.

• Exclusion: Any eligible hospital or CAH will be excluded from the measure if it is located in a county that does not have 50 percent or more of their housing units with 4Mbps broadband availability according to the latest information available from the FCC at the start of the EHR reporting period.

• Proposed Modification to the Send a Summary of Care Measure for Eligible Hospitals and CAHs Attesting Under the Medicare EHR Incentive Program

We proposed to reduce the threshold for the Send a Summary of Care measure for eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program from more than 50 percent to more than 10 percent.

Hospital and hospital association feedback on the 2015 EHR Incentive Programs Final Rule, as well as recent reports and surveys of hospital participants showed that there were still challenges to achieving wide scale interoperable health information exchange.[249] Specifically, more than 50 percent of hospital stakeholders identified a lack of health IT adoption to support electronic exchange among trading partners as a key barrier, especially for provider types and settings of care where wide spread adoption may be slower. Stakeholders have emphasized that while the majority of hospitals are now engaging in health IT supported health information exchange, achieving high performance will require further saturation of these health IT supports throughout the industry.

We invited public comment on our proposal.

Comment: Several commenters supported the reduction of the threshold to greater than 10 percent.

Response: We thank the commenters for their support. We continue to believe that technology and access will continue to increase as more healthcare providers implement EHR systems and there is greater focus on interoperability. In addition, we agree that the creation and electronic exchange of a summary of care is beneficial to delivery system reform and facilitating coordination of care.

Comment: A few commenters stated hospitals should not be penalized for interacting with other healthcare providers who are still in the process of implementing health IT.

A few commenters stated that primary care physicians are at a disadvantage in attempting to meet the Health Information Exchange requirements. The commenters believed that it is difficult to find other providers with which they could successfully exchange

[247] ONC Data Brief 36: May 2016 ''Interoperability among U.S. Non-federal Acute Care Hospitals in 2015: *http://dashboard.healthit.gov/evaluations/data-briefs/non-federal-acute-care-hospital-interoperability-2015.php.*

[248] EHR Contracts Untangled: Selecting Wisely, Negotiating Terms, and Understanding the Fine Print—*https://www.healthit.gov/sites/default/files/EHR_Contracts_Untangled.pdf.*

[249] ONC Data Brief: No. 36; May 2016. Available at: *https://www.healthit.gov/sites/default/files/briefs/onc_data_brief_36_interoperability.pdf.*

a patient's summary of care and requested that CMS consider excluding this objective until widespread adoption could be achieved.

Other commenters stated there is room for both CMS and healthcare providers to improve data sharing as a way to improve patient care and safety.

Response: We understand the difficulties that providers have in health information exchange requirements. However, the majority of hospitals are engaging in health information exchange as indicated in the ONC data brief (*https://www.healthit.gov/sites/default/files/briefs/onc_data_brief_36_interoperability.pdf*). We believe advancement in health information exchange will increase trading partners and allow for greater ability to meet the thresholds. We decline to remove this measure based on the comment that there is a lack of trading partners. We have provided flexibility in that providers must attest to the numerator and denominator for all three measures, but are only required to successfully meet the threshold for two of the three measures to meet the Health Information Exchange objective.

We agree that data sharing will continue to progress as interoperability and health information exchanges improve in number and innovation.

Request/Accept Summary of Care: For more than 10 percent of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, the eligible hospital or CAH incorporates into the patient's EHR an electronic summary of care document.

- Denominator: Number of patient encounters during the EHR reporting period for which an eligible hospital or CAH was the receiving party of a transition or referral or has never before encountered the patient and for which an electronic summary of care record is available.
- Numerator: Number of patient encounters in the denominator where an electronic summary of care record received is incorporated by the provider into the certified EHR technology.
- Threshold: The percentage must be more than 10 percent in order for an eligible hospital or CAH to meet this measure.
- Exclusions:
  - Any eligible hospital or CAH for whom the total of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, is fewer than 100 during the EHR reporting period is excluded from this measure.
  - Any eligible hospital or CAH will be excluded from the measure if it is located in a county that does not have 50 percent or more of their housing units with 4Mbps broadband availability according to the latest information available from the FCC at the start of the EHR reporting period.
- Proposed Modification to the Request/Accept Summary of Care Threshold for Eligible Hospitals and CAHs Attesting Under the Medicare EHR Incentive Program

We proposed to reduce the threshold for eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program for the Request/Accept Summary of Care measure from more than 40 percent to more than 10 percent. Hospital and hospital association feedback on the 2015 EHR Incentive Programs Final Rule, as well as recent reports and surveys of hospital participants showed that there were still challenges to achieving wide scale interoperable health information exchange.[250] Specifically, more than 50 percent of hospital stakeholders identified a lack of health IT adoption to support electronic exchange among trading partners as a key barrier, especially for provider types and settings of care where wide spread adoption may be slower. Stakeholders have emphasized that while the majority of hospitals are now engaging in health IT supported health information exchange, achieving high performance will require further saturation of these health IT supports throughout the industry.

We invited public comment on our proposal.

Comment: Several commenters supported the reduction of the threshold to greater than 10 percent.

Response: We thank the commenters for their support. We believe the reduction of this threshold will allow additional time for focus on interoperability and an increase in trading partners. We are encouraged by the state of interoperable exchange activity among U.S. non-Federal acute care hospitals found in ONC's data brief and believe this trend will continue.[251]

Comment: A few commenters recommended lowering this threshold from 10 percent to at least one patient due to significant technical problems with receiving an electronic summary-of-care document.

Response: A review of the Stage 2 eligible hospital summary of care performance data through March 2015 found that eligible hospitals met the requirements at the 1st (19 percent) 2nd (29 percent) and 3rd (48 percent) quartile at a threshold of 10 percent for measure 2 under the Stage 2 Summary of Care objective (*https://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/Downloads/AttestationPerformanceData_Feb2015.pdf*) (page 25)). We believe the data support the proposed threshold reduction to more than 10 percent and indicate that providers have been successful with meeting this threshold.

Clinical Information Reconciliation: For more than 50 percent of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, the eligible hospital or CAH performs a clinical information reconciliation. The provider must implement clinical information reconciliation for the following three clinical information sets: (1) Medication. Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy. Review of the patient's known allergic medications; and (3) Current Problem list. Review of the patient's current and active diagnoses.

- Denominator: Number of transitions of care or referrals during the EHR reporting period for which the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) was the recipient of the transition or referral or has never before encountered the patient.
- Numerator: The number of transitions of care or referrals in the denominator where the following three clinical information reconciliations were performed: Medication list; medication allergy list; and current problem list.
- Threshold: The resulting percentage must be more than 50 percent in order for an eligible hospital or CAH to meet this measure.
- Exclusions: Any eligible hospital or CAH for whom the total of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, is fewer than 100 during the EHR reporting period is excluded from this measure.
- Proposed Modification to the Clinical Information Reconciliation Threshold for Eligible Hospitals and CAHs Attesting Under the Medicare EHR Incentive Program.

We proposed to reduce the threshold for eligible hospitals and CAHs attesting under the Medicare EHR Incentive Program for the Clinical Information Reconciliation measure from more than 80 percent to more than 50 percent. As

[250] Ibid.

[251] ONC Data Brief: No. 36 ▪ May 2016. Available at: *https://www.healthit.gov/sites/default/files/briefs/onc_data_brief_36_interoperability.pdf.*

mentioned in both the Send a Summary of Care measure and the Request/Accept Summary of Care measure, there are challenges to achieving wide scale interoperable health information exchange. Specifically, more than 50 percent of hospital stakeholders identified a lack of health IT adoption to support electronic exchange among trading partners as a key barrier, especially for provider types and settings of care where wide spread adoption may be slower. We will continue to review adoption and performance and consider increasing the threshold in future rulemaking.

We invited public comment on our proposal.

Comment: A few commenters supported the reduction of the threshold to greater than 50 percent.

Response: We thank commenters for their support and note that our intent in maintaining a 50-percent threshold for this measure is to allow providers to continue to improve on reconciliation workflows both involving HIE and through other methods as well as to provide flexibility, as providers continue to move toward reconciliation of a wider range of information beyond medications alone.

Comment: A few commenters stated that the proposed 50-percent threshold is not reasonably achievable as the industry has no experience implementing technology capable of clinical information reconciliation.

A few commenters suggested that the threshold for pulling the record and reconciling the information should be the same. The commenters stated that 10 percent is reasonable, given that this is the initial year of this objective and that a minority of patients are likely to have this information electronically available.

Response: We note that this measure builds on the existing Medication Reconciliation Objective for the EHR Incentive Programs in 2015 through 2017 (we refer readers to section II.B.2.a. of the preamble to the 2015 EHR Incentive Programs Final Rule (80 FR 62809 through 62811)). We further stated in the 2015 EHR Incentive Programs Final Rule that this process may include electronic and manual reconciliation through use of certified EHR technology and discussion with the patient. In addition, we stated the process of reconciliation may consist of simply verifying that fact or reviewing a record received on referral and determining that such information is merely duplicative of existing information in the patient record (80 FR 62861).

A review of the Stage 2 eligible hospital summary of care performance data through March 2015 found that eligible hospitals met the requirements for Medication Reconciliation at the 1st (81 percent) 2nd (91 percent) and 3rd (97 percent) quartile at a threshold of 50 percent (*https://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/Downloads/AttestationPerformanceData_Feb2015.pdf* (page 23)). We believe the data support the proposed threshold reduction to 50 percent and indicate providers have been successful with meeting this threshold. We believe the success of the medication reconciliation measure, shown in our data, will transcend to the Clinical Information Reconciliation measure because it builds on the medication reconciliation measure and allows for the provider's clinical judgment on what information is included in the process.

We stated in the 2015 EHR Incentive Programs Final Rule (80 FR 62861) that we believe many providers may conduct some form of reconciliation in conjunction with measure 2, or that providers in certain specialties may elect to conduct reconciliation of clinical information even beyond our requirement. We do not believe that the thresholds for measures 2 and 3 should both be at greater than 10 percent, and reiterate that while providers must attest to the numerator and denominator of all three measures, they are only required to successfully meet the threshold for two of three measures, providing additional flexibility.

After consideration of the public comments we received, we are finalizing the reduction to the thresholds. Specifically, for Stage 3 in 2017 and 2018, we are finalizing the Send a Summary of Care measure threshold as more than 10 percent, Request/Accept Summary of Care measure threshold as more than 10 percent, and Clinical Information Reconciliation measure threshold as more than 50 percent for eligible hospitals and CAHs attesting to CMS, including dual-eligible hospitals that are attesting to CMS for both the Medicare and Medicaid EHR Incentive Programs. These reduced thresholds do not apply to eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program.

The objective and measures are as follows:

Objective: Health Information Exchange (HIE) (42 CFR 495.24(c)(7))

Objective: The eligible hospital or CAH provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and incorporates summary of care information from other providers into their EHR using the functions of CEHRT.

Send a Summary of Care: For more than 10 percent of transitions of care and referrals, the eligible hospital or CAH that transitions or refers their patient to another setting of care or provider of care: (1) Creates a summary of care record using CEHRT; and (2) electronically exchanges the summary of care record.

- Denominator: Number of transitions of care and referrals during the EHR reporting period for which the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) was the transferring or referring provider.
- Numerator: The number of transitions of care and referrals in the denominator where a summary of care record was created using certified EHR technology and exchanged electronically.
- Threshold: The percentage must be more than 10 percent in order for an eligible hospital or CAH to meet this measure.
- Exclusion: Any eligible hospital or CAH will be excluded from the measure if it is located in a county that does not have 50 percent or more of their housing units with 4Mbps broadband availability according to the latest information available from the FCC at the start of the EHR reporting period.

Request/Accept Summary of Care: For more than 10 percent of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, the eligible hospital or CAH incorporates into the patient's EHR an electronic summary of care document.

- Denominator: Number of patient encounters during the EHR reporting period for which an eligible hospital or CAH was the receiving party of a transition or referral or has never before encountered the patient and for which an electronic summary of care record is available.
- Numerator: Number of patient encounters in the denominator where an electronic summary of care record received is incorporated by the provider into the certified EHR technology.
- Threshold: The percentage must be more than 10 percent in order for an eligible hospital or CAH to meet this measure.
- Exclusions:

•• Any eligible hospital or CAH for whom the total of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, is fewer than 100 during the EHR reporting period is excluded from this measure.

•• Any eligible hospital or CAH will be excluded from the measure if it is located in a county that does not have 50 percent or more of their housing units with 4Mbps broadband availability according to the latest information available from the FCC at the start of the EHR reporting period.

Clinical Information Reconciliation: For more than 50 percent of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, the eligible hospital or CAH performs a clinical information reconciliation. The provider must implement clinical information reconciliation for the following three clinical information sets: (1) Medication. Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy. Review of the patient's known allergic medications; and (3) Current Problem list. Review of the patient's current and active diagnoses.

• Denominator: Number of transitions of care or referrals during the EHR reporting period for which the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) was the recipient of the transition or referral or has never before encountered the patient.

• Numerator: The number of transitions of care or referrals in the denominator where the following three clinical information reconciliations were performed: Medication list; medication allergy list; and current problem list.

• Threshold: The resulting percentage must be more than 50 percent in order for an eligible hospital or CAH to meet this measure.

• Exclusions: Any eligible hospital or CAH for whom the total of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, is fewer than 100 during the EHR reporting period is excluded from this measure.

(4) Objective: Public Health and Clinical Data Registry Reporting (42 CFR 495.24(c)(8))

Objective: The eligible hospital or CAH is in active engagement with a public health agency (PHA) or clinical data registry (CDR) to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice.

Immunization Registry Reporting (42 CFR 495.24(c)(8)(A))

Syndromic Surveillance Reporting (42 CFR 495.24(c)(8)(B))

Electronic Case Reporting (42 CFR 495.24(c)(8)(C))

Public Health Registry Reporting (42 CFR 495.24(c)(8)(D))

Clinical Data Registry Reporting (42 CFR 495.24(c)(8)(E))

Electronic Reportable Laboratory Result Reporting (42 CFR 495.24(c)(8)(F))

• Proposed Modification to the Public Health and Clinical Data Registry Reporting Requirements for Eligible Hospitals and CAHs Attesting Under the Medicare EHR Incentive Program.

We proposed to reduce the reporting requirement for eligible hospitals and CAHs attesting to CMS for Public Health and Clinical Data Registry Reporting, to the Modified Stage 2 requirement of any combination of three measures from any combination of six measures in alignment with Modified Stage 2 requirements (80 FR 62870). We received written correspondence from hospitals and hospital associations indicating that it is often difficult to find registries that are able to accept data that will allow them to successfully attest. Hospitals and hospital associations had indicated that it is administratively burdensome to seek out registries in their jurisdiction, contact the registries to determine if they are accepting data in the standards required, then determine if they meet the exclusion criteria if they are unable to send data to a registry. In addition, we had received written correspondence from hospitals indicating that in some instances additional technologies were required to transmit data, which prevented them from doing so.

We invited public comment on our proposal.

Comment: Several providers supported the reduction of Public Health and Clinical Data Registry Reporting requirements for Stage 3 because they believed there is a lack of entities ready to accept the electronic reporting data.

Response: We thank the commenters for their support. As we discussed in the proposed rule (81 FR 45751 through 45752), we have received written communication regarding the difficulty in finding registries that are able to accept data that will allow hospitals to successfully attest. We believe the number of available registries will increase over time. In addition, we are in the process of developing a centralized repository for public health agency and clinical data registry reporting, which should be available early in 2017. The repository will assist eligible professionals, eligible hospitals and CAHs in finding entities that accept electronic public health data. We further note that the lack of an available registry capable of receiving electronic data remains an acceptable reason for exclusion from a given measure under this objective.

Comment: A few commenters disagreed with reducing the reporting requirement for eligible hospitals and CAHs to three measures for the Public Health and Clinical Data Registry Reporting objective. A few commenters noted that providers still struggle to identify the certified clinical registries to which they must submit measures and suggested that CMS maintain a list of clinical and public health registries that can support the active engagement requirement.

Response: We proposed to reduce the threshold for the Public Health and Clinical Data Registry Reporting objective based on concerns voiced by stakeholders who were having difficulty finding registries to report to. We believe a reduction in the reporting requirement will relieve the administrative burden providers indicated they were experiencing with this objective. We note that, for the 2015 and 2016 EHR reporting periods, we implemented alternate exclusions based on the issues associated with the specialized registry measure including acquisition of additional technologies they did not already have. We also note that providers that wish to attest to additional measures may do so.

We are developing a centralized repository for public health agency and clinical data registry reporting to help EPs, eligible hospitals, and CAHs find entities that accept electronic public health data as discussed in the 2015 EHR Incentive Programs Final Rule (80 FR 62863).

After consideration of the public comments we received, we are finalizing the reduction of the reporting requirements for Stage 3 Public Health and Clinical Data Registry Reporting to any combination of three measures out of six total measures for eligible hospitals and CAHs attesting to CMS, including dual-eligible hospitals that are attesting to CMS for both the Medicare and Medicaid EHR Incentive Programs. This reduction does not apply to eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program.

STAGE 3 OBJECTIVES AND MEASURES FOR 2017 AND 2018 FOR ELIGIBLE HOSPITALS AND CAHS ATTESTING TO CMS

Objective	Previous measure name/reference	Measure name	Threshold requirement
Protect Patient Health Information	Measure	Security Risk Analysis	Yes/No attestation.
Electronic Prescribing	Eligible hospital/CAH Measure	e-Prescribing	>25%
CDS (Clinical Decision Support) *	Measure 1	Clinical Decision Support Interventions.	Five CDS.
	Measure 2	Drug Interaction and Drug-Allergy Checks.	Yes/No.
CPOE (Computerized Provider Order Entry *.	Measure 1	Medication Orders	>60%
	Measure 2	Laboratory Orders	>60%
	Measure 3	Diagnostic Imaging Orders	>60%
Patient Electronic Access to Health Information.	Measure 1	Provide Patient Access	>50%
	Measure 2	Patient-Specific Education **	>10%
Coordination of Care through Patient Engagement.	Measure 1	View, Download or Transmit (VDT) **.	At least 1 patient.
	Measure 2	Secure Messaging	>5%
	Measure 3	Patient Generated Health Data	>5%
Health Information Exchange	Measure 1	Send a Summary of Care ***	>10%
	Measure 2	Request/Accept Summary of Care ***.	>10%
	Measure 3	Clinical Information Reconciliation **.	>50%
Public Health and Clinical Data Registry Reporting.	Immunization Registry Reporting	Immunization Registry Reporting	Report to 3 Registries or claim exclusions.
	Syndromic Surveillance Reporting	Syndromic Surveillance Reporting	
	Case Reporting	Electronic Case Reporting	
	Public Health Registry Reporting	Public Health Registry Reporting	
	Clinical Data Registry Reporting	Clinical Data Registry Reporting	
	Electronic Reportable Laboratory Result Reporting.	Electronic Reportable Laboratory Result Reporting.	

* We note that we are finalizing the removal of CDS and CPOE for eligible hospitals and CAHs attesting to CMS section XVIII.C.1. of this final rule with comment period. These objectives are included in the table to demonstrate what their measures and thresholds would have been if we were not finalizing our proposal to remove them.

** We note that, in the proposed rule (81 FR 45752), we referred to this measure as the ''View Download Transmit Measure.''

*** We note that, in the proposed rule (81 FR 45752), we referred to this measure as the ''Patient Care Record Exchange Measure.''

** We note that, in the proposed rule (81 FR 45752), we referred to this measure as the ''Request/Accept Patient Care Record Measure.''

We sought public comments on how measures of meaningful use under the EHR Incentive Program can be made more stringent in future years, consistent with the requirements of section 1886(n)(3)(A) of the Act. In addition, we sought public comments on new and more stringent measures for future years of the EHR Incentive Program and will consider these comments for future enhancements of the EHR Incentive Program in future rulemaking. We intend to reevaluate the objectives, measures, and other program requirements for Stage 3 in 2019 and subsequent years. We noted that our proposed revisions to the regulation text at § 495.24 would only include objectives and measures for eligible hospitals and CAHs for Stage 3 in 2017 and 2018. We requested comments on any changes that hospitals and other stakeholders believe should be made to the objectives and measures for Stage 3 in 2019 and subsequent years.

Comment: One commenter disagreed with CMS making further changes to meaningful use objectives and measures in 2019 and subsequent years as this conflicted with the 2015 EHR Incentive Programs Final Rule that indicated meaningful use Stage 3 requirements would continue unchanged in 2018, 2019, and through future years (80 FR 62776) and that Stage 3 is intended to be the last stage of the program (80 FR 62766). The commenter indicated confusion on whether an additional stage was planned or if the intention was to make changes without the distinction of a separate stage and disagreed with same-stage changes to requirements. In addition, the commenter stated if CMS intends to make changes in 2019, vendors and healthcare organizations need sufficient advance notice to plan and prepare for those changes. Based on the timeline of previous rulemaking for Stage 2 and Stage 3, the commenter believed CMS would need to issue a proposed rule by March 2017 to allow for public comments and a final rule by August 2017 so there is enough time to implement changes before the start of the 2019 EHR reporting period.

Response: We previously stated that there would be three stages of meaningful use. However, we do not want to hinder advancement of health information technology and additional program revisions are likely necessary in achieving widespread adoption of CEHRT. Therefore, continual advancements, changes and evolution in technology and other aspects of the program such as privacy, security, and practice standards will impact the EHR Incentive Program and may spur additional rulemaking, possibly resulting in additional stages to the EHR Incentive Program.

We understand the concern regarding the timeline for any changes we might make for 2019 and intend to work with stakeholders to ensure sufficient time is provided for updates and implementation of requirements in future rulemaking.

As stated in the previous sections, in the proposed rule, we did not propose any changes to the objectives and measures for Modified Stage 2 for 2017 or Stage 3 for 2017 and 2018 for eligible hospitals and CAHs that attest to a State's Medicaid EHR Incentive Program. We considered proposing the same changes for both Medicare and Medicaid, but based upon our concerns that States would incur additional cost

and time burdens in having to update their technology and reporting systems within a short period of time, we proposed these changes only for eligible hospitals and CAHs attesting to the Medicare EHR Incentive Program. We requested comments on whether these proposed changes should also apply for eligible hospitals and CAHs attesting to a State's Medicaid EHR Incentive Program. Specifically, we requested comments on whether the proposed changes to eliminate the CPOE and CDS objectives and measures and reduce a subset of the measure thresholds for Modified Stage 2 in 2017 and Stage 3 in 2017 and 2018 should also apply for eligible hospitals and CAHs that seek to qualify for an incentive payment for meaningful use under Medicaid. We requested comments from State Medicaid agencies concerning our assumptions about the additional cost and time burdens they would face in accommodating these changes, and whether those burdens would exist for both 2017 and 2018.

Comment: The majority of commenters requested that the proposed changes to the objectives and measures, including removal of the CDS and CPOE objectives beginning in 2017 and a reduction in thresholds for a subset of the remaining objectives and measures, also be applied to the Medicaid EHR Incentive Program for eligible hospitals, CAHs, and EPs. The commenters indicated that differing requirements vastly increase the burden of reporting and complexity, especially for hospitals that participate in both the Medicare and Medicaid EHR Incentive Programs. A few commenters suggested that CMS collect all data through the Medicare attestation process and pass the results to the appropriate State Medicaid program indicated by the participant or that CMS could assess its ability to intake Medicaid-only attestations and communicate them to the States because it currently does for hospitals participating in both the Medicare and Medicaid EHR Incentive Programs. This would leverage existing reporting and communication capabilities to ensure alignment across Medicare and Medicaid.

A few commenters believed that dual-eligible hospitals are required to attest to both the Medicare and Medicaid programs.

Some commenters proposed that, for objectives proposed for elimination, hospitals attesting under Medicaid should be able to attest with either 0 percent or NO as appropriate for 2017 and 2018 without penalty.

Response: We recognize the challenges associated with the proposal to require different sets of objectives and measures for hospitals participating in the Medicaid EHR Incentive Program versus the Medicare EHR Incentive Program beginning in 2017. The vast majority of commenters supported aligning the proposed changes for dual-eligible hospitals participating in both the Medicare EHR Incentive Program and the Medicaid EHR Incentive Program because doing so will eliminate the need for additional attestation and reporting requirements. Section 1903(t)(8) of the Act provides that a State and the Secretary shall seek, to the maximum extent practicable, to avoid duplicative requirements to demonstrate meaningful use of certified EHR technology under Medicaid and Medicare.

Based on this statutory directive and for the reasons identified by the commenters, under our final policy, eligible hospitals and CAHs participating in both the Medicare and Medicaid EHR Incentive Programs that attest to CMS will attest based on the revised objectives and measures that we are adopting in this final rule with comment period, including the changes to eliminate the CPOE and CDS objectives and measures and reduce a subset of the measure thresholds for Modified Stage 2 in 2017 and Stage 3 in 2017 and 2018. Dual-eligible hospitals may submit one attestation for both the Medicare and Medicaid EHR Incentive Programs to CMS and the attestation data will be shared with the appropriate State Medicaid agency to process the Medicaid incentive payment. Medicaid-only hospitals and dual-eligible hospitals that attest directly to a State for the State's Medicaid EHR Incentive Program will continue to attest based on the measures and objectives as finalized in the 2015 EHR Incentive Programs Final Rule (80 FR 62793 through 80 FR 62871).

Comment: One commenter stated that Medicare providers should have to meet the higher standards for objectives and measures in the 2015 EHR Incentive Programs Final Rule that would apply for Medicaid providers.

Response: We thank the commenter for its input. We have previously stated that the proposals were meant to reduce reporting burden and allow providers to focus more on patient care. In addition, under our final policies stated above, the changes to the objectives and measures that we are adopting in this final rule with comment period apply to dual-eligible hospitals that participate in both the Medicare and Medicaid EHR Incentive Programs that submit an attestation to CMS, in addition to Medicare-only hospitals. In addition, we requested public comments on how we could make the measures more stringent in future years. We did not receive any public comments on how to make the measures more stringent in future years.

After consideration of the public comments we received, we are finalizing that eligible hospitals and CAHs participating in both the Medicare and Medicaid EHR Incentive Programs that attest to CMS will attest based on the revised objectives and measures that we are adopting in this final rule with comment period, including the changes to eliminate the CPOE and CDS objectives and measures and reduce a subset of the measure thresholds for Modified Stage 2 in 2017 and Stage 3 in 2017 and 2018. Dual-eligible hospitals may submit one attestation for both the Medicare and Medicaid EHR Incentive Programs to CMS. Medicaid-only hospitals and dual-eligible hospitals that attest directly to a State for the State's Medicaid EHR Incentive Program will continue to attest based on the measures and objectives as finalized in the 2015 EHR Incentive Programs Final Rule (80 FR 62793 through 80 FR 62871).

D. Changes to the EHR Reporting Period in 2016 for EPs, Eligible Hospitals and CAHs

1. Definition of ''EHR Reporting Period'' and ''EHR Reporting Period for a Payment Adjustment Year''

In the CY 2017 OPPS/ASC proposed rule (81 FR 45753), we proposed to change the EHR reporting periods in 2016 for returning participants from the full CY 2016 to any continuous 90-day period within CY 2016. This would mean that all EPs, eligible hospitals and CAHs may attest to meaningful use for an EHR reporting period of any continuous 90-day period from January 1, 2016 through December 31, 2016. The applicable incentive payment year and payment adjustment years for the EHR reporting period in 2016, as well as the deadlines for attestation and other related program requirements, would remain the same as established in prior rulemaking. We proposed corresponding changes to the definition of ''EHR reporting period'' and ''EHR reporting period for a payment adjustment year'' at 42 CFR 495.4.

We invited public comment on our proposals.

Comment: Several commenters supported the 90-day EHR reporting period because they believed it would reduce the burden of reporting and meeting all the thresholds for a 12-month period, increase program flexibility, and allow clinicians to spend

more time on patient care and implement new program requirements without affecting clinician workflow. These commenters also stated that this additional time would allow health care providers to focus more time and attention on preparing for the upcoming implementation of MACRA/MIPS and train new physicians on the use of a group's EHR, including work flows and processes, and allows the extra time needed to upgrade to the 2015 Edition CEHRT.

Several commenters also requested CMS to extend the 90-day EHR reporting period for 2017 and 2018. These commenters believed that this reduction from a full calendar year reporting to a 90-day EHR reporting period will increase flexibility and prepare them for success in MPS starting in 2017. Some commenters also expressed concerns about implementing APIs and other functionalities for Stage 3 and encouraged CMS to adopt a 90-day EHR reporting period in 2017 to allow for extra time needed to upgrade to the 2015 Edition CEHERT.

Response: We agree with the commenters that the change in the EHR reporting period will reduce burden on all EPs, eligible hospitals and CAHs preparing for Stage 3, as well as for EPs who will begin participating in MIPS in 2017. We also agree with health care providers that allowing a 90-day EHR reporting period does allow clinicians to spend more time on patient care and implement new requirements without negatively affecting clinician workflow.

Comment: Several commenters urged CMS to adopt the 90-day EHR reporting period as expeditiously as possible. Some commenters further urged the rapid launch of the Web site to prepare for these attestations.

Response: We note that after this final rule with comment period is published, we will work on a rapid implementation of this policy.

Comment: Several commenters recommended that CMS permanently keep the 90-day EHR reporting period for hospitals and EPs to avoid having to make yearly changes and streamline the attestation process.

Response: We disagree that we should permanently retain a 90-day EHR reporting period for returning participants. We do understand that it can cause uncertainty when we change the EHR reporting period in rulemaking from year to year. However, considering the implementation of MIPS in 2017 for EPs, as well as Stage 3 and the 2015 Edition for all EPs, eligible hospitals and CAHs in 2018 (optional in 2017), we believe adopting a 90-day EHR reporting period in 2016 for all participants will reduce the burden of reporting for a full year and assist healthcare providers in establishing and testing their processes and workflows for the new requirements and implementation functionalities required for EHR technology certified to the 2015 Edition. We believe a full year EHR reporting period is the most effective way to ensure that all actions related to patient safety that leverage CEHRT are fully enabled for the duration of the year. This is one of the primary considerations of our continued push for a full year EHR reporting period, in addition to promoting greater alignment with other CMS quality reporting programs.

Comment: Some commenters stated that they are concerned with the proposed rule's late notice of the proposed change to the EHR reporting period in 2016 because they will have to monitor EPs and eligible hospitals for both 365-day reporting periods and 90-day reporting periods because they will not know if CMS will finalize the proposed change until the fourth quarter of 2016

Response: We thank the commenters for their views on this proposal. While we understand the concerns of these commenters, we believe that we have provided EPs, eligible hospitals, and CAHs sufficient time to report on any continuous 90-day EHR reporting period from January 1, 2016–December 31, 2016.

Comment: Several commenters welcomed having a longer EHR reporting period because it allows them opportunity to evaluate their progress and improve in subsequent months.

Response: We thank the commenters for their feedback. We note that we are establishing in this final rule with comment period an EHR reporting period of any continuous 90 days from January 1, 2016 through December 31, 2016. However, we note that health care providers are required to report on a minimum of 90 days, but may choose to report on the full calendar year in 2016.

Comment: Some commenters stated that they need more time to implement and upgrade technology in order to meet the complex Stage 3 requirements, which they stated adds to the existing challenges they face. In addition, some commenters disagreed with the proposed changes in the proposed rule because they stated they must adapt to new changes every year.

Response: We thank the commenters for their feedback. We believe that reducing the EHR reporting period from the full CY 2016 to any continuous 90-day period from January 1, 2016 through December 31, 2016, in fact, reduces challenges because it allows for the EPs, eligible hospitals and CAHs to report based on a shorter period of time.

Comment: Some commenters suggested that CMS issue guidance notifying physicians of the 90-day EHR reporting period and begin educating physicians about the change as quickly as possible.

Response: We thank the commenters for their feedback. This final rule with comment period serves as the notice to all EPs, eligible hospitals, and CAHs. We understand the need to implement the policies adopted in this rule as quickly as possible.

Comment: Some commenters were unclear if they should prepare for a 90-day or 365-day EHR reporting period in 2016.

Response: We are finalizing an EHR reporting period of any continuous 90-day period within CY 2016. Therefore, EPs, eligible hospitals, and CAHs should prepare for a 90-day EHR reporting period.

After consideration of the public comments we received, we are finalizing a change to the EHR reporting periods in 2016 and 2017 for returning participants, from the full calendar year to any continuous 90-day period within the CY. For all EPs, eligible hospitals and CAHs, the EHR reporting period in CY 2016 is any continuous 90-day period from January 1, 2016 through December 31, 2016, and the EHR reporting period in CY 2017 is any continuous 90-day period from January 1, 2017 through December 31, 2017. The applicable incentive payment year and payment adjustment years for the EHR reporting periods in 2016 and 2017, as well as the deadlines for attestation and other related program requirements, will remain the same as established in prior rulemaking. We are finalizing corresponding changes to the definitions of ''EHR reporting period'' and ''EHR reporting period for a payment adjustment year'' in the regulations under § 495.4.

2. Clinical Quality Measurement

In connection with the proposal to establish a 90-day EHR reporting period in 2016, we also proposed a 90-day reporting period for CQMs (81 FR 45753) which would have no impact on the requirements for CQM data that are electronically reported as established in prior rulemaking. In 2016, we proposed that providers may:

- Report CQM data by attestation for any continuous 90-day period during calendar year 2016 through the Medicare EHR Incentive Program registration and attestation site; or

• Electronically report CQM data in accordance with the requirements established in prior rulemaking.

We noted that, for EPs, eligible hospitals and CAHs, CQM data submitted via attestation can be submitted for a different 90-day period than the EHR reporting period for the meaningful use objectives and measures.

Comment: Several commenters agreed with a 90-day EHR reporting period because it would allow EPs, eligible hospitals, and CAHs the opportunity to implement the changes from the 2015 Final Rule for CQMs and urged CMS to finalize this change.

Response: We believe that this change will reduce provider burden and further simplify the program through alignment of the EHR reporting period and CQM reporting period for CY 2016.

We are finalizing our policy to allow a 90-day reporting period for clinical quality measures (CQMs) for all EPs, eligible hospitals, and CAHs that choose to report CQMs by attestation in 2016.

We intend to continue to allow the States to determine the form and manner of reporting CQMs for their respective State Medicaid EHR Incentive Programs subject to CMS approval.

E. Policy To Require Modified Stage 2 for New Participants in 2017

After the publication of the 2015 EHR Incentive Programs Final Rule, we determined that, due to cost and time limitation concerns related specifically to 2015 Edition CEHRT updates in the EHR Incentive Program Registration and Attestation System, it is not technically feasible for EPs, eligible hospitals, and CAHs that have not successfully demonstrated meaningful use in a prior year (new participants) to attest to the Stage 3 objectives and measures in 2017 in the EHR Incentive Program Registration and Attestation System. For this reason, in the CY 2017 OPPS/ASC proposed rule (81 FR 45753 through 45754), we proposed that any EP or eligible hospital new participant seeking to avoid the 2018 payment adjustment by attesting for an EHR reporting period in 2017 through the EHR Incentive Program Registration and Attestation system, or any CAH new participant seeking to avoid the FY 2017 payment adjustment by attesting for an EHR reporting period in 2017 through the EHR Incentive Program Registration and Attestation System, would be required to attest to the Modified Stage 2 objectives and measures. This proposal does not apply to EPs, eligible hospitals, and CAHs that have successfully demonstrated meaningful use in a prior year (returning participants) attesting for an EHR reporting period in 2017. In early 2018, these returning eligible hospitals and CAHs will be transitioned to other reporting systems to attest for 2017, such as the Hospital IQR Program reporting portal. Eligible professionals who have successfully demonstrated meaningful use in a prior year would not be attesting to the Medicare EHR Incentive Program for 2017, because the applicable EHR reporting period for the 2018 payment adjustment is in 2016 (80 FR 62906), and 2016 is also the final year of the incentive payment under section 1848(o)(1)(A)(ii) of the Act.

We further note that providers using 2014 Edition, 2015 Edition, or any combination of 2014 and 2015 Edition certified EHR technology in 2017 would have the necessary technical capabilities to attest to the Modified Stage 2 objectives and measures.

We proposed corresponding revisions to the regulations at proposed 42 CFR 495.40(a)(2)(i)(F) and 42 CFR 495.40(b)(2)(i)(F) to require new participants to attest to the Modified Stage 2 objectives and measures for 2017.

We note that we also proposed an editorial correction to the introductory language to 42 CFR 495.40(b), to correct the inadvertent omission of the word ''satisfy'' after the term ''CAH must.''

We invited public comment on our proposals.

Comment: Several commenters agreed that new participants to the Medicare EHR Incentive program should attest to Modified Stage 2 objectives and measures in 2017 and stated that the proposed requirements protect new participants from having to attest to Stage 3 requirements which they believe are challenging and unattainable.

Response: We agree that allowing for new participants to attest to Modified Stage 2 objectives and measures provide them an opportunity to successfully participate in the EHR Incentive Program. We reiterate that we are requiring new participants seeking to avoid the payment adjustment in 2018 by attesting early in 2017 to attest to only the Modified Stage 2 objectives and measures and will not allow these providers to attest to the Stage 3 objectives and measures. We are adopting this policy because as we are transitioning EPs to the advancing care information category of MIPS in 2017 and eligible hospitals will be reporting under the Hospital IQR Program in 2017 as well, Therefore, it is not feasible for providers attesting early in 2017 to avoid the payment adjustment in 2018 to attest to the Stage 3 objectives and measures and they will instead be allowed to attest to only the Modified Stage 2 objectives and measures.

We believe this requirement will prepare these participants for success in MIPS and Stage 3 of the EHR Incentive Program in 2018. Also, while we agree that the objectives and measures for Stage 3 are challenging, we do not believe that they are unattainable.

Comment: Several commenters recommended that the Modified Stage 2 attestation date for new participants be pushed back from October 1, 2017 to a later date. One commenter disagreed with CMS' statement that new participants attesting to Stage 3 is not technically feasible, and stated it would be beneficial for health care organizations if CMS could technically support Stage 3 attestation for new participants in 2017. One commenter stated that CMS should establish modified criteria for new program participants that will prepare them to meet subsequent stages successfully, stating that Modified Stage 2 requirements place an unfair burden on new participants.

Response: We thank the commenters for their recommendations. However, we do not agree that we should push the date back later. The reason for having an October 1, 2017 attestation deadline is to accommodate all the changes to the new systems that will occur specifically to the technology certified to the 2015 edition updates in the attestation system.

We also believe that developing modified requirements for new participants would further create confusion among health care providers and would create undue administrative burden, in addition to not being technically feasible. In addition, requiring new participants to attest to Modified Stage 2 in 2017 provides new participants with the experience necessary to attest to future stages of meaningful use and prepares those EPs who will transition to MIPS in 2017.

Comment: One commenter asked whether the proposals extend to the Medicaid EHR Incentive Program.

Response: The proposal to require attestation to Modified Stage 2 is for all new participants, including those who participate in the Medicaid EHR Incentive Program.

Comment: One commenter asked CMS to present the proposal in a table or grid format for clarity.

Response: We will provide guidance materials on our Web page at: *https://www.cms.gov/EHRIncentivePrograms/* after this final rule with comment period is published.

After consideration of the public comments we received, we are

finalizing our proposed policy at 42 CFR 495.40(a)(2)(i)(F) and 42 CFR 495.40(b)(2)(i)(F) to require new participants to attest to the Modified Stage 2 objectives and measures for 2017.

We did not receive any public comments specific to our proposed editorial correction to 42 CFR 495.40(b), and we are finalizing the correction as proposed.

F. Significant Hardship Exception for New Participants Transitioning to MIPS in 2017

In the 2016 MIPS and APMs proposed rule (81 FR 28161 through 28586), we proposed calendar year 2017 as the first MIPS performance period. As established in the 2015 EHR Incentive Programs Final Rule (80 FR 62904 through 62908), 2017 is also the last year in which new participants may attest to meaningful use (for a 90-day EHR reporting period in 2017) to avoid the 2018 payment adjustment. For the reasons stated in the CY 2017 OPPS/ASC proposed rule (81 FR 45754), we proposed to allow certain EPs to apply for a significant hardship exception from the 2018 payment adjustment as authorized under section 1848(a)(7)(B) of the Act. We limited this proposal only to EPs who have not successfully demonstrated meaningful use in a prior year, intend to attest to meaningful use for an EHR reporting period in 2017 by October 1, 2017, to avoid the 2018 payment adjustment, and intend to transition to MIPS and report on measures specified for the advancing care information performance category under the MIPS in 2017.

To apply for this significant hardship exception, we proposed an EP would submit an application by October 1, 2017 (or a later date specified by CMS) to CMS that includes sufficient information to show that they are eligible to apply for this particular category of significant hardship exception. The application must also explain why, based on their particular circumstances, demonstrating meaningful use for the first time in 2017 under the EHR Incentive Program and also reporting on measures specified for the advancing care information performance category under the MIPS in 2017 would result in a significant hardship. EPs should retain all relevant documentation of this hardship for 6 years post attestation.

We stated in the proposed rule that we believed this new category of significant hardship exception would allow the EPs who are new to certified EHR technology to focus on their transition to MIPS, and allow them to work with their EHR vendor to build out an EHR system focused on the goals of patient engagement and interoperability, which are important pillars of patient-centered care and expected to be highly emphasized in the MIPS. It would also allow EPs to identify which objectives and measures are most meaningful to their practice which is a key feature of the proposed MIPS advancing care information performance category. We also proposed to amend the regulations by adding new § 495.102(d)(4)(v) to include this new category of significant hardship exception.

We invited public comment on our proposals.

Comment: Several commenters agreed with limiting the hardship exception to certain EPs by allowing new program participants to focus on meeting the requirements of MIPS instead of meeting the requirements of a program that will end soon.

Response: We thank the commenters for their support of the hardship exception for certain EPs. As stated in the propose rule (81 FR 45753), we want to provide first time participants who are new to meaningful use and will participate in MIPS ample time to adjust to the new reporting requirements. We believe that limiting this hardship exception to these new EPs, who would otherwise have to report to the Medicare EHR Incentive Program and MIPS, will provide these EPs more time to get adjusted to MIPS.

Comment: Several commenters supported the proposal. They also requested that CMS adopt a hardship exception application process that is as simple and readily available as possible for EPs affected by this policy.

Response: We thank the commenters for their support in this one-time significant hardship exception. Once this proposal is finalized, we will develop an application process that will be accessible for those who are applying for such an exception.

Comment: Several commenters appreciated CMS' flexibility in proposing to allow certain EPs to apply for a one time significant hardship exception. Commenters agreed that the hardship exception will help new participants focus on preparing for and successfully participating in MIPS.

Response: We thank the commenters for their support. As discussed previously we are providing this one-time hardship exception to improve chances of successful participation in MIPS.

Comment: Several commenters requested that the application deadline for a hardship exception be extended.

Response: We thank the commenters for their suggestion. However, as provided in the proposed rule the first time participants to the EHR Incentive Program have to attest by October 1, 2017. Therefore, it would not be desirable to extend the application deadline beyond this date.

Comment: Several commenters urged CMS not to finalize the hardship exception because they believed it provides incentives for procrastination and noncompliance.

Response: We thank the commenters for their views. However, we disagree with the commenters. We believe that, with this one-time hardship exception, we are providing new EPs an opportunity to prepare for the work to follow under MIPS. We believe that, through providing this hardship exception, we are improving the chances of successful participation under the MIPS.

Comment: Several commenters recommended that CMS include all new participants, rather than just certain EPs, in the hardship exception.

Response: We disagree that this policy should be extended to all new participants, as only EPs are transitioning to MIPS. This policy is to help those participants transitioning to MIPS to not have to attest to two different programs in order for them to focus their efforts on the new requirements under MIPS.

Comment: Several commenters stated that the hardship application requirement is unnecessary and too burdensome on physicians. Commenters suggested that EPs who have not previously participated in meaningful use automatically be granted a hardship exception from the meaningful use payment adjustment in 2018.

Response: We believe an application process is warranted for this significant hardship exception because we do not know how else we would verify that an EP meets the criteria for this exception, including the requirement that the EP show that, based on their particular circumstances, demonstrating meaningful use for the first time in 2017 under the EHR Incentive Program and also reporting on measures specified for the advancing care information performance category under the MIPS in 2017 would result in a significant hardship. We also believe that for some EPs this may not be a significant hardship, and thus we do not want to take the opportunity away for them to successfully participate in both the EHR Incentive Program and MIPS in 2017.

Comment: Several commenters urged CMS to communicate clearly the availability of the hardship exception to

all program participants prior to the 2017 EHR reporting period. These commenters stated that it is important that new participants who intend to transition into MIPS have the opportunity to focus on the measures and requirements specified for the proposed advancing care information performance category in 2017.

Response: We thank the commenters for their suggestion and rationale. We will work with our stakeholders to clearly communicate the availability of the hardship exception application once available. We plan to do this early enough in 2017 to ensure these new participants can focus on the relevant categories under MIPS.

After consideration of the public comments we received, we are finalizing the significant hardship exception for new participants transitioning to MIPS in 2017 as proposed. We are codifying this final policy at § 495.102(d)(4)(v).

G. Modifications To Measure Calculations for Actions Outside the EHR Reporting Period

In the CY 2017 OPPS/ASC proposed rule (81 FR 45755), we proposed that, for all meaningful use measures, unless otherwise specified, actions included in the numerator must occur within the EHR reporting period if that period is a full calendar year, or if it is less than a full calendar year, within the calendar year in which the EHR reporting period occurs. For example, if the EHR reporting period is any continuous 90-day period within CY 2017, the action must occur between January 1 and December 31, 2017, but does not have to occur within the 90-day EHR reporting period timeframe.

We note that FAQ 8231 was intended to help providers who initiate an action in their EHR after December 31 that is related to a patient encounter that occurred during the year of the EHR reporting period. We understand that a small number of actions may occur after December 31 of the year in which the EHR reporting period occurs.

However, we believe that the reduced measure thresholds proposed in the proposed rule would significantly reduce the impact that these actions would have on performance. In addition, we note that actions occurring after December 31 of the reporting year would count toward the next calendar year's EHR reporting period.

We invited public comment on our proposals.

Comment: Several commenters agreed with the proposal to require for all actions included in the numerator to occur within the EHR reporting period.

Response: We thank the commenters for their support. We believe that actions which occur outside of the EHR reporting period should be kept within the same calendar year because it could lead to attesting more than once on the same action but for different calendar year reporting periods.

Comment: Several commenters suggested that CMS revise FAQ 8231 in order to further clarify this change if it is finalized.

Response: We plan to update FAQ 8231 to explain the new policy.

Comment: Several commenters suggested that if CMS were to make a change to the reporting logic, it should be implemented as part of Stage 3, not to the Stage 2 modification.

Response: We thank the commenters for their suggestion. We do not believe that this change should be implemented as part of Stage 3 only. We believe that the intention of this policy is to be inclusive of both Modified Stage 2 objectives and measures and Stage 3 objectives and measures in order to accurately measure how EPs, eligible hospitals and CAHs are performing on the measures affected by this policy.

Comment: Several commenters suggested clarifying and maintaining the current policy to allow physicians to count actions that take place from the beginning of the calendar year of the EHR reporting period.

Response: We do not agree with the suggestion that we maintain the current policy. The goal of the new policy is to require all actions that occur during an EHR reporting period to only be counted once. We note that with the previous policy there was potential that some actions could be counted during two separate EHR reporting periods.

Comment: Several commenters requested that CMS clarify reporting timelines, specifically related to actions outside of the EHR reporting period.

Response: We clarify that the action do not have to occur within the 90 day EHR reporting period timeframe, but must occur between January 1 and December 31 (or within the calendar year).

Comment: Several commenters asked CMS to clarify whether this proposed policy applies to all EPs, eligible hospitals, and CAHs.

Response: The proposed policy for actions outside the EHR reporting period applies to all EPs, eligible hospitals and CAHs beginning January 1, 2017.

After consideration of the public comments we received, we are finalizing that, for all meaningful use measures, unless otherwise specified, actions included in the numerator must occur within the EHR reporting period if that period is a full calendar year, or if that period is less than a calendar year, actions included in the numerator must occur within the calendar year in which the EHR reporting period occurs. This policy applies beginning with EHR reporting periods in CY 2017.

XIX. Additional Hospital Value-Based Purchasing (VBP) Program Policies

A. Background

Section 1886(o) of the Act, as added by section 3001(a)(1) of the Affordable Care Act, requires the Secretary to establish a hospital value-based purchasing program (the Hospital Value-Based Purchasing (VBP) Program) under which value-based incentive payments are made in a fiscal year to hospitals that meet performance standards established for a performance period for such fiscal year. Both the performance standards and the performance period for a fiscal year are to be established by the Secretary. We refer readers to the FY 2017 IPPS/LTCH PPS final rule for a full discussion of the Hospital VBP Program and its finalized policies (81 FR 56979 through 57011).

B. Removal of the HCAHPS Pain Management Dimension From the Hospital VBP Program

1. Background of the HCAHPS Survey in the Hospital VBP Program

Section 1886(o)(2)(A) of the Act requires the Secretary to select for the Hospital VBP Program measures, other than readmission measures, for purposes of the program. CMS partnered with the Agency for Healthcare Research and Quality (AHRQ) to develop the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) patient experience of care survey (NQF #0166) (hereinafter referred to as the HCAHPS Survey). We adopted the HCAHPS Survey in the Hospital VBP Program beginning with the FY 2013 program year (76 FR 26510), and we added the 3-Item Care Transition Measure (CTM–3) (NQF #0228) as the ninth dimension in the HCAHPS Survey beginning with the FY 2018 program year (80 FR 49551 through 49553). The HCAHPS Survey scores for the Hospital VBP Program are the basis for the Patient- and Caregiver-Centered Experience of Care/Care Coordination domain.

The HCAHPS Survey is the first national, standardized, publicly reported survey of patients' experience of hospital care. The HCAHPS Survey asks discharged patients 32 questions about their recent hospital stay. Survey results are used to score nine

dimensions of the patient's experience of care for the Hospital VBP Program, as the table below illustrates.

HCAHPS SURVEY DIMENSIONS FOR THE FY 2018 PROGRAM YEAR

Communication with Nurses.
Communication with Doctors.
Responsiveness of Hospital Staff.
Pain Management.
Communication About Medicines.
Hospital Cleanliness & Quietness.
Discharge Information.
3-Item Care Transition.
Overall Rating of Hospital.

The HCAHPS Survey is administered to a random sample of adult patients who receive medical, surgical, or maternity care between 48 hours and 6 weeks (42 calendar days) after discharge and is not restricted to Medicare beneficiaries. Hospitals must survey patients throughout each month of the year. The HCAHPS Survey is available in official English, Spanish, Chinese, Russian, Vietnamese, and Portuguese versions. The HCAHPS Survey and its protocols for sampling, data collection and coding, and file submission can be found in the current HCAHPS *Quality Assurance Guidelines,* which is available on the official HCAHPS Web site at: *http://www.hcahpsonline.org/qaguidelines.aspx.* AHRQ carried out a rigorous, scientific process to develop and test the HCAHPS instrument. This process entailed multiple steps, including: A public call for measures; literature reviews; cognitive interviews; consumer focus groups; multiple opportunities for additional stakeholder input; a 3-State pilot test; small-scale field tests; and notice-and-comment rulemaking. In May 2005, the HCAHPS Survey was endorsed by the NQF (#0166).

2. Background of the Patient- and Caregiver-Centered Experience of Care/Care Coordination Domain Performance Scoring Methodology

As previously finalized in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49565 through 49566), beginning with the FY 2018 program year, for each of the 9 dimensions of the HCAHPS Survey that we have adopted for the Hospital VBP Program, we calculate Achievement Points (0 to 10 points) and Improvement Points (0 to 9 points), the larger of which is summed across the nine dimensions to create a prenormalized HCAHPS Base Score (0 to 90 points). The prenormalized HCAHPS Base Score is then multiplied by 8/9 (0.88888) and rounded according to standard rules (values of 0.5 and higher are rounded up; values below 0.5 are rounded down) to create the normalized HCAHPS Base Score. Each of the nine dimensions is weighted equally, so that the normalized HCAHPS Base Score would range from 0 to 80 points. HCAHPS Consistency Points are then calculated and range from 0 to 20 points. The Consistency Points consider scores across all nine of the dimensions. The final element of the scoring formula is the sum of the HCAHPS Base Score and the HCAHPS Consistency Points, and that sum will range from 0 to 100 points. The Patient- and Caregiver-Centered Experience of Care/Care Coordination domain accounts for 25 percent of a hospital's Total Performance Score (TPS) for the FY 2018 program year (80 FR 49561).

3. Removal of the HCAHPS Pain Management Dimension From the Hospital VBP Program Beginning With the FY 2018 Program Year

As noted above, one of the HCAHPS Survey dimensions that we have adopted for the Hospital VBP Program is Pain Management. Three survey questions are used to construct this dimension,[252] as follows:

- 12. During this hospital stay, did you need medicine for pain?

☐ Yes
☐ No (If No, Go to Question 15)

- 13. During this hospital stay, how often was your pain well controlled?

☐ Never
☐ Sometimes
☐ Usually
☐ Always

- 14. During this hospital stay, how often did the hospital staff do everything they could to help you with your pain?

☐ Never
☐ Sometimes
☐ Usually
☐ Always

We have received feedback that some stakeholders are concerned about the Pain Management dimension questions being used in a program where there is any link between scoring well on the questions and higher hospital payments. Some stakeholders believe that the linkage of the Pain Management dimension questions to the Hospital VBP Program payment incentives creates pressure on hospital staff to prescribe more opioids in order to achieve higher scores on this dimension. Many factors outside the control of CMS quality program requirements may contribute to the perception of a link between the Pain Management dimension and opioid prescribing practices, including misuse of the survey (such as using it for outpatient emergency room care instead of inpatient care, or using it for determining individual physician performance) and failure to recognize that the HCAHPS Survey excludes certain populations from the sampling frame (such as those with a primary substance use disorder diagnosis).

Because some hospitals have identified patient experience as a potential source of competitive advantage, we have heard that some hospitals may be disaggregating their raw HCAHPS data to compare, assess, and incentivize individual physicians, nurses, and other hospital staff. Some hospitals also may be using the HCAHPS Survey to assess their emergency and outpatient departments. The HCAHPS Survey was never intended to be used in these ways.[253]

We continue to believe that pain control is an appropriate part of routine patient care that hospitals should manage and is an important concern for patients, their families, and their caregivers. It is important to note that the HCAHPS Survey does not specify any particular type of pain control method. In addition, appropriate pain management includes communication with patients about pain-related issues, setting expectations about pain, shared decision-making, and proper prescription practices. Although we are not aware of any scientific studies that support an association between scores on the Pain Management dimension questions and opioid prescribing practices, we are developing alternative questions for the Pain Management dimension in order to remove any potential ambiguity in the HCAHPS Survey. We are following our standard survey development processes, which include drafting alternative questions, cognitive interviews and focus group evaluation, field testing, statistical analysis, stakeholder input, the Paperwork Reduction Act, and NQF endorsement. HHS is also conducting further research to help better understand these stakeholder concerns and determine if there are any unintended consequences that link the Pain Management dimension questions to opioid prescribing practices. In addition, we are in the early stages of developing an electronically specified

[252] Available at: *http://www.hcahpsonline.org/surveyinstrument.aspx.*

[253] L. Tefera, W.G. Lehrman, and P. Conway. ''Measurement of the Patient Experience: Clarifying Facts, Myths, and Approaches.'' *Journal of the American Medical Association*. Published online, 3–10–16. *http://jama.jamanetwork.com/article.aspx?articleid=2503222.*

process measure for the inpatient and outpatient hospital settings that would measure concurrent prescribing of an opioid and benzodiazepine. We also are in the early stages of developing a process measure that would assess whether inpatient psychiatric facilities are regularly monitoring for adverse drug events of opioid and psychotropic drugs. The measure specifications for any future measures will be posted on the CMS Web page and the public will have an opportunity to provide feedback before we make any proposal to adopt it for quality reporting purposes.

Due to some potential confusion about the appropriate use of the Pain Management dimension questions in the Hospital VBP Program and the public health concern about the ongoing prescription opioid overdose epidemic, while we await the results of our ongoing research and the above-mentioned process for developing modifications to the Pain Management dimension questions, we proposed in the CY 2017 OPPS/ASC proposed rule (81 FR 45755 through 45757) to remove the Pain Management dimension of the HCAHPS Survey in the Patient- and Caregiver-Centered Experience of Care/Care Coordination domain beginning with the FY 2018 program year. The FY 2018 program year uses HCAHPS performance period data from January 1, 2016 to December 31, 2016 to calculate each hospital's TPS, which affects FY 2018 payments. When modified Pain Management questions for the HCAHPS Survey become available for use in the Hospital VBP Program, and subject to the statutory requirements listed in sections 1886(o)(2)(A) and 1886(o)(2)(C)(i) of the Act, we intend to propose to adopt them in future rulemaking.

In the proposed rule, we stated that finalizing our proposal to remove the Pain Management dimension would leave eight dimensions in the HCAHPS Survey, as the table below illustrates.

PROPOSED HCAHPS SURVEY DIMENSIONS FOR THE FY 2018 PROGRAM YEAR

Communication with Nurses.
Communication with Doctors.
Responsiveness of Hospital Staff.
Communication About Medicines.
Hospital Cleanliness & Quietness.
Discharge Information.
3-Item Care Transition.
Overall Rating of Hospital.

In order to adjust for the removal of the Pain Management dimension from the HCAHPS Survey, we proposed to continue to assign Achievement Points (0 to 10 points) and Improvement Points (0 to 9 points) to each of the remaining eight dimensions in order to create the HCAHPS Base Score (0 to 80 points) (81 FR 45756). Each of the remaining eight dimensions would be of equal weight, so that the HCAHPS Base Score would range from 0 to 80 points. HCAHPS Consistency Points would then be calculated, and would range from 0 to 20 points. The Consistency Points would consider scores across the remaining eight dimensions, and would not include the Pain Management dimension. The final element of the scoring formula would be the sum of the HCAHPS Base Score and the HCAHPS Consistency Points and would range from 0 to 100 points.

For the FY 2018 program year, we finalized performance standards for the HCAHPS measures in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49566). In the CY 2017 OPPS/ASC proposed rule (81 FR 45757), we proposed to remove the Pain Management dimension of the HCAHPS Survey in the calculation of the Patient- and Caregiver-Centered Experience of Care/Care Coordination domain score beginning with the FY 2018 program year. The performance standards for the other eight dimensions would remain unchanged, as the table below illustrates.

PERFORMANCE STANDARDS FOR THE FY 2018 PROGRAM YEAR

HCAHPS survey dimension	Floor * (percent)	Achievement threshold ** (percent)	Benchmark *** (percent)
Communication with Nurses	55.27	78.52	86.68
Communication with Doctors	57.39	80.44	88.51
Responsiveness of Hospital Staff	38.40	65.08	80.35
Pain Management	N/A	N/A	N/A
Communication about Medicines	43.43	63.37	73.66
Hospital Cleanliness & Quietness	40.05	65.60	79.00
Discharge Information	62.25	86.60	91.63
3-Item Care Transition	25.21	51.45	62.44
Overall Rating of Hospital	37.67	70.23	84.58

* Floor is defined as the 0th percentile of the baseline (76 FR 26519).
** Achievement threshold is defined as the 50th percentile of hospital performance in the baseline period (76 FR 26519).
*** Benchmark is defined as the mean of the top decile of hospital performance on each dimension (76 FR 26517).

For the FY 2019 program year, we proposed performance standards in the FY 2017 IPPS/LTCH PPS proposed rule (81 FR 25114), and finalized performance standards in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57006 through 57007). The table below reflects the finalized performance standards for the FY 2019 program year. In the CY 2017 OPPS/ASC proposed rule (81 FR 45757), we proposed to remove the Pain Management dimension of the HCAHPS Survey in the calculation of the Patient- and Caregiver-Centered Experience of Care/Care Coordination domain score beginning with the FY 2018 program year. (In section IV.H.3.b. of the FY 2017 IPPS/LTCH PPS final rule, we also finalized our proposal to change the name of this domain to the Person and Community Engagement domain beginning with the FY 2019 program year (81 FR 56984)). The performance standards for the other eight dimensions would remain unchanged, as the table below illustrates.

PERFORMANCE STANDARDS FOR THE FY 2019 PROGRAM YEAR

HCAHPS survey dimension	Floor * (percent)	Achievement threshold ** (percent)	Benchmark *** (percent)
Communication with Nurses	28.10	78.69	86.97
Communication with Doctors	33.46	80.32	88.62
Responsiveness of Hospital Staff	32.72	65.16	80.15
Pain Management	N/A	N/A	N/A
Communication about Medicines	11.38	63.26	73.53
Hospital Cleanliness & Quietness	22.85	65.58	79.06
Discharge Information	61.96	87.05	91.87
3-Item Care Transition	11.30	51.42	62.77
Overall Rating of Hospital	28.39	70.85	84.83

* Floor is defined as the 0th percentile of the baseline (76 FR 26519).
** Achievement threshold is defined as the 50th percentile of hospital performance in the baseline period (76 FR 26519).
*** Benchmark is defined as the mean of the top decile of hospital performance on each dimension (76 FR 26517).

We invited public comments on these proposals.

Comment: Many commenters supported CMS' proposal to remove the Pain Management dimension of the HCAHPS Survey from the Hospital VBP Program based on their concern that the survey questions may inadvertently create incentives and undue pressure for providers to prescribe opioids in order to achieve higher scores on the HCAHPS Survey, which may contribute to the opioid epidemic. Commenters also noted that removing the Pain Management dimension will resolve the perceived conflict between appropriate management of opioid use and patient satisfaction by allowing practitioners to use their best judgment in managing patients' pain and providing effective, appropriate patient care. Some of these commenters believed that removing these questions from hospitals' scores will reduce providers' fear of negative feedback on the HCAHPS Survey and, in turn, reduce inappropriately high opioid prescription dosages and durations.

Other commenters supported removing the Pain Management dimension of the HCAHPS Survey from the Hospital VBP Program based on a belief that scoring hospitals on patients' perception of the adequacy of their pain management unfairly penalizes providers by inappropriately linking clinical decision-making to payment. These commenters also expressed concern that linking assessment of patient experience of care with pain management has led to an increase in opioid prescription when other pain management, such as use of nonsteroidal anti-inflammatory drugs, has failed.

A number of commenters noted the importance of measuring patients' experience of pain management despite these concerns with the current Pain Management dimension questions, and urged CMS to develop alternative questions to assess patients' pain management as soon as practicable. A few of these commenters also encouraged CMS to act to ensure that patients receive an appropriate level of pain control through methods that do not encourage excessive opioid prescription.

Response: We thank the commenters for their support. We are not aware of any scientific studies that support an association between scores on the Pain Management dimension questions and opioid prescribing practices. In addition, we continue to believe that many factors outside the control of CMS quality program requirements may contribute to the perception of a link between the Pain Management dimension and opioid prescribing practices; that pain control is an appropriate part of routine patient care that hospitals should manage; and that pain control is an important concern for patients, their families, and their caregivers.[254] However, we believe that removing the Pain Management dimension from the Hospital VBP Program scoring calculations will address potential confusion about the appropriate use of the Pain Management dimension, and provide us with an opportunity to further refine the pain management questions used in the HCAHPS Survey.

Comment: A number of commenters disagreed with the assertion that the HCAHPS Survey Pain Management questions influence clinical decision-making, citing the lack of empirical evidence to support this position, but supported CMS' proposal to remove the Pain Management dimension of the HCAHPS Survey from the Hospital VBP Program because it will provide CMS and the hospital community with an opportunity to refine the pain management questions on the HCAHPS Survey.

Response: We thank the commenters for their support. As noted above, we are not aware of any scientific studies that support an association between scores on the Pain Management dimension questions and opioid prescribing practices. Nevertheless, we believe that removing the Pain Management dimension from the Hospital VBP Program scoring calculations will address potential confusion about the appropriate use of the Pain Management dimension, and provide us with an opportunity to further refine the pain management questions used in the HCAHPS Survey.

Comment: Several commenters supported CMS' proposal to remove the Pain Management dimension of the HCAHPS Survey from the Hospital VBP Program because the current questions focus on pain control rather than pain communication, which the commenters believe could create a perverse incentive to inappropriately prescribe opioids and other pain medication. One commenter supported removal of the Pain Management dimension based on concerns regarding the wording of the pain management questions and how it may influence patient responses to these questions. Specifically, the commenter expressed concern that the current question wording may imply that pain is only an issue if the patient needed medicine, that medicine is the only means to reduce pain, and that medication should be administered to the point of cessation of all pain. Another commenter expressed concern that the current pain management questions may not accurately reflect the quality of care received at the hospital because they do not factor in all

[254] L. Tefera, W.G. Lehrman, and P. Conway. ''Measurement of the Patient Experience: Clarifying Facts, Myths, and Approaches.'' *Journal of the American Medical Association.* Published online, 3–10–16. *http://jama.jamanetwork.com/article.aspx?articleid=2503222.*

elements of clinical decision-making and the individual circumstances of a patient's episode of care.

Response: We acknowledge commenters' concerns about the current Pain Management questions, and we will take the feedback into consideration as we continue to develop, test, and empirically assess potential alternative questions that focus on communication with patients about pain management as potential replacements for the Pain Management questions currently included in the HCAHPS Survey. As discussed in the CY 2017 OPPS/ASC proposed rule, we are following our standard survey development processes, which include drafting alternative questions, cognitive interviews and group evaluation, field testing, statistical analysis, and soliciting stakeholder input.

Comment: One commenter supported CMS' proposal to remove the Pain Management dimension from the Hospital VBP Program because the commenter believed that only the most reliable and valid measures should be included when Medicare payment is at risk.

Response: We thank the commenter for the support of our proposal. We continue to believe the HCAHPS Survey Pain Management questions, and the HCAHPS Survey as a whole, are valid and reliable measures of hospital quality that encourage hospitals to assess and improve patient experience. We further note that the HCAHPS Survey, including the Pain Management questions, is NQF-endorsed (NQF #0166). However, we believe that removing the Pain Management dimension from the Hospital VBP Program scoring calculations will address potential confusion about the appropriate use of the Pain Management dimension, and provide us with an opportunity to further refine the pain management questions used in the HCAHPS Survey.

Comment: One commenter recommended that hospitals continue to survey patients about their inpatient pain management experience because pain management is an important aspect of quality care.

Response: We agree with commenter that management of patients' pain is an important aspect of quality care. We note that the administration and reporting of the full HCAHPS Survey, including the current Pain Management questions, remains part of the Hospital IQR Program. In addition, we will continue to make publicly available the data reported under the Hospital IQR Program on our *Hospital Compare* Web site.

Comment: Some commenters did not support CMS' proposal to remove the HCAHPS Survey Pain Management dimension from the Hospital VBP Program due to the lack of evidence linking these questions to opioid overprescribing. Specifically, commenters stated that there is a lack of evidence that the HCAHPS Survey has inappropriately influenced providers' prescribing patterns; that there is no evidence that prescribed opioids are primarily responsible for opioid abuse or opioid-related deaths; and that there is no evidence to suggest that assessing and controlling pain in hospitalized inpatients is responsible for initiating or perpetuating the opioid epidemic. One commenter expressed concern that removing these pain management questions from hospitals' scores in the Hospital VBP Program would eliminate an important driver of progress to develop improved means of acute pain assessment. Another commenter expressed concern that removing the Pain Management dimension from the Hospital VBP Program may result in pain management issues being excluded from hospitals' quality improvement efforts. These commenters recommended that CMS explore opportunities to modify the Pain Management dimension questions in the HCAHPS Survey, but not remove these questions from the HCAHPS Survey or the Hospital VBP Program's scoring calculations until alternative questions are available to replace them.

Other commenters did not support CMS' proposal to remove the Pain Management dimension from the Hospital VBP Program because they believe doing so ignores the needs of patients who require treatment for pain. These commenters also expressed their concern that removing these questions may result in inadequate pain treatment for patients in need of such treatment.

Response: We remain dedicated to improving the quality of care provided to patients, including the appropriate management of pain and communication between patients and their providers regarding pain. We continue to believe that pain control is an appropriate part of routine patient care that hospitals should manage and is an important concern for patients, their families, and their caregivers. Furthermore, we are unaware of any empirical evidence demonstrating that failing to prescribe opioids lowers a hospital's HCAHPS Survey scores. However, we believe the potential confusion about the appropriate use of the Pain Management dimension questions, coupled with the public health concern about the opioid epidemic, warrants removing these questions from Hospital VBP Program scoring calculations until alternative pain management questions are available. We note that hospitals would continue to administer the full HCAHPS Survey, including the current Pain Management questions, to eligible patients. In addition, we note that hospital performance rates on all HCAHPS Survey measures will still be publicly reported under the Hospital IQR Program on *Hospital Compare* and used in calculating HCAHPS star ratings and *Hospital Compare* overall ratings. We believe continued public reporting of Pain Management performance rates appropriately balances the need to provide the public with important quality data for use in health care decision-making and to incentivize quality improvement regarding pain management and communication with our desire to address the perceived conflict between appropriate management of opioid use and patient satisfaction by relieving the pressure physicians may feel to overprescribe opioids. We further believe continued public reporting of Pain Management performance rates will provide important information to patients and consumers and encourage hospitals to appropriately manage patients' pain and continue engaging in quality improvement efforts.[255]

Comment: One commenter recommended that CMS make concerted efforts to inform Medicare providers of the CDC's recently published ''Guideline for Prescribing Opioids for Chronic Pain.''

Response: We thank the commenter for the recommendation and note that this information is publicly available on the CDC's Web site at: *http://www.cdc.gov/drugoverdose/prescribing/guideline.html.* The guideline provides recommendations that focus on the use of opioids in treating chronic pain (defined as pain lasting longer than 3 months or past the time of normal tissue healing) outside of active cancer treatment, palliative care, and end-of-life care. We encourage prescribing clinicians to follow this guideline for prescribing opioids for chronic pain.

Comment: Many commenters supported the development of alternative questions regarding pain management for the HCAHPS Survey and recommended that CMS submit the revised survey to NQF for endorsement

[255] L. Tefera, W.G. Lehrman, and P. Conway. ''Measurement of the Patient Experience: Clarifying Facts, Myths, and Approaches.'' *Journal of the American Medical Association*. Published online, 3–10–16. *http://jama.jamanetwork.com/article.aspx?articleid=2503222.*

following a rigorous survey development process. A large number of commenters provided specific recommendations regarding the context and content of these alternative questions. Numerous commenters recommended that the alternative questions should include whether a patient's pain was assessed; whether treatment options were discussed with the patient, including discussion of the risks and benefits associated with opioid prescription and the potential for use of alternative, non-opioid pain management therapy, and interventions made; and whether the patient's pain was reassessed following intervention to determine its effectiveness. Other commenters recommended that the alternative questions focus on effective provider communication with patients about pain management-related issues, appropriate expectations about pain relief, patient understanding of interventions offered to address pain, and shared decision-making and proper prescription practices. Some commenters specifically recommended that CMS assess patients' understanding of the interventions offered to address the patient's pain. Some commenters urged CMS to pay particular attention to the difference between acute and chronic pain treatment, individual patient's pain management goals, and the risks of the particular clinical situation in pain management decision-making. Commenters also urged CMS to acknowledge the role of palliative care in pain management decision-making.

One commenter recommended that CMS define a high-quality patient experience as one in which the health care provider discussed pain management treatment options with patients and patients believed they had the opportunity to engage in the discussion to determine the most appropriate treatment option. Another commenter recommended the development of alternative questions regarding pain management for the HCAHPS Survey that align with the pain control and communication questions in the OAS CAHPS Survey. Other commenters recommended that these alternative questions be studied for their potential effect on clinical behavior and patient outcomes, including any unintended consequences such as creating barriers to access opioids when they are clinically appropriate.

Response: We thank the commenters for their recommendations regarding the alternative questions for the HCAHPS Survey. We will take these recommendations into consideration as we continue to develop, test, and empirically assess potential alternative questions that focus on communication with patients about pain management as potential replacements for the Pain Management questions currently included in the HCAHPS Survey. As discussed in the CY 2017 OPPS/ASC proposed rule, we are following our standard survey development processes, which include drafting alternative questions, cognitive interviews and group evaluation, field testing, statistical analysis, and soliciting stakeholder input. Any specific Pain Management questions that would be considered for use in a CMS program will proceed through the prerulemaking process, including listing of measures on the ''Measures Under Consideration'' list and review by the Measures Application Partnership, as well as notice-and-comment rulemaking in the future. In addition, we intend to seek NQF endorsement for the alternative questions we decide to propose to use in the HCAHPS Survey once these survey development processes are complete.

Comment: Several commenters recommended that CMS exclude all patients with substance use disorders on their problem list, not just those patients admitted with a primary diagnosis of a substance use disorder, from the HCAHPS Survey because the commenters believed these patients' survey responses are affected by their underlying conditions, which in turn creates a perverse incentive for providers to prescribe opioids rather than referring patients for substance use disorder treatment.

Response: We thank the commenters for their comments. Since its inception in 2006, HCAHPS has classified eligible patients into three service line categories: Medical, surgical, or maternity care.[256] The recommended method of assignment to service line is the patient's MS–DRG at discharge; if unavailable, CMS permits several alternative methods of service line assignment. Due to methodological considerations, the requirements of national standardization, and the data collection burden placed on hospitals and their HCAHPS Survey vendors, CMS does not collect or employ patients' secondary diagnoses or any other codes, designations, or notes, including ''problem lists.'' We note that patients whose primary diagnosis MS–DRG is substance abuse are ineligible for the HCAHPS Survey under the current HCAHPS Quality Assurance Guidelines.[257] We will take into consideration public comments received as we continually seek to improve our quality measures.

Comment: One commenter encouraged CMS to conduct further assessments of whether, and to what extent, removal of the Pain Management dimension from the Hospital VBP Program scoring calculations influences providers' management of pain. Another commenter urged CMS to study the impact of the HCAHPS Pain Management questions (both the current and alternative questions) on clinician behavior, use of other approaches to pain management, and patient outcomes.

Response: We thank the commenter for the recommendations and will take these concerns into consideration as we continue to develop and test the alternative pain management questions. We note that HHS is also conducting further research to help better understand stakeholder concerns regarding the current HCAHPS Survey Pain Management dimension questions and to determine whether there are any unintended consequences that link the Pain Management dimension questions to opioid prescribing practices.

Comment: One commenter recommended that CMS conduct mode testing for an electronic administration option for the HCAHPS Survey.

Response: We thank the commenter for its recommendation. While email and a Web-based survey are not available survey modes at present, we are actively investigating these modes as possible new options for the future. This ongoing investigation includes exploring whether hospitals receive reliable email addresses and whether there is adequate access to the Internet across all types of inpatients. Ultimately, the purpose of the investigation is to ensure that any new survey administration method does not introduce bias to the survey process.

Comment: One commenter believed that if the HCAHPS Survey can be used for public reporting, the data should also have the ability to be used to change the behavior of individual providers. Furthermore, the commenter believed that individual and groups of providers should be held accountable for HCAHPS Survey results.

Response: While we agree that the HCAHPS Survey can be used to identify general areas for improvement within a hospital, some of which may be addressed through changes in provider

[256] HCAHPS Quality Assurance Guidelines, V11.0, pp. 53–55; 75–76 (2016). *http://www.hcahpsonline.org/qaguidelines.aspx.*

[257] HCAHPS Quality Assurance Guidelines, V11.0, p. 75 (2016). *http://www.hcahpsonline.org/qaguidelines.aspx.*

behavior generally, we disagree with the commenter's assertion that individual providers or provider groups should be held ''accountable'' for hospital scores on the HCAHPS Survey. The HCAHPS Survey is designed to evaluate the performance of a hospital as a whole, not individuals or groups within the larger hospital setting;[258] therefore, its use for evaluating or incentivizing individual providers or groups within the hospital is contrary to the survey's design and policy aim.[259]

Comment: One commenter sought clarification regarding CMS' concerns about hospitals' use of disaggregated HCAHPS Survey results to evaluate individual provider performance on a given question or domain, and whether those concerns are limited to use of disaggregated results on the Pain Management questions. Specifically, the commenter believed that HCAHPS Survey data should be used to improve clinician-patient communication, which is important in quality of care.

Response: We agree with the commenter that clinician-patient communication about pain and pain management are important aspects of quality care. However, disaggregation of HCAHPS Survey results for use in evaluating individual providers' performance on any dimension within the HCAHPS Survey, not just the Pain Management dimension, is not how the HCAHPS Survey was intended to be used. As noted above, the HCAHPS Survey is designed to assess hospital-level performance and is not suitable for evaluating or incentivizing individual providers or provider groups within a hospital. Hospitals can and should use HCAHPS Survey results to identify general areas for improvement within the hospital setting, but should not ascribe those results to individual providers within the hospital.[260]

Comment: A few commenters expressed concern regarding the application of the HCAHPS Survey to the emergency department (ED) setting. These commenters stated that the available evidence indicates ED physicians are most affected by low ratings on patient experience of care surveys, particularly on questions regarding the adequacy of pain medication prescriptions. One commenter asserted that the use of the HCAHPS Survey in the ED setting is inappropriate and urged CMS to refine the pain management questions included in the Emergency Department Patient Experience of Care Survey currently under development and implement the survey in order to better capture patient experience of care in the ED setting.

Response: We agree that use of the HCAHPS Survey in the ED setting to assess outpatient ED care instead of inpatient care is inappropriate. HCAHPS was designed, developed, and intended for hospital level measurement for inpatient stays, not EDs or other individual hospital departments. Other uses of the HCAHPS Survey are not consistent with its design or validation metrics. Accordingly, we encourage hospitals and HCAHPS Survey vendors to review the HCAHPS Survey specifications in order to avoid such instances of misuse. We are continuing our evaluation of the Emergency Department Patient Experience of Care Survey in an effort to develop a survey that will provide patient experience data that enable comparison of EDs across the nation and promote effective communication and coordination, and we intend to address its potential use in CMS' quality programs in the future. We also note that, in section XIII.B.5.c. of this final rule with comment period, we are finalizing adoption of five survey-based measures in the Hospital OQR Program utilizing the OAS CAHPS Survey, a patient experience of care survey developed for use with selected outpatient surgical procedures.

Comment: A number of commenters expressed concern about the continued public reporting of the HCAHPS Pain Management measure in other CMS quality reporting programs, specifically the Hospital IQR Program, including HCAHPS star ratings and *Hospital Compare* overall ratings. Commenters stated that use of these questions in these quality reporting programs may still lead to potential overprescribing of opioids to at-risk patients. Some commenters also expressed concern that public reporting of these scores could distort the public's perception of the quality of care provided at certain hospitals. Commenters recommended that CMS remove or exclude hospital scores on the HCAHPS Survey's Pain Management questions from *Hospital Compare* reporting, including HCAHPS star ratings and *Hospital Compare* overall ratings, until alternative questions are developed and adopted for these programs.

Response: Pain management is an important component of the quality of care provided at a hospital, and we believe continued public reporting of hospital rates on the HCAHPS Survey Pain Management questions, without linkage to payment, properly balances these concerns with our desire to provide patients with critical information for use in selecting a hospital setting for their care, ensure hospitals continue to appropriately manage patients' pain, and encourage hospitals to engage in quality improvement efforts addressing pain management and communication. We continue to believe that pain control is a critical part of routine patient care that hospitals should manage and is an important concern for patients, their families, and their caregivers. Therefore, we believe there is continued benefit to publicly reporting the HCAHPS Survey Pain Management questions in other CMS quality programs. As noted previously, we are not aware of any empirical evidence that failing to prescribe opioids lowers a hospital's HCAHPS rates. We also continue to believe that many factors outside the control of CMS quality program requirements may contribute to the perception of a link between the Pain Management dimension and opioid prescribing practices, such as misuse of the survey, disaggregation of surveys results to assess the performance of individual hospital staff, and/or failure to recognize that the HCAHPS Survey excludes certain populations from the sampling frame.

Comment: A number of commenters supported continued collection and public reporting of the current HCAHPS Survey Pain Management questions in the Hospital IQR Program until alternative pain management questions are developed and adopted. Commenters noted that these questions are currently the only source of nationally comparable data on pain management, and stated that the importance of pain management to patient care and experience during a hospital stay makes this information useful for the public. One commenter supported continued collection of these data because hospitals can use the information to improve patient quality of care as new survey questions are developed and tested. One commenter recommended that CMS provide a notation on the publicly reported HCAHPS Survey Pain Management dimension rates, stating that CMS is reviewing the pain management questions for possible revision.

Response: We thank the commenters for their support and note that, in July

[259] L. Tefera, W.G. Lehrman, and P. Conway. ''Measurement of the Patient Experience: Clarifying Facts, Myths, and Approaches.'' *Journal of the American Medical Association.* Published online, 3–10–16. *http://jama.jamanetwork.com/article.aspx?articleid=2503222.*

[260] L. Tefera, W.G. Lehrman, and P. Conway. ''Measurement of the Patient Experience: Clarifying Facts, Myths, and Approaches.'' *Journal of the American Medical Association.* Published online, 3–10–16. *http://jama.jamanetwork.com/article.aspx?articleid=2503222.*

2016, we began displaying a footnote on the *Hospital Compare* Web site along with the Pain Management measure information, which reads: ''Note: CMS is reviewing the pain management questions on the HCAHPS Survey for possible revision.''

After consideration of the public comments we received, we are finalizing our proposal to remove the Pain Management dimension of the HCAHPS Survey in the Patient- and Caregiver-Centered Experience of Care/Care Coordination domain of the Hospital VBP Program beginning with the FY 2018 program year.

XX. Files Available to the Public via the Internet

The Addenda to the OPPS/ASC proposed rules and the final rules with comment period are published and available only via the Internet on the CMS Web site. To view the Addenda to this final rule with comment period pertaining to CY 2017 payments under the OPPS, we refer readers to the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Hospital-Outpatient-Regulations-and-Notices.html;* select ''1656–FC'' from the list of regulations. All OPPS Addenda to this final rule with comment period are contained in the zipped folder entitled ''2017 OPPS 1656-FC Addenda'' at the bottom of the page. To view the Addenda to this final rule with comment period pertaining to the CY 2017 payments under the ASC payment system, we refer readers to the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ASCPayment/ASC-Regulations-and-Notices.html;* select ''1656-FC'' from the list of regulations. All ASC Addenda to this final rule with comment period are contained in the zipped folders entitled ''Addendum AA, BB, DD1, DD2, and EE''.

XXI. Collection of Information Requirements

A. Statutory Requirement for Solicitation of Comments

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45758 through 45761), we solicited public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs).

B. ICRs for the Hospital OQR Program

1. Background

As we stated in section XIV. of the CY 2012 OPPS/ASC final rule with comment period, the Hospital OQR Program has been generally modeled after the quality data reporting program for the Hospital IQR Program (76 FR 74451). We refer readers to the CY 2011 through CY 2016 OPPS/ASC final rules with comment periods (75 FR 72111 through 72114; 76 FR 74549 through 74554; 77 FR 68527 through 68532; 78 FR 75170 through 75172; 79 FR 67012 through 67015; and 80 FR 70580 through 70582, respectively) for detailed discussions of Hospital OQR Program information collection requirements we have previously finalized. The information collection requirements associated with the Hospital OQR Program are currently approved under OMB control number 0938–1109.

Below we discuss only the changes in burden resulting from the provisions in this final rule with comment period.

2. Estimated Burden of Hospital OQR Program Newly Finalized Proposals for the CY 2018 Payment Determination and Subsequent Years

In section XIII.B.8. of this final rule with comment period, we are finalizing our proposal to publicly display data on the *Hospital Compare* Web site, or other CMS Web site, as soon as possible after measure data have been submitted to CMS. In addition, we are finalizing our proposal that hospitals will generally have approximately 30 days to preview their data. Both of these policies are consistent with current practice. Lastly, we are finalizing our proposal to announce the timeframes for the preview period starting with the CY 2018 payment determination on a CMS Web site and/or on our applicable listservs. We do not anticipate additional burden to hospitals as a result of these changes to the public display policies because hospitals will not be required to submit additional data or forms to CMS.

3. Estimated Burden of Hospital OQR Program Newly Finalized Proposals for the CY 2019 Payment Determination and Subsequent Years

a. Extraordinary Circumstances Extension or Exemptions Process

In section XIII.D.8. of this final rule with comment period, we are finalizing our proposal to extend the submission deadline for requests under our ''Extraordinary Circumstances Extension or Exemptions'' (ECE) process from 45 days from the date that the extraordinary circumstance occurred to 90 days from the date that the extraordinary circumstance occurred. For a complete discussion of our ECE process under the Hospital OQR Program, we refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68489), the CY 2014 OPPS/ASC final rule with comment period (78 FR 75119 through 75120), the CY 2015 OPPS/ASC final rule with comment period (79 FR 66966), and the CY 2016 OPPS/ASC final rule with comment period (80 FR 70524).

We believe that the updates to the ECE deadlines will have no effect on burden for hospitals, because we are not making any changes that will increase the amount of time necessary to complete the form. We do not anticipate that there will be any additional burden as the materials to be submitted related to an ECE request are unchanged and the deadline does not result in a change in time necessary to submit an extension or exemption request. The burden associated with submitting an Extraordinary Circumstances Extension/Exemption Request is accounted for in OMB Control Number 0938–1022.

b. Reconsideration and Appeals

In section XIII.D.9. of this final rule with comment period, we are finalizing a clarification to our reconsideration and appeals procedures. While there is a burden associated with filing a reconsideration request, 5 CFR 1320.4 of OMB's implementing regulations for the Paperwork Reduction Act of 1995 excludes collection activities during the conduct of administrative actions such as reconsiderations.

4. Estimated Burden of Hospital OQR Program Newly Finalized Proposals for the CY 2020 Payment Determination and Subsequent Years

In sections XIII.B.5.a. and XIII.B.5.b. of this final rule with comment period, we are finalizing our proposals to add

two new claims-based measures for the CY 2020 payment determination and subsequent years: (1) OP–35: Admissions and Emergency Department Visits for Patients Receiving Outpatient Chemotherapy; and (2) OP–36: Hospital Visits after Hospital Outpatient Surgery (NQF #2687). In section XIII.B.5.c. of this final rule with comment period, we also are finalizing our proposal to add five new Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-based measures for the CY 2020 payment determination and subsequent years: (1) OP–37a: OAS CAHPS—About Facilities and Staff; (2) OP–37b: OAS CAHPS—Communication About Procedure; (3) OP–37c: OAS CAHPS—Preparation for Discharge and Recovery; (4) OP–37d: OAS CAHPS—Overall Rating of Facility; and (5) OP–37e: OAS CAHPS—Recommendation of Facility.

OP–35 and OP–36 are claims-based measures. As noted in the CY 2013 OPPS/ASC final rule with comment period (77 FR 68530), we calculate claims-based measures using Medicare FFS claims data that do not require additional hospital data submissions. As a result, as we stated in the CY 2017 OPPS/ASC proposed rule (81 FR 45758), we do not anticipate that the proposed OP–35 or OP–36 measures will create any additional burden to hospital outpatient departments for the CY 2020 payment determination and subsequent years.

The information collection requirements associated with the five newly adopted OAS CAHPS survey-based measures (OP–37a, OP–37b, OP–37c, OP–37d, and OP–37e) are currently approved under OMB Control Number 0938–1240. For this reason, in the CY 2017 OPPS/ASC proposed rule (81 FR 45758), we did not provide an independent estimate of the burden associated with OAS CAHPS Survey-based measures for the Hospital OQR Program.

We invited public comment on the burden associated with these information collection requirements. We did not receive any public comments on our estimates of the burden associated with these information collection requirements. Therefore, we are finalizing our burden estimates as discussed above.

C. ICRs for the ASCQR Program

1. Background

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74554), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53672), and the CY 2013, CY 2014, CY 2015 and CY 2016 OPPS/ASC final rules with comment periods (77 FR 68532 through 68533; 78 FR 75172 through 75174; 79 FR 67015 through 67016; and 80 FR 70582 through 70584, respectively) for detailed discussions of the ASCQR Program information collection requirements we have previously finalized. The information collection requirements associated with the ASCQR Program are currently approved under OMB control number 0938–1270.

Below we discuss only the changes in burden that would result from the provisions in this final rule with comment period.

2. Changes in Burden Calculation for the ASCQR Program

To better align this program with our other quality reporting and value-based purchasing programs, we are finalizing our proposal to update our burden calculation methodology to standardize elements within our burden calculation. Specifically, we are finalizing our proposals to utilize: (1) A standard estimate of the time required for abstracting chart data for measures based on historical data from other quality reporting programs; and (2) a standard hourly labor cost for chart abstraction activities.

a. Estimate of Time Required to Chart-Abstract Data

In the past, we have used 35 minutes as the time required to chart-abstract and report data for each chart-abstracted Web-based measure in the ASCQR Program (76 FR 74554). However, we have studied other programs' estimates for this purpose and believe that 15 minutes is a more reasonable number. Specifically, the Hospital IQR Program possesses historical data from its data validation contractor. This contractor chart-abstracts each measure set when charts are sent to CMS for validation. Based on this contractor's validation activities, we believe that the average time required to chart-abstract data for each measure is approximately 15 minutes. We believe that this estimate is reasonable because the ASCQR Program uses measures similar to those of the Hospital IQR Program, such as the surgery safety measures and immunization measures. Accordingly, in the CY 2017 OPPS/ASC proposed rule (81 FR 45759), we proposed to use 15 minutes in calculating the time required to chart-abstract data, unless we have historical data that indicate that this approximation is not accurate.

b. Hourly Labor Cost

Previously, we used $30 as our hourly labor cost in calculating the burden associated with chart-abstraction activities. This labor cost is different from those used in other quality reporting and value-based purchasing programs, and we do not believe there is a justification for these different numbers given the similarity in quality measures and required staff. Therefore, in the CY 2017 OPPS/ASC proposed rule (81 FR 45759), we proposed to align these numbers and use one hourly labor cost across programs for purposes of burden calculations. Specifically, we proposed to use an hourly labor cost (hourly wage plus fringe and overhead, as discussed below) of $32.84. This labor cost is based on the Bureau of Labor Statistics (BLS) wage for a Medical Records and Health Information Technician. The BLS is ''the principal Federal agency responsible for measuring labor market activity, working conditions, and price changes in the economy.'' [261] Acting as an independent agency, the BLS provides objective information for not only the government, but also for the public. The BLS describes Medical Records and Health Information Technicians as those responsible for organizing and managing health information data. Therefore, we believe it is reasonable to assume that these individuals will be tasked with abstracting clinical data for these measures. According to the BLS, the median pay for Medical Records and Health Information Technicians is $16.42 per hour.[262]

However, obtaining data on other overhead costs is challenging because overhead costs may vary greatly across ASCs. In addition, the precise cost elements assigned as ''indirect'' or ''overhead'' costs, as opposed to direct costs or employee wages, are subject to some interpretation at the facility level. Therefore, in the CY 2017 OPPS/ASC proposed rule (81 FR 45759), we proposed to calculate the cost of overhead at 100 percent of the mean hourly wage. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer to employer. Nonetheless, there is no practical alternative, and we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method. We note that in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57260, 57266, and 57339), we used

[261] *http://www.bls.gov/bls/infohome.htm.*

[262] *http://www.bls.gov/ooh/healthcare/medical-records-and-health-information-technicians.htm.*

a similar adjustment for a couple other quality reporting programs. Therefore, we proposed to apply an hourly labor cost of $32.84 ($16.42 base salary + $16.42 fringe and overhead) to our burden calculations.

We did not receive any public comments on our proposals to utilize: (1) A standard estimate of the time required for abstracting chart data for measures based on historical data from other quality reporting programs, specifically, 15 minutes; and (2) a standard hourly labor cost for chart abstraction activities, specifically, $32.84. Therefore, we are finalizing our proposals as proposed.

3. Estimated Burden of ASCQR Program Newly Finalized Proposals for the CY 2018 Payment Determination

For the CY 2018 payment determination and subsequent years, we are finalizing a few proposals. In section XIV.B.7 of this final rule with comment period, we are finalizing our proposal to publicly display data on the *Hospital Compare* Web site, or other CMS Web site, as soon as possible after measure data have been submitted to CMS. In addition, we are finalizing our proposal that ASCs will generally have approximately 30 days to preview their data. Both of these finalized proposals are consistent with current practice. Lastly, we are finalizing our proposal to announce the timeframes for the preview period starting with the CY 2018 payment determination on a CMS Web site and/or on our applicable listservs. We believe that these finalized changes to the ASCQR Program public reporting policies will have no effect on burden for ASCs because these changes will not require participating ASCs to submit additional data to CMS.

4. Estimated Burden of ASCQR Program Newly Finalized Proposals for the CY 2019 Payment Determination

For the CY 2019 payment determination and subsequent years, we are finalizing two new proposals. In section XIV.D.3. of this final rule with comment period, we are finalizing our proposal to implement a submission deadline with an end date of May 15 for all data submitted via a CMS Web-based tool beginning with the CY 2019 payment determination as proposed. (For all data submitted via a non-CMS Web-based tool, ASCs are already required to submit by May 15 of the year prior to the affected payment determination year (79 FR 66985 through 66986).) We do not anticipate additional burden as the data collection and submission requirements have not changed; only the deadline will be moved to a slightly earlier date that we anticipate will alleviate burden by aligning data submission deadlines. We also are finalizing our proposal to make corresponding changes to the regulations at 42 CFR 416.310(c)(1)(ii) to reflect this change in submission deadline, as proposed. We do not anticipate any additional burden to ASCs as a result of codifying this policy.

In addition, in section XIV.D.6. of this final rule with comment period, we are finalizing our proposal to extend the time for filing an Extraordinary Circumstance Exception or Exemption from within 45 days of the date that the extraordinary circumstance occurred to within 90 days of the date that the extraordinary circumstance occurred as proposed. We do not anticipate that there will be any additional burden as the materials to be submitted are unchanged and the deadline does not result in reduced time to submit an extension or exemption. We also are finalizing our proposal to make corresponding changes to the regulations at 42 CFR 416.310(d)(1) to reflect this change to 90 days, as proposed. We do not anticipate any additional burden to ASCs as a result of codifying this policy.

5. Estimated Burden of ASCQR Program Newly Finalized Proposals for the CY 2020 Payment Determination

For the CY 2020 payment determination and subsequent years, we are finalizing our proposals to add two new measures collected via a CMS online data submission tool and five survey-based measures to the ASCQR Program measure set. In section XIV.B.4. of this final rule with comment period, we are finalizing our proposals, as proposed, to add the following measures collected via a CMS online data submission tool: ASC–13: Normothermia Outcome and ASC–14: Unplanned Anterior Vitrectomy. In the same section, we are finalizing our proposals to adopt the following survey-based measures: (1) ASC–15a: OAS CAHPS—About Facilities and Staff; (2) ASC–15b: OAS CAHPS—Communication About Procedure; (3) ASC–15c: OAS CAHPS—Preparation for Discharge and Recovery; (4) ASC–15d: OAS CAHPS—Overall Rating of Facility; and (5) ASC–15e: OAS CAHPS—Recommendation of Facility.

We believe ASCs will incur a financial burden associated with abstracting numerators, denominators, and exclusions for the two newly adopted measures collected and reported via a CMS online data submission tool (ASC–13 and ASC–14). Using the burden estimate values for chart-abstracted measures discussed in section XXI.C.2. of this final rule with comment period, we estimate that each participating ASC will spend 15 minutes per case to collect and submit the data, making the total estimated burden for all ASCs with a single case per ASC of 1,315 hours (5,260 ASCs × 0.25 hours per case per ASC), and 82,845 hours for each measure across all ASCs based on a historic average of 63 cases. Therefore, we estimate that the reporting burden for all ASCs with a single case per ASC for newly finalized ASC–13 and ASC–14 will be 1,315 hours and $43,185 [263] (1,315 hours × $32.84 per hour), and 82,845 hours (1,315 × 63 cases) and $2,720,630 (82,845 hours × $32.84 per hour) for each measure across all ASCs based on an historic average of 63 cases for the CY 2020 payment determination. The additional burden associated with these requirements is available for review and comment under OMB Control Number 0938–1270.

The information collection requirements associated with the five newly adopted OAS CAHPS Survey-based measures (ASC–15a, ASC–15b, ASC–15c, ASC–15d, and ASC–15e) are currently approved under OMB Control Number 0938–1240. For this reason, in the CY 2017 OPPS/ASC proposed rule (81 FR 45760), we did not provide an independent estimate of the burden associated with OAS CAHPS Survey administration for the ASCQR Program.

6. Reconsideration

For a complete discussion of the ASCQR Program's reconsideration processes, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53643 through 53644), the CY 2014 OPPS/ASC final rule with comment period (78 FR 75141), and the CY 2016 final rule with comment period (80 FR 75141). In the CY 2017 OPPS/ASC proposed rule, we did not propose any changes to this process.

While there is burden associated with filing a reconsideration request, 5 CFR 1320.4 of OMB's implementing regulations for the Paperwork Reduction Act of 1995 excludes collection activities during the conduct of administrative actions such as reconsiderations.

We invited public comment on the burden associated with these information collection requirements. We did not receive any public comments on

[263] We note that in the CY 2017 OPPS/ASC proposed rule (81 FR 45760) this value appeared as $42,185. This was a typographical error; the correct value for this burden estimate is $43,185, the product of 1,315 hours multiplied by $32.84 per hour.

our estimates of the burden associated with these information collection requirements. Therefore, we are finalizing our burden estimates as discussed above.

D. ICRs Relating to Changes in Transplant Enforcement Performance Thresholds

In section XV. of this final rule with comment period, we discuss changes to the enforcement performance thresholds relating to patient and graft survival outcomes. The changes will impose no new burdens on transplant programs. The changes do not impose any new information collection or recordkeeping requirements. Consequently, review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 is not required.

E. ICRs for Changes Relating to Organ Procurement Organizations (OPOs)

In section XVI. of this final rule with comment period, we are finalizing several proposed changes to definitions, outcome measures and documentation requirements for OPOs. In section XVI.B.1. of this final rule with comment period, we are revising the definition of ''eligible death.'' In section XVI.B.2 of this final rule with comment period, we are finalizing our proposal to adjust the outcome performance yield measure to align CMS with the SRTR yield metric. In section XVI.B.3. of this final rule with comment period, we are finalizing our proposal to reduce the amount of hard copy documentation that is packaged and shipped with each organ. These finalized changes do not impose any new information collection or recordkeeping requirements. Consequently, review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 is not required.

Finally, in section XVII. of this final rule with comment period, we are finalizing our proposal to make a technical correction to the enforcement provisions for transplant centers and to clarify our policy regarding SIAs. These changes do not impose information collection and recordkeeping requirements. Consequently, review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 is not required.

F. ICRs Relating to Changes to the Electronic Health Record (EHR) Incentive Program

In section XVIII. of this final rule with comment period, we discuss our proposed and finalized policy changes for eligible hospitals and CAHs attesting to CMS for Modified Stage 2 and Stage 3 to eliminate the Clinical Decision Support (CDS) and Computerized Provider Order Entry (CPOE) objectives and measures and reduce the reporting thresholds for a subset of the remaining objectives and measures, generally to the Modified Stage 2 thresholds. We believe that there will be a reduction in burden by not reporting for the CDS (1 minute) and CPOE (10 minutes) objectives and measures. This will reduce the total burden associated with these measures by a total of 11 minutes. This will reduce the time to attest to objectives and measures for Modified Stage 2 (495.22) from 6 hours and 48 minutes to 6 hours and 37 minutes and for the Stage 3 from 6 hours and 52 minutes to 6 hours and 41 minutes. We refer readers to the 2015 EHR Incentive Programs Final Rule for the detailed analysis of the burden associated with the objectives and measures (80 FR 62916 through 62924).

While we do believe that eliminating requirements will decrease the associated information collection burden, we believe that the reduction detailed below falls within an acceptable margin of error, and therefore we will not be revising the information collection request currently approved under 0938–1158.

We discuss our proposed and finalized policies to change the EHR reporting period in 2016 and 2017 from the full calendar year to any continuous 90-day period within the calendar year for all returning EPs, eligible hospitals and CAHs in the Medicare and Medicaid EHR Incentive Programs; require new participants in 2017 who are seeking to avoid the 2018 payment adjustment by attestation by October 1, 2017 to attest to the Modified Stage 2 objectives and measures. We do not believe that modifying the EHR reporting period will cause an increase in burden as the reporting requirements for a 90 day reporting period are the same for a full calendar year reporting period. Instead, the burden is associated with data capture and measure calculations on the objectives and measures not the reporting period to which one will attest for.

We discuss our proposed and finalized policy changes to allow for a one-time significant hardship exception from the 2018 payment adjustment for certain EPs who are new participants in the EHR Incentive Program in 2017 and are transitioning to MIPS in 2017. The hardship exception process involves participants completing an application form for an exception. While the form is standardized, we believe it is exempt from the PRA. The form is structured as an attestation. Therefore, we believe it is exempt under 5 CFR 1320.3(h)(1) of the implementing regulations of the PRA. The form is an attestation that imposes no burden beyond what is required to provide identifying information and to attest to the applicable information.

G. ICRs Relating to Additional Hospital VBP Program Policies

In section XIX. of this final rule with comment period, we discuss finalizing our proposal to change the scoring methodology for the Patient- and Caregiver-Centered Experience of Care/Care Coordination domain in the Hospital VBP Program by removing the HCAHPS Pain Management dimension. As required under section 1886(o)(2)(A) of the Act, the HCAHPS Survey is used in the Hospital IQR Program. Therefore, the removal of the Pain Management dimension from the survey for purposes of the Hospital VBP Program does not change the reporting burden for hospitals because the data will still be used for the Hospital IQR Program. The finalized change to the scoring methodology for the Patient- and Caregiver-Centered Experience of Care/Care Coordination domain in the Hospital VBP Program also will not result in any change to the reporting burden.

H. ICRs for Payment for Off-Campus Provider-Based Departments Policy Changes for CY 2017

In section X.A. of this final rule with comment period, we discuss finalized proposals for the implementation of section 603 of the Bipartisan Budget Act of 2015. The finalized proposals will impose no new information collection requirements for CY 2017. Consequently, review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 is not required.

Any public comments on estimates of the burden associated with implementation of section 603 of the Bipartisan Budget Act of 2015 are summarized and addressed in section X.A. of this final rule with comment period.

XXII. Waiver of Proposed Rulemaking and Response to Comments

A. Waiver of Proposed Rulemaking

We ordinarily publish a notice of proposed rulemaking in the **Federal Register** and invite public comment on a proposed rule. The notice of proposed rulemaking includes a reference to the legal authority under which the rule is proposed, and the terms and substance of the proposed rule or a description of the subjects and issues involved. This

procedure can be waived, however, if an agency finds good cause that a notice-and-comment procedure is impracticable, unnecessary, or contrary to the public interest and incorporates a statement of the finding and its reasons in the rule issued.

We utilize HCPCS codes for Medicare payment purposes. The HCPCS is a national coding system comprised of Level I codes (CPT codes) and Level II codes that are intended to provide uniformity to coding procedures, services, and supplies across all types of medical providers and suppliers. CPT codes are copyrighted by the AMA and consist of several categories, including Category I codes which are 5-digit numeric codes, and Category III codes which are temporary codes to track emerging technology, services, and procedures. The AMA issues an annual update of the CPT code set each Fall, with January 1 as the effective date for implementing the updated CPT codes. The HCPCS codes, including both CPT codes and Level II codes, are similarly updated annually on a calendar year basis. Annual Level II coding changes are not available to the public until the Fall immediately preceding the annual January update of the OPPS and the ASC payment system. Because of the timing of the release of these new codes, it is impracticable for us to provide prior notice and solicit comment on the Level II codes and the payments assigned to them in advance of publication of the final rule that implements the OPPS and the ASC payment system. However, it is imperative that these coding changes be accounted for and recognized timely under the OPPS and the ASC payment system for payment because services represented by these codes will be provided to Medicare beneficiaries in hospital outpatient departments and ASCs during the calendar year in which they become effective. Moreover, regulations implementing the HIPAA (42 CFR parts 160 and 162) require that the HCPCS codes be used to report health care services, including services paid under the OPPS and the ASC payment system. We assign interim payment amounts and status indicators to any new codes according to our assessment of the most appropriate APC based on clinical and resource homogeneity with other procedures and services in the APC. If we did not assign payment amounts to new codes on an interim basis, the alternative would be to not pay for these services during the initial calendar year in which the codes become effective. We believe it would be contrary to the public interest to delay establishment of payment amounts for these codes.

Therefore, we find good cause to waive the notice of proposed rulemaking for the establishment of payment amounts for selected HCPCS codes identified with comment indicator ''NI'' in Addendum B and Addendum BB to this final rule with comment period. We are providing a 60-day public comment period.

B. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this final rule with comment period, and, when we proceed with a subsequent document(s), we will respond to those comments in the preamble to that document.

XXIII. Economic Analyses

A. Regulatory Impact Analysis

1. Introduction

We have examined the impacts of this final rule with comment period, as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) (March 22, 1995, Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the Contract with America Advancement Act of 1996 (Pub. L. 104–121) (5 U.S.C. 804(2)). This section of the final rule with comment period contains the impact and other economic analyses for the provisions that we are finalizing for CY 2017.

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This final rule with comment period has been designated as an economically significant rule under section 3(f)(1) of Executive Order 12866 and a major rule under the Contract with America Advancement Act of 1996 (Pub. L. 104–121). Accordingly, this final rule with comment period has been reviewed by the Office of Management and Budget. We have prepared a regulatory impact analysis that, to the best of our ability, presents the costs and benefits of this final rule with comment period. In the CY 2017 OPPS/ASC proposed rule (81 FR 45761), we solicited public comments on the regulatory impact analysis in the proposed rule, and we are addressing any public comments we received in this final rule with comment period as appropriate.

2. Statement of Need

This final rule with comment period is necessary to make updates to the Medicare hospital OPPS rates. It is necessary to make changes to the payment policies and rates for outpatient services furnished by hospitals and CMHCs in CY 2017. We are required under section 1833(t)(3)(C)(ii) of the Act to update annually the OPPS conversion factor used to determine the payment rates for APCs. We also are required under section 1833(t)(9)(A) of the Act to review, not less often than annually, and revise the groups, the relative payment weights, and the wage and other adjustments described in section 1833(t)(2) of the Act. We must review the clinical integrity of payment groups and relative payment weights at least annually. We are revising the APC relative payment weights using claims data for services furnished on and after January 1, 2015, through and including December 31, 2015, and processed through June 30, 2016, and updated cost report information.

This final rule with comment period also is necessary to make updates to the ASC payment rates for CY 2017, enabling CMS to make changes to payment policies and payment rates for covered surgical procedures and covered ancillary services that are performed in an ASC in CY 2017. Because ASC payment rates are based on the OPPS relative payment weights for the majority of the procedures performed in ASCs, the ASC payment rates are updated annually to reflect annual changes to the OPPS relative payment weights. In addition, we are required under section 1833(i)(1) of the Act to review and update the list of surgical procedures that can be performed in an ASC not less frequently than every 2 years.

3. Overall Impacts for the OPPS and ASC Payment Provisions

We estimate that the total increase in Federal government expenditures under the OPPS for CY 2017, compared to CY 2016 due to the changes in this final rule with comment period, will be approximately $773 million. Taking into account our estimated changes in enrollment, utilization, and case-mix, we estimate that the OPPS expenditures for CY 2017 will be approximately $5.0 billion higher relative to expenditures in CY 2016. We note that this estimate of $5.0 billion does not include the implementation of section 603 of the Bipartisan Budget Act of 2015 in CY 2017, which we estimate will reduce Part B expenditures by $50 million in CY 2017. Because this final rule with comment period is economically significant as measured by the threshold of an additional $100 million in expenditures in 1 year, we have prepared this regulatory impact analysis that, to the best of our ability, presents its costs and benefits. Table 52 displays the distributional impact of the CY 2017 changes in OPPS payment to various groups of hospitals and for CMHCs.

We estimate that the update to the conversion factor and other adjustments (not including the effects of outlier payments, the pass-through estimates, and the application of the frontier State wage adjustment for CY 2016) will increase total OPPS payments by 1.7 percent in CY 2017. The changes to the APC relative payment weights, the changes to the wage indexes, the continuation of a payment adjustment for rural SCHs, including EACHs, and the payment adjustment for cancer hospitals will not increase OPPS payments because these changes to the OPPS are budget neutral. However, these updates will change the distribution of payments within the budget neutral system. We estimate that the total change in payments between CY 2016 and CY 2017, considering all payments, changes in estimated total outlier payments, pass-through payments, and the application of the frontier State wage adjustment outside of budget neutrality, in addition to the application of the OPD fee schedule increase factor after all adjustments required by sections 1833(t)(3)(F), 1833(t)(3)(G), and 1833(t)(17) of the Act, will increase total estimated OPPS payments by 1.7 percent.

We estimate the total increase (from changes to the ASC provisions in this final rule with comment period as well as from enrollment, utilization, and case-mix changes) in Medicare expenditures under the ASC payment system for CY 2017 compared to CY 2016 to be approximately $177 million. Because the provisions for the ASC payment system are part of a final rule that is economically significant as measured by the $100 million threshold, we have prepared a regulatory impact analysis of the changes to the ASC payment system that, to the best of our ability, presents the costs and benefits of this portion of this final rule with comment period. Table 53 and 54 of this final rule with comment period display the redistributive impact of the CY 2017 changes regarding ASC payments, grouped by specialty area and then grouped by procedures with the greatest ASC expenditures, respectively.

4. Detailed Economic Analyses

a. Estimated Effects of OPPS Changes in This Final Rule With Comment Period

(1) Limitations of Our Analysis

The distributional impacts presented here are the projected effects of the CY 2017 policy changes on various hospital groups. We post on the CMS Web site our hospital-specific estimated payments for CY 2017 with the other supporting documentation for this final rule with comment period. To view the hospital-specific estimates, we refer readers to the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html.* At the Web site, select ''regulations and notices'' from the left side of the page and then select ''CMS–1656–FC'' from the list of regulations and notices. The hospital-specific file layout and the hospital-specific file are listed with the other supporting documentation for this final rule with comment period. We show hospital-specific data only for hospitals whose claims were used for modeling the impacts shown in Table 52 below. We do not show hospital-specific impacts for hospitals whose claims we were unable to use. We refer readers to section II.A. of this final rule with comment period for a discussion of the hospitals whose claims we do not use for ratesetting and impact purposes.

We estimate the effects of the individual policy changes by estimating payments per service, while holding all other payment policies constant. We use the best data available, but do not attempt to predict behavioral responses to our policy changes. In addition, we have not made adjustments for future changes in variables such as service volume, service-mix, or number of encounters.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45762), we solicited public comment and information about the anticipated effects of the proposed changes included in the proposed rule on providers and our methodology for estimating them. Any public comments that we receive are addressed in the applicable sections of this final rule with comment period that discuss the specific policies.

(2) Estimated Effects of OPPS Changes on Hospitals

Table U1 below shows the estimated impact of this final rule with comment period on hospitals. Historically, the first line of the impact table, which estimates the change in payments to all facilities, has always included cancer and children's hospitals, which are held harmless to their pre-BBA amount. We also include CMHCs in the first line that includes all providers. We now include a second line for all hospitals, excluding permanently held harmless hospitals and CMHCs.

We present separate impacts for CMHCs in Table 52, and we discuss them separately below, because CMHCs are paid only for partial hospitalization services under the OPPS and are a different provider type from hospitals. In CY 2017, we are paying CMHCs for partial hospitalization services under only one APC 5853 (Partial Hospitalization for CMHCs), and we are paying hospitals for partial hospitalization services under only one APC 5863 (Partial Hospitalization for Hospital-Based PHPs).

The estimated increase in the total payments made under the OPPS is determined largely by the increase to the conversion factor under the statutory methodology. The distributional impacts presented do not include assumptions about changes in volume and service-mix. The conversion factor is updated annually by the OPD fee schedule increase factor as discussed in detail in section II.B. of this final rule with comment period. Section 1833(t)(3)(C)(iv) of the Act provides that the OPD fee schedule increase factor is equal to the market basket percentage increase applicable under section 1886(b)(3)(B)(iii) of the Act, which we refer to as the IPPS market basket percentage increase. The IPPS market basket percentage increase for FY 2017 is 2.7 percent (81 FR 56938). Section 1833(t)(3)(F)(i) of the Act reduces that 2.7 percent by the multifactor productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act, which is 0.3 percentage point for FY 2017 (which is also the MFP adjustment for FY 2017 in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56939)), and sections 1833(t)(3)(F)(ii) and 1833(t)(3)(G)(v) of the Act further

reduce the market basket percentage increase by 0.75 percentage point, resulting in the OPD fee schedule increase factor of 1.65 percent. We are using the OPD fee schedule increase factor of 1.65 percent in the calculation of the CY 2017 OPPS conversion factor. Section 10324 of the Affordable Care Act, as amended by HCERA, further authorized additional expenditures outside budget neutrality for hospitals in certain frontier States that have a wage index less than 1.0000. The amounts attributable to this frontier State wage index adjustment are incorporated in the CY 2017 estimates in Table 52.

To illustrate the impact of the CY 2017 changes, our analysis begins with a baseline simulation model that uses the CY 2016 relative payment weights, the FY 2016 final IPPS wage indexes that include reclassifications, and the final CY 2016 conversion factor. Table 52 shows the estimated redistribution of the increase or decrease in payments for CY 2017 over CY 2016 payments to hospitals and CMHCs as a result of the following factors: the impact of the APC reconfiguration and recalibration changes between CY 2016 and CY 2017 (Column 2); the wage indexes and the provider adjustments (Column 3); the combined impact of all of the changes described in the preceding columns plus the 1.65 percent OPD fee schedule increase factor update to the conversion factor; and the estimated impact taking into account all payments for CY 2017 relative to all payments for CY 2016, including the impact of changes in estimated outlier payments, the frontier State wage adjustment, and changes to the pass-through payment estimate (Column 5).

We did not model an explicit budget neutrality adjustment for the rural adjustment for SCHs because we are maintaining the current adjustment percentage for CY 2017. Because the updates to the conversion factor (including the update of the OPD fee schedule increase factor), the estimated cost of the rural adjustment, and the estimated cost of projected pass-through payment for CY 2017 are applied uniformly across services, observed redistributions of payments in the impact table for hospitals largely depend on the mix of services furnished by a hospital (for example, how the APCs for the hospital's most frequently furnished services will change), and the impact of the wage index changes on the hospital. However, total payments made under this system and the extent to which this final rule with comment period will redistribute money during implementation also will depend on changes in volume, practice patterns, and the mix of services billed between CY 2016 and CY 2017 by various groups of hospitals, which CMS cannot forecast.

Overall, we estimate that the rates for CY 2017 will increase Medicare OPPS payments by an estimated 1.7 percent. Removing payments to cancer and children's hospitals because their payments are held harmless to the pre-OPPS ratio between payment and cost and removing payments to CMHCs results in an estimated 1.8 percent increase in Medicare payments to all other hospitals. These estimated payments will not significantly impact other providers.

Column 1: Total Number of Hospitals

The first line in Column 1 in Table U1 shows the total number of facilities (3,906), including designated cancer and children's hospitals and CMHCs, for which we were able to use CY 2015 hospital outpatient and CMHC claims data to model CY 2016 and CY 2017 payments, by classes of hospitals, for CMHCs and for dedicated cancer hospitals. We excluded all hospitals and CMHCs for which we could not plausibly estimate CY 2016 or CY 2017 payment and entities that are not paid under the OPPS. The latter entities include CAHs, all-inclusive hospitals, and hospitals located in Guam, the U.S. Virgin Islands, Northern Mariana Islands, American Samoa, and the State of Maryland. This process is discussed in greater detail in section II.A. of this final rule with comment period. At this time, we are unable to calculate a disproportionate share hospital (DSH) variable for hospitals that are not also paid under the IPPS because DSH payments are only made to hospitals paid under the IPPS. Hospitals for which we do not have a DSH variable are grouped separately and generally include freestanding psychiatric hospitals, rehabilitation hospitals, and long-term care hospitals. We show the total number of OPPS hospitals (3,789), excluding the hold-harmless cancer and children's hospitals and CMHCs, on the second line of the table. We excluded cancer and children's hospitals because section 1833(t)(7)(D) of the Act permanently holds harmless cancer hospitals and children's hospitals to their ''pre-BBA amount'' as specified under the terms of the statute, and therefore, we removed them from our impact analyses. We show the isolated impact on the 50 CMHCs at the bottom of the impact table and discuss that impact separately below.

Column 2: APC Recalibration—All Changes

Column 2 shows the estimated effect of APC recalibration. Column 2 also reflects any changes in multiple procedure discount patterns or conditional packaging that occur as a result of the changes in the relative magnitude of payment weights. As a result of APC recalibration, we estimate that urban hospitals will experience no change, with the impact ranging from an increase of 0.2 percent to a decrease of 0.3 percent, depending on the number of beds. Rural hospitals will experience a 0.2 percent increase, with the impact ranging from an increase of 0.1 percent to 0.3 percent, depending on the number of beds. Major teaching hospitals will experience a decrease of 0.2 percent overall.

Column 3: Wage Indexes and the Effect of the Final Provider Adjustments

Column 3 demonstrates the combined budget neutral impact of the APC recalibration; the updates for the wage indexes with the FY 2017 IPPS post-reclassification wage indexes; the rural adjustment; and the cancer hospital payment adjustment. We modeled the independent effect of the budget neutrality adjustments and the OPD fee schedule increase factor by using the relative payment weights and wage indexes for each year, and using a CY 2016 conversion factor that included the OPD fee schedule increase and a budget neutrality adjustment for differences in wage indexes.

Column 3 reflects the independent effects of the updated wage indexes, including the application of budget neutrality for the rural floor policy on a nationwide basis. This column excludes the effects of the frontier State wage index adjustment, which is not budget neutral and is included in Column 5. We did not model a budget neutrality adjustment for the rural adjustment for SCHs because we are continuing the rural payment adjustment of 7.1 percent to rural SCHs for CY 2017, as described in section II.E. of this final rule with comment period.

We modeled the independent effect of updating the wage indexes by varying only the wage indexes, holding APC relative payment weights, service-mix, and the rural adjustment constant and using the CY 2017 scaled weights and a CY 2016 conversion factor that included a budget neutrality adjustment for the effect of the changes to the wage indexes between CY 2016 and CY 2017. The FY 2017 wage policy results in modest redistributions.

There is a slight increase of less than 0.1 in Column 3 for the CY 2017 cancer hospital payment adjustment budget neutrality calculation, because we are using a payment-to-cost ratio target for the cancer hospital payment adjustment in CY 2017 of 0.91, compared to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70362 through 70363) payment-to-cost ratio target of 0.92.

Column 4: All Budget Neutrality Changes Combined With the Market Basket Update

Column 4 demonstrates the combined impact of all of the changes previously described and the update to the conversion factor of 1.65 percent. Overall, these changes will increase payments to urban hospitals by 1.7 percent and to rural hospitals by 2.2 percent. Most classes of hospitals will receive an increase in line with the 1.7 percent overall increase after the update is applied to the budget neutrality adjustments. Additionally, this column includes a slight increase of less than 0.1 to account for our final policy to package unrelated laboratory tests into OPPS payment.

Column 5: All Changes for CY 2017

Column 5 depicts the full impact of the CY 2017 policies on each hospital group by including the effect of all of the changes for CY 2017 and comparing them to all estimated payments in CY 2016. Column 5 shows the combined budget neutral effects of Column 2 and 3; the OPD fee schedule increase; the impact of the frontier State wage index adjustment; the impact of estimated OPPS outlier payments as discussed in section II.G. of this final rule with comment period; the change in the Hospital OQR Program payment reduction for the small number of hospitals in our impact model that failed to meet the reporting requirements (discussed in section XIII. of this final rule with comment period); and the difference in total OPPS payments dedicated to transitional pass-through payments.

Of those hospitals that failed to meet the Hospital OQR Program reporting requirements for the full CY 2016 update (and assumed, for modeling purposes, to be the same number for CY 2017), we included 50 hospitals in our model because they had both CY 2015 claims data and recent cost report data. We estimate that the cumulative effect of all of the changes for CY 2017 will increase payments to all facilities by 1.7 percent for CY 2017. We modeled the independent effect of all of the changes in Column 5 using the final relative payment weights for CY 2016 and the final relative payment weights for CY 2017. We used the final conversion factor for CY 2016 of $73.725 and the final CY 2017 conversion factor of $75.001 discussed in section II.B. of this final rule with comment period.

Column 5 contains simulated outlier payments for each year. We used the 1-year charge inflation factor used in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57286) of 4.8 percent (1.0481) to increase individual costs on the CY 2015 claims, and we used the most recent overall CCR in the July 2016 Outpatient Provider-Specific File (OPSF) to estimate outlier payments for CY 2016. Using the CY 2015 claims and a 4.8 percent charge inflation factor, we currently estimate that outlier payments for CY 2016, using a multiple threshold of 1.75 and a fixed-dollar threshold of $3,250 will be approximately 0.96 percent of total payments. The estimated current outlier payments of 0.96 percent are incorporated in the comparison in Column 5. We used the same set of claims and a charge inflation factor of 9.8 percent (1.0984) and the CCRs in the July 2016 OPSF, with an adjustment of 0.9688, to reflect relative changes in cost and charge inflation between CY 2015 and CY 2017, to model the CY 2017 outliers at 1.0 percent of estimated total payments using a multiple threshold of 1.75 and a fixed-dollar threshold of $3,825. The charge inflation and CCR inflation factors are discussed in detail in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57286).

Overall, we estimate that facilities will experience an increase of 1.7 percent under this final rule with comment period in CY 2017 relative to total spending in CY 2016. This projected increase (shown in Column 5) of Table 52 reflects the 1.65 percent OPD fee schedule increase factor, plus 0.04 percent to account for our finalized policy to package unrelated laboratory tests into OPPS payment, plus 0.02 percent for the change in the pass-through estimate between CY 2016 and CY 2017, plus 0.04 percent for the difference in estimated outlier payments between CY 2016 (0.96 percent) and CY 2017 (1.0 percent). We estimate that the combined effect of all of the changes for CY 2017 will increase payments to urban hospitals by 1.8 percent. Overall, we estimate that rural hospitals will experience a 2.2 percent increase as a result of the combined effects of all of the changes for CY 2017.

Among hospitals by teaching status, we estimate that the impacts resulting from the combined effects of all changes will include an increase of 1.5 percent for major teaching hospitals and an increase of 2.0 percent for nonteaching hospitals. Minor teaching hospitals will experience an estimated increase of 1.9 percent.

In our analysis, we also have categorized hospitals by type of ownership. Based on this analysis, we estimate that voluntary hospitals will experience an increase of 1.9 percent, proprietary hospitals will experience an increase of 1.8 percent, and governmental hospitals will experience an increase of 1.6 percent.

TABLE 52—ESTIMATED IMPACT OF THE CY 2017 CHANGES FOR THE HOSPITAL OUTPATIENT PROSPECTIVE PAYMENT SYSTEM

	Number of hospitals	APC recalibration (all changes)	New wage index and provider adjustments	All budget neutral changes (combined cols 2, 3) with market basket update	All changes
	(1)	(2)	(3)	(4)	(5)

CMHCs	50	−15.1	−0.4	−13.9	−13.7

Column (1) shows total hospitals and/or CMHCs.

Column (2) includes all CY 2017 OPPS policies and compares those to the CY 2016 OPPS.

Column (3) shows the budget neutral impact of updating the wage index by applying the final FY 2017 hospital inpatient wage index, including all hold harmless policies and transitional wages. The rural adjustment continues our current policy of 7.1 percent so the budget neutrality factor is 1. The budget neutrality adjustment for the cancer hospital adjustment is 1.0003 because the target payment-to-cost ratio target changes from 0.92 in CY 2016 to 0.91 in CY 2017 (80 FR 70362 through 70364).

Column (4) shows the impact of all budget neutrality adjustments and the addition of the final 1.65 percent OPD fee schedule update factor. It also includes the impact of the additional adjustment of 1.0004 for laboratory services with "L1" modifiers packaged into the OPPS.

Column (5) shows the additional adjustments to the conversion factor resulting from the frontier adjustment, a change in the pass-through payment estimate, and adding estimated outlier payments.

* These 3,906 providers include children and cancer hospitals, which are held harmless to pre-BBA amounts, and CMHCs.

** Complete DSH numbers are not available for providers that are not paid under IPPS, including rehabilitation, psychiatric, and long-term care hospitals.

(3) Estimated Effects of OPPS Changes on CMHCs

The last line of Table U1 demonstrates the isolated impact on CMHCs, which furnish only partial hospitalization services under the OPPS. In CY 2016, CMHCs are paid under two APCs for these services: APC 5851 (Level 1 Partial Hospitalization (3 services) for CMHCs) and APC 5852 (Level 2 Partial Hospitalization (4 or more services) for CMHCs). For CY 2017, we are to combining APCs 5851 and 5852 into new APC 5853 (Partial Hospitalization (3 or more services) for CMHCs). We modeled the impact of this APC policy assuming that CMHCs will continue to provide the same number of days of PHP care as seen in the CY 2015 claims data used for this final rule with comment period. We excluded days with 1 or 2 services because our policy only pays a per diem rate for partial hospitalization when 3 or more qualifying services are provided to the beneficiary. We estimate that CMHCs will experience an overall 13.7 percent decrease in payments from CY 2016 (shown in Column 5). We note that this includes the trimming methodology described in section VIII.B. of this final rule with comment period.

Column 3 shows that the estimated impact of adopting the FY 2017 wage index values will result in a small decrease of 0.4 percent to CMHCs. Column 4 shows that combining this OPD fee schedule increase factor, along with changes in APC policy for CY 2017 and the FY 2017 wage index updates, will result in an estimated decrease of 13.9 percent. Column 5 shows that adding the changes in outlier and pass-though payments will result in a total 13.7 percent decrease in payment for CMHCs. This reflects all changes to CMHCs for CY 2017.

(4) Estimated Effect of OPPS Changes on Beneficiaries

For services for which the beneficiary pays a copayment of 20 percent of the payment rate, the beneficiary's payment will increase for services for which the OPPS payments will rise and will decrease for services for which the OPPS payments will fall. For further discussion on the calculation of the national unadjusted copayments and minimum unadjusted copayments, we refer readers to section II.I. of this final rule with comment period. In all cases, section 1833(t)(8)(C)(i) of the Act limits beneficiary liability for copayment for a procedure performed in a year to the hospital inpatient deductible for the applicable year.

We estimate that the aggregate beneficiary coinsurance percentage will be 18.5 percent for all services paid under the OPPS in CY 2017. The estimated aggregate beneficiary coinsurance reflects general system adjustments, including the CY 2017 comprehensive APC payment policy discussed in section II.A.2.e. of this final rule with comment period.

(5) Estimated Effects of OPPS Changes on Other Providers

The relative payment weights and payment amounts established under the OPPS affect the payments made to ASCs as discussed in section XII. of this final rule with comment period. No types of providers or suppliers other than hospitals, CMHCs, and ASCs will be affected by the changes in this final rule with comment period.

(6) Estimated Effects of OPPS Changes on the Medicare and Medicaid Programs

The effect on the Medicare program is expected to be an increase of $773 million in program payments for OPPS services furnished in CY 2017. The effect on the Medicaid program is expected to be limited to copayments that Medicaid may make on behalf of Medicaid recipients who are also Medicare beneficiaries. We refer readers to our discussion of the impact on beneficiaries in section XXIII.A.4.a.(4) of this final rule with comment period.

(7) Alternative OPPS Policies Considered

Alternatives to the OPPS changes we are making and the reasons for our selected alternatives are discussed throughout this final rule with comment period.

b. Estimated Effects of CY 2017 ASC Payment System Policies

Most ASC payment rates are calculated by multiplying the ASC conversion factor by the ASC relative payment weight. As discussed fully in section XII. of this final rule with comment period, we are setting the CY 2017 ASC relative payment weights by scaling the CY 2017 OPPS relative payment weights by the ASC scalar of 0.9000. The estimated effects of the updated relative payment weights on payment rates are varied and are reflected in the estimated payments displayed in Tables 53 and 54 below.

Beginning in CY 2011, section 3401 of the Affordable Care Act requires that the annual update to the ASC payment system (which currently is the CPI–U) after application of any quality reporting reduction be reduced by a productivity adjustment. The Affordable Care Act defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multifactor productivity (MFP) (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost reporting period, or other annual period). For ASCs that fail to meet their quality reporting requirements, the CY 2017 payment determinations will be based on the application of a 2.0 percentage points reduction to the annual update factor, which currently is the CPI–U. We calculated the CY 2017 ASC conversion factor by adjusting the CY 2016 ASC conversion factor by 0.9997 to account for changes in the pre-floor and pre-reclassified hospital wage indexes between CY 2016 and CY 2017 and by applying the CY 2017 MFP-adjusted CPI–U update factor of 1.9 percent (projected CPI–U update of 2.2 percent minus a projected productivity adjustment of 0.3 percentage point). The CY 2017 ASC conversion factor is $45.016.

(1) Limitations of Our Analysis

Presented here are the projected effects of the changes for CY 2017 on Medicare payment to ASCs. A key limitation of our analysis is our inability to predict changes in ASC service-mix between CY 2015 and CY 2017 with precision. We believe that the net effect on Medicare expenditures resulting from the CY 2017 changes will be small in the aggregate for all ASCs. However, such changes may have differential effects across surgical specialty groups as ASCs continue to adjust to the payment rates based on the policies of the revised ASC payment system. We are unable to accurately project such changes at a disaggregated level. Clearly, individual ASCs will experience changes in payment that differ from the aggregated estimated impacts presented below.

(2) Estimated Effects of ASC Payment System Policies on ASCs

Some ASCs are multispecialty facilities that perform the gamut of surgical procedures from excision of lesions to hernia repair to cataract extraction; others focus on a single specialty and perform only a limited range of surgical procedures, such as eye, digestive system, or orthopedic procedures. The combined effect on an individual ASC of the update to the CY 2017 payments will depend on a number of factors, including, but not limited to, the mix of services the ASC provides, the volume of specific services provided by the ASC, the percentage of its patients who are Medicare

beneficiaries, and the extent to which an ASC provides different services in the coming year. The following discussion presents tables that display estimates of the impact of the CY 2017 updates to the ASC payment system on Medicare payments to ASCs, assuming the same mix of services as reflected in our CY 2015 claims data. Table 53 depicts the estimated aggregate percent change in payment by surgical specialty or ancillary items and services group by comparing estimated CY 2016 payments to estimated CY 2017 payments, and Table 54 shows a comparison of estimated CY 2016 payments to estimated CY 2017 payments for procedures that we estimate will receive the most Medicare payment in CY 2016.

Table 53 shows the estimated effects on aggregate Medicare payments under the ASC payment system by surgical specialty or ancillary items and services group. We have aggregated the surgical HCPCS codes by specialty group, grouped all HCPCS codes for covered ancillary items and services into a single group, and then estimated the effect on aggregated payment for surgical specialty and ancillary items and services groups. The groups are sorted for display in descending order by estimated Medicare program payment to ASCs. The following is an explanation of the information presented in Table 53.

- Column 1—Surgical Specialty or Ancillary Items and Services Group indicates the surgical specialty into which ASC procedures are grouped and the ancillary items and services group which includes all HCPCS codes for covered ancillary items and services. To group surgical procedures by surgical specialty, we used the CPT code range definitions and Level II HCPCS codes and Category III CPT codes as appropriate, to account for all surgical procedures to which the Medicare program payments are attributed.
- Column 2—Estimated CY 2016 ASC Payments were calculated using CY 2015 ASC utilization (the most recent full year of ASC utilization) and CY 2016 ASC payment rates. The surgical specialty and ancillary items and services groups are displayed in descending order based on estimated CY 2016 ASC payments.
- Column 3—Estimated CY 2017 Percent Change is the aggregate percentage increase or decrease in Medicare program payment to ASCs for each surgical specialty or ancillary items and services group that are attributable to updates to ASC payment rates for CY 2017 compared to CY 2016.

As seen in Table 53, for the six specialty groups that account for the most ASC utilization and spending, we estimate that the update to ASC payment rates for CY 2017 will result in a 2-percent increase in aggregate payment amounts for eye and ocular adnexa procedures, a 1-percent increase in aggregate payment amounts for digestive system procedures, no change in aggregate payment amounts for nervous system procedures, a 8-percent increase in aggregate payment amounts for musculoskeletal system procedures, a 1-percent decrease in aggregate payment amounts for genitourinary system procedures, and a 3-percent decrease in aggregate payment amounts for integumentary system procedures.

Also displayed in Table 53 is a separate estimate of Medicare ASC payments for the group of separately payable covered ancillary items and services. The payment estimates for the covered surgical procedures include the costs of packaged ancillary items and services. We estimate that aggregate payments for these items and services will be $31 million for CY 2017.

TABLE 53—ESTIMATED IMPACT OF THE CY 2017 UPDATE TO THE ASC PAYMENT SYSTEM ON AGGREGATE CY 2017 MEDICARE PROGRAM PAYMENTS BY SURGICAL SPECIALTY OR ANCILLARY ITEMS AND SERVICES GROUP

Surgical specialty group	Estimated CY 2016 ASC payments (in millions)	Estimated CY 2017 percent change
(1)	(2)	(3)
Total	$3,993	2
Eye and ocular adnexa	1,556	2
Digestive system	813	1
Nervous system	687	0
Musculoskeletal system	466	8
Genitourinary system	178	−1
Integumentary system	132	−3

Table 54 below shows the estimated impact of the updates to the revised ASC payment system on aggregate ASC payments for selected surgical procedures during CY 2017. The table displays 30 of the procedures receiving the greatest estimated CY 2016 aggregate Medicare payments to ASCs. The HCPCS codes are sorted in descending order by estimated CY 2016 program payment.

- Column 1–CPT/HCPCS code.
- Column 2–Short Descriptor of the HCPCS code.
- Column 3–Estimated CY 2016 ASC Payments were calculated using CY 2015 ASC utilization (the most recent full year of ASC utilization) and the CY 2016 ASC payment rates. The estimated CY 2016 payments are expressed in millions of dollars.
- Column 4–Estimated CY 2017 Percent Change reflects the percent differences between the estimated ASC payment for CY 2016 and the estimated payment for CY 2017 based on the update.

TABLE 54—ESTIMATED IMPACT OF THE CY 2017 UPDATE TO THE ASC PAYMENT SYSTEM ON AGGREGATE PAYMENTS FOR SELECTED PROCEDURES

CPT/HCPCS code	Short descriptor	Estimated CY 2016 ASC payment (in millions)	Estimated CY 2017 percent change

67904	Repair eyelid defect	18	2

(3) Estimated Effects of ASC Payment System Policies on Beneficiaries

We estimate that the CY 2017 update to the ASC payment system will be generally positive for beneficiaries with respect to the new procedures that we are adding to the ASC list of covered surgical procedures and for those that we are designating as office-based for CY 2017. First, other than certain preventive services where coinsurance and the Part B deductible is waived to comply with sections 1833(a)(1) and (b) of the Act, the ASC coinsurance rate for all procedures is 20 percent. This contrasts with procedures performed in HOPDs under the OPPS, where the beneficiary is responsible for copayments that range from 20 percent to 40 percent of the procedure payment (other than for certain preventive services). Second, in almost all cases, the ASC payment rates under the ASC payment system are lower than payment rates for the same procedures under the OPPS. Therefore, the beneficiary coinsurance amount under the ASC payment system will almost always be less than the OPPS copayment amount for the same services. (The only exceptions would be if the ASC coinsurance amount exceeds the inpatient deductible. The statute requires that copayment amounts under the OPPS not exceed the inpatient deductible.) Beneficiary coinsurance for services migrating from physicians' offices to ASCs may decrease or increase under the revised ASC payment system, depending on the particular service and the relative payment amounts under the MPFS compared to the ASC. However, for those additional procedures that we are designating as office-based in CY 2017, the beneficiary coinsurance amount under the ASC payment system generally will be no greater than the beneficiary coinsurance under the MPFS because the coinsurance under both payment systems generally is 20 percent (except for certain preventive services where the coinsurance is waived under both payment systems).

(4) Alternative ASC Payment Policies Considered

Alternatives to the ASC changes we are making and the reasons for our selected alternatives are discussed throughout this final rule with comment period.

c. Accounting Statements and Tables

As required by OMB Circular A–4 (available on the Office of Management and Budget Web site at: *https://www.whitehouse.gov/sites/default/files/omb/assets/regulatory_matters_pdf/a-4.pdf*, we have prepared two accounting statements to illustrate the impacts of this final rule with comment period. The first accounting statement, Table 55 below, illustrates the classification of expenditures for the CY 2017 estimated hospital OPPS incurred benefit impacts associated with the CY 2017 OPD fee schedule increase, based on the 2016 Trustee's Report. The second accounting statement, Table 56 below, illustrates the classification of expenditures associated with the 1.9 percent CY 2017 update to the ASC payment system, based on the provisions of this final rule with comment period and the baseline spending estimates for ASCs in the 2016 Trustee's Report. Lastly, the tables classify most estimated impacts as transfers.

TABLE 55—ACCOUNTING STATEMENT: CY 2017 ESTIMATED HOSPITAL OPPS TRANSFERS FROM CY 2016 TO CY 2017 ASSOCIATED WITH THE CY 2017 HOSPITAL OUTPATIENT OPD FEE SCHEDULE INCREASE

Category	Transfers
Annualized Monetized Transfers	$773 million.
From Whom to Whom	Federal Government to outpatient hospitals and other providers who receive payment under the hospital OPPS.
Total	$773 million.

TABLE 56—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED TRANSFERS FROM CY 2016 TO CY 2017 AS A RESULT OF THE CY 2017 UPDATE TO THE ASC PAYMENT SYSTEM

Category	Transfers
Annualized Monetized Transfers	$63 million.
From Whom to Whom	Federal Government to Medicare Providers and Suppliers.
Total	$63 million

d. Effects of Requirements for the Hospital OQR Program

We refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70593 through 70594), for the estimated effects of changes to the Hospital OQR Program for the CY 2018 payment determination. In section XIII. of this final rule with comment period, we are finalizing changes to policies affecting the Hospital OQR Program. Of the 3,266 hospitals that met eligibility requirements for the CY 2016 payment determination, we determined that 113 hospitals did not meet the requirements to receive the full OPD fee schedule increase factor. Most of these hospitals (71 of the 113), chose not to participate in the Hospital OQR Program for the CY 2016 payment determination.[264] We estimate that approximately 108 to 121 hospitals will not receive the full OPD fee schedule increase factor for the CY 2018 payment determination and subsequent years.

In section XIII. of this final rule with comment period, we are finalizing several changes to the Hospital OQR Program for the CY 2018 payment determination and subsequent years, CY 2019 payment determination and subsequent years, and the CY 2020 payment determination and subsequent years. We do not believe that any of the other changes we are making will increase burden, as further discussed below.

For the CY 2018 payment determination and subsequent years, we are finalizing, as proposed, that we will publicly display data on the *Hospital Compare* Web site, or other CMS Web site, as soon as possible after measure data have been submitted to CMS. In addition, we are finalizing, as proposed, that hospitals will generally have approximately 30 days to preview their data. Both of these policies are consistent with current practice. Lastly, we are finalizing, as proposed, that we will announce the timeframes for the preview period starting with the CY 2018 payment determination on a CMS Web site and/or on our applicable listservs. We do not anticipate additional burden to hospitals as a result of these changes to the public display policies because hospitals will not be required to submit additional data or forms to CMS.

For the CY 2019 payment determination and subsequent years, we are finalizing our proposal to extend the time for filing an extraordinary circumstance extension or exemption request from 45 days to 90 days. We do not anticipate additional burden to hospitals as a result of this policy because the requirements for filing a request have not otherwise changed.

For the CY 2020 payment determination and subsequent years, we are finalizing, as proposed, two new claims-based measures for the Hospital OQR Program: OP–35: Admissions and Emergency Department Visits for Patients Receiving Outpatient Chemotherapy; and OP–36: Hospital Visits after Hospital Outpatient Surgery (NQF #2687). For the CY 2020 payment determination and subsequent years, we also are adopting, as proposed, five new OAS CAHPS Survey-based measures: (1) OP–37a: OAS CAHPS—About Facilities and Staff; (2) OP–37b: OAS CAHPS—Communication About Procedure; (3) OP–37c: OAS CAHPS—Preparation for Discharge and Recovery; (4) OP–37d: OAS CAHPS—Overall Rating of Facility; and (5) OP–37e: OAS CAHPS—Recommendation of Facility. As discussed in section XXI.B.4. of this final rule with comment period, we do not believe that the OP–35 and OP–36 measures will create any additional burden across all participating hospitals because these measures use Medicare FFS claims data and do not require additional hospital data submissions. In addition, as discussed in the same section, the burden associated with the OAS CAHPS Survey-based measures (OP–37a, OP–37b, OP–37c, OP–37d, and OP–37e) is already accounted for in previously approved OMB Control Number 0938–1240.

We refer readers to section XXI.B. of this final rule with comment period (information collection requirements) for a detailed discussion of the burden of the additional requirements for submitting data to the Hospital OQR Program.

e. Effects of Requirements for the ASCQR Program

In section XIV. of this final rule with comment period, we discuss our finalized policies affecting the ASCQR Program. For the CY 2016 payment determination, of the 5,260 ASCs that met eligibility requirements for the ASCQR Program, 261 ASCs did not meet the requirements to receive the full annual payment update. We note that, in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70594), we used the CY 2015 payment determination numbers as a baseline, and estimated that approximately 115 ASCs will not receive the full annual payment update in CY 2018 due to failure to meet the ASCQR Program requirements (CY 2016 and CY 2017 payment determination information were not yet available).

[264] We note in the CY 2017 OPPS/ASC proposed rule (81 FR 45769), we stated that the hospitals chose not to participate in the Hospital OQR Program for the CY 2015 payment determination instead of the CY 2016 payment determination. This was a typographical error, and the correct payment determination year is CY 2016.

For the CY 2018 payment determination and subsequent years, we are making a few changes in policies. In section XIV.B.7. of this final rule with comment period, we are finalizing, as proposed, that we will publicly display data on the *Hospital Compare* Web site, or other CMS Web site, as soon as possible after measure data have been submitted to CMS. In addition, we are finalizing, as proposed, that ASCs will generally have approximately 30 days to preview their data. Both of these policies are consistent with current practice. Lastly, we are finalizing, as proposed, that we will announce the timeframes for the preview period starting with the CY 2018 payment determination on a CMS Web site and/or on our applicable listservs. We believe that these changes to the ASCQR Program public reporting policies will have no effect on burden for ASCs because these changes would not require participating ASCs to submit additional data to CMS.

For the CY 2019 payment determination and subsequent years, we are finalizing, as proposed, two new policy changes. In section XIV.D.3. of this final rule with comment period, we are finalizing our proposal to implement a submission deadline with an end date of May 15 for all data submitted via a CMS Web-based tool beginning with the CY 2019 payment determination, as proposed. (For all data submitted via a non CMS Web-based tool, ASCs are already required to submit by May 15 of the year prior to the affected payment determination year (79 FR 66985 through 66986).) We do not anticipate additional burden as the data collection and submission requirements have not changed; only the deadline will be moved to a slightly earlier date that we anticipate will alleviate burden by aligning data submission deadlines. In section XIV.D.6. of this final rule with comment period, we are finalizing our proposal to extend the time for filing an extraordinary circumstance extension or exemption request from 45 days to 90 days. We do not believe this policy will result in additional burden to ASCs because the requirements for filing a request have not otherwise changed. We are not adding any quality measures to the ASCQR Program measure set for the CY 2019 payment determination, nor do we believe that the other measures we previously adopted will cause any additional ASCs to fail to meet the ASCQR Program requirements. (We refer readers to the CY 2015 OPPS/ASC final rule with comment period (79 FR 66978 through 66979) for a list of these measures.) Therefore, we do not believe that these changes will increase the number of ASCs that do not receive a full annual payment update for the CY 2019 payment determination.

In section XIV.B.4. of this final rule with comment period, we are finalizing, as proposed, two new measures collected via a CMS online data submission tool to the ASCQR Program measure set beginning with the CY 2020 payment determination—ASC–13: Normothermia Outcome and ASC–14: Unplanned Anterior Vitrectomy—and five new OAS CAHPS Survey-based measures beginning with the CY 2020 payment determination: (1) ASC–15a: OAS CAHPS—About Facilities and Staff; (2) ASC–15b: OAS CAHPS—Communication About Procedure; (3) ASC–15c: OAS CAHPS—Preparation for Discharge and Recovery; (4) ASC–15d: OAS CAHPS—Overall Rating of Facility; and (5) ASC–15e: OAS CAHPS—Recommendation of Facility. As discussed in section XXI.C.2. of this final rule with comment period, we estimate a data collection and submission burden of approximately 15.75 hours and $517 (15.75 hours x $32.84 per hour) each per ASC for the ASC–13 and ASC–14 measures based on an average sample of 63 cases. This results in a total estimated burden of approximately 82,845 hours and $2,720,630 each for the ASC–13 and ASC–14 measures across all ASCs based on an average sample of 63 cases per ASC. In addition, and as discussed in the same section, the burden associated with the OAS CAHPS Survey-based measures is already accounted for in a previously approved OMB Control Number 0938–1240.

In the CY 2017 OPPS/ASC proposed rule (81 FR 45770 through 45771), we invited public comment on the burden associated with our proposals in the proposed rule. We did not receive any comments on the burden associated with our proposals in the proposed rule, and therefore, are finalizing our burden estimates as discussed. We refer readers to the information collection requirements in sections XXI.C.2. through XXI.C.5. of this final rule with comment period for a detailed discussion of the financial and hourly burden of the ASCQR Program's current and new requirements.

f. Effects of the Changes to Transplant Performance Thresholds

In section XV. of this final rule with comment period, we discuss our proposed and finalized changes to the transplant centers performance thresholds to restore the tolerance range for patient and graft survival with respect to organ transplants to those we established in our 2007 regulations. We considered the option of leaving the current regulation unchanged. However, given the recent upward trend in the percent of unused adult kidneys, combined with an increase in the number of recovered organs, we do not believe that inaction is advisable. In addition, in the original 2007 organ transplant rule, CMS committed to review the outcomes thresholds if it considered them to be set at a level that was too high or too low. We are following through on that commitment.

We considered the option of leaving the regulation unchanged and instead reclassifying a larger range of outcomes as a ''standard-level'' rather than the more serious ''condition-level'' deficiency. We have already taken this approach to a considerable extent in survey and certification guidance (*https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Policy-and-Memos-to-States-and-Regions.html*). However, standard-level deficiencies must be remedied at some point; therefore, reclassification may not yield the change necessary to address an increasingly stringent outcomes requirement.

We considered the option of creating a ''balancing measure'' that would directly measure a transplant program's effectiveness in using organs, including tracking organs that are declined to see if other programs were able to make use of the organs successfully for long term graft survival. Such a balancing measure could ''unflag'' a program that had been flagged for substandard outcomes under the existing outcome measures. The OPTN developed a concept paper to obtain public comment for a similar idea, in which highest risk organs might be removed from the data when calculating outcomes (*https://optn.transplant.hrsa.gov/governance/public-comment/performance-metrics-concept-paper/*). This concept is slightly different than use of a balancing measure, but both approaches would require a multiyear effort to construct, test, and study the effects, including potential undesirable side effects. It is not an option readily available.

We considered the argument that the regulation should be unchanged because CMS should expect health care providers to improve outcomes over time, and, if the outcomes standard is becoming more difficult to meet, providers should rise to the challenge. We agree that we should expect health care providers to improve outcomes over time. However, once programs are at a very high level of performance, there is little room to improve.

Therefore, there is no persuasive reason to leave the regulations unchanged. First, in addition to patient and graft survival, we are interested in optimizing the use of organs so that individuals on the waiting list can gain the benefits of a transplant. To the extent that there are unintended and undesirable effects on this access goal that outweigh the value gained from an increasingly stringent outcomes requirement, we believe we should respond. Second, the transplant community has demonstrated a track record of consistent improvement efforts and innovation. Third, we commissioned a study that found that the overall risk levels of both available organs and transplant candidates have been increasing every year.[265] To the extent these population trends continue (for example, increasing age, higher rates of diabetes, obesity, hypertension), transplant programs will continue to be challenged to improve their care and processes just to sustain the patient and graft survival rates already achieved. We will continue to monitor these trends.

Finally, we considered the option to adopt the Bayesian methodology that the OPTN recently adopted. We are not doing so at this time because the OPTN continues to study its implementation of that methodology and to evaluate its own thresholds for flagging programs in relation to the Bayesian model.

We believe that the finalized changes in this final rule with comment period will result in costs savings to hospitals. The savings results from: (1) Fewer programs that would need to file a request for approval on the basis of mitigating factors; and (2) fewer programs that would need to fulfill the terms of an SIA. Both a mitigating factors review and completion of an SIA are voluntary acts on the part of a hospital that maintains a transplant program. Since the 2007 effective date of the CMS regulation, only one hospital has not filed a request for mitigating factors review after being cited by CMS for a condition-level deficiency for patient outcomes or clinical experience, and few hospitals have declined a CMS offer to complete an SIA. Therefore, we have concluded that the costs involved in these activities are much lower for the hospital compared with other alternatives, such as filing an appeal and incurring the legal costs of that appeal.

In the two SRTR reports from 2015, a total of 54 programs were flagged once (24 of which were adult kidney programs). If the performance threshold were set at 1.85 instead of the existing 1.5, this number would have been reduced to 48 programs (21 of which would have been adult kidney programs). However, the cost savings would occur mainly for programs that were multiple-flagged and met the criteria for citation at the condition-level. These are the programs that are cited at the condition level and risk termination of Medicare approval unless they are approved under the mitigating factors provision, and some of those programs would not be approved without successful completion of an SIA. Historically, of the programs that voluntarily withdrew from Medicare participation pending termination or were terminated based on outcomes deficiencies for which data are available, all had O/E ratios above the performance threshold of 1.85. For CY 2015, a total of 30 programs met the criteria for condition-level deficiency (15 of which were adult kidney programs). If the threshold had been at the 1.85 instead of 1.5 level, these numbers would have been reduced to 27 and 13 respectively.

We estimate the cost associated with the application for mitigating factors at $10,000. This is based on the salary for the transplant administrator to prepare the documents for the application during the 30-day timeframe allotted. Based on the CY 2015 SRTR reports described earlier, we estimate that three fewer programs each year will need to file a mitigating factors request, yielding a small savings of $30,000 per year.

We also estimate that four fewer programs each year will be required to complete an SIA. For transplant programs that enter into an SIA, the estimated cost to the transplant program is $250,000 based on reports from programs that have completed such agreements in the past. Therefore, we estimate the annual cost savings to hospitals from fewer SIAs to be $1 million.

We estimate that the total costs savings will be $1 million per year ($1 million plus $30,000), and conclude that our finalized policies will not have a significant impact on a substantial number of small businesses or other small entities, given both the small number of programs affected and the large size of many entities with transplant programs. Nor will they have a significant impact on small rural hospitals.

g. Effects of the Changes Relating to Organ Procurement Organizations (OPOs)

In section XVI. of this final rule with comment period, we discuss our proposed and finalized policies to expand and clarify the current OPO regulation as it relates to revising the definition of eligible death, adjusting the outcome performance yield measure and changing the documentation requirements of donor information to the transplant center to align CMS policy with OPTN policy and the SRTR yield metric.

All 58 OPOs will be affected by the changed requirements to a greater or lesser degree. Many OPOs have already put into practice many of these requirements. Thus, while we do not believe these changed requirements will have a substantial economic impact on a significant number of OPOs, we believe it is desirable to inform the public of our projections of the likely effects of these changed requirements on OPOs. It is important to note that because OPOs are paid by the Medicare program on a cost basis, any additional costs that exceed an OPO's annual revenues will be fully paid under the Medicare program. In addition, these changed requirements will have no identifiable economic impact on transplant hospitals. It is expected that improved OPO performance will result from the proposals and increase organ donation and the number of organs available for transplantation.

The definition and yield metric changes will result in no additional burden. OPOs already report a large amount of data to the OPTN which, in turn, provides the data to the SRTR for analysis. OPOs will not be asked to report additional data as a result of the changes.

The change in the documentation requirements of donor information sent to the transplant center with the organs will reduce burden for the OPOs. This change will reduce the amount of hard copy documentation that is packaged and shipped with each organ and will free up the OPO transplant coordinator's time to focus on the critical donor management and organ preparation tasks. We estimate that this change will save OPOs a total of approximately $259,000 a year for all 58 certified OPOs. There were approximately 7,000 deceased eligible donors in 2014 (according to the CMS data report), which will require hard copy documentation packaged and shipped with the organ(s) procured by the OPO transplant coordinator. According to *http://www.payscale.com/*, the average

[265] White, Zinsser et al., ''Patient Selection and Volume in the Era Surrounding Implementation of Medicare Conditions of Participation for Transplant Programs,'' *Health Services Research,* DOI: 10.111/1465–6773.12188.

salary for an OPO transplant coordinator is $70,693 per year, which is approximately $37 an hour. We estimate that it takes an OPO transplant coordinator approximately 1 hour to print, package, and ship the hard copy documentation with the organ(s) at $37 an hour for approximately 7,000 deceased donors. Thirty-seven dollars an hour multiplied by 7,000 deceased donors which require hard copy documentation equals $259,000 and 7,000 hours saved for OPOs nationwide. The primary economic impact of these changes will lie with their potential to increase organ donation. However, it is difficult to predict precisely what that impact will be, but we estimate that, by increasing OPOs' efficiency and adherence to continuous quality improvement measures, these changes could increase the number of organ donors in the regulation's first year.

With regard to the impact of the transplant enforcement technical corrections and other revisions to § 488.61 discussed in section XVII. of this final rule with comment period, there is no economic impact.

h. Effects of the Changes to the Medicare and Medicaid Electronic Health Record (EHR) Incentive Programs

In section XVIII. of this final rule with comment period, we discuss changed requirements for the Medicare and Medicaid EHR Incentive Programs. Specifically, in this final rule with comment period, for eligible hospitals and CAHs attesting to CMS, we are eliminating the Clinical Decision Support (CDS) and Computerized Provider Order Entry (CPOE) objectives and measures for Modified Stage 2 and Stage 3 as well as reducing the reporting thresholds on a subset of the remaining objectives and measures to the Modified Stage 2 thresholds. We do not believe that the changes will increase burden on eligible hospitals and CAHs as the objectives and measures remain the same; only a subset of thresholds will be reduced. In addition, the changes to eliminate the CDS and CPOE objectives and measures are based on high performance and the statistical evidence demonstrates that the expected result of any provider attesting to the EHR Incentive Programs will be a score near the maximum. While the functions of measures and the processes behind them will continue even without a requirement to report the results, the provisions will result in a reduction in reporting requirements. Based on the public comments we received, we are finalizing a policy that these changes to the objectives and measures apply for all eligible hospitals and CAHs that attest to CMS, including eligible hospitals and CAHs that are eligible to participate in both the Medicare and Medicaid EHR Incentive Programs.

We also are modifying the EHR reporting period in 2016 and 2017 for all returning EPs, eligible hospitals and CAHs that have previously demonstrated meaningful use to any continuous 90-day period within the calendar year. We do not believe that the modification of the EHR reporting period in 2016 and 2017 to any continuous 90-day period will increase the reporting burden of providers in the Medicare and Medicaid EHR Incentive Programs as all providers attested to a 90-day EHR reporting period in 2015. We are modifying the options for reporting on Modified Stage 2 or Stage 3 objectives finalized in the 2015 EHR Incentive Programs Final Rule by requiring new participants in 2017 who are seeking to avoid the 2018 payment adjustment to attest to the Modified Stage 2 objectives and measures. We do not believe that requiring new participants in 2017 to attest to Modified Stage 2 objectives and measures will increase the reporting burden because new participants using 2014 Edition, 2015 Edition, or any combination of 2014 and 2015 Edition certified EHR technology in 2017 will have the necessary technical capabilities to attest to the Modified Stage 2 objectives and measures.

We are providing that for all meaningful use measures, unless otherwise specified, actions included in the numerator must occur within the EHR reporting period if that period is a full calendar year, or if it is less than a full calendar year, within the calendar year in which the EHR reporting period occurs. Because this change only affect the time period within which certain actions must occur, but not the underlying actions to be reported, we do not believe that this change will affect the burden on meaningful users. Finally, we are providing a one-time significant hardship exception from the 2018 payment adjustment for certain EPs who are new participants in the EHR Incentive Program in 2017 and are transitioning to MIPS in 2017. We do not believe the change to allow a one-time significant hardship exception from the 2018 payment adjustment for certain EPs will increase their burden. Rather, we believe this will reduce the reporting burden for 2017 because this change will reduce confusion on the different reporting requirements for the EHR Incentive Program and MIPs as well as the different systems to which participants will need to register and attest.

i. Effects of Requirements for the Hospital VBP Program

In section XIX. of this final rule with comment period, we discuss finalizing our proposal to change the scoring methodology for the Patient- and Caregiver-Centered Experience of Care/Care Coordination domain in the Hospital VBP Program by removing the HCAHPS Pain Management dimension from the Patient- and Caregiver-Centered Experience of Care/Care Coordination domain beginning with the FY 2018 program year.

As noted in section XXI.G. of this final rule with comment period, as required under section 1886(o)(2)(A) of the Act, the HCAHPS Survey is included the Hospital IQR Program. Therefore, we believe that removing the HCAHPS Pain Management dimension from the Hospital VBP Program beginning with the FY 2018 program year will have no effect on burden for participating hospitals because this change does not change the data that are submitted to CMS; it only affects how the scoring is computed under the domain in the Hospital VBP Program.

j. Effects of Implementation of Section 603 of the Bipartisan Budget Act of 2015 Relating to Payment for Nonexcepted Items and Services Furnished by Nonexcepted Off-Campus Departments of a Provider

In section X.A. of this final rule with comment period, we discuss the implementation of section 603 of the Bipartisan Budget Act of 2015 relating to payments for nonexcepted items and services furnished by nonexcepted off-campus departments of a provider. Section 603 does not impact OPPS payment rates or payments to OPPS-eligible providers. The impact tables displayed in section XXIII.A.3. of this final rule with comment period do not factor in changes in volume or service-mix in OPPS payments. As a result, the impact tables displayed in section XXIII.A.3. of this final rule with comment period do not reflect changes in the volume of OPPS services due to the implementation of section 603.

We estimate that implementation of section 603 will reduce net OPPS payments by $500 million in CY 2017, relative to a baseline where section 603 was not implemented in CY 2017. These estimates reflect that the reduced spending from implementation of section 603 results in a lower Part B premium; the reduced Part B spending is slightly offset by lower aggregate Part B premium collections. Additional information on the impact of implementing section 603 of Public Law

114–74 is provided in the interim final rule with comment period under section X.B. of this document.

B. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, we estimate that most hospitals, ASCs and CMHCs are small entities as that term is used in the RFA. For purposes of the RFA, most hospitals are considered small businesses according to the Small Business Administration's size standards with total revenues of $38.5 million or less in any single year or by the hospital's not-for-profit status. Most ASCs and most CMHCs are considered small businesses with total revenues of $15 million or less in any single year. For details, see the Small Business Administration's ''Table of Small Business Size Standards'' at *http://www.sba.gov/content/table-small-business-size-standards*.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has 100 or fewer beds. We estimate that this final rule with comment period will increase payments to small rural hospitals by less than 3 percent; therefore, it should not have a significant impact on approximately 639 small rural hospitals.

The analysis above, together with the remainder of this preamble, provides a regulatory flexibility analysis and a regulatory impact analysis.

C. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. That threshold level is currently approximately $146 million. This final rule with comment period does not mandate any requirements for State, local, or tribal governments, or for the private sector.

D. Conclusion

The changes we are making in this final rule with comment period will affect all classes of hospitals paid under the OPPS and will affect both CMHCs and ASCs. We estimate that most classes of hospitals paid under the OPPS will experience a modest increase or a minimal decrease in payment for services furnished under the OPPS in CY 2017. Table 52 demonstrates the estimated distributional impact of the OPPS budget neutrality requirements that will result in a 1.7 percent increase in payments for all services paid under the OPPS in CY 2017, after considering all of the changes to APC reconfiguration and recalibration, as well as the OPD fee schedule increase factor, wage index changes, including the frontier State wage index adjustment, estimated payment for outliers, and changes to the pass-through payment estimate. However, some classes of providers that are paid under the OPPS will experience more significant gains or losses in OPPS payments in CY 2017.

The updates to the ASC payment system for CY 2017 will affect each of the approximately 5,300 ASCs currently approved for participation in the Medicare program. The effect on an individual ASC will depend on its mix of patients, the proportion of the ASC's patients who are Medicare beneficiaries, the degree to which the payments for the procedures offered by the ASC are changed under the ASC payment system, and the extent to which the ASC provides a different set of procedures in the coming year. Table 53 demonstrates the estimated distributional impact among ASC surgical specialties of the MFP-adjusted CPI–U update factor of 1.9 percent for CY 2017.

XXV. Federalism Analysis

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct costs on State and local governments, preempts State law, or otherwise has Federalism implications. We have examined the OPPS and ASC provisions included in this final rule with comment period in accordance with Executive Order 13132, Federalism, and have determined that they will not have a substantial direct effect on State, local or tribal governments, preempt State law, or otherwise have a Federalism implication. As reflected in Table 52 of this final rule with comment period, we estimate that OPPS payments to governmental hospitals (including State and local governmental hospitals) will increase by 1.6 percent under this final rule with comment period. While we do not know the number of ASCs or CMHCs with government ownership, we anticipate that it is small. The analyses we have provided in this section of this final rule with comment period, in conjunction with the remainder of this document, demonstrate that this final rule with comment period is consistent with the regulatory philosophy and principles identified in Executive Order 12866, the RFA, and section 1102(b) of the Act. This final rule with comment period will affect payments to a substantial number of small rural hospitals and a small number of rural ASCs, as well as other classes of hospitals, CMHCs, and ASCs, and some effects may be significant.

List of Subjects

42 CFR Part 414

Administrative practice and procedure, Health facilities, Health professions, Kidney disease, Medicare, Reporting and recordkeeping

42 CFR Part 416

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 419

Hospitals, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 482

Grant programs—health, Hospitals, Medicaid, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 486

Grant programs—health, Health facilities, Medicare, Reporting and recordkeeping requirements, X-rays.

42 CFR Part 488

Administrative practice and procedure, Health facilities, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 495

Administrative practice and procedure, Electronic health records, Health facilities, Health professions, Health maintenance organizations (HMO), Medicaid, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

For reasons stated in the preamble of this document, the Centers for Medicare & Medicaid Services is amending 42 CFR chapter IV as set forth below:

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 1. The authority citation for part 414 continues to reads as follows:

Authority: Secs. 1102, 1871, and 1881(b)(2) of the Social Security Act (42 U.S.C. 1302, 1395hh, and 1395rr(b)(1)).

§ 414.22 [Amended]

■ 2. Section 414.22 is amended by removing and reserving paragraph (b)(5)(ii).

PART 416—AMBULATORY SURGICAL SERVICES

■ 3. The authority citation for part 416 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 4. Section 416.171 is amended by revising paragraph (b)(2) to read as follows:

§ 416.171 Determination of payment rates for ASC services.

* * * * *

(b) * * *

(2) The device portion of device-intensive procedures, which are procedures with a HCPCS code-level device offset of greater than 40 percent when calculated according to the standard OPPS APC ratesetting methodology.

* * * * *

■ 5. Section 416.310 is amended by revising paragraphs (c)(1)(ii) and (d)(1) and adding paragraph (e) to read as follows:

§ 416.310. Data collection and submission requirements under the ASCQR Program.

* * * * *

(c) * * *

(1) * * *

(ii) *Data collection requirements.* The data collection time period for quality measures for which data are submitted via a CMS online data submission tool is for services furnished during the calendar year 2 years prior to the payment determination year. Beginning with the CY 2017 payment determination year, data collected must be submitted during the time period of January 1 to May 15 in the year prior to the payment determination year.

* * * * *

(d) * * *

(1) Upon request of the ASC. ASCs may request an extension or exemption within 90 days of the date that the extraordinary circumstance occurred. Specific requirements for submission of a request for an extension or exemption are available on the QualityNet Web site; or

* * * * *

(e) *Requirements for Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey.* OAS CAHPS is the Outpatient and Ambulatory Surgical Center Consumer Assessment of Healthcare Providers and Systems survey that measures patient experience of care after a recent surgery or procedure at either a hospital outpatient department or an ambulatory surgical center. Ambulatory surgical centers must use an approved OAS CAHPS survey vendor to administer and submit OAS CAHPS data to CMS.

(1) [Reserved]

(2) CMS approves an application for an entity to administer the OAS CAHPS survey as a vendor on behalf of one or more ambulatory surgical centers when the applicant has met the Minimum Survey Requirements and Rules of Participation that can be found on the official OAS CAHPS Web site, and agrees to comply with the current survey administration protocols that can be found on the official OAS CAHPS Web site. An entity must be an approved OAS CAHPS Survey vendor in order to administer the OAS CAPHS Survey and submit data to CMS on behalf of one or more ambulatory surgical centers.

PART 419—PROSPECTIVE PAYMENT SYSTEM FOR HOSPITAL OUTPATIENT DEPARTMENT SERVICES

■ 6. The authority citation for part 419 continues to read as follows:

Authority: Secs. 1102, 1833(t), and 1871 of the Social Security Act (42 U.S.C. 1302, 1395l(t), and 1395hh).

■ 7. Section 419.22 is amended by adding paragraph (v) to read as follows:

§ 419.22 Hospital services excluded from payment under the hospital outpatient prospective payment system.

* * * * *

(v) Effective January 1, 2017, for cost reporting periods beginning on or after January 1, 2017, items and services that do not meet the definition of excepted items and services under § 419.48(a).

■ 8. Section 419.32 is amended by adding paragraph (b)(1)(iv)(B)(*8*) to read as follows:

§ 419.32 Calculation of prospective payment rates for hospital outpatient services.

* * * * *

(b) * * *

(1) * * *

(iv) * * *

(B) * * *

(*8*) For calendar year 2017, a multiproductivity adjustment (as determined by CMS) and 0.75 percentage point.

* * * * *

■ 9. Section 419.43 is amended by adding paragraph (d)(7) to read as follows:

§ 419.43 Adjustments to national program payment and beneficiary copayment amounts.

* * * * *

(d) * * *

(7) *Community mental health center (CMHC) outlier payment cap.* Outlier payments made to CMHCs for services provided on or after January 1, 2017 are subject to a cap, applied at the individual CMHC level, so that each CMHC's total outlier payments for the calendar year do not exceed 8 percent of that CMHC's total per diem payments for the calendar year. Total per diem payments are total Medicare per diem payments plus the total beneficiary share of those per diem payments.

* * * * *

■ 10. Section 419.44 is amended by revising paragraph (b)(2) to read as follows:

§ 419.44 Payment reductions for procedures.

* * * * *

(b) * * *

(2) For all device-intensive procedures (defined as having a device offset of greater than 40 percent), the device offset portion of the device-intensive procedure payment is subtracted prior to determining the program payment and beneficiary copayment amounts identified in paragraph (b)(1)(ii) of this section.

■ 11. Section 419.46 is amended by adding paragraph (g) to read as follows:

§ 419.46 Participation, data submission, and validation requirements under the Hospital Outpatient Quality Reporting (OQR) Program.

* * * * *

(g) *Requirements for Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey.* OAS CAHPS is the Outpatient and Ambulatory Surgical Center Consumer Assessment of Healthcare Providers and Systems Survey that measures patient experience of care after a recent surgery or procedure at either a hospital outpatient department or an ambulatory surgical center. Hospital outpatient departments must use an approved OAS

CAHPS survey vendor to administer and submit OAS CAHPS data to CMS.

(1) [Reserved]

(2) CMS approves an application for an entity to administer the OAS CAHPS Survey as a vendor on behalf of one or more hospital outpatient departments when the applicant has met the Minimum Survey Requirements and Rules of Participation that can be found on the official OAS CAHPS Web site, and agrees to comply with the current survey administration protocols that can be found on the official OAS CAHPS Survey Web site. An entity must be an approved OAS CAHPS Survey vendor in order to administer and submit OAS CAHPS Survey data to CMS on behalf of one or more hospital outpatient departments.

■ 12. Section 419.48 is added to subpart D to read as follows:

§ 419.48 Definition of excepted items and services.

(a) Excepted items and services are items or services that are furnished on or after January 1, 2017—

(1) By a dedicated emergency department (as defined at § 489.24(b) of this chapter); or

(2) By an excepted off-campus provider-based department defined in paragraph (b) of this section that has not impermissibly relocated or changed ownership.

(b) For the purpose of this section, ''excepted off-campus provider-based department'' means a ''department of a provider'' (as defined at § 413.65(a)(2) of this chapter) that as of November 2, 2015 was located on the campus (as defined in § 413.65(a)(2) of this chapter) or within the distance described in such definition from a ''remote location of a hospital'' (as defined in § 413.65(a)(2) of this chapter) that meets the requirements for provider-based status under § 413.65 of this chapter. This definition also includes a department of a provider that was billing under the OPPS with respect to covered OPD services furnished prior to November 2, 2015.

(c) Payment for items and services that do not meet the definition in paragraph (a) of this section will generally be made under the Medicare Physician Fee Schedule on or after January 1, 2017.

■ 13. Section 419.66 is amended by revising paragraph (g) to read as follows:

§ 419.66 Transitional pass-through payments: Medical devices.

* * * * *

(g) *Limited period of payment for devices.* CMS limits the eligibility of a pass-through payment established under this section to a period of at least 2 years, but not more than 3 years, beginning on the first date on which pass-through payment is made.

* * * * *

PART 482—CONDITIONS OF PARTICIPATION FOR HOSPITALS

■ 14. The authority citation for part 482 continues to read as follows:

Authority: Secs. 1102, 1871, and 1881 of the Social Security Act (42 U.S.C. 1302, 1395hh, and 1395rr), unless otherwise noted.

■ 15. Section 482.80 is amended by revising paragraph (c)(2)(ii)(C) to read as follows:

§ 482.80 Condition of participation: Data submission, clinical experience, and outcome requirements for initial approval of transplant centers.

* * * * *

(c) * * *

(2) * * *

(ii) * * *

(C) The number of observed events divided by the number of expected events is greater than 1.85.

* * * * *

■ 16. Section 482.82 is amended by revising paragraph (c)(2)(ii)(C) to read as follows:

§ 482.82 Condition of participation: Data submission, clinical experience, and outcome requirements for re-approval of transplant centers.

* * * * *

(c) * * *

(2) * * *

(ii) * * *

(C) The number of observed events divided by the number of expected events is greater than 1.85.

* * * * *

PART 486—CONDITIONS FOR COVERAGE OF SPECIALIZED SERVICES FURNISHED BY SUPPLIERS

■ 17. The authority citation for part 486 continues to read as follows:

Authority: 1102, 1138, and 1871 of the Social Security Act (42 U.S.C. 1302, 1320b–8, and 1395hh) and section 371 of the Public Health Service Act (42 U.S.C. 273).

■ 18. Section 486.302 is amended by revising the definition of ''Eligible death'' to read as follows:

§ 486.302 Definitions.

* * * * *

Eligible death. An eligible death for organ donation means the death of a person—

(1) Who is 75 years old or younger;

(2) Who is legally declared dead by neurologic criteria in accordance with State or local law;

(3) Whose body weight is 5 kg or greater;

(4) Whose body mass Index (BMI) is 50 kg/m2 or less;

(5) Who had at least one kidney, liver, heart, or lung that is deemed to meet the eligible data definition as follows:

(i) The kidney would be initially deemed to meet the eligible data definition unless the donor meets one of the following:

(A) Is more than 70 years of age;

(B) Is age 50–69 years with history of Type 1 diabetes for more than 20 years;

(C) Has polycystic kidney disease;

(D) Has glomerulosclerosis equal to or more than 20 percent by kidney biopsy;

(E) Has terminal serum creatinine greater than 4/0 mg/dl;

(F) Has chronic renal failure; or

(G) Has no urine output for at least or more than 24 hours;

(ii) The liver would be initially deemed to meet the eligible data definition unless the donor has one of the following:

(A) Cirrhosis;

(B) Terminal total bilirubin equal to or more than 4 mg/dl;

(C) Portal hypertension;

(D) Macrosteatosis equal to or more than 50 percent or fibrosis equal to or more than stage II;

(E) Fulminant hepatic failure; or

(F) Terminal AST/ALT of more than 700 U/L.

(iii) The heart would be initially deemed to meet the eligible data definition unless the donor meets one of the following:

(A) Is more than 60 years of age;

(B) Is at least or more than 45 years of age with a history of at least or more than 10 years of HTN or at least or more than 10 years of type 1 diabetes;

(C) Has a history of Coronary Artery Bypass Graft (CABG);

(D) Has a history of coronary stent/intervention;

(E) Has a current or past medical history of myocardial infarction (MI);

(F) Has a severe vessel diagnosis as supported by cardiac catheterization (that is more than 50 percent occlusion or 2+ vessel disease);

(G) Has acute myocarditis and/or endocarditis;

(H) Has heart failure due to cardiomyopathy;

(I) Has an internal defibrillator or pacemaker;

(J) Has moderate to severe single valve or 2-valve disease documented by echo or cardiac catheterization, or previous valve repair;

(K) Has serial echo results showing severe global hypokinesis;

(L) Has myxoma; or

(M) Has congenital defects (whether surgically corrected or not).

(iv) The lung would be initially deemed to meet the eligible data definition unless the donor meets one of the following:

(A) Is more than 65 years of age;

(B) Is diagnosed with coronary obstructive pulmonary disease (COPD) (for example, emphysema);

(C) Has terminal PaO2/FiO2 less than 250 mmHg;

(D) Has asthma (with daily prescription);

(E) Asthma is the cause of death;

(F) Has pulmonary fibrosis;

(G) Has previous lobectomy;

(H) Has multiple blebs documented on Computed Axial Tomography (CAT) Scan;

(I) Has pneumonia as indicated on Computed Tomography (CT), X-ray, bronchoscopy, or cultures;

(J) Has bilateral severe pulmonary contusions as per CT.

(6) If a deceased person meets the criteria specified in paragraphs (1) through (5) of this definition, the death of the person would be classified as an eligible death, unless the donor meets any of the following criteria:

(i) The donor was taken to the operating room with the intent for the OPO to recover organs for transplant and all organs were deemed not medically suitable for transplantation; or

(ii) The donor exhibits any of the following active infections (specific diagnoses) of—

(A) Bacterial: Tuberculosis, Gangrenous bowel or perforated bowel or intra-abdominal sepsis;

(B) Viral: HIV infection by serologic or molecular detection, Rabies, Reactive Hepatitis B Surface Antigen, Retroviral infections including Viral Encephalitis or Meningitis, Active Herpes simplex, varicella zoster, or cytomegalovirus viremia or pneumonia, Acute Epstein Barr Virus (mononucleosis), West Nile (c) Virus infection, SARS, except as provided in paragraph (8) of this definition.

(C) Fungal: Active infection with Cryptococcus, Aspergillus, Histoplasma, Coccidioides, Active candidemia or invasive yeast infection;

(D) Parasites: Active infection with Trypanosoma cruzi (Chagas'), Leishmania, Strongyloides, or Malaria (Plasmodium sp.); or

(E) Prion: Creutzfeldt-Jacob Disease.

(7) The following are general exclusions:

(i) Aplastic anemia, Agranulocytosis;

(ii) Current malignant neoplasms except non-melanoma skin cancers such as basal cell and squamous cell cancer and primary CNS tumors without evident metastatic disease;

(iii) Previous malignant neoplasms with current evident metastatic disease;

(iv) A history of melanoma;

(v) Hematologic malignancies: Leukemia, Hodgkin's Disease, Lymphoma, Multiple Myeloma;

(vi) Active Fungal, Parasitic, Viral, or Bacterial Meningitis or Encephalitis; and

(vii) No discernable cause of death.

(8) Notwithstanding paragraph (6)(ii)(B) of this definition, an HIV positive organ procured for the purpose of transplantation into an HIV positive recipient would be an exception to an active infection rule out, consistent with the HIV Organ Policy Equity Act (the Hope Act).

* * * * *

■ 19. Section 486.318 is amended by revising paragraphs (a)(3) and (b)(3) to read as follows:

§ 486.318 Condition: Outcome measures.

(a) * * *

(3) The OPO data reports, averaged over the 4 years of the recertification cycle, must meet the rules and requirements of the most current OPTN aggregate donor yield measure.

(i) The initial criteria used to identify OPOs with lower than expected organ yield, for all organs as well as for each organ type, will include all of the following:

(A) More than 10 fewer observed organs per 100 donors than expected yield (Observed per 100 donors—Expected per 100 donors < -10);

(B) A ratio of observed to expected yield less than 0.90; and

(C) A two-sided p-value is less than 0.05.

(ii) The number of organs used for research per donor, including pancreata used for islet cell research.

(b) * * *

(3) The OPO data reports, averaged over the 4 years of the recertification cycle, must meet the rules and requirements of the most current OPTN aggregate donor yield measure.

(i) The initial criteria used to identify OPOs with lower than expected organ yield, for all organs as well as for each organ type, will include all of the following:

(A) More than 10 fewer observed organs per 100 donors than expected yield (Observed per 100 donors—Expected per 100 donors < -10);

(B) A ratio of observed to expected yield less than 0.90; and

(C) A two-sided p-value is less than 0.05.

(ii) The number of organs used for research per donor, including pancreata used for islet cell research.

* * * * *

■ 20. Section 486.346 is amended by revising paragraph (b) to read as follows:

§ 486.346 Condition: Organ preparation and transport.

* * * * *

(b)(1) The OPO must send complete documentation of donor information to the transplant center with the organ, including donor evaluation, the complete record of the donor's management, documentation of consent, documentation of the pronouncement of death, and documentation for determining organ quality. This information is available to the transplant center electronically.

(2) The OPO must physically send a paper copy of the following documentation with each organ:

(i) Blood type;

(ii) Blood subtype, if used for allocation; and

(iii) Infectious disease testing results available at the time of organ packaging.

(3) The source documentation must be placed in a watertight container in *either* of the following:

(i) A location specifically designed for documentation; or

(ii) Between the inner and external transport materials.

(4) Two individuals, one of whom must be an OPO employee, must verify that the documentation that accompanies an organ to a transplant center is correct.

* * * * *

PART 488—SURVEY, CERTIFICATION, AND ENFORCEMENT PROCEDURES

■ 21. The authority citation for part 488 continues to read as follows:

Authority: Secs. 1102, 1128l, 1864, 1865, 1871 and 1875 of the Social Security Act, unless otherwise noted (42 U.S.C. 1302, 1320a–7j, 1395aa, 1395bb, 1395hh) and 1395ll.

■ 22. Section 488.61 is amended by revising paragraphs (f)(1) introductory text, (f)(3), and (h)(2) to read as follows:

§ 488.61 Special procedures for approval and re-approval of organ transplant centers.

* * * * *

(f) * * *

(1) *Factors.* Except for situations of immediate jeopardy or deficiencies other than failure to meet requirements of § 482.80 or § 482.82 of this chapter, CMS will consider such mitigating factors as may be appropriate in light of the nature of the deficiency and circumstances, including (but not

limited to) the following, in making a decision of initial and re-approval of a transplant center that does not meet the data submission, clinical experience, or outcome requirements:

* * * * *

(3) *Timing.* Within 14 calendar days after CMS has issued formal written notice of a condition-level deficiency to the program, CMS must receive notification of the program's intent to seek mitigating factors approval or re-approval, and receive all information for consideration of mitigating factors within 120 calendar days of the CMS written notification for a deficiency due to data submission, clinical experience or outcomes at § 482.80 or § 482.82 of this chapter. Failure to meet these timeframes may be the basis for denial of mitigating factors. However, CMS may permit an extension of the timeline for good cause, such as a declared public health emergency.

* * * * *

(h) * * *

(2) *Timeframe.* A Systems Improvement Agreement will be established for up to a 12-month period, subject to CMS' discretion to determine if a shorter timeframe may suffice. At the hospital's request, CMS may extend the agreement for up to an additional 6-month period. A signed Systems Improvement Agreement remains in force even if a subsequent SRTR report indicates that the program has restored compliance with the CMS conditions of participation, except that CMS in its sole discretion may shorten the timeframe or allow modification to any portion of the elements of the Agreement in such a case.

PART 495—STANDARDS FOR THE ELECTRONIC HEALTH RECORD TECHNOLOGY INCENTIVE PROGRAM

■ 23. The authority citation for part 495 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 24. Section 495.4 is amended—

■ a. In the definition of ''EHR reporting period'', by revising paragraphs (1)(ii)(B)(*2*), (1)(ii)(C)(*2*), (2)(ii)(B)(*2*), and (2)(ii)(C)(*2*).

■ b. In the definition of ''EHR reporting period for a payment adjustment year'', by revising paragraphs (1)(ii)(B)(*2*), (2)(ii)(B)(*2*), (2)(ii)(C)(*3*), and (3)(ii)(B)(*2*), and (3)(ii)(C)(*3*).

The revisions read as follows:

§ 495.4 Definitions.

* * * * *

EHR reporting period. * * *

(1) * * *

(ii) * * *

(B) * * *

(*2*) For the EP who has successfully demonstrated he or she is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2016.

(C) * * *

(*2*) For the EP who has successfully demonstrated he or she is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2017.

* * * * *

(2) * * *

(ii) * * *

(B) * * *

(*2*) For the eligible hospital or CAH that has successfully demonstrated it is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2016.

(C) * * *

(*2*) For the eligible hospital or CAH that has successfully demonstrated it is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2017.

* * * * *

EHR reporting period for a payment adjustment year. * * *

(1) * * *

(ii) * * *

(B) * * *

(*2*) If in a prior year an EP has successfully demonstrated he or she is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2016 and applies for the CY 2018 payment adjustment year.

* * * * *

(2) * * *

(ii) * * *

(B) * * *

(*2*) If in a prior year an eligible hospital has successfully demonstrated it is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2016 and applies for the FY 2018 payment adjustment year.

(C) * * *

(*3*) If in a prior year an eligible hospital has successfully demonstrated it is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2017 and applies for the FY 2019 payment adjustment year.

* * * * *

(3) * * *

(ii) * * *

(B) * * *

(*2*) If in a prior year a CAH has successfully demonstrated it is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2016 and applies for the FY 2016 payment adjustment year.

(C) * * *

(*3*) If in a prior year a CAH has successfully demonstrated it is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2017 and applies for the FY 2017 payment adjustment year.

* * * * *

■ 25. Section 495.22 is amended by revising paragraphs (a), (c)(1), (d)(1), and the paragraph (e) heading, and adding paragraph (f) to read as follows:

§ 495.22 Meaningful use objectives and measures for EPs, eligible hospitals, and CAHs for 2015 through 2017.

(a) *General rules.* (1) Subject to the provisions of paragraph (a)(2) of this section, the criteria specified in this section are applicable for EPs, eligible hospitals, and CAHs for 2015 through 2017.

(2) For 2017 only, EPs, eligible hospitals, and CAHs that have successfully demonstrated meaningful use in a prior year have the option to use the criteria specified for 2018 in § 495.24 instead of the criteria specified for 2017 under paragraphs (e) and (f) of this section.

* * * * *

(c) * * *

(1) *General rule regarding criteria for meaningful use for 2015 through 2017 for eligible hospitals and CAHs.* Except as specified in paragraph (c)(2) of this section, eligible hospitals and CAHs attesting to CMS must meet all objectives and associated measures of the meaningful use criteria specified under paragraph (e) of this section to meet the definition of a meaningful EHR user in 2015 and 2016 and must meet all objectives and associated measures of the meaningful use criteria specified under paragraph (f) of this section to meet the definition of a meaningful EHR user in 2017. Except as specified in paragraph (c)(2) of this section, eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program must meet all objectives and associated measures of the meaningful use criteria specified under paragraph (e) of this section to meet the definition of a meaningful EHR user in 2015 through 2017.

* * * * *

(d) * * *

(1) If a measure (or associated objective) in paragraph (e) or (f) of this section references this paragraph (d), the measure may be calculated by reviewing only the actions for patients whose records are maintained using CEHRT. A

patient's record is maintained using CEHRT if sufficient data were entered in the CEHRT to allow the record to be saved, and not rejected due to incomplete data.

* * * * *

(e) *Meaningful use objectives and measures for EPs for 2015 through 2017, for eligible hospitals and CAHs attesting to CMS for 2015 and 2016, and for eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program for 2015 through 2017.*

* * * * *

(f) *Meaningful use objectives and measures for eligible hospitals and CAHs attesting to CMS for 2017.*—(1) *Protect patient health information*—(i) *Objective.* Protect electronic protected health information created or maintained by the CEHRT through the implementation of appropriate technical capabilities.

(ii) *Security risk analysis measure.* Conduct or review a security risk analysis in accordance with the requirements under 45 CFR 164.308(a)(1), including addressing the security (to include encryption) of ePHI created or maintained in CEHRT in accordance with requirements under 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3), and implement security updates as necessary, and correct identified security deficiencies as part of the eligible hospital's or CAH's risk management process.

(2) [Reserved]

(3) [Reserved]

(4) *Electronic Prescribing*—(i) *Objective.* Generate and transmit permissible discharge prescriptions electronically (eRx).

(ii) *e-Prescribing measure.* Subject to the provisions of paragraph (d) of this section, more than 10 percent of hospital discharge medication orders for permissible prescriptions are queried for a drug formulary and transmitted electronically using CEHRT.

(iii) *Exclusion for nonapplicable objectives.* Subject to the provisions of paragraph (c)(2) of this section, any eligible hospital or CAH that does not have an internal pharmacy that can accept electronic prescriptions and is not located within 10 miles of any pharmacy that accepts electronic prescriptions at the start of their EHR reporting period.

(5) *Health Information Exchange*—(i) *Objective.* The eligible hospital or CAH who transitions a patient to another setting of care or provider of care or refers a patient to another provider of care provides a summary care record for each transition of care or referral.

(ii) *Health information exchange measure.* Subject to the provisions of paragraph (d) of this section, the eligible hospital or CAH that transitions or refers their patient to another setting of care or provider of care must do the following:

(A) Use CEHRT to create a summary of care record; and

(B) Electronically transmit such summary to a receiving provider for more than 10 percent of transitions of care and referrals.

(6) *Patient specific education*—(i) *Objective.* Use clinically relevant information from CEHRT to identify patient-specific education resources and provide those resources to the patient.

(ii) *Patient-specific education measure.* More than 10 percent of all unique patients admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) are provided patient specific education resources identified by CEHRT.

(7) *Medication reconciliation.*—(i) *Objective.* The eligible hospital or CAH that receives a patient from another setting of care or provider of care or believes an encounter is relevant performs medication reconciliation.

(ii) *Medication reconciliation measure.* Subject to the provisions of paragraph (d) of this section, the eligible hospital or CAH performs medication reconciliation for more than 50 percent of transitions of care in which the patient is admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23).

(8) *Patient electronic access*—(i) *Objective.* Provide patients the ability to view online, download, and transmit information within 36 hours of hospital discharge.

(ii) *Measures.* An eligible hospital or CAH must meet the following two measures:

(A) *Provide patient access measure.* More than 50 percent of all unique patients who are discharged from the inpatient or emergency department (POS 21 or 23) of an eligible hospital or CAH have timely access to view online, download, and transmit to a third party their health information.

(B) *View, download or transmit (VDT) measure.* At least 1 patient (or patient-authorized representative) who is discharged from the inpatient or emergency department (POS 21 or 23) of an eligible hospital or CAH during the EHR reporting period views, downloads, or transmits to a third party his or her information during the EHR reporting period.

(iii) *Exclusion for nonapplicable objectives.* Subject to the provisions of paragraph (c)(2) of this section, any eligible hospital or CAH that is located in a county that does not have 50 percent or more of its housing units with 4Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period is excluded from paragraph (f)(8)(ii)(B) of this section.

(9) *Public health reporting*—(i) *Objective.* The eligible hospital or CAH is in active engagement with a public health agency to submit electronic public health data from CEHRT, except where prohibited, and in accordance with applicable law and practice.

(ii) *Measures.* In order to meet the objective under paragraph (f)(9)(i) of this section, an eligible hospital or CAH must choose from measures 1 through 4 (as described in paragraphs (f)(9)(ii)(A) through (D) of this section).

(A) *Immunization registry reporting measure.* The eligible hospital or CAH is in active engagement with a public health agency to submit immunization data.

(B) *Syndromic surveillance reporting measure.* The eligible hospital or CAH is in active engagement with a public health agency to submit syndromic surveillance data.

(C) *Specialized registry reporting measure.* The eligible hospital or CAH is in active engagement to submit data to a specialized registry.

(D) *Electronic reportable laboratory result reporting measure.* The eligible hospital or CAH is in active engagement with a public health agency to submit electronic reportable laboratory results.

(iii) *Exclusions for non-applicable objectives.* Subject to the provisions of paragraph (c)(2) of this section—

(A) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the immunization measure specified in paragraph (f)(9)(ii)(A) of this section if the eligible hospital or CAH—

(*1*) Does not administer any immunizations to any of the populations for which data is collected by its jurisdiction's immunization registry or immunization information system during the EHR reporting period.

(*2*) Operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*3*) Operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data from the eligible hospital or CAH at the start of the EHR reporting period.

(B) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the syndromic surveillance measure specified in paragraph (f)(9)(ii)(B) of this section if the eligible hospital or CAH—

(*1*) Does not have an emergency or urgent care department.

(*2*) Operates in a jurisdiction for which no public health agency is capable of receiving electronic syndromic surveillance data from eligible hospitals or CAHs in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*3*) Operates in a jurisdiction where no public health agency has declared readiness to receive syndromic surveillance data from eligible hospitals or CAHs at the start of the EHR reporting period.

(C) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the specialized registry measure specified in paragraph (f)(9)(ii)(C) of this section if the eligible hospital or CAH—

(*1*) Does not diagnose or directly treat any disease associated with or collect relevant data is required by a specialized registry for which the eligible hospital or CAH is eligible in their jurisdiction.

(*2*) Operates in a jurisdiction for which no specialized registry is capable of accepting electronic registry transactions in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period; or

(*3*) Operates in a jurisdiction where no specialized registry for which the eligible hospital or CAH is eligible has declared readiness to receive electronic registry transactions at the beginning of the EHR reporting period.

(D) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the electronic reportable laboratory result reporting measure specified in paragraph (f)(9)(ii)(D) of this section if the eligible hospital or CAH—

(*1*) Does not perform or order laboratory tests that are reportable in the eligible hospital's or CAH's jurisdiction during the EHR reporting period.

(*2*) Operates in a jurisdiction for which no public health agency that is capable of accepting the specific ELR standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*3*) Operates in a jurisdiction where no public health agency has declared readiness to receive electronic reportable laboratory results from eligible hospitals or CAHs at the start of the EHR reporting period.

■ 26. Section 495.24 is revised to read as follows:

§ 495.24 Stage 3 meaningful use objectives and measures for EPs, eligible hospitals and CAHs for 2018 and subsequent years.

The criteria specified in paragraphs (c) and (d) of this section are optional for 2017 for EPs, eligible hospitals, and CAHs that have successfully demonstrated meaningful use in a prior year. The criteria specified in paragraph (c) of this section are applicable for eligible hospitals and CAHs attesting to CMS for 2018. The criteria specified in paragraph (d) of this section are applicable for all EPs for 2018 and subsequent years, and for eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program for 2018.

(a) *Stage 3 criteria for EPs*—(1) *General rule regarding Stage 3 criteria for meaningful use for EPs.* Except as specified in paragraphs (a)(2) and (3) of this section, EPs must meet all objectives and associated measures of the Stage 3 criteria specified in paragraph (d) of this section to meet the definition of a meaningful EHR user.

(2) *Selection of measures for specified objectives in paragraph (d) of this section.* An EP may meet the criteria for 2 out of the 3 measures associated with an objective, rather than meeting the criteria for all 3 of the measures, if the EP meets all of the following requirements:

(i) Must ensure that the objective in paragraph (d) of this section includes an option to meet 2 out of the 3 associated measures.

(ii) Meets the threshold for 2 out of the 3 measures for that objective.

(iii) Attests to all 3 of the measures for that objective.

(3) *Exclusion for non-applicable objectives and measures.* (i) An EP may exclude a particular objective that includes an option for exclusion contained in paragraph (d) of this section, if the EP meets all of the following requirements:

(A) Meets the criteria in the applicable objective that would permit the exclusion.

(B) Attests to the exclusion.

(ii) An EP may exclude a measure within an objective which allows for a provider to meet the threshold for 2 of the 3 measures, as outlined in paragraph (a)(2) of this section, in the following manner:

(A)(*1*) Meets the criteria in the applicable measure or measures that would permit the exclusion; and

(*2*) Attests to the exclusion or exclusions.

(B)(*1*) Meets the threshold; and

(*2*) Attests to any remaining measure or measures.

(4) *Exception for Medicaid EPs who adopt, implement or upgrade in their first payment year.* For Medicaid EPs who adopt, implement, or upgrade its CEHRT in their first payment year, the meaningful use objectives and associated measures of the Stage 3 criteria specified in paragraph (d) of this section apply beginning with the second payment year, and do not apply to the first payment year.

(5) *Objectives and associated measures in paragraph (d) of this section that rely on measures that count unique patients or actions.* (i) If a measure (or associated objective) in paragraph (d) of this section references paragraph (a)(5) of this section, the measure may be calculated by reviewing only the actions for patients whose records are maintained using CEHRT. A patient's record is maintained using CEHRT if sufficient data were entered in the CEHRT to allow the record to be saved, and not rejected due to incomplete data.

(ii) If the objective and associated measure does not reference paragraph (a)(5) of this section, the measure must be calculated by reviewing all patient records, not just those maintained using CEHRT.

(b) *Stage 3 criteria for meaningful use for eligible hospitals and CAHs*—(1) *General rule.* Except as specified in paragraphs (b)(2) and (3) of this section, eligible hospitals and CAHs must meet all objectives and associated measures of the Stage 3 criteria specified in paragraphs (c) and (d) of this section, as applicable, to meet the definition of a meaningful EHR user.

(2) *Selection of measures for specified objectives in paragraphs (c) and (d) of this section.* An eligible hospital or CAH may meet the criteria for 2 out of the 3 measures associated with an objective, rather than meeting the criteria for all 3 of the measures, if the eligible hospital or CAH meets all of the following requirements:

(i) Must ensure that the objective in paragraph (c) or (d) of this section, as applicable, includes an option to meet 2 out of the 3 associated measures.

(ii) Meets the threshold for 2 out of the 3 measures for that objective.

(iii) Attests to all 3 of the measures for that objective.

(3) *Exclusion for nonapplicable objectives and measures.* (i) An eligible hospital or CAH may exclude a particular objective that includes an option for exclusion contained in

paragraph (c) or (d) of this section, as applicable, if the eligible hospital or CAH meets all of the following requirements:

(A) Meets the criteria in the applicable objective that would permit the exclusion.

(B) Attests to the exclusion.

(ii) An eligible hospital or CAH may exclude a measure within an objective which allows for a provider to meet the threshold for 2 of the 3 measures, as outlined in paragraph (b)(2) of this section, in the following manner:

(A)(*1*) Meets the criteria in the applicable measure or measures that would permit the exclusion; and

(*2*) Attests to the exclusion or exclusions.

(B)(*1*) Meets the threshold; and

(*2*) Attests to any remaining measure or measures.

(4) *Exception for Medicaid eligible hospitals or CAHs that adopt, implement or upgrade in their first payment year.* For Medicaid eligible hospitals or CAHs that adopt, implement or upgrade CEHRT in their first payment year, the meaningful use objectives and associated measures of the Stage 3 criteria specified in paragraph (c) or (d) of this section apply beginning with the second payment year, and do not apply to the first payment year.

(5) *Objectives and associated measures in paragraph (c) or (d) of this section that rely on measures that count unique patients or actions.* (i) If a measure (or associated objective) in paragraph (c) or (d) of this section, as applicable, references paragraph (b)(5) of this section, the measure may be calculated by reviewing only the actions for patients whose records are maintained using CEHRT. A patient's record is maintained using CEHRT if sufficient data were entered in the CEHRT to allow the record to be saved, and not rejected due to incomplete data.

(ii) If the objective and associated measure does not reference this paragraph (b)(5) of this section, the measure must be calculated by reviewing all patient records, not just those maintained using CEHRT.

(c) *Stage 3 objectives and measures for eligible hospitals and CAHs attesting to CMS for 2018.*—(1) *Protect patient health information.* (i) *Objective.* Protect electronic protected health information (ePHI) created or maintained by the CEHRT through the implementation of appropriate technical, administrative, and physical safeguards.

(ii) *Security risk analysis measure.* Conduct or review a security risk analysis in accordance with the requirements under 45 CFR 164.308(a)(1), including addressing the security (including encryption) of data created or maintained by CEHRT in accordance with requirements under 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3), implement security updates as necessary, and correct identified security deficiencies as part of the provider's risk management process.

(2) *Electronic prescribing.*—(i) *Objective.* Generate and transmit permissible discharge prescriptions electronically (eRx).

(ii) *e-Prescribing measure.* Subject to paragraph (b)(5) of this section, more than 25 percent of hospital discharge medication orders for permissible prescriptions (for new and changed prescriptions) are queried for a drug formulary and transmitted electronically using CEHRT.

(iii) *Exclusions in accordance with paragraph (b)(3) of this section.* Any eligible hospital or CAH that does not have an internal pharmacy that can accept electronic prescriptions and there are no pharmacies that accept electronic prescriptions within 10 miles at the start of the eligible hospital or CAH's EHR reporting period.

(3) [Reserved]

(4) [Reserved]

(5) *Patient electronic access to health information.*—(i) *Objective.* The eligible hospital or CAH provides patients (or patient-authorized representative) with timely electronic access to their health information and patient-specific education.

(ii) *Measures.* Eligible hospitals and CAHs must meet the following two measures:

(A) *Provide patient access measure.* For more than 50 percent of all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23):

(*1*) The patient (or patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and

(*2*) The provider ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the API in the provider's CEHRT.

(B) *Patient-specific education measure.* The eligible hospital or CAH must use clinically relevant information from CEHRT to identify patient-specific educational resources and provide electronic access to those materials to more than 10 percent of unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period.

(iii) *Exclusion in accordance with paragraph (b)(3) of this section.* Any eligible hospital or CAH that is located in a county that does not have 50 percent or more of its housing units with 4Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period is excluded from the measures specified in paragraphs (c)(5)(ii)(A) and (B) of this section.

(6) *Coordination of care through patient engagement.*—(i) *Objective.* Use CEHRT to engage with patients or their authorized representatives about the patient's care.

(ii) *Measures.* In accordance with paragraph (b)(2) of this section, an eligible hospital or CAH must satisfy 2 of the 3 following measures in paragraphs (c)(6)(ii)(A), (B), and (C) of this section, except those measures for which an eligible hospital or CAH qualifies for an exclusion under paragraph (b)(3) of this section.

(A) *View, download or transmit (VDT) measure.* During the EHR reporting period, at least one unique patient (or their authorized representatives) discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) actively engage with the electronic health record made accessible by the provider and one of the following:

(*1*) View, download or transmit to a third party their health information.

(*2*) Access their health information through the use of an API that can be used by applications chosen by the patient and configured to the API in the provider's CEHRT; or

(*3*) A combination of paragraphs (c)(6)(ii)(A)(*1*) and (*2*) of this section.

(B) *Secure messaging measure.* During the EHR reporting period, more than 5 percent of all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or the patient authorized representative), or in response to a secure message sent by the patient (or the patient authorized representative).

(C) *Patient generated health data.* Patient generated health data or data from a non-clinical setting is incorporated into the CEHRT for more than 5 percent of unique patients discharged from the eligible hospital or CAH inpatient or emergency department

(POS 21 or 23) during the EHR reporting period.

(iii) *Exclusions under paragraph (b)(3) of this section.* Any eligible hospital or CAH operating in a location that does not have 50 percent or more of its housing units with 4Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period may exclude from the measures specified in paragraphs (c)(6)(ii)(A) through (C) of this section.

(7) *Health information exchange*—(i) *Objective.* The eligible hospital or CAH provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and incorporates summary of care information from other providers into their EHR using the functions of CEHRT.

(ii) *Measures.* In accordance with paragraph (b)(2) of this section, a eligible hospital or CAH must attest to all 3 measures, but must meet the threshold for 2 of the 3 measures in paragraphs (e)(7)(ii)(A) through (C) of this section. Subject to paragraph (b)(5) of this section—

(A) *Send a summary of care measure.* For more than 10 percent of transitions of care and referrals, the eligible hospital or CAH that transitions or refers its patient to another setting of care or provider of care—

(*1*) Creates a summary of care record using CEHRT; and

(*2*) Electronically exchanges the summary of care record.

(B) *Request/accept summary of care measure.* For more than 10 percent of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, the eligible hospital or CAH incorporates into the patient's EHR an electronic summary of care document.

(C) *Clinical information reconciliation measure.* For more than 50 percent of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, the eligible hospital or CAH performs a clinical information reconciliation. The provider must implement clinical information reconciliation for the following three clinical information sets:

(*1*) *Medication.* Review of the patient's medication, including the name, dosage, frequency, and route of each medication.

(*2*) *Medication allergy.* Review of the patient's known allergic medications.

(*3*) *Current problem list.* Review of the patient's current and active diagnoses.

(iii) *Exclusions in accordance with paragraph (b)(3) of this section.* (A) Any eligible hospital or CAH for whom the total of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, is fewer than 100 during the EHR reporting period may be excluded from paragraphs (c)(7)(ii)(B) and (C) of this section.

(B) Any eligible hospital or CAH operating in a location that does not have 50 percent or more of its housing units with 4Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period may be excluded from the measures specified in paragraphs (e)(7)(ii)(A) and (B) of this section.

(8) *Public health and clinical data registry reporting*—(i) *Objective.* The eligible hospital or CAH is in active engagement with a public health agency (PHA) or clinical data registry (CDR) to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice.

(ii) *Measures.* In order to meet the objective under paragraph (c)(8)(i) of this section, an eligible hospital or CAH must choose from measures 1 through 6 (as described in paragraphs (c)(8)(ii)(A) through (F) of this section) and must successfully attest to any combination of three measures. These measures may be met by any combination, including meeting the measure specified in paragraphs (c)(8)(ii)(D) and (E) of this section multiple times, in accordance with applicable law and practice:

(A) *Immunization registry reporting measure.* The eligible hospital or CAH is in active engagement with a public health agency to submit immunization data and receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS).

(B) *Syndromic surveillance reporting measure.* The eligible hospital or CAH is in active engagement with a public health agency to submit syndromic surveillance data from an urgent care setting.

(C) *Electronic case reporting measure.* The eligible hospital or CAH is in active engagement with a public health agency to submit case reporting of reportable conditions.

(D) *Public health registry reporting measure.* The eligible hospital or CAH is in active engagement with a public health agency to submit data to public health registries.

(E) *Clinical data registry reporting measure.* The eligible hospital or CAH is in active engagement to submit data to a clinical data registry.

(F) *Electronic reportable laboratory result reporting measure.* The eligible hospital or CAH is in active engagement with a public health agency to submit electronic reportable laboratory results.

(iii) *Exclusions in accordance with paragraph (b)(3) of this section.* (A) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the immunization registry reporting measure specified in paragraph (c)(8)(ii)(A) of this section if the eligible hospital or CAH—

(*1*) Does not administer any immunizations to any of the populations for which data is collected by its jurisdiction's immunization registry or immunization information system during the EHR reporting period.

(*2*) Operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*3*) Operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the EHR reporting period.

(B) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the syndromic surveillance reporting measure specified in paragraph (c)(8)(ii)(B) of this section if the eligible hospital or CAH—

(*1*) Does not have an emergency or urgent care department.

(*2*) Operates in a jurisdiction for which no public health agency is capable of receiving electronic syndromic surveillance data in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*3*) Operates in a jurisdiction where no public health agency has declared readiness to receive syndromic surveillance data from eligible hospitals or CAHs as of 6 months prior to the start of the EHR reporting period.

(C) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the case reporting measure specified in paragraph (e)(8)(ii)(C) of this section if the eligible hospital or CAH—

(*1*) Does not treat or diagnose any reportable diseases for which data is collected by their jurisdiction's reportable disease system during the EHR reporting period.

(*2*) Operates in a jurisdiction for which no public health agency is capable of receiving electronic case reporting data in the specific standards required to meet the CEHRT definition at the start of their EHR reporting period.

(*3*) Operates in a jurisdiction where no public health agency has declared readiness to receive electronic case reporting data as of 6 months prior to the start of the EHR reporting period.

(D) Any eligible hospital or CAH meeting at least one of the following criteria may be excluded from the public health registry reporting measure specified in paragraph (c)(8)(ii)(D) of this section if the eligible hospital or CAH—

(*1*) Does not diagnose or directly treat any disease or condition associated with a public health registry in its jurisdiction during the EHR reporting period.

(*2*) Operates in a jurisdiction for which no public health agency is capable of accepting electronic registry transactions in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*3*) Operates in a jurisdiction where no public health registry for which the eligible hospital or CAH is eligible has declared readiness to receive electronic registry transactions as of 6 months prior to the start of the EHR reporting period.

(E) Any eligible hospital or CAH meeting at least one of the following criteria may be excluded from the clinical data registry reporting measure specified in paragraph (c)(8)(ii)(E) of this section if the eligible hospital or CAH—

(*1*) Does not diagnose or directly treat any disease or condition associated with a clinical data registry in their jurisdiction during the EHR reporting period.

(*2*) Operates in a jurisdiction for which no clinical data registry is capable of accepting electronic registry transactions in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*3*) Operates in a jurisdiction where no clinical data registry for which the eligible hospital or CAH is eligible has declared readiness to receive electronic registry transactions as of 6 months prior to the start of the EHR reporting period.

(F) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the electronic reportable laboratory result reporting measure specified in paragraph (c)(8)(ii)(F) of this section if the eligible hospital or CAH—

(*1*) Does not perform or order laboratory tests that are reportable in its jurisdiction during the EHR reporting period.

(*2*) Operates in a jurisdiction for which no public health agency that is capable of accepting the specific ELR standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*3*) Operates in a jurisdiction where no public health agency has declared readiness to receive electronic reportable laboratory results from an eligible hospital or CAH as of 6 months prior to the start of the EHR reporting period.

(d) *Stage 3 objectives and measures for all EPs for 2018 and subsequent years, and for eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program for 2018*—(1) *Protect patient health information*—(i) *EP protect patient health information*—(A) *Objective.* Protect electronic protected health information (ePHI) created or maintained by the CEHRT through the implementation of appropriate technical, administrative, and physical safeguards.

(B) *Measure.* Conduct or review a security risk analysis in accordance with the requirements under 45 CFR 164.308(a)(1), including addressing the security (including encryption) of data created or maintained by CEHRT in accordance with requirements under 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3), implement security updates as necessary, and correct identified security deficiencies as part of the provider's risk management process.

(ii) *Eligible hospital/CAH protect patient health information*—(A) *Objective.* Protect electronic protected health information (ePHI) created or maintained by the CEHRT through the implementation of appropriate technical, administrative, and physical safeguards.

(B) *Measure.* Conduct or review a security risk analysis in accordance with the requirements under 45 CFR 164.308(a)(1), including addressing the security (including encryption) of data created or maintained by CEHRT in accordance with requirements under 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3), implement security updates as necessary, and correct identified security deficiencies as part of the provider's risk management process.

(2) *Electronic Prescribing*—(i) *EP Electronic Prescribing*—(A) *Objective.* Generate and transmit permissible prescriptions electronically (eRx).

(B) *Measure.* Subject to paragraph (a)(5) of this section, more than 60 percent of all permissible prescriptions written by the EP are queried for a drug formulary and transmitted electronically using CEHRT.

(C) *Exclusions in accordance with paragraph (a)(3) of this section.* (*1*) Any EP who writes fewer than 100 permissible prescriptions during the EHR reporting period; or

(*2*) Any EP who does not have a pharmacy within its organization and there are no pharmacies that accept electronic prescriptions within 10 miles of the EP's practice location at the start of his/her EHR reporting period.

(ii) *Eligible hospital/CAH electronic prescribing*—(A) *Objective.* Generate and transmit permissible discharge prescriptions electronically (eRx).

(B) *Measure.* Subject to paragraph (b)(5) of this section, more than 25 percent of hospital discharge medication orders for permissible prescriptions (for new and changed prescriptions) are queried for a drug formulary and transmitted electronically using CEHRT.

(C) *Exclusions in accordance with paragraph (b)(3) of this section.* Any eligible hospital or CAH that does not have an internal pharmacy that can accept electronic prescriptions and there are no pharmacies that accept electronic prescriptions within 10 miles at the start of the eligible hospital or CAH's EHR reporting period.

(3) *Clinical decision support*—(i) *EP clinical decision support*—(A) *Objective.* Implement clinical decision support (CDS) interventions focused on improving performance on high-priority health conditions.

(B) *Measures.* (*1*) Implement five clinical decision support interventions related to four or more clinical quality measures at a relevant point in patient care for the entire EHR reporting period. Absent four clinical quality measures related to an EP's scope of practice or patient population, the clinical decision support interventions must be related to high-priority health conditions; and

(*2*) The EP has enabled and implemented the functionality for drug-drug and drug-allergy interaction checks for the entire EHR reporting period.

(C) *Exclusion in accordance with paragraph (a)(3) of this section for paragraph (d)(3)(i)(B)(2) of this section.* An EP who writes fewer than 100 medication orders during the EHR reporting period.

(ii) *Eligible hospital/CAH clinical decision support*—(A) *Objective.* Implement clinical decision support (CDS) interventions focused on

improving performance on high-priority health conditions.

(B) *Measures*—(*1*) Implement five clinical decision support interventions related to four or more clinical quality measures at a relevant point in patient care for the entire EHR reporting period. Absent four clinical quality measures related to an eligible hospital or CAH's patient population, the clinical decision support interventions must be related to high-priority health conditions; and

(*2*) The eligible hospital or CAH has enabled and implemented the functionality for drug-drug and drug-allergy interaction checks for the entire EHR reporting period.

(4) *Computerized provider order entry (CPOE)*—(i) *EP CPOE*—(A) *Objective.* Use computerized provider order entry (CPOE) for medication, laboratory, and diagnostic imaging orders directly entered by any licensed healthcare professional, credentialed medical assistant, or a medical staff member credentialed to and performing the equivalent duties of a credentialed medical assistant, who can enter orders into the medical record per state, local, and professional guidelines.

(B) *Measures.* Subject to paragraph (a)(5) of this section—

(*1*) More than 60 percent of medication orders created by the EP during the EHR reporting period are recorded using computerized provider order entry;

(*2*) More than 60 percent of laboratory orders created by the EP during the EHR reporting period are recorded using computerized provider order entry; and

(*3*) More than 60 percent of diagnostic imaging orders created by the EP during the EHR reporting period are recorded using computerized provider order entry.

(C) *Exclusions in accordance with paragraph (a)(3) of this section.* (*1*) For the measure specified in paragraph (d)(4)(i)(B)(*1*) of this section, any EP who writes fewer than 100 medication orders during the EHR reporting period.

(*2*) For the measure specified in paragraph (d)(4)(i)(B)(*2*) of this section, any EP who writes fewer than 100 laboratory orders during the EHR reporting period.

(*3*) For the measure specified in paragraph (d)(4)(i)(B)(*3*) of this section, any EP who writes fewer than 100 diagnostic imaging orders during the EHR reporting period.

(ii) *Eligible hospital and CAH CPOE*—(A) *Objective.* Use computerized provider order entry (CPOE) for medication, laboratory, and diagnostic imaging orders directly entered by any licensed healthcare professional, credentialed medical assistant, or a medical staff member credentialed to and performing the equivalent duties of a credentialed medical assistant; who can enter orders into the medical record per State, local, and professional guidelines.

(B) *Measures.* Subject to paragraph (b)(5) of this section—

(*1*) More than 60 percent of medication orders created by authorized providers of the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period are recorded using computerized provider order entry;

(*2*) More than 60 percent of laboratory orders created by authorized providers of the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period are recorded using computerized provider order entry; and

(*3*) More than 60 percent of diagnostic imaging orders created by authorized providers of the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period are recorded using computerized provider order entry.

(5) *Patient electronic access to health information*—(i) *EP patient electronic access to health information*—(A) *Objective.* The EP provides patients (or patient-authorized representative) with timely electronic access to their health information and patient-specific education.

(B) *Measures.* EPs must meet the following two measures:

(*1*) For more than 80 percent of all unique patients seen by the EP—

(*i*) The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and

(*ii*) The provider ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the API in the provider's CEHRT.

(*2*) The EP must use clinically relevant information from CEHRT to identify patient-specific educational resources and provide electronic access to those materials to more than 35 percent of unique patients seen by the EP during the EHR reporting period.

(C) *Exclusions in accordance with paragraph (a)(3) of this section.* (*1*) Any EP who has no office visits during the reporting period may exclude from the measures specified in paragraphs (d)(5)(i)(B)(*1*) and (*2*) of this section.

(*2*) Any EP that conducts 50 percent or more of his or her patient encounters in a county that does not have 50 percent or more of its housing units with 4Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period may exclude from the measures specified in paragraphs (d)(5)(i)(B)(*1*) and (*2*) of this section.

(ii) *Eligible hospital and CAH patient electronic access to health information*—(A) *Objective.* The eligible hospital or CAH provides patients (or patient-authorized representative) with timely electronic access to their health information and patient-specific education.

(B) *Measures.* Eligible hospitals and CAHs must meet the following two measures:

(*1*) For more than 80 percent of all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23):

(*i*) The patient (or patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and

(*ii*) The provider ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the API in the provider's CEHRT.

(*2*) The eligible hospital or CAH must use clinically relevant information from CEHRT to identify patient-specific educational resources and provide electronic access to those materials to more than 35 percent of unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period.

(C) *Exclusion in accordance with paragraph (b)(3) of this section.* Any eligible hospital or CAH that is located in a county that does not have 50 percent or more of its housing units with 4Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period is excluded from the measures specified in paragraphs (d)(5)(ii)(B)(*1*) and (*2*) of this section.

(6) *Coordination of care through patient engagement*—(i) *EP coordination of care through patient engagement*—(A) *Objective.* Use CEHRT to engage with patients or their authorized representatives about the patient's care.

(B) *Measures.* In accordance with paragraph (a)(2) of this section, an EP must satisfy 2 out of the 3 following

measures in paragraphs (d)(6)(i)(B)(*1*) through (*3*) of this section except those measures for which an EP qualifies for an exclusion under paragraph (a)(3) of this section.

(*1*) During the EHR reporting period, more than 10 percent of all unique patients (or their authorized representatives) seen by the EP actively engage with the electronic health record made accessible by the provider and either of the following:

(*i*) View, download or transmit to a third party their health information;

(*ii*) their health information through the use of an API that can be used by applications chosen by the patient and configured to the API in the provider's CEHRT; or

(*iii*) A combination of paragraphs (d)(6)(i)(B)(*1*)(*i*) and (*ii*) of this section.

(*iv*) For an EHR reporting period in 2017 only, an EP may meet a threshold of 5 percent instead of 10 percent for the measure at paragraph (d)(6)(i)(B)(*1*) of this section.

(*2*) During the EHR reporting period—

(*i*) For an EHR reporting period in 2017 only, for more than 5 percent of all unique patients seen by the EP during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or their authorized representatives), or in response to a secure message sent by the patient; or

(*ii*) For an EHR reporting period other than 2017, for more than 25 percent of all unique patients seen by the EP during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or their authorized representatives), or in response to a secure message sent by the patient.

(*3*) Patient generated health data or data from a nonclinical setting is incorporated into the CEHRT for more than 5 percent of all unique patients seen by the EP during the EHR reporting period.

(C) *Exclusions in accordance with paragraph (a)(3) of this section.* (*1*) Any EP who has no office visits during the reporting period may exclude from the measures specified in paragraphs (d)(6)(i)(B)(*1*) through (*3*) of this section.

(*2*) Any EP that conducts 50 percent or more of his or her patient encounters in a county that does not have 50 percent or more of its housing units with 4Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period may exclude from the measures specified in paragraphs (d)(6)(i)(B)(*1*) through (*3*) of this section.

(ii) *Eligible hospital and CAH coordination of care through patient engagement*—(A) *Objective.* Use CEHRT to engage with patients or their authorized representatives about the patient's care.

(B) *Measures.* In accordance with paragraph (b)(2) of this section, an eligible hospital or CAH must satisfy 2 of the 3 following measures in paragraphs (d)(6)(ii)(B)(*1*) through (*3*) of this section, except those measures for which an eligible hospital or CAH qualifies for an exclusion under paragraph (b)(3) of this section.

(*1*) During the EHR reporting period, more than 10 percent of all unique patients (or their authorized representatives) discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) actively engage with the electronic health record made accessible by the provider and one of the following:

(*i*) View, download or transmit to a third party their health information.

(*ii*) Access their health information through the use of an API that can be used by applications chosen by the patient and configured to the API in the provider's CEHRT.

(*iii*) A combination of paragraphs (d)(6)(ii)(B)(*1*)(*i*) and (*ii*) of this section.

(*iv*) For an EHR reporting period in 2017, an eligible hospital or CAH may meet a threshold of 5 percent instead of 10 percent for the measure at paragraph (d)(6)(ii)(B)(*1*) of this section.

(*2*) During the EHR reporting period—

(*i*) For an EHR reporting period in 2017 only, for more than 5 percent of all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or their authorized representatives), or in response to a secure message sent by the patient (or their authorized representatives).

(*ii*) For an EHR reporting period other than 2017, for more than 25 percent of all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or their authorized representatives), or in response to a secure message sent by the patient (or their authorized representatives).

(*3*) Patient generated health data or data from a non-clinical setting is incorporated into the CEHRT for more than 5 percent of unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period.

(C) *Exclusions under paragraph (b)(3) of this section.* Any eligible hospital or CAH operating in a location that does not have 50 percent or more of its housing units with 4Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period may exclude from the measures specified in paragraphs (d)(6)(ii)(B)(*1*) through (*3*) of this section.

(7) *Health information exchange*—(i) *EP health information exchange*—(A) *Objective.* The EP provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and incorporates summary of care information from other providers into their EHR using the functions of CEHRT.

(B) *Measures.* In accordance with paragraph (a)(2) of this section, an EP must attest to all 3 measures, but must meet the threshold for 2 of the 3 measures in paragraphs (d)(7)(i)(B)(*1*) through (*3*) of this section, in order to meet the objective. Subject to paragraph (c) of this section—

(*1*) *Measure 1.* For more than 50 percent of transitions of care and referrals, the EP that transitions or refers their patient to another setting of care or provider of care—

(*i*) Creates a summary of care record using CEHRT; and

(*ii*) Electronically exchanges the summary of care record.

(*2*) *Measure 2.* For more than 40 percent of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, the EP incorporates into the patient's EHR an electronic summary of care document.

(*3*) *Measure 3.* For more than 80 percent of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, the EP performs clinical information reconciliation. The EP must implement clinical information reconciliation for the following three clinical information sets:

(*i*) *Medication.* Review of the patient's medication, including the name, dosage, frequency, and route of each medication.

(*ii*) *Medication allergy.* Review of the patient's known allergic medications.

(*iii*) *Current problem list.* Review of the patient's current and active diagnoses.

(C) *Exclusions in accordance with paragraph (a)(3) of this section.* An EP must be excluded when any of the following occur:

(*1*) Any EP who transfers a patient to another setting or refers a patient to another provider less than 100 times during the EHR reporting period must be excluded from paragraph (d)(7)(i)(B)(*1*) of this section.

(*2*) Any EP for whom the total of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, is fewer than 100 during the EHR reporting period may be excluded from paragraphs (d)(7)(i)(B)(*2*) and (*3*) of this section.

(*3*) Any EP that conducts 50 percent or more of his or her patient encounters in a county that does not have 50 percent or more of its housing units with 4Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period may exclude from the measures specified in paragraphs (d)(7)(i)(B)(*1*) and (*2*) of this section.

(ii) *Eligible hospitals and CAHs health information exchange*—(A) *Objective.* The eligible hospital or CAH provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and incorporates summary of care information from other providers into their EHR using the functions of CEHRT.

(B) *Measures.* In accordance with paragraph (b)(2) of this section, an eligible hospital or CAH must attest to all three measures, but must meet the threshold for 2 of the 3 measures in paragraphs (d)(7)(ii)(B)(*1*) through (*3*) of this section. Subject to paragraph (b)(5) of this section—

(*1*) *Measure 1.* For more than 50 percent of transitions of care and referrals, the eligible hospital or CAH that transitions or refers its patient to another setting of care or provider of care—

(*i*) Creates a summary of care record using CEHRT; and

(*ii*) Electronically exchanges the summary of care record.

(*2*) *Measure 2.* For more than 40 percent of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, the eligible hospital or CAH incorporates into the patient's EHR an electronic summary of care document from a source other than the provider's EHR system.

(*3*) *Measure 3.* For more than 80 percent of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, the eligible hospital or CAH performs a clinical information reconciliation. The provider must implement clinical information reconciliation for the following three clinical information sets:

(*i*) *Medication.* Review of the patient's medication, including the name, dosage, frequency, and route of each medication.

(*ii*) *Medication allergy.* Review of the patient's known allergic medications.

(*iii*) *Current problem list.* Review of the patient's current and active diagnoses.

(C) *Exclusions in accordance with paragraph (b)(3) of this section.* (*1*) Any eligible hospital or CAH for whom the total of transitions or referrals received and patient encounters in which the provider has never before encountered the patient, is fewer than 100 during the EHR reporting period may be excluded from paragraphs (d)(7)(i)(B)(*2*) and (*3*) of this section.

(*2*) Any eligible hospital or CAH operating in a location that does not have 50 percent or more of its housing units with 4Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period may exclude from the measures specified in paragraphs (d)(7)(ii)(B)(*1*) and (*2*) of this section.

(8) *Public Health and Clinical Data Registry Reporting*—(i) *EP Public Health and Clinical Data Registry: Reporting objective*—(A) *Objective.* The EP is in active engagement with a public health agency or clinical data registry to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice.

(B) *Measures.* In order to meet the objective under paragraph (d)(8)(i)(A) of this section, an EP must choose from measures 1 through 5 (paragraphs (d)(8)(i)(B)(*1*) through (*5*) of this section) and must successfully attest to any combination of two measures. These measures may be met by any combination, including meeting measure specified in paragraph (d)(8)(i)(B)(*4*) or (*5*) of this section multiple times, in accordance with applicable law and practice:

(*1*) *Immunization registry reporting.* The EP is in active engagement with a public health agency to submit immunization data and receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS).

(*2*) *Syndromic surveillance reporting.* The EP is in active engagement with a public health agency to submit syndromic surveillance data from an urgent care setting.

(*3*) *Electronic case reporting.* The EP is in active engagement with a public health agency to submit case reporting of reportable conditions.

(*4*) *Public health registry reporting.* The EP is in active engagement with a public health agency to submit data to public health registries.

(*5*) *Clinical data registry reporting.* The EP is in active engagement to submit data to a clinical data registry.

(C) *Exclusions in accordance with paragraph (a)(3) of this section.* (*1*) Any EP meeting one or more of the following criteria may be excluded from the immunization registry reporting measure in paragraph (d)(8)(i)(B)(*1*) of this section if the EP—

(*i*) Does not administer any immunizations to any of the populations for which data is collected by their jurisdiction's immunization registry or immunization information system during the EHR reporting period.

(*ii*) Operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT definition at the start of its EHR reporting period.

(*iii*) Operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the EHR reporting period.

(*2*) Any EP meeting one or more of the following criteria may be excluded from the syndromic surveillance reporting measure described in paragraph (d)(8)(i)(B)(*2*) of the section if the EP—

(*i*) Is not in a category of providers from which ambulatory syndromic surveillance data is collected by their jurisdiction's syndromic surveillance system.

(*ii*) Operates in a jurisdiction for which no public health agency is capable of receiving electronic syndromic surveillance data in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*iii*) Operates in a jurisdiction where no public health agency has declared readiness to receive syndromic surveillance data from EPs as of 6 months prior to the start of the EHR reporting period.

(*3*) Any EP meeting one or more of the following criteria may be excluded from

the case reporting measure at paragraph (d)(8)(i)(B)(*3*) of this section if the EP:

(*i*) Does not treat or diagnose any reportable diseases for which data is collected by their jurisdiction's reportable disease system during the EHR reporting period.

(*ii*) Operates in a jurisdiction for which no public health agency is capable of receiving electronic case reporting data in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*iii*) Operates in a jurisdiction where no public health agency has declared readiness to receive electronic case reporting data as of 6 months prior to the start of the EHR reporting period.

(*4*) Any EP meeting at least one of the following criteria may be excluded from the public health registry reporting measure specified in paragraph (d)(8)(i)(B)(*4*) of this section if the EP—

(*i*) Does not diagnose or directly treat any disease or condition associated with a public health registry in the EP's jurisdiction during the EHR reporting period.

(*ii*) Operates in a jurisdiction for which no public health agency is capable of accepting electronic registry transactions in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*iii*) Operates in a jurisdiction where no public health registry for which the EP, eligible hospital, or CAH is eligible has declared readiness to receive electronic registry transactions as of 6 months prior to the start of the EHR reporting period.

(*5*) Any EP meeting at least one of the following criteria may be excluded from the clinical data registry reporting measure specified in paragraph (d)(8)(i)(B)(*5*) of this section if the EP—

(*i*) Does not diagnose or directly treat any disease or condition associated with a clinical data registry in their jurisdiction during the EHR reporting period.

(*ii*) Operates in a jurisdiction for which no clinical data registry is capable of accepting electronic registry transactions in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*iii*) Operates in a jurisdiction where no clinical data registry for which the EP, eligible hospital, or CAH is eligible has declared readiness to receive electronic registry transactions as of 6 months prior to the start of the EHR reporting period.

(ii) *Eligible hospital and CAH Public Health and Clinical Data Registry: Reporting objective*—(A) *Objective.* The eligible hospital or CAH is in active engagement with a public health agency (PHA) or clinical data registry (CDR) to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice.

(B) *Measures.* In order to meet the objective under paragraph (d)(8)(ii)(A) of this section, an eligible hospital or CAH must choose from measures 1 through 6 (as described in paragraphs (d)(8)(ii)(B)(*1*) through (*6*) of this section) and must successfully attest to any combination of four measures. These measures may be met by any combination, including meeting the measure specified in paragraph (d)(8)(ii)(B)(*4*) or (*5*) of this section multiple times, in accordance with applicable law and practice:

(*1*) *Immunization registry reporting.* The eligible hospital or CAH is in active engagement with a public health agency to submit immunization data and receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS).

(*2*) *Syndromic surveillance reporting.* The eligible hospital or CAH is in active engagement with a public health agency to submit syndromic surveillance data from an urgent care setting.

(*3*) *Case reporting.* The eligible hospital or CAH is in active engagement with a public health agency to submit case reporting of reportable conditions.

(*4*) *Public health registry reporting.* The eligible hospital or CAH is in active engagement with a public health agency to submit data to public health registries.

(*5*) *Clinical data registry reporting.* The eligible hospital or CAH is in active engagement to submit data to a clinical data registry.

(*6*) *Electronic reportable laboratory result reporting.* The eligible hospital or CAH is in active engagement with a public health agency to submit electronic reportable laboratory results.

(C) *Exclusions in accordance with paragraph (b)(3) of this section.* (*1*) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from to the immunization registry reporting measure specified in paragraph (d)(8)(ii)(B)(*1*) of this section if the eligible hospital or CAH—

(*i*) Does not administer any immunizations to any of the populations for which data is collected by its jurisdiction's immunization registry or immunization information system during the EHR reporting period.

(*ii*) Operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*iii*) Operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the EHR reporting period.

(*2*) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the syndromic surveillance reporting measure specified in paragraph (d)(8)(ii)(B)(*2*) of this section if the eligible hospital or CAH—

(*i*) Does not have an emergency or urgent care department.

(*ii*) Operates in a jurisdiction for which no public health agency is capable of receiving electronic syndromic surveillance data in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*iii*) Operates in a jurisdiction where no public health agency has declared readiness to receive syndromic surveillance data from eligible hospitals or CAHs as of 6 months prior to the start of the EHR reporting period.

(*3*) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the case reporting measure specified in paragraph (d)(8)(ii)(B)(*3*) of this section if the eligible hospital or CAH—

(*i*) Does not treat or diagnose any reportable diseases for which data is collected by their jurisdiction's reportable disease system during the EHR reporting period.

(*ii*) Operates in a jurisdiction for which no public health agency is capable of receiving electronic case reporting data in the specific standards required to meet the CEHRT definition at the start of their EHR reporting period.

(*iii*) Operates in a jurisdiction where no public health agency has declared readiness to receive electronic case reporting data as of 6 months prior to the start of the EHR reporting period.

(*4*) Any eligible hospital or CAH meeting at least one of the following criteria may be excluded from the public health registry reporting measure specified in paragraph (d)(8)(ii)(B)(*4*) of this section if the eligible hospital or CAH—

(*i*) Does not diagnose or directly treat any disease or condition associated with a public health registry in its jurisdiction during the EHR reporting period.

(*ii*) Operates in a jurisdiction for which no public health agency is capable of accepting electronic registry transactions in the specific standards

required to meet the CEHRT definition at the start of the EHR reporting period.

(*iii*) Operates in a jurisdiction where no public health registry for which the eligible hospital or CAH is eligible has declared readiness to receive electronic registry transactions as of 6 months prior to the start of the EHR reporting period.

(*5*) Any eligible hospital or CAH meeting at least one of the following criteria may be excluded from the clinical data registry reporting measure specified in paragraph (d)(8)(ii)(B)(*5*) of this section if the eligible hospital or CAH—

(*i*) Does not diagnose or directly treat any disease or condition associated with a clinical data registry in their jurisdiction during the EHR reporting period.

(*ii*) Operates in a jurisdiction for which no clinical data registry is capable of accepting electronic registry transactions in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*iii*) Operates in a jurisdiction where no clinical data registry for which the eligible hospital or CAH is eligible has declared readiness to receive electronic registry transactions as of 6 months prior to the start of the EHR reporting period.

(*6*) Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the electronic reportable laboratory result reporting measure specified in paragraph (d)(8)(ii)(B)(*6*) of this section if the eligible hospital or CAH—

(*i*) Does not perform or order laboratory tests that are reportable in its jurisdiction during the EHR reporting period.

(*ii*) Operates in a jurisdiction for which no public health agency that is capable of accepting the specific ELR standards required to meet the CEHRT definition at the start of the EHR reporting period.

(*iii*) Operates in a jurisdiction where no public health agency has declared readiness to receive electronic reportable laboratory results from an eligible hospital or CAH as of 6 months prior to the start of the EHR reporting period.

■ 27. Section 495.40 is amended by—

■ a. Revising paragraph (a) introductory text.

■ b. Revising paragraphs (a)(2)(i)(E) and (F).

■ c. Adding paragraph (a)(2)(i)(G).

■ d. Revising paragraphs (b) introductory text and (b)(2)(i)(E) and (F).

■ e. Redesignating paragraph (b)(2)(i)(G) as paragraph (b)(2)(i)(H).

■ f. Adding a new paragraph (b)(2)(i)(G).

The revisions and additions read as follows:

§ 495.40 Demonstration of meaningful use criteria.

(a) *Demonstration by EPs.* An EP must demonstrate that he or she satisfies each of the applicable objectives and associated measures under § 495.20 or § 495.24, as follows:

* * * * *

(2) * * *

(i) * * *

(E) For CYs 2015 through 2016, satisfied the required objectives and associated measures under § 495.22(e) for meaningful use.

(F) For CY 2017: An EP that has successfully demonstrated it is a meaningful EHR user in any prior year may satisfy either the objectives and measures specified in § 495.22(e) for meaningful use or the objectives and measures specified in § 495.24(d) for meaningful use; an EP that has never successfully demonstrated it is a meaningful EHR user in any prior year must satisfy the objectives and measures specified in § 495.22(e) for meaningful use.

(G) For CY 2018 and subsequent years, satisfied the required objectives and associated measures under § 495.24(d) for meaningful use.

* * * * *

(b) *Demonstration by eligible hospitals and CAHs.* To successfully demonstrate that it is a meaningful EHR user, an eligible hospital or CAH must satisfy the following requirements:

* * * * *

(2) * * *

(i) * * *

(E) For CYs 2015 through 2016, satisfied the required objectives and associated measures under § 495.22(e) for meaningful use.

(F) For CY 2017:

(*1*) For an eligible hospital or CAH attesting to CMS: An eligible hospital or CAH that has successfully demonstrated it is a meaningful EHR user in any prior year may satisfy either the objectives and measures specified in § 495.22(f) for meaningful use or the objectives and measures specified in § 495.24(c) for meaningful use; an eligible hospital or CAH that has never successfully demonstrated it is a meaningful EHR user in any prior year must satisfy the objectives and measures specified in § 495.22(f) for meaningful use.

(*2*) For an eligible hospital or CAH attesting to a State for the Medicaid EHR Incentive Program: An eligible hospital or CAH that has successfully demonstrated it is a meaningful EHR user in any prior year may satisfy either the objectives and measures specified in § 495.22(e) for meaningful use or the objectives and measures specified in § 495.24(d) for meaningful use; an eligible hospital or CAH that has never successfully demonstrated it is a meaningful EHR user in any prior year must satisfy the objectives and measures specified in § 495.22(e) for meaningful use.

(G) For CY 2018:

(*1*) For an eligible hospital or CAH attesting to CMS, satisfied the required objectives and associated measures under § 495.24(c) for meaningful use.

(*2*) For an eligible hospital or CAH attesting to a State for the Medicaid EHR Incentive Program, satisfied the required objectives and associated measures under § 495.24(d) for meaningful use.

* * * * *

■ 28. Section 495.102 is amended by adding paragraph (d)(4)(v) to read as follows:

§ 495.102 Incentive payments to EPs.

* * * * *

(d) * * *

(4) * * *

(v) For the 2018 payment adjustment only, an EP who has not successfully demonstrated meaningful use in a prior year, intends to attest to meaningful use for an EHR reporting period in 2017 by October 1, 2017 to avoid the 2018 payment adjustment, and intends to transition to the Merit-Based Incentive Payment System (MIPS) and report on measures specified for the advancing care information performance category under the MIPS in 2017. The EP must explain in the application why demonstrating meaningful use for an EHR reporting period in 2017 would result in a significant hardship. Applications requesting this exception must be submitted no later than October 1, 2017, or a later date specified by CMS.

BILLING CODE 4120–01–P

FEDERAL REGISTER

Vol. 81 Monday,

No. 219 November 14, 2016

Part III

Federal Communications Commission

47 CFR Parts 1, 2, 15, et al.

Use of Spectrum Bands Above 24 GHz for Mobile Radio Services; Final Rule

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 1, 2, 15, 25, 30, and 101

[GN Docket No. 14–177, IB Docket Nos. 15–256 and 97–95, RM–11664, WT Docket No. 10–112; FCC 16–89]

Use of Spectrum Bands Above 24 GHz for Mobile Radio Services

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In this document, the Federal Communications Commission (Commission or FCC) adopts rules for specific millimeter wave (mmW) bands above 24 GHz. This action is undertaken to establish a regulatory framework for the use of these bands for the development of the next generational evolution of wireless technology. Once effective, these rules will promote the development of highly beneficial technologies, in particular the so-called 5G technology.

DATES: Effective December 14, 2016, except for §§ 25.136 and 30.8 which contain information collection requirements that are not effective until approved by the Office of Management and Budget. The FCC will publish a document in the **Federal Register** announcing the effective date for those sections.

FOR FURTHER INFORMATION CONTACT: John Schauble of the Wireless Telecommunications Bureau, Broadband Division, at 202–418–0797 or *John.Schauble@fcc.gov,* Michael Ha of the Office of Engineering and Technology, Policy and Rules Division, at 202–418–2099 or *Michael.Ha@fcc.gov,* or Jose Albuquerque of the International Bureau, Satellite Division, at 202–418–2288 or *Jose.Albuquerque@fcc.gov.* For information regarding the PRA information collection requirements contained in this PRA, contact Cathy Williams, Office of Managing Director, at (202) 418–2918, or via email at *Cathy.Williams@fcc.gov.*

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's *Report and Order* GN Docket No. 14–177, FCC 16–89, adopted and released on July 14, 2016. The complete text of this document is available for public inspection and copying from 8 a.m. to 4:30 p.m. Eastern Time (ET) Monday through Thursday or from 8 a.m. to 11:30 a.m. ET on Fridays in the FCC Reference Information Center, 445 12th Street SW., Room CY–A257, Washington, DC 20554. The complete text is available on the Commission's Web site at *http://wireless.fcc.gov,* or by using the search function on the ECFS Web page at *http://www.fcc.gov/cgb/ecfs/.* Alternative formats are available to persons with disabilities by sending an email to *fcc504@fcc.gov* or by calling the Consumer & Governmental Affairs Bureau at 202–418–0530 (voice), 202–418–0432 (tty).

Ex Parte Presentations

This proceeding shall continue to be treated as a ''permit-but-disclose'' proceeding in accordance with the Commission's *ex parte* rules. Persons making *ex parte* presentations must file a copy of any written presentation or a memorandum summarizing any oral presentation within two business days after the presentation (unless a different deadline applicable to the Sunshine period applies). Persons making oral *ex parte* presentations are reminded that memoranda summarizing the presentation must (1) list all persons attending or otherwise participating in the meeting at which the *ex parte* presentation was made, and (2) summarize all data presented and arguments made during the presentation. If the presentation consisted in whole or in part of the presentation of data or arguments already reflected in the presenter's written comments, memoranda or other filings in the proceeding, the presenter may provide citations to such data or arguments in his or her prior comments, memoranda, or other filings (specifying the relevant page and/or paragraph numbers where such data or arguments can be found) in lieu of summarizing them in the memorandum. Documents shown or given to Commission staff during *ex parte* meetings are deemed to be written *ex parte* presentations and must be filed consistent with § 1.1206(b). In proceedings governed by § 1.49(f) or for which the Commission has made available a method of electronic filing, written *ex parte* presentations and memoranda summarizing oral *ex parte* presentations, and all attachments thereto, must be filed through the electronic comment filing system available for that proceeding, and must be filed in their native format (*e.g.,* .doc, .xml, .ppt, searchable .pdf). Participants in this proceeding should familiarize themselves with the Commission's *ex parte* rules.

Paperwork Reduction Act

The *Report and Order* contains new information collection requirements subject to the Paperwork Reduction Act of 1995 (PRA), Public Law 104–13. It will be submitted to the Office of Management and Budget (OMB) for review under § 3507(d) of the PRA. OMB, the general public, and other Federal agencies will be invited to comment on the new information collection requirements contained in this proceeding.

Comment Filing Procedures

Pursuant to §§ 1.415 and 1.419 of the Commission's rules, 47 CFR 1.415, 1.419, interested parties may file comments and reply comments on or before the dates indicated on the first page of this document. Comments may be filed using the Commission's Electronic Comment Filing System (ECFS). See Electronic Filing of Documents in Rulemaking Proceedings, 63 FR 24121 (1998).

- *Electronic Filers:* Comments may be filed electronically using the Internet by accessing the ECFS: *http://fjallfoss.fcc.gov/ecfs2/* or the Federal eRulemaking Portal: *http://www.regulations.gov.* Filers should follow the instructions provided on the Web site for submitting comments and transmit one electronic copy of the filing to GN Docket No. 14–177. For ECFS filers, in completing the transmittal screen, filers should include their full name, U.S. Postal Service mailing address, and the applicable docket number.
- *Paper Filers:* Parties who choose to file by paper must file an original and one copy of each filing. If more than one docket or rulemaking number appears in the caption of this proceeding, filers must submit two additional copies for each additional docket or rulemaking number.
- Filings can be sent by hand or messenger delivery, by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail. All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.
- All hand-delivered or messenger-delivered paper filings for the Commission's Secretary must be delivered to FCC Headquarters at 445 12th St. SW., Room TW–A325, Washington, DC 20554. The filing hours are 8:00 a.m. to 7:00 p.m. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes and boxes must be disposed of before entering the building.
- Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9300 East Hampton Drive, Capitol Heights, MD 20743.
- U.S. Postal Service first-class, Express, and Priority mail must be

addressed to 445 12th Street, SW., Washington DC 20554.

People with Disabilities: To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an email to *fcc504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at 202–418–0530 (voice), 202–418–0432 (tty).

Congressional Review Act

The Commission will send a copy of this *Report and Order* in a report to be sent to Congress and the Government Accountability Office pursuant to the Congressional Review Act (CRA), see 5 U.S.C. 801(a)(1)(A).

Synopsis

I. Introduction

1. In this *Report and Order,* the Commission adopts new licensing, service, and technical rules for three bands. In so doing, the Commission attempts to follow a consistent framework across all of the bands that can serve as a template for additional bands in the future. The Commission adopted 10 year license terms and performance requirements that are flexible to allow multiple use cases to evolve over time. These basic building blocks are modified in order to meet the specific characteristics of a particular band.

2. The Commission also took significant steps forward on solutions to spectrum sharing in the millimeter wave (mmW) bands. The Commission adopted rules that will allow both satellite and terrestrial networks to continue to expand in a flexible manner. The Commission continues to facilitate co-primary shared access to the 39.5–40 GHz band for Federal and non-Federal users, and building off of recent policy developments in spectrum sharing, it also created a new approach to Federal sharing in the 37 GHz band. Specifically, instead of relying on static exclusion zones, the Commission created a space for both Federal and non-Federal users to share on a coequal basis and set out a process for defining how that sharing will be implemented. Finally, the Commission substantially increases the amount of unlicensed spectrum available by adding another seven gigahertz to the existing 57–64 GHz band, and adopting flexible technical rules.

A. 28 GHz Band

1. Suitability for Mobile Use

3. Some satellite operators, satellite equipment suppliers and satellite-focused trade associations urge the Commission not to authorize terrestrial mobile services in the 28 GHz band. This perspective is by no means unanimous or unqualified even among that group, however. SES, for example, says that it expects to support terrestrial mobile services in bands above 24 GHz by providing video distribution, providing backhaul services, and by extending terrestrial network coverage to sea, air, and remote land masses. EchoStar says that satellite operators could coexist with mobile services in the band by avoiding deployment of gateway earth stations in large urban centers. ViaSat estimates that the compatibility distance between satellite earth stations and terrestrial mobile in the 28 GHz band would be in the range of 160 meters, and could be further reduced by additional mitigation techniques. Nearly all other commenters who address the topic emphatically support mobile service authorization in the 28 GHz band.

4. Perhaps more so than other mmW bands, the 28 GHz band has been the focus of academic research and industry prototyping efforts to develop mobile service technologies. The 28 GHz band is attractive for research on enabling mobility in mmW bands because, with 850 megahertz of contiguous bandwidth, it has ample capacity to accommodate a wide range of high data-rate applications, and it has global co-primary allocations for fixed and mobile services. There are no Federal allocations in the band. Further, because this is an active service with Local Multipoint Distribution Service (LMDS) licenses covering about 75 percent of the U.S. population, it can be quickly repurposed for new flexible uses, including mobile. The ready availability of the spectrum will also help drive the development of a robust ecosystem at a large scale.

5. Opponents of authorizing new flexible and mobile use in the 28 GHz band raise three basic objections: (1) That there is no international consensus to authorize mobile services in the band; (2) that LMDS operators do not have an equitable expectation of mobile rights in the band; and (3) that mobile services in the 28 GHz band would impair vital satellite services. The Commission discusses the first of those issues below, reserving discussion of the second and third issues for Section I.4.c (Aggregate Interference to Satellite Receivers).

6. Regarding the alleged absence of international consensus expressed by some of the commenting parties, the Commission notes that the 28 GHz band already has a primary worldwide mobile service allocation, which embodies a previously agreed consensus among International Telecommunication Union (ITU) members. Although World Radiocommunication Conference (WRC) 2015 (WRC–15) omitted 27.5–28.35 GHz from a list of mmW bands that it invited ITU-Radiocommunication (ITU–R) to study for mobile service, the record in this proceeding makes it abundantly clear that there are significant benefits to authorizing mobile use in the 28 GHz band regardless of that international decision.

7. Administrations and wireless industry representatives that have been major leaders in the mobile industry support authorization of mobile services in the 27.5–28.35 GHz band. Verizon notes that countries supporting mobile use in the band include South Korea, Japan, Sweden, Finland, and Singapore—''technology powerhouses with their sights set on 5G''—and argues that this Commission should not delay repurposing the 28 GHz band while its counterparts in those countries support their industries' efforts to develop mobile technologies for the band. Intel says that major markets like the U.S., Japan, and Korea are moving expeditiously, ''blazing the trail for mobile 5G services in the 28 GHz band, in spite of the WRC–15 decision not to study the 28 GHz band leading up to WRC–19.'' Ericsson contends that, regardless of the outcome of WRC–15, spectrum from this general range very likely will be used for 5G around the world, as evidenced by the fact that Japan and Korea appear to be pressing ahead to use frequencies in this range for their Olympic Game deployments. Nokia expresses disappointment with the outcome of WRC–15, sees ''great potential'' for the 28 GHz band and urges the Commission to ''unlock the promise of that band for mobile use.'' Internationally, Huawei and Alcatel-Lucent are also focusing on the 28 GHz band as key spectrum for mobile use. T-Mobile USA, whose majority owner is the flagship German telecommunications company, Deutsche Telekom, filed comments in this proceeding expressing its support for mobile services in the 28 GHz band. Other comments reflect near-unanimous support among carriers, equipment suppliers, and associations that represent them.

8. The Commission acknowledges the comments of parties that emphasize the importance of international harmonization, but in this case, it appears there is sufficient international interest (including from Japan and South Korea) for using the 28 GHz band and adjacent bands to justify making the 28 GHz band available for mobile use. Intel and Ericsson both state that the

mobile industry could readily create integrated circuits with tuning ranges for various bands in that part of the spectrum, and the Republic of Korea submitted a proposal to WRC–15 stating that the ''frequency range from 24.25 GHz to 29.5 GHz proposed from regional groups could be implemented by one single device to facilitate global roaming around the year 2020.'' These kinds of capabilities are already being reflected in standards development. Microsoft explains that 3GPP release 13 will allow for carrier aggregation of multiple bands of spectrum, both licensed and unlicensed, in the 5 GHz band, and it says that, once 5G service is defined, the committee will likely extend its standards to encompass the millimeter wave bands. Microsoft argues that carriers should ultimately be able to aggregate low-, medium-, and high-band spectrum. The significant domestic and international interest in making the 28 GHz band available for new mobile uses clearly supports taking action in this *Report and Order* to create new flexible use licenses.

2. Licensing the 28 GHz Band

a. Use of Geographic Area Licensing

9. The Commission adopted its proposal to implement geographic area licensing throughout the 28 GHz band because geographic area licensing will expedite deployment, provide licensees with the flexibility to provide a variety of services, and is consistent with the existing licensing scheme. One significant advantage to this approach is that the Commission can expedite use of the band for advanced services because it is consistent with the existing framework in this band.

10. In contrast, if the Commission adopted a separate framework for mobile use of the band, the Commission needs to develop a Spectrum Access System (SAS), define the specific rights held by the existing licensees, and work out rules for coordination with the existing licensees. Adopting geographic area licensing for this band is also consistent with the Commission's goal of adopting a balanced licensing approach that includes licensed, unlicensed, and innovative sharing approaches across a variety of bands. For these reasons, the Commission is not adopting a 3.5 GHz-style SAS framework for this band.

11. Similarly, the Commission declines to adopt Microsoft's proposal to create an unlicensed portion of the band. The Commission believes splitting the band into unlicensed and licensed segments would potentially hinder deployment by making it more difficult for licensees to use the full 850 megahertz of spectrum. The Commission nonetheless agrees that a balance between licensed and unlicensed usage is important, and as described below, the Commission is also making seven gigahertz of spectrum available for use by unlicensed devices in the 64–71 GHz band, and create an opportunity for shared access in the 37–37.6 GHz band segment.

b. License Area Size

12. The Commission adopted counties as the license area size for Upper Microwave Flexible Use Service (UMFUS) licenses in the 28 GHz band. The Commission also adopted its proposal to subdivide existing LMDS licenses on a county basis. As the Commission explained in the *Notice of Proposed Rulemaking (NPRM),* a county-based license affords a licensee the flexibility to develop localized services, allows for targeted deployments based on market forces and customer demand, and facilitates access by both smaller and larger carriers. In the Commission views, the claims of certain commenters that larger license areas will better fit the services contemplated for these bands lack specificity and do not take into account the potential need for targeted deployment. It is unclear that providers need to—or will want to—aggregate nationwide licenses, as mobile operations in the band may initially be deployed. On a mobile basis, this band is envisioned for mobile operations in denser population centers or around highway corridors. While it is true that county-sized licenses will result in more borders, the Commission adopted a power flux density (PFD) limit at the border that will facilitate coordination between licensees. Furthermore, no party offered evidence that there have been problems providing service near existing Basic Trading Area (BTA) borders. The Commission notes that licensees in other services regularly coordinate their operations along shared borders and have well established procedures for conducting this coordination. The Commission expects that licensees will be able to apply these same procedures in this band without any undue burden. To the extent existing BTA licensees do not believe it is economically viable to build within certain counties of a BTA, the Commission believes it would be appropriate to give other interested parties an opportunity to license and to make use of the spectrum. Finally, establishing smaller license areas is fair to existing licensees because those licensees are also obtaining valuable new rights and they are keeping the same bundle of rights they had previously. Overall, the Commission believes the benefits of smaller license areas for this specific band outweigh any administrative burden on licensees and the Commission.

13. In this proceeding, the Commission is endeavoring to create a regulatory scheme that will suit the development of innovative wireless services for years to come. The Commission in recent years has sought greater consistency in its approach to geographic license area sizes to help providers aggregate licenses in a more targeted and efficient manner, gravitating toward license areas that are derived from Economic Area (EA) units. BTAs have only been used as the license area for a few commercial wireless services. Counties, however, are the base unit that make up common commercial wireless license sizes, including EAs and the new Partial Economic Area (PEA) license areas. There is also a practical advantage to issuing county-based licenses. Specifically, the Commission would be required to negotiate a new licensing agreement with Rand McNally to use BTAs in UMFUS. In recent years, the Commission has avoided using license areas controlled by third parties in order to eliminate the time and expense involved in negotiating such agreements.

3. Mobile Rights for Incumbents

14. The Commission adopted its proposal to grant mobile operating rights to existing active LMDS licensees. This grant is in fulfillment of the Commission's original mobile allocation for 28 GHz and its stated expectation of allowing mobile use in the band in ''providing LMDS licensees with maximum flexibility in designing their systems.'' The Commission adopted the rules; therefore, licensees are able to provide mobile services consistent with part 30 licensing and technical rules. Granting mobile operating rights to existing licensees will expedite the deployment of service, minimize the difficulties involved in coordinating fixed and mobile deployments, and provide a uniform licensing scheme throughout the United States. The Commission remains concerned that awarding fixed and mobile rights separately would lead to disputes between fixed and mobile licensees that could make it more difficult for both licensees to provide service.

15. The Commission recognizes that awarding mobile rights to incumbent licensees could be viewed as a windfall to those licensees, although the

Commission contemplated granting mobile rights when it first created LMDS. Here, the benefits of expediting service and ease of coordinating fixed and mobile service outweigh any foreseeable disadvantages of granting mobile rights to incumbents. In this instance, the Commission finds that expedition is particularly important because of the need to make mmW spectrum available for innovative and novel issues.

4. Satellite Terrestrial Sharing

a. Sharing With FSS (Fixed Satellite Service) Earth Stations

16. The record demonstrates that FSS earth stations in the 28 GHz band can share the band with minimal impact on terrestrial operations. For example, EchoStar argues that 28 GHz Earth-to-space stations would not curtail the deployment of 5G systems outside a few very small non-urban areas. EchoStar and ViaSat both estimate that terrestrial mobile stations could be deployed as close as 170 meters to their Earth-to-space transmitters in the 28 GHz band. SES Americom suggests ''carving out some rural areas where future gateway earth stations can be licensed for use in the 28 GHz band.'' With respect to terrestrial operations, AT&T, Nokia, Samsung, T-Mobile, and Verizon estimate that the necessary separation distances between FSS earth stations and terrestrial deployments are between 50 and 400 meters depending on the type of earth stations. Therefore, the Commission finds that it is in the public interest to create rules that allow for continued and expanded sharing between terrestrial operations and FSS earth stations in the 28 GHz band.

17. The Commission recognizes that sharing may be more difficult for non-geostationary satellite systems, such as the system operated by O3b. While O3b argues that it needs multiple sites in a county in order to serve customer locations, it ignores the Commission's decision that it was allowing FSS to access the 28 GHz band solely for the purpose of providing limited Earth-to-space gateway-type services. O3b had no reasonable expectation that the Commission would grant earth stations designed to serve customer locations priority over fixed LMDS services and mobile services that the Commission contemplated would become part of LMDS. O3b estimates that the preclusive distance for its gateway earth stations with respect to mmW mobile stations is between 1.2 and 13.8 kilometers. Nonetheless, the Commission believes that sharing is feasible for O3b. First, as discussed below, the Commission is grandfathering O3b's existing earth stations in Texas and Hawaii. Second, O3b has the option of locating future earth stations in relatively remote areas. Third, O3b can obtain protection by purchasing an exclusive use terrestrial license at auction or by working with a licensee in the secondary market to partition a license area with sufficient size to allow it to deploy additional earth stations without impacting terrestrial operations, or enter into a different type of negotiated sharing arrangement. Fourth, O3b can take advantage of shielding or other mitigation techniques. Comsearch characterizes satellite operators' use of naturally occurring terrain features as follows:

> Before the great explosion of satellite communications for all types of uses, earth station sites were carefully selected with protection from interference the primary consideration. Most locations were many miles from the cities that they were serving, with the ideal earth station site being naturally shielded by terrain at a spot, which was calculated to be virtually free of interfering signals. For most types of communication, this type of isolation is not required, although it is still true that the most important aspect of a site is its shielding.

There are many naturally occurring terrain features that are capable of providing terrain shielding for NGSO gateway stations and shielding can also be provided by creating berms or other man-made barriers.

18. In short, while allowing new earth stations in the 28 GHz band is not without cost to terrestrial licensees, the Commission believes that the small area encumbered by a new earth station (with the limits noted below) will minimize such costs and will allow both satellite and terrestrial services to expand and coexist. Furthermore, satellite operators deployed in this band knowing that they were secondary licensees with respect to LMDS, that the Commission had chosen to allow only limited satellite use, and that the Commission had long envisioned allowing mobile use in the band. Despite these facts, below the Commission creates a path to further expand satellite gateways that could add thousands of new sites because the Commission believes the relatively small protection zones will have little impact on terrestrial use.

b. Licensing of FSS Earth Stations

19. The Commission maintains the current status of FSS, and as described below, creates new opportunities for continued expansion of FSS earth stations on a protected basis. Upgrading the FSS designation to co-primary status, even if limited to individually licensed earth stations, would be inconsistent with terrestrial use of this band and the Commission's decision to facilitate expanded terrestrial use, and would not effectively facilitate sharing in the band. The Commission believes the 28 GHz band will play a vital role in the deployment of advanced mmW services, and fully upgrading FSS under the Commission's service rules to co-primary status would be inconsistent with this goal and would be unnecessary to meet the FSS community's needs.

20. The Commission recognizes, however, that FSS operators rely on this band for gateway connectivity and have invested significant capital in the band and will continue to do so in the future. The Commission believes there is value in creating meaningful, targeted opportunities to deploy additional FSS earth stations in the band without harming terrestrial operations. The *NPRM*'s proposals encouraging satellite operators to participate in county-sized (or smaller) market transactions were predicated in part on the vast protection zones that satellite operators have traditionally claimed were necessary, either to protect their operations or to protect others from them. Here, there is a consensus that much smaller protection zones are needed. EchoStar and ViaSat have both estimated that terrestrial mobile stations could be deployed as close as 170 meters to their Earth-to-space transmitters in the 28 GHz band. Most other satellite operators either support those specific calculations, agree in general terms that the necessary preclusive zones can be very small, or state that gateway earth stations can be located in rural areas far away from the urban cores where mmW mobile operations will be most viable.

21. The ability of satellite earth stations and terrestrial operations to coexist in close proximity to each other has two significant ramifications. First, it should be possible for satellite and terrestrial services to share the 28 GHz band with *de minimis* impairment of each other's operations. Second, the disparity between the county-sized license areas the Commission has established for 28 GHz UMFUS licensees and the extremely small areas required for FSS earth stations makes it inappropriate for the Commission to rely exclusively on a market-based mechanism for assigning rights to FSS earth stations, although the Commission retains this option as one means through which FSS operators may expand.

22. In addition to acquiring the terrestrial license rights, the

Commission also concludes that it would be efficient to continue to authorize gateway satellite earth stations under the existing part 25 first-come, first-served basis. The Commission adopts a mechanism under which FSS earth stations will, so long as they comply with conditions noted below, be able to deploy new gateways in limited circumstances without being required to take any additional actions to provide interference protection to UMFUS licensees. The Commission builds this upon record support for several different approaches to sharing in the 28 GHz band.

23. The authorization of FSS earth stations in the 27.5–28.35 GHz band that will not be required to take any additional actions to provide interference protection to UMFUS licenses is subject to the following conditions. First, the Commission will authorize no more than three locations in each county where FSS may deploy earth stations on a protected basis. Second, an FSS applicant must demonstrate in its license application that the permitted interference zone around its earth station, which the Commission will define as the contour within which FSS licensees generate a PFD, at 10 meters above ground level, of no more than -77.6 dBm/m^2/MHz, together with any preexisting earth stations located in the same county on a protected basis, will, in the aggregate, cover no more than 0.1 percent of the population of the county license area where the earth station is located.[1] Third, the applicant must show that the permitted interference zone does not infringe upon any major event venue, arterial street, interstate or U.S. highway, urban mass transit route, passenger railroad, or cruise ship port. The Commission notes that Verizon supports prohibiting siting earth stations near athletic and/or entertainment venues, interstate and U.S. highways, and port facilities. The Commission believes the other locations the Commission has identified are similarly areas where the Commission could expect to have high demand for wireless services. Fourth, prior to filing its application, if there is an existing 28 GHz UMFUS licensee in the county where it is proposing to locate its earth station, the earth station applicant must coordinate its operation with the existing UMFUS licensees using the coordination procedures contained in § 101.103(d) of the Commission's rules. The purpose of the coordination is to ensure that the earth station will not interfere with existing facilities operating under the UMFUS license. The Commission expects that UMFUS licensees will cooperate in good faith in the coordination process and only raise objections if there is a legitimate concern about interference to existing UMFUS facilities or failure to comply with the criteria listed above.

24. These conditions are designed to provide FSS licensees with substantial opportunities to expand their limited use of the 28 GHz band to deploy earth stations that do not have to protect terrestrial services, while minimizing the impact on terrestrial operations. Since there are over 3,000 counties in the United States, with a potential for up to three locations in each county, FSS licensees would have many choices for earth station locations. Furthermore, even with the conditions the Commission has imposed, FSS operators will have great flexibility in selecting earth station locations that meet their needs. Taking ViaSat's 160-meter radius estimate as a point of departure, the typical interference zone for terrestrial operations around a gateway earth station would cover about 0.08 square kilometers. As ViaSat notes, this zone could be reduced further by reducing the preclusive distance around the earth station, using mitigation techniques such as shielding. Even without such reductions, the interference zone would represent only about 0.0033 percent of the area of an average U.S. county. If one were to assume an even population distribution throughout every county, ViaSat's interference zone would cover no more than 0.1 percent of the population of any county that covers more than 80 square kilometers. There are only four counties in the United States that cover less than 80 square kilometers. In addition, any interference zone will be allowed to accommodate multiple FSS earth stations that could, for instance, be serving different satellites in the geostationary orbit, as long as these earth stations, in the aggregate, do not cause the interference zone to exceed the limits the Commission adopted in this *Report and Order.*

25. Conversely, the Commission believes that allowing FSS earth stations to share the 28 GHz band under these conditions will not unduly hinder terrestrial deployment in the band. The Commission notes that existing LMDS licensees are obtaining valuable mobile rights, and the value of those rights far outweighs any impairment imposed by this sharing mechanism. In addition, under the rules the Commission adopted, the Commission believes that FSS operations will encumber only a small geographic area and a small portion of the population of the license area. While the Commission maintains flexibility for FSS operators to choose the areas that fit within these conditions, current and future licensees will have some ability to predict the potential impact on the license area.

26. Other than applying those conditions, the Commission does not propose to designate the locations of any county's satellite permitted interference zones in advance—*i.e.,* the Commission will leave the choices of locations to the discretion of the satellite operators, conditional upon the licensees constructing and activating their earth stations within 12 months, pursuant to § 25.133 of the Commission's rules.

27. The Commission also notes that FSS operators will have other mechanisms available to deploy earth stations that do not have to protect terrestrial services. The Commission will adopt its proposal to grant such rights to any FSS earth stations for which the FSS operator also holds the UMFUS license that covers the earth station's permitted interference zone. To the extent FSS operators and UMFUS licensees enter into private agreements, their relationship will be governed by those agreements. Finally, FSS earth stations may continue to be authorized without the benefit of an interference zone. In this respect, taking into account the small size of the area around an earth station where terrestrial operations would not be protected, the Commission encourages UMFUS licensees to be flexible in providing certainty to the operation of FSS earth stations in areas where they do not intend to deploy terrestrial services. The Commission emphasizes that these FSS earth stations will have no expectation of interfering rights and will have to cease operation if requested by UMFUS licensees at any time on the basis of harmful interference to their services.

28. The Commission also modifies its proposal in the *NPRM* for treatment of existing FSS gateway earth stations. Since the Commission is no longer requiring FSS operators to obtain an UMFUS license in order to obtain the right to interfere, the Commission will not grant UMFUS licenses to existing FSS earth station holders. Instead, the Commission will grandfather all

[1] The International Bureau will issue a public notice seeking comment on the appropriate methodology to calculate the 0.1 percent population limit and further details regarding earth station interference zone calculation (including propagation models, *e.g.* free space versus probabilistic), and will also seek comment on best practices for earth station siting to minimize the impact on UMFU services, colocation of earth stations, and accommodating multiple earth station interference zones without exceeding 0.1 percent of population in a given county.

existing 28 GHz FSS earth stations authorized as of the adoption date (July 14, 2016) of this *Report and Order* and grant them the right to operate under the terms of their existing authorizations without taking into account possible interference to UMFUS operations. The Commission will also grandfather pending applications for 28 GHz earth stations filed prior to the adoption date of this *Report and Order* if such applications are subsequently granted pursuant to the existing part 25 rules (*i.e.,* without regard to the criteria the Commission adopted). The Commission notes that in many instances, these earth stations are used to provide valuable services to customers. In areas where there is no existing LMDS licensee, a new UMFUS licensee will have the ability to take the existing FSS earth station into account before it acquires the license or plans deployment. Even in areas where there is an existing LMDS licensee, Samsung's analysis demonstrates that existing earth stations will have a small impact on the terrestrial licensee. Finally, the Commission notes that AT&T and Verizon support grandfathering existing earth stations.

29. In adopting these rules, the Commission acknowledges with appreciation the efforts that AT&T and EchoStar have made to forge a compromise proposal that would be acceptable to other parties. The Commission declines to adopt their compromise proposal because it would have provided less predictability regarding the locations of future earth stations, and it would have limited the ability of FSS to deploy near population centers even if the deployment affected a small percentage (or even none) of the population. By contrast, the sharing mechanism that the Commission adopted will provide predictability to terrestrial licensees while giving FSS the opportunity to greatly expand their operations to over 9,500 locations. The Commission believes the rules that the Commission adopted will encourage intensive use of the band by both UMFUS and FSS licensees.

c. Aggregate Interference to Satellite Receivers

30. The second issue that must be considered with respect to satellite-terrestrial system coexistence is aggregate skyward interference to satellite receivers. There is a concern on the record that upward transmissions from large numbers of terrestrial stations will, in the aggregate, generate enough power to be received at the satellite's receiver, thus degrading the satellite's performance. The most detailed concerns about aggregate interference are raised in *ex parte* presentations by O3b, SES, ViaSat, and a group referring to themselves as Satellite Operators. For the reasons noted below, the Commission concludes that the potential for aggregate interference rising to the level of harmful interference is unlikely and thus is not a basis for refusing to authorize mobile service in the 28 GHz band, and the Commission declines to establish any regulatory limit on aggregate power levels.

31. Under the Commission's rules, FSS is secondary to LMDS fixed and mobile operations in the 28 GHz band. The Commission's rules specifically state, ''FSS is secondary to LMDS in [the 27.5–28.35 GHz] band.'' Internationally, this band is allocated to the FSS and the fixed and mobile services on a co-primary basis. The Commission recognizes that there are non-U.S. licensed FSS networks in this band, and that the United States needs to protect those systems consistent with its relevant international obligations. This framework exists in other bands where FSS shares spectrum with terrestrial services internationally, such as the C-band. Contrary to Lockheed Martin's assertions, the Commission is not violating U.S. international treaty obligations by adopting rules that will enable the provision of UMFUS in the 28 GHz band without first resolving potential aggregate interference issues. As discussed below, the Commission concludes that the risk of aggregate interference is low. In the event, however, that there is an instance where a non-U.S.-licensed FSS network receives harmful interference, the Commission intends to address such interference in accordance with applicable U.S. international treaties, and will monitor industry developments to that end. The Commission rejects ViaSat's argument that the Commission granted FSS primary status over mobile operations. ViaSat relies in part on the following passage from the *LMDS First Report and Order:*

> We are designating discrete spectrum bands for specific types of systems. Services designated for domestic licensing priority are specified in capital letters in the graphic depiction of the band plan. These services have licensing priority vis-à-vis any other type of service allocated domestically or internationally in the band. Lower-case letters indicate services in a particular band segment which also have licensing priority vis-à-vis any third service allocated domestically or internationally in the band, but have no licensing priority over the service in capital letters in the band segment and must operate on a non-interference basis and must accept interference vis-à-vis that service.

Contrary to ViaSat's view, the Commission can, and in fact did, establish priority for mobile services through its service rules. ViaSat claims that FSS retains primary status over any new mobile service, because the Commission established priority only for LMDS. This argument fails because mobile service is part of LMDS, and is not a ''third service'' or a ''new service.'' The mobile allocation already existed at the time of the *LMDS First Report and Order,* but the Commission made no distinction between fixed and mobile service in terms of priority—it established priority for a terrestrial service over a satellite service. The Commission contemplated that LMDS, the designated primary service, could eventually obtain mobile rights. Indeed, it ''kn[e]w of no reason why we would not allow mobile operations if they are proposed and we obtain a record in support'' thereof. It declined to authorize mobile operations ''for now,'' not because of concerns about coexistence with FSS (which it had already designated as secondary due to the infeasibility of sharing at that time), but because it was unclear that the technology existed to facilitate mobile operations and whether mobile operations could share with fixed operations. The actions, the Commission is taking, are precisely the actions the Commission contemplated when it established service rules for LMDS—adding mobile rights to existing LMDS licenses.

32. The Commission also notes that if the Commission had intended to make mobile operations secondary to FSS, it could have very clearly done so by explicitly stating that FSS had priority over the mobile allocation. In the *LMDS First Report and Order,* when the Commission intended to discuss the mobile allocation, it specifically referred to the mobile allocation. If the Commission intended to make mobile secondary to FSS, it could have specifically referred to mobile instead of a ''third service.'' Indeed, when the Commission talked of mobile services in the 28 GHz band, it said that authorizing such services ''would be consistent with the Commission's goal of providing LMDS licensees with maximum flexibility in designing their systems.'' If the Commission intended to treat mobile services independently of LMDS, it would not have referred to providing flexibility to LMDS licensees.

33. FSS operators received multiple notices of their secondary status. Indeed, in the *LMDS First Report and*

Order, the Commission specifically rejected a request from GE Americom to provide some protection to FSS gateways as ''inconsistent with the designation of FSS for secondary licensing priority in the 27.5–28.35 GHz band.'' As ViaSat recognizes, FSS license conditions in the 28 GHz band explicitly state that FSS operations in the 28 GHz band are on an ''unprotected, non-harmful interference basis relative to LMDS.'' The *NPRM* in this proceeding noted, ''Twenty stations are licensed for Earth-to-space transmissions on a secondary basis in the 28 GHz band. . . .'' That much being said, the Commission recognizes that FSS operators use the 28 GHz band to provide services and intend to provide additional services in the future.

34. However, the record in this proceeding does not demonstrate that the rules that the Commission adopted would significantly risk harmful interference to satellite operations because of aggregate interference received at the satellite receiver. Under the existing rules, LMDS stations have a maximum authorized transmit power of 55 dBW (85 dBm), versus the 75 dBm the Commission adopted. Furthermore, LMDS can operate in either point-to-point or point-to-multipoint mode, and there are no existing limits on upward emissions. In contrast, the Commission adopted lower power limits for base-station and mobile operations in UMFUS. Furthermore, the systems contemplated for these bands have several characteristics that will tend to limit transmissions towards satellite receivers. As noted in the *NPRM,* most industry evaluations of potential mmW mobile base station deployments appear to assume that such stations' antennas will be tilted downward at a slight angle, typically from a street lamp pole or a location on a building at a similar height. Intel explains that this configuration is necessary not only to direct transmissions toward user equipment but also to limit interference between adjacent cellular base stations. In fact, says Intel, failure to adopt this downtilt configuration would impair throughput to users at cell edges by about 60 percent. Although ViaSat expresses concern that in some limited locations mobile base stations might be directed skyward to provide coverage to users in the upper floors of tall buildings, because of this need for downward coverage such mobile providers can rely on wired in-building facilities where necessary. Mobile base stations in this band will probably use antenna systems that employ dynamic beamforming techniques to produce beams as narrow as 1.0 degree, which will substantially reduce the likelihood that such beams will point directly at satellite receivers. User equipment will also employ antenna arrays to generate dynamic beamforming, varying both azimuth and elevation in order to maintain signal connections with their base stations. Again, terrestrial operators are likely to deploy this technology of their own accord: By Intel's analysis, choosing not to use dynamic beamforming technology would reduce throughput at cell edges by about 70 percent. Base stations and user equipment will also likely employ dynamic power control, both to avoid draining batteries and to limit intersystem interference. In fact, both base stations and user equipment could be entirely silent much of the time; terrestrial operators report that, in current deployments, network loading rarely exceeds 30 percent. All of these features will limit the extent of skyward transmissions from terrestrial mobile systems.

35. In addition, it is important to recognize that most mmW transmissions will likely not occur in environments that have line of sight to satellites. By some estimates, as much as 80 percent of smartphone use occurs indoors, with much of the remainder occurring in vehicles. Because mmW signals are heavily attenuated by exterior walls, roofs and windows, signals originating from handheld smartphones will be largely confined within any buildings or vehicles where they are used, and would need to be relayed to mobile base stations by other devices with exterior antennas that will likely have sufficient beamforming ability to limit skyward transmissions. In principle, spilling signal power uselessly into outer space would represent a source of inefficiency, so it is likely that dynamically beamformed signals will be aimed at receivers on the ground or not far above it. The most vulnerable satellites—those situated at elevations close to the horizon—will be protected further by the path losses that terrestrial signals will encounter in the cluttered environments of street canyons, suburban foliage, and other obstacles.

36. The Commission has reviewed the studies submitted by the various parties, including the satellite operators. As discussed in the Technical Rules section, *infra,* the Commission concludes that the various studies submitted by the parties do not support establishment of an aggregate interference limit. From the satellite operators' perspective, part of the challenge is that mmW mobile is a new, rapidly evolving technology, and the terrestrial mobile industry is still developing system designs and propagation models. Even so, there has been substantial progress in that regard, and the interference models submitted by satellite operators in this proceeding do not take into account prospective features of mmW mobile systems that are readily accessible on the public record. O3b, for example, assumes that mmW mobile user equipment will employ no beamforming at all, and will generate omnidirectional signals. Interference models submitted by other parties do not adequately account for, and in some cases do not take into account at all, antenna beamwidths, downtilts, beamforming, power control, traffic patterns, number of simultaneously transmitting stations, the obstruction losses that terrestrial signals are likely to encounter before reaching satellites at low elevations, and the fact that the majority of transmissions will occur indoors. Terrestrial operators have every incentive to design networks that direct the signals they are transmitting to the locations of the receivers—either another fixed point on a vertical structure, or a mobile unit within a couple of meters of the ground—especially given the propagation characteristics of these frequencies. Furthermore, mobile units, which are likely to be transmitting at angles more skyward, are operating at powers significantly lower than base stations. These are both true regardless of the types of systems that are ultimately deployed in these bands. Nonetheless, given the wide variety of deployments and uses the Commission expects to see in these bands, it would be inappropriate to universally mandate these design features in every deployment, in the absence of more credible support for the proposition that satellite systems will receive harmful interference from mmW mobile systems.

37. The Commission's decision not to set specific limits on aggregate interference is consistent with the Commission's treatment of that issue in other bands. In AWS–3, the Commission declined to establish aggregate power limits to protect Federal satellites in the 1761–1780 MHz band because it was unlikely that aggregate interference was likely to occur. Similarly, in the 10.7–11.7 GHz band, which is shared between FSS and Fixed Service (FS), the Commission held with respect to concerns regarding a different type of aggregate interference: ''[W]e view rule changes that would allow greater FS use of the 11 GHz band as beneficial to the

public interest, so long as existing users would not be harmed.'' Similarly, the Commission sees great public benefit to more intensive terrestrial use of the 28 GHz band where terrestrial use is the primary designated service in the band.

38. The Commission has concluded that the satellite industry has not shown that it has a legal right to protection from aggregate interference or that harmful aggregate interference is likely to occur from the mobile operations now being authorized for LMDS. The Commission also recognizes that SES, EchoStar, and ViaSat believe that satellite and mobile operations can coexist. Nonetheless, the Commission is sensitive to the concerns raised. The Commission notes that the satellite and wireless industries have begun the process of modeling the terrestrial systems under consideration for this band to provide further information concerning their potential impact on satellites. The Commission encourages both industries to continue working cooperatively on this issue, including by submitting any relevant data demonstrating changes in the amount of aggregate interference on record as UMFUS services are deployed. The Commission directs the International Bureau (IB), the Office of Engineering and Technology (OET), and the Wireless Telecommunications Bureau (WTB) to jointly establish a separate docket that parties can use to file the relevant data and analyses, and the Commission reserves the right to revisit this issue should additional information or other circumstances warrant further Commission review or action.[2]

5. Band Plan

39. The Commission will license the 28 GHz band as two 425 megahertz blocks. The Commission believes 425 megahertz channels will be sufficient for a licensee to provide the type of high data rate services and other innovative uses and applications contemplated for this spectrum. The fact that several carriers support dividing the bands into multiple blocks supports that conclusion. The Commission also agrees with T-Mobile that there are benefits to competition in allowing multiple licensees to provide service in the 28 GHz band.

40. The Commission emphasizes that existing LMDS Channel A1 licensees will receive licenses for both channels, so they will maintain their existing license rights. To the extent licensees are interested in having a contiguous block of 850 megahertz of spectrum, they are free to acquire both licenses, subject to compliance with the Commission's spectrum aggregation policies.

B. 39 GHz Band (38.6–40 GHz)

41. In the *NPRM,* the Commission proposed to develop service rules for mobile operations in the 38.6–40 GHz band (the ''39 GHz Band''). This band is currently allocated to the fixed, fixed satellite (space-to-Earth), and mobile services on a primary basis for non-Federal use. There are Federal FSS (space-to-earth) and Mobile Satellite Service (MSS) (space-to-Earth) allocations in the 39.5–40 GHz band, limited to military systems.

42. The 39 GHz band is licensed by EA and consists of 14 blocks of 50 by 50 megahertz channels. Out of the 2,464 possible terrestrial fixed service EA licenses available in this band (14 channel pairs for each of 176 EAs) only 870 licenses currently exist. Other licenses were voluntarily cancelled or terminated for failure to meet substantial service requirements. In addition, there are currently 229 active Rectangular Service Area (RSA) licenses that predate the creation of the EA licenses in which the licensees self-defined their service area, and where they retain the exclusive right to operate. The populations in licensed areas (both EA and RSA licenses) vary by channel, but in aggregate they cover about 49 percent of the U.S. population. The Commission has previously indicated that licensees of the band could have the flexibility to provide mobile service and stated the belief that ''the issue of technical compatibility of fixed and mobile operations within a service area is one that can and should be resolved by the licensee.'' The Commission declined, however, to permit mobile operations until it conducted a separate proceeding to resolve any inter-service and inter-licensee interference issues. As a result, no mobile operations currently exist in the 39 GHz band. To accommodate high-density fixed terrestrial systems under a ''soft segmentation'' band plan, the Commission has established lower PFD limits for satellite transmissions in the 37.5–40 GHz band than in other satellite bands. The Commission notes that there are no commercial satellite operations in the band.

1. Suitability for Mobile Service

43. The Commission will authorize mobile operation in the 39 GHz band (38.6–40 GHz), and the Commission will issue new licenses granting existing and new 39 GHz licensees both fixed and mobile rights. The Commission believes that the significant bandwidth available in this band will help to accommodate the expected continued rise in demand for mobile data. Commenters, including incumbent terrestrial licensees, overwhelmingly support opening the band for mobile use and expanding their reach to mobile. The Commission agrees and believes the band can be used by both mobile and satellite because satellite use can be accommodated with minimal impact on terrestrial service. The Commission created the service rules to enable such mobile use, and the Commission detailed the means by which satellite must cooperate with new mobile services in these bands to reduce interference and improve service.

2. Licensing the 39 GHz Band

a. Use of Geographic Area Licensing

44. The Commission adopted geographic area licenses that will grant licensees the flexibility to provide fixed and mobile services. As with the 28 GHz band, the Commission finds that in this band, geographic area licensing will expedite deployment, provide licensees with the flexibility to provide a variety of services, and is consistent with the existing licensing scheme in the band. The Commission will maintain the current co-primary Federal FSS and MSS allocations and associated regulations in this band. The Commission also finds that the presence of incumbent geographic area licenses in a large part of the country renders the 39 GHz band a poor candidate for implementing an SAS-based sharing model.

b. License Area Size

45. The Commission will license the 39 GHz band using PEAs, because the Commission finds that use of this license area size will facilitate access to spectrum and the rapid deployment of service in the band. PEAs are smaller than BTAs or EAs, and therefore are more realistically obtainable by smaller bidders, yet are larger than counties which various commenters deem too small. Licensing the 39 GHz band on a PEA basis strikes the appropriate balance between facilitating access to spectrum by both large and small providers and simplifying frequency coordination while incentivizing investment in, and rapid deployment of, new technologies. PEAs also nest into

[2] In the *NPRM,* the Commission also sought comment on the possibility of repealing the prohibition on FSS user equipment in the 28 GHz band. While there has been considerable comment on this issue, in light of the evolving nature of technology and deployment in the band, the Commission does not believe the issue is ripe for action at this time. Accordingly, the Commission will consider this issue in the future, either in this proceeding or in a separate proceeding.

EAs but can also be broken down into counties, allowing operators to combine or partition their PEAs into the license areas of their choice. The Commission believes that the size and ability to combine/partition will aid in the rapid deployment of these licenses. The Commission's decision to license the 39 GHz band on a PEA basis is distinguishable from the Commission's decision to use counties as the license area in the 28 GHz band, because, as previously discussed, the latter band is currently licensed by BTAs and cannot readily be reformed into either EAs or PEAs.

3. Mobile Rights for Incumbents

46. The Commission adopted its proposal to grant mobile operating rights to existing active 39 GHz licensees for the same reasons the Commission granted mobile operating rights to LMDS incumbent licensees. Granting mobile operating rights to existing licensees will expedite the deployment of service, minimize the difficulties involved in coordinating fixed and mobile deployments, and provide a uniform licensing scheme throughout the United States. In contrast, separating fixed and mobile rights through assignment of overlay licenses would delay the implementation of mobile service. The Commission remains concerned that awarding fixed and mobile rights separately would lead to disputes between fixed and mobile licensees that could make it more difficult for both licensees to provide service.

47. The Commission recognizes that awarding mobile rights to incumbent licensees could be viewed as a windfall to those licensees, although the Commission contemplated granting mobile rights when it first created LMDS. Here, the benefits of expediting service and facilitating the coordination of fixed and mobile service outweigh any potential disadvantages of granting mobile rights to incumbents.

4. Non-Federal Satellite Terrestrial Sharing—Licensing of Gateway Earth Stations

48. The *NPRM* invited comments on three issues relating to FSS use of the radiofrequency spectrum from 37.5 GHz to 40 GHz, encompassing both the 38.6–40 GHz (39 GHz) band and the 37–38.6 GHz (37 GHz) band. The first question was whether the Commission should make any changes to its treatment of gateway earth station applications; the second, whether it would be reasonable to eliminate the prohibition against ubiquitous deployment of user equipment; and the third question, whether it would be feasible to allow satellite operators to increase their PFDs above existing limits during heavy rain storms. In none of those cases did the Commission foresee any reason to differentiate between the 37 GHz and 39 GHz bands with respect to satellite sharing issues.

49. The U.S. Table of Frequency Allocations accords co-primary status to FSS earth stations in the 37.5–40 GHz frequencies, but Commission rules provide that gateway earth stations in the 39 GHz band may be deployed only if the FSS licensee obtains a 39 GHz license for the area where the earth station will be located, or if it enters into an agreement with the corresponding 39 GHz licensee. The Commission mentioned the changes that the *NPRM* was proposing for the licensing of satellite operations in the 28 GHz band and sought comment on whether similar changes should be adopted for the 37.5–40 GHz channel groups. The *NPRM* asked whether the Commission should establish a waiver process by which non-Federal FSS earth stations in the 37.5–40 GHz bands could acquire co-primary status in areas where there is no geographic service area licensee, if they can demonstrate that doing so would not have a negative impact on future terrestrial service. The Commission asked if the fact that 37.5–40 GHz FSS operations are space-to-Earth, rather than Earth-to-space as in the 28 GHz band, should lead to different answers to these questions. The Commission also sought comment on any other changes it should make to the existing rules.

50. Commenters acknowledge that the space-to-Earth nature of satellite operations in the 37.5–40 GHz bands means that it is earth stations that need protection against interfering signals from terrestrial operations rather than the opposite situation that applies for Earth-to-space operations in the 28 GHz band. EchoStar calculates that satellite earth stations in the 37.5–40 GHz band will need exclusion zones with radii extending no more than about two kilometers. EchoStar states this radius in the 37.5–40 GHz bands is about 12 times the radius (170 meters) circumscribing the exclusion zone that EchoStar says is required for earth stations in the 28 GHz band. The areas required for the resulting exclusion zones would be about 138 times as large—12.6 square kilometers (4.9 square miles) for the 37.5–40 GHz bands versus 0.09 square kilometers (0.03 square miles) for the 28 GHz band. By comparison with the 28 GHz band, therefore, accommodating satellite earth stations in the 39 GHz band is approximately two orders of magnitude more difficult.

51. The smallest counties mentioned in the Commission's discussion of satellite interference zones for the 28 GHz band each cover about 80 square kilometers. The exclusion area that EchoStar says is required for the 37.5–40 GHz frequencies would cover about 16 percent of such a county—a proportion that could seriously impair the growth prospects for mmW mobile. The challenge is less daunting when the Commission considers the possibility of authorizing earth station sites on a PEA basis rather than a county basis. The average PEA in the 48 contiguous U.S. states covers about 18,692 square kilometers (7,217 square miles). Therefore, the requisite exclusion zone would cover about 0.0674 percent of the average PEA's land mass in the contiguous U.S. If people were evenly distributed across this hypothetical average PEA, substantially less than 0.1 percent of its population would fall in the earth station's exclusion zone.

52. These calculations show that some PEAs should be able to host a 39 GHz earth station without placing more than 0.1 percent of the PEA's population in the earth station's exclusion zone. Most PEAs cover substantially less territory than the average PEA does; *i.e.,* even for some PEAs, a five square-mile exclusion zone might affect an unacceptably high proportion of their populations. But satellite operators will not necessarily need to deploy 39 GHz earth stations in the smaller, more densely populated PEAs. For satellite gateway earth stations in particular, the *sine qua non* is not proximity to population centers, *per se,* but access to long-haul, high data-rate Internet facilities. Direct access to long-haul Internet nodes is available not just in major population centers but also in some of the more remote parts of the U.S. Many of those nodes are in places with comparatively low population densities—*i.e.,* near areas where it should be possible to deploy earth stations without creating exclusion zones that affect unacceptably high proportions of the population. In addition, as the Commission suggested for the 28 GHz band, satellite operators can substantially reduce the sizes of the exclusion zones that they require by constructing artificial site shields or by taking advantage of naturally occurring terrain features. Spatial analysis software can process digital elevation data to identify geographic depressions, which are capable of providing natural site-shielding in all directions. For earth stations that communicate only with geosynchronous satellites, more limited site shielding would typically suffice. In

addition, satellite operators may continue to protect their earth stations from interference using any of four market-oriented mechanisms: Purchasing geographic area licenses at auction, acquiring licenses from existing licensees, obtaining partitioned segments of existing geographic area licenses from existing licensees, or obtaining contractual agreements from nearby licensees not to interfere into their earth station operations.

53. Based on those considerations, the Commission will authorize non-Federal satellite earth stations in the 39 GHz band on a first-come, first-served basis that will entitle them to protection from terrestrial transmissions subject to the following conditions.[3] First, the earth station applicant must define a protection zone in its application around its earth station where no terrestrial operations may be located. The FSS applicant may self-define this protection zone, but it must demonstrate using reasonable engineering methods that the designated protection zone is no larger than necessary to protect its earth station. Second, the Commission will authorize a maximum of three protection zones in each PEA, so the applicant must demonstrate that there are no more than two existing protection zones in the PEA or demonstrate that its protection zone will be contiguous to any preexisting satellite protection zone. Third, the applicant must demonstrate the existing and proposed protection zones, in the aggregate, will not cover more than 0.1 percent of the PEA's population.[4] Fourth, the applicant must show that the protection zone does not infringe upon any major event venue, arterial street, interstate or U.S. highway, urban mass transit route, passenger railroad, or cruise ship port. Finally, the earth station applicant must coordinate with terrestrial fixed and mobile licensees whose license areas overlap with the protection zone, in order to ensure that the protection zone does not encompass existing terrestrial operations. The coordination requirements will be based on the Commission's existing requirements contained in § 101.103(d) of the Commission's rules. If the earth station is authorized, UMFUS licensees will be prohibited from placing facilities within the protection zone absent consent from the FSS operator, and the FSS operator must respond in good faith to requests to place facilities within a protection zone.

5. Band Plan

54. The Commission will create seven 200 megahertz bands out of the 39 GHz band (38.6–40 GHz). The Commission finds that this channel size is large enough to take advantage of the data throughput capacity of these bands yet yields a sufficient quantity of channels in the band to provide access to multiple operators simultaneously. The Commission agrees with the comment that next generation 5G networks are expected to depend in part on higher frequencies, increased spectral efficiency and greater density of cell deployments and that these factors alone may be insufficient to meet the expected tenfold increases in peak data rates and user throughput without using ultra-wide channel bandwidths of at least 200 MHz. These wider channels available at higher frequencies could allow for higher data rates in environments constrained by power or signal-to-noise ratios. By facilitating higher throughput, wideband channels will thereby permit more users to simultaneously use the band.

55. The Commission also modified the current band plan that is based on paired spectrum blocks in favor of larger, unpaired channels to enable Time Division Duplexing (TDD) which commenters believe will best enable a 5G mobile service environment. Straight Path asserts that TDD is preferable in these frequencies given the current lack of adequate frequency duplexers capable of meeting the performance, cost or form factor requirements necessary to facilitate Frequency Division Duplexing (FDD) at these higher wavelengths. TDD does not require a frequency duplexer and allows flexible downlink-uplink ratios that depend on traffic and result in efficient utilization of spectrum. While these and other commenters note the benefits of TDD in the context of 5G, commenters overwhelmingly support rules that allow for flexible duplexing schemes, and the rules the Commission adopted will allow any type of duplexing. Licensees may also continue to offer FDD service by acquiring and pairing multiple spectrum blocks. Because the existing channel plan favors FDD operation and limits flexibility to accommodate other duplexing schemes, reconfiguring the channel plan will remove obstacles to TDD schemes while still allowing for flexibility to accommodate FDD. Furthermore, larger bandwidths may optimize traffic management and improve system performance because a single, wide carrier permits centralized spectrum management whereas aggregation and use of various narrow bandwidth channels requires greater power consumption and equipment complexity. Finally, 200 megahertz channels will potentially create several empty channels for new entrants after incumbent licensees swap or repack their existing systems into consecutive or adjacent channels. Given all of the considerations above, the Commission finds that 200 MHz channels are the best band size for 39 GHz.

6. Pre-Auction License Reconfiguration

56. Straight Path's proposal contains the clearest delineation of rules and steps necessary to align adjacent spectrum tranches to create contiguous bands—the goal advocated by commenters. The Commission agrees with Straight Path that in EAs where only it holds licenses, the Commission should accept any exchange application in which Straight Path or others propose to acquire the same amount of spectrum in the market that it proposes to relinquish as long as it meets the end goal of creating a contiguous block or blocks of spectrum. In instances where there are multiple geographic area licensees, Straight Path advocates that the Commission should first accept any band plan mutually acceptable to the various licensees as long as it also increases the amount of contiguous spectrum for at least one of the licensees. If licensees do not agree on a band plan, Straight Path argues the Commission should accept applications in which an incumbent geographic area licensee seeks to acquire any contiguous spectrum blocks adjacent to spectrum blocks it already holds subject to two limitations (i) the target spectrum block is not already occupied by another incumbent geographic area licensee; and (ii) the target spectrum block could not be requested by another incumbent geographic area licensee on the grounds that it is adjacent to a block it holds or that it could hold. A licensee should be able to continue to add contiguous unused blocks in a row until it reaches a prohibited block—*i.e.,* a spectrum block that could also be claimed by another incumbent licensee. Straight Path suggests that in this way, contiguous occupied bands could be aligned starting at the lower edge of the band—at 38.6 GHz—and moving up toward 40 GHz. Because the Commission adopted a band plan for the

[3] The Commission adopted a new footnote, NG63, to the Allocation Table that reflects the existing limitation to gateway earth stations. *See* 47 CFR 25.202(a)(1) n.3.

[4] The IB will issue a public notice seeking comment on the appropriate methodology to calculate the 0.1 percent population limit and will also seek comment on best practices for earth station siting to minimize impact on UMFU services, colocation of earth stations, and accommodating multiple earth station interference zones without exceeding 0.1 percent of population in a given PEA.

37 GHz band that provides for continuity of commercial operations across the 37 GHz and 39 GHz bands, when the bands are viewed together, Straight Path's swapping plan results in occupied spectrum in the middle of the combined bands. One alternative might be to push incumbents to the upper end of the band near 39.5 GHz, in order to create larger available swathes of spectrum by combining the lower frequencies with the open bands in the 37 GHz band. However, in the interest of addressing mobile data demand as quickly as possible, 39 GHz licensees at the bottom of the band will provide the first market for mmW mobile equipment as soon as it becomes available, and this will further the goal of interoperability by allowing fixed licensees to more rapidly foster the development of mobile in their bands.

57. Some of the 200 MHz spectrum blocks offered at auction will also contain at least one incumbent RSA licensee occupying some portion of the spectrum. Straight Path argues that where the incumbent geographic license holder is also the RSA licensee, the RSA license will be deemed not to exist and will be cancelled upon an exchange. Otherwise, incumbent licensees will only be permitted to elect to add contiguous channels with greater encumbrances than *vice versa;* accordingly, a geographic area licensee can always opt to exchange a block without an RSA for an adjacent block with an RSA whose operations it will have to protect, and similarly it can always opt to take a license area with a more encumbered RSA over a block it holds with a less encumbered RSA, but it cannot ''upgrade'' to an RSA-free block or a license with an embedded RSA that is less encumbered. Overall, although Intel and Straight Path have argued that EAs are the appropriate geographic area for new licenses given their historical use and the complexity of the swap process, as discussed above, the Commission's preferred license area size for the 39 GHz band are PEAs, and such PEAs neatly fit into the EAs they comprise. Accordingly, once incumbents' spectrum swapping has run its course at the EA level, the resulting license area/band combinations should be further broken down into PEAs, which 'nest' into EAs.

58. The Commission believes this reconfiguration process will yield a band, and licenses, that are more useable by incumbents as well as new entrants for the new flexible use services, including mobile broadband that the Commission is authorizing in this *Report and Order.* Straight Path currently holds 931 licenses out of 1,098. If Straight Path voluntarily reconfigures its rights as it has advocated, this will substantially reduce encumbrances (*i.e.,* remaining RSAs or blocks within EAs that have not been reconfigured) that might exist in new license areas before a future auction. While the Commission adopted a voluntary reconfiguration approach, it is its hope and expectation that all licensees will take advantage of this opportunity to convert their licenses to the new flexible use licensing scheme and band plan. Furthermore, while the Commission adopted a voluntary approach, the Commission notes that under Section 316 of the Act the Commission retains the right to modify any license consistent with the public interest.

C. 37 GHz Band (37–38.6 GHz)

59. The 37 GHz band presents a number of opportunities because, other than a limited number of existing Federal uses that need protection, the band is a greenfield—there are no existing non-federal operations, terrestrial or mobile. In addition, it is adjacent to the 39 GHz band, which presents an opportunity to create a larger, contiguous 37/39 GHz band, subject to similar technical and operational rules. Also, the Federal fixed and mobile service allocations are lightly used. The approach the Commission adopted takes full advantage of these opportunities.

60. Specifically, the Commission can meet the twin goals of expanding commercial access in this band while facilitating continued and expanded Federal use. Because there are both Federal and non-Federal fixed and mobile rights and there are minimal incumbency issues (or an installed base of equipment), the approach the Commission adopted in this band can significantly further the regulatory, policy, and technical approaches to Federal and non-Federal sharing. As discussed in greater detail below, the Commission adopted a band plan that allows for continuity of commercial operations between the 37 and 39 GHz bands, the Commission protects a limited number of Federal military sites across the full 37 GHz band, and the Commission identifies 600 megahertz of spectrum that will be available for coordinated coequal shared access between Federal and non-Federal users. Through this structure, additional proposals in the *Further Notice of Proposed Rulemaking* (*FNPRM*), and the collaborative industry/government process that will take place to further define the sharing process and paradigm, the Commission will take substantial strides forward on Federal and non-Federal sharing in the mmW bands while also making a significant amount of spectrum available for wireless broadband.

1. Suitability for Mobile Use

61. The Commission adopted rules to permit fixed and mobile terrestrial operation in the 37 GHz band to enable as wide a range of services as possible. The Commission finds that there are several important characteristics of the 37 GHz band that make the provision of fixed and mobile terrestrial operations especially promising: It contains 1.6 gigahertz of contiguous spectrum, which could support ultra-high data rates; it is contiguous with the 39 GHz band, which will permit operators to aggregate spectrum across both bands; and it has global co-primary fixed and mobile allocations, which could enable operators to achieve economies of scale. Cisco urges us to proceed cautiously, and Boeing urges the Commission to wait until the studies called for by the WRC–15 are completed, the Commission is persuaded that fixed and mobile terrestrial services can be provided in the 37 GHz band. In this regard, in analyzing the suitability of the 37 GHz band for mobile service, the band is very similar to the 39 GHz band. It has an existing mobile allocation, the propagation characteristics are very similar to the 39 GHz band, and the Commission does not see any inconsistency with other allocations that would make the band unsuitable for mobile service. In terms of timing of the Commission's action, considering the potential benefit for 5G services and the significant lead time that will be necessary to develop the services in this band, the Commission believes that the Commission should move forward and develop fixed and mobile terrestrial services rules for the 37 GHz band. Moreover, as discussed more fully below, the rules the Commission adopted accommodate the needs of National Aeronautics and Space Administration (NASA), National Science Foundation (NSF), the military, and FSS operations in the 37 GHz band as well as Earth Exploration Satellite Service (EESS) (passive) and Space Research Service (SRS) (passive) operations in the adjacent 36–37 GHz band.

2. Licensing the 37 GHz Band

62. The Commission adopted a licensing approach that makes five 200 megahertz blocks available on a geographic area-licensed basis in the 37.6–38.6 GHz portion of the band (upper band segment). The Commission

will make the 37–37.6 GHz block (lower band segment) available for coordinated co-primary sharing between Federal and non-Federal users, where non-Federal rights are granted by rule. The Commission notes that the entire band is subject to Federal co-primary fixed and mobile allocations. The Commission declines to adopt the hybrid authorization licensing scheme because it is unsupported by the record. Specifically, commenters oppose it because they do not believe that the 37 GHz band is appropriate for this particular scheme, though it could be used for other bands. In addition, the satellite industry expresses concern that the hybrid licensing approach does not provide satellite operators with any meaningful certainty that they will be able to expand into the 37 GHz band.

63. Of the three licensing options that the Commission sought comment on in the *NPRM,* the Commission finds that a variation of the Commission's alternative proposal best enables the band to be used for new commercial uses while simultaneously allowing fixed and mobile Federal use to expand. Although there is support in the record to license the entire 37 GHz band by geographic area, the Commission finds that it is in the public interest to license a portion of this band on a non-exclusive shared basis, and to license the remainder of the band by geographic area to give potential licensees additional opportunity to access large blocks of spectrum or to use 37 GHz spectrum in combination with, and similarly to, 39 GHz spectrum. Allowing part of the band to be made available on a non-exclusive, shared basis will promote access to spectrum by a wide variety of entities, support innovative uses of the band, and help ensure that spectrum is widely utilized. Adopting geographic area licensing for the other portion of the band will expeditiously make spectrum available and allow common development of the 37 GHz and 39 GHz bands. Furthermore, users in the shared portion of the band will benefit from efforts by equipment manufacturers and licensees to develop equipment for the portion of the band licensed on a geographic area basis. Thus, the Commission finds that adopting the alternative proposal, as modified below, should promote investment and deployment in both bands. As explained below, the Commission agrees that there are benefits to adopting the same geographic area licensing framework for the 37 GHz and 39 GHz spectrum bands. Also, the Commission finds that adopting the alternative proposal, in addition to other decisions made by the Commission, provides satellite operators the certainty they need to be able to expand their operations into the 37 GHz band in the future.

64. The Commission adopted a modified version of the alternative proposal as follows: The Commission will create a band plan with a 600 megahertz shared block in 37–37.6 GHz and a geographically-licensed portion in 37.6–38.6 GHz. The lower band segment will be fully available for use by both Federal and non-Federal users on a coordinated co-equal basis. Non-Federal users, which the Commission will identify as Shared Access License (SAL), will be authorized by rule. Federal and non-Federal users will access the band through a coordination mechanism, including exploration of potential dynamic sharing through technology in the lower 600 megahertz, which the Commission will more fully develop through the *FNPRM* and through government/industry collaboration. The Commission envisions this segment serving as a proving ground for Federal and non-Federal sharing in the mmW bands, as a way to facilitate expanded Federal use in the band, an opportunity to facilitate lower-cost access to mmW bands, and a means for all providers to gain additional capacity where and when it is needed.

65. As described below, the Commission adopted the same technical rules for the shared band segment as the Commission does for the rest of the 37 GHz band. These technical rules are also consistent with the 39 GHz band. The Commission also adopted an operability requirement that will ensure equipment developed for the 37 and 39 GHz bands is able to operate across the entire 37–40 GHz band. This will help drive scale in the development and access to the equipment, and allow users in the shared portion of the band, including Federal users, to benefit. In order to ensure a sharing environment in 37–37.6 GHz that is predictable, manageable, and efficient, the Commission strongly encourages Federal users to comply with the same technical rules, and will work with National Telecommunications and Information Administration (NTIA) to explore establishment of guidance in its regulations.

66. Following the adoption of this *Report and Order,* the WTB and OET will, in collaboration with NTIA and Federal stakeholders, work with industry stakeholders and other interested parties to further define the sharing framework. The Commission will hold one or more public meetings to examine the state of innovative sharing techniques and technologies and to have an open dialogue about how sharing can best be implemented and achieved in the 37–37.6 GHz band. The Commission strongly encourages both industry and Federal stakeholders to use new and existing experimental testbeds to develop sharing approaches and technologies. Based on stakeholder feedback, the WTB and OET may, jointly with NTIA, issue a public notice seeking comment on a refined and detailed 37 GHz sharing framework. In response to the record developed, the Commission, jointly with NTIA, will establish the 37 GHz sharing mechanism. The Commission believes this inclusive and collaborative process ensures that all parties' needs are met and that an effective and robust sharing mechanism will be developed.

67. In the upper band segment (37.6–38.6 GHz), the Commission will use geographic area licensing with PEAs as the licensing unit, which is consistent with the licenses in the 39 GHz band. In this band, there will be Federal co-primary use coordination zones around 14 military sites where the military will have the right to operate fixed and mobile operations, and the three SRS sites as described below. Non-Federal users will be able to access these locations through a coordination mechanism that will be developed and established by WTB and OET in conjunction with NTIA and announced via Public Notice. The Commission also recognizes that there are existing Federal and non-Federal fixed and mobile allocations in the upper band segment, and in the *FNPRM,* the Commission seeks comment on developing additional criteria under which Federal users can obtain access to the upper band segment.

68. The Commission believes licensing the 37 GHz band in this manner has many benefits. In the lower band segment, the Commission is creating an innovative shared space that can be used by a wide variety of Federal and non-Federal users. SALs will be widely available to provide easy access to spectrum, including for new innovative uses and for targeted access where and when providers need additional capacity. It will help further efforts to facilitate sharing between Federal and non-Federal users, and will give Federal users and consumers an opportunity to take advantage of speed-to-market and lower cost of broadly deployed commercial technologies, and provide Federal users opportunities for current use and future growth. In the upper band segment, the Commission notes that the 37 GHz band and the 39

GHz band will be licensed under the same framework, with identical technical and licensing rules. They will both be licensed by PEAs, which will allow licensees in the 37 GHz and 39 GHz bands to aggregate blocks of spectrum or to pair blocks of spectrum.

69. Below, the Commission discusses in further detail some of the decisions the Commission has made concerning the 37 GHz band. In the *FNPRM,* the Commission seeks comment on refining the sharing framework the Commission adopted.

3. License Area Size

70. The Commission is presented with a unique opportunity to adopt a licensing scheme that will apply to 2,400 megahertz of contiguous spectrum, the upper segment from 37.6–38.6 GHz together with the 38.6–40 GHz band. In the shared band segment, the Commission will authorize fixed and mobile users on a site-based coordinated basis. The Commission believes this approach will allow users to access spectrum where and when it is needed, which will help maximize spectrum by providing opportunities for each user to target just the areas it needs. The Commission is licensing the 39 GHz band by PEA. The Commission's reasons for adopting PEAs as the geographic area for the 39 GHz band apply here as well. Specifically, as the Commission noted with respect to the 39 GHz band, after reviewing the record, the Commission now believes that PEAs strike the appropriate balance between facilitating access to spectrum by both large and small providers and simplifying frequency coordination while incentivizing investment in, and rapid deployment of, new technologies. Thus, the Commission adopts the same geographic license structure for both the upper band segment of the 37 GHz band and the 39 GHz band. This decision will give licensees the flexibility that they need and will encourage investment in a wide variety of services and technologies.

4. Band Plan for Upper Band Segment

71. The Commission will divide the upper band segment into five blocks of 200 megahertz each for non-Federal users. As explained in this *Report and Order,* the Commission is attempting to create a consistent and coherent licensing framework that can be applied throughout the mmW bands, with modifications based on the characteristics of a particular band. The Commission's decision to choose 200 megahertz channels rather than 533 megahertz channels also stems, in part, from the Commission's previous decision to create two licensing segments for the 37 GHz band: A 600 megahertz lower band segment licensed by rule, and a 1,000 megahertz upper segment, which will be licensed geographically by PEA. Adopting 200 megahertz channel sizes for the upper band segment is consistent with the 200 megahertz channels the Commission adopted for the 39 GHz band. Because the Commission licenses the upper band segment of the 37 GHz band and the 39 GHz band by PEA, licensees will have the flexibility to pair their 37 GHz license with a 39 GHz license.

72. In addition, the provision of fixed and mobile terrestrial operations at this frequency will depend upon large blocks of spectrum and a single 200 megahertz block provides a sufficient amount of spectrum for the provision of high-capacity wireless broadband. Those licensees needing more spectrum than a 200 megahertz channel can combine channels to create contiguous blocks of 200 megahertz channels, either within the 37 GHz band or by combining 37 GHz spectrum with 39 GHz spectrum. Licensees also have the option of acquiring 425 megahertz channels in the 28 GHz band.

D. 64–71 GHz Band

73. The Commission is making available the 64–71 GHz frequency band for use by unlicensed devices pursuant to the same technical standards as in the 57–64 GHz frequency band under § 15.255 of the Commission's rules, with slight modifications. As the Commission has consistently stated, it is optimal to include a balance of licensed rights and opportunities to operate on an unlicensed basis in order to meet the country's wireless broadband needs. The Commission's action here creates a 14-gigahertz segment of contiguous spectrum in these frequency bands to encourage the development of new and innovative unlicensed applications, and promote next-generation high-speed wireless links with higher connectivity and throughput, while alleviating spectrum congestion from carrier networks by enabling mobile data off-loading through Wi-Fi and other unlicensed connections.

74. The Commission is adopting rules to allow for unlicensed operations in the 64–71 GHz band, subject to the technical standards in § 15.255, thus creating a contiguous spectrum segment with the 57–64 GHz band. The Commission observes that unlicensed WiGig devices using the 57–64 GHz band are just beginning to be marketed and these products are standardized pursuant to an internationally harmonized channelization scheme, which should promote their growth and usage. Making available additional spectrum contiguous to the existing 57–64 GHz band may enable higher throughputs and enhanced use of present spectrum, as well as to permit an increase in the number of simultaneous high-bandwidth users. The Commission agrees with Intel that a lesser amount of spectrum would limit the growth potential of 60 GHz applications. The Commission also agrees with the WISPA that ''because ITU may study a band is an insufficient reason for the Commission to delay making a valuable spectrum resource available for unlicensed use.'' The Commission acknowledges that eventual harmonization with international requirements will benefit consumers by promoting a global marketplace and enhancing the international competitiveness of U.S. manufacturers. However, notwithstanding a desire for harmonization with international standards, the Commission determines to make these frequencies available for unlicensed use based on the Commission's analysis of U.S.-specific factors. Here, the Commission determines that the Commission should not wait for the outcome of the ITU study of this band, contrary to what T-Mobile advocates, because that could take years, leaving 5 gigahertz of spectrum to lie fallow in the meantime, when unlicensed applications are ready in the very near future to make use of this spectrum, given current planned deployments of WiGig products in the adjacent 57–64 GHz band.[5] In addition, note that spectrum characteristics vary at different frequencies, due to different propagation losses and other atmospheric and sharing conditions, thus a strict linear comparison per frequency unit of the Commission amounts in different frequency bands as ''gigahertz parity'' (*e.g.,* 3.85 gigahertz of spectrum in lower bands vs. 14 gigahertz of spectrum in upper bands) is not a valid comparison. Based on the above, the Commission is permitting use of the 57–71 GHz band by unlicensed devices pursuant to the technical rules in § 15.255.

75. With respect to the additional requests from Microsoft *et al* to extend

[5] The Commission also notes that the ''study'' of a frequency band by the ITU does not mean necessarily that the band will be automatically designated for licensed use, because licensing of spectrum is deferred to ''the sovereign right of each State to regulate its telecommunication''. *See* International Telecommunication Union, *Constitution and Convention* (*http://www.itu.int/en/history/Pages/ConstitutionAndConvention.aspx).*

the band up to 72.5 GHz, and to allow indoor use of the 72.5–76 GHz band by unlicensed devices, the Commission does not find that additional spectrum above and beyond the very large 14-gigahertz of contiguous spectrum in the 57–71 GHz band that the Commission is providing for unlicensed operations herein is warranted at this time, due to the presence of the numerous existing fixed links in the 71–76/81–86 GHz bands. When the Commission adopted rules for licensed operations in these bands in 2003, it did not permit unlicensed sharing of these bands because ''an underlay of unlicensed devices in the bands could detrimentally affect the quality and buildout of service.'' In addition, the fixed point-to-point equipment that has been developed for deployment in the 71–76 GHz and 81–86 GHz bands were not engineered to operate in a part 15 unlicensed environment. Subsequently, in 2014, the Commission adopted part 15 rules to permit a special type of unlicensed device, level probing radars (LPR), to share the 75–85 GHz band; these devices, however, must be operated in a vertically downward position at fixed locations with severe limitations on antenna beamwidth. In contrast, the 5G unlicensed transmitters envisioned here would be both mobile and fixed and would not have such limitations. The Commission finds that parties requesting to extend the band beyond 71 GHz for unlicensed operation did not submit any persuasive technical arguments to prove that unlicensed sharing with the 71–76/81–86 GHz licensed services is feasible at this time. Accordingly, the Commission denies these requests at this time.

E. Federal Sharing Issues

76. Many bands above 24 GHz have Federal allocations on a primary basis. As the Commission continues to increase flexibility in the non-Federal use of these bands, the Commission must consider appropriate mechanisms and tools to share these bands that recognize the co-primary rights in these bands. In this *Report and Order,* the Commission facilitates sharing in the 39.5–40 GHz band and 37–38.6 GHz band, including through new sharing schemes that promote dynamic and flexible access in the 37–37.6 GHz band. In order to continue to evolve spectrum access and sharing regimes that meet both Federal and non-Federal needs, it will be imperative for all stakeholders, including wireless and satellite industries, to engage proactively to help shape these solutions.

1. 39.5–40 GHz

77. The 39.5–40 GHz portion of the 39 GHz band is allocated to the Federal FSS and MSS a primary basis, limited to space-to-Earth (downlink) operations. However, Federal MSS earth stations in this band may not claim protection from non-Federal fixed and mobile stations in this band.

78. In the *NPRM,* the Commission explained that when the *39 GHz Report and Order* was adopted, Federal use of the band was limited to military systems in the 39.5–40 GHz band segment, that the Department of Defense (DoD) stated that it had plans to implement satellite downlinks at 39.5–40 GHz in the future, and that the NASA identified 39.5–40 GHz as a possible space research band to accommodate future Earth-to-space wideband data requirements. The *39 GHz Report and Order* expressed optimism that such plans would not affect the continued development of the 39 GHz band for non-Federal use, but the Commission said that it intended to address those interference issues in a future, separate proceeding that would focus on developing inter-licensee and inter-service standards and criteria. At present, the U.S. Table of Frequency Allocations provides that Federal satellite services in the 39.5–40 GHz band are limited to military systems.

79. Although only four commenters responded to the Commission's questions on these issues, all four agreed that it is possible for Federal and non-Federal operations to share the 39 GHz band. They also agreed that the Commission should adopt coordination zones to mitigate interference between Federal and non-Federal operations. For instance, AT&T argues that the Commission should adopt coordination zones rather than novel spectrum sharing techniques because coordination zones balance the twin goals of efficient spectrum utilization and the prevention of harmful interference to incumbents. Intel argues that portions of the band that are strictly Federal use could be separated from those for commercial use. Cisco states that while coordination will have to be done by the Commission staff and their counterparts at NTIA, co-existence is achievable. Finally, Nokia argues that the Commission should continue work with NTIA and other Federal agencies to minimize Federal coordination zones, which would maximize the value of the spectrum.

80. In 2016, NTIA sent a letter to the Commission addressing issues raised in the *NPRM,* regarding, in part, military operations in the 39.5–40 GHz portion of the 38.6–40 GHz band. NTIA explained that the 39.5–40 GHz band is allocated to military MSS and FSS earth stations. Federal MSS earth stations cannot claim protection from non-Federal fixed and mobile stations as specified in footnote US382 of the table of frequency allocations. However, Federal earth stations in the MSS are not required to protect non-Federal fixed and mobile services. NTIA stated that given the existing regulatory constraints in the 39.5–40 GHz band, the *NPRM's* proposed non-Federal fixed and mobile operations will not impact Federal satellite operations in the 39.5–40 GHz band.

81. The Commission concludes that it is possible for Federal operations to share the band with non-Federal fixed and mobile terrestrial operations because the protections offered by footnote US382 are sufficient to protect both Federal and non-Federal operations in this band. Thus, no changes to the Commission's rules are necessary.

2. 37–38.6 GHz

82. The Commission concludes that non-Federal fixed and mobile operations can share the 37–38 GHz band with SRS downlink operations under certain conditions. First, as a result of discussions between NTIA and the Commission, NTIA indicated that it would request protection for only three SRS earth station sites: Goldstone, California; White Sands, New Mexico; and Socorro, New Mexico. Second, to address NTIA's recommendations, the Commission will establish coordination zones for these three sites by adding a footnote to the US Table of Allocations listing the locations to be protected and their respective coordination zones. Third, with respect to operations, at Green Bank, West Virginia, NTIA indicated that since Green Bank, West Virginia is located in an existing quiet zone, any new or modified stations including in the fixed and mobile services, within the zone are required by § 1.924(a) of the Commission's rules to notify the National Radio Astronomy Observatory (NRAO), and thus Green Bank would not be included in the footnote. Therefore, the Commission adopted footnote US151, which requires that, in the 37–38 GHz band, fixed and mobile stations not cause harmful interference to Federal SRS earth station at three sites and that non-Federal applications for such use be coordinated with NTIA in accordance with new § 30.205 of the Commission's rules.

83. The Commission concludes that non-Federal fixed and mobile operations can share the 37–38.6 GHz band with DoD operations. With regard

to Federal co-primary access to the 37 GHz band, the Commission will adopt rules that entail the coordination zones recommended by NTIA for the 14 military sites, and the ability for Federal agencies to add future sites on a coordinated basis. The Commission will make the 37–37.6 GHz block (lower band segment) available for coordinated co-primary sharing between Federal and non-Federal users, where non-Federal rights are granted by rule. This framework will facilitate access by DoD and other Federal users. In the *FNPRM,* the Commission seeks comment on defining the sharing framework in greater detail. In the upper band segment, the Commission seeks comment on facilitating Federal coordination with licensees for access to licensed areas.

84. The Commission also does not believe that it is necessary to take action to protect the weather satellites, which according to Committee on Radio Frequency (CORF), will operate above 37 GHz until at least 2020 because it will take a significant amount of time for mmW devices to be developed and deployed in the 37 GHz band. Therefore, the Commission expects that relatively few mmW devices will be operating in the band while the weather satellites are still in use.

85. Under the plan the Commission adopted, the Commission enables the deployment of new commercial services while protecting Federal agency missions. This balances the needs of commercial operators with the needs of Federal agencies for protection and future growth by creating an environment where Federal and non-Federal users can share the band on a co-primary basis and providing enough certainty to future commercial users to stimulate investment in the spectrum.

3. Passive Services Below 37 GHz

86. The Commission believes that the out-of-band emission (OOBE) limit that the Commission adopts in this *Report and Order* will provide adequate protection to the passive sensors in the adjacent 36–37 GHz band. The OOBE limit will keep emissions from an UMFUS device into the 36–37 GHz band well below the −10 dBW level specified by footnote US550A. The Commission notes that the −10dBW power limit was adopted to protect passive sensors in the 36–37 GHz band in accordance with ITU Resolution 752 (WRC–07). Because this limit was adopted by the ITU to protect passive sensors from harmful interference from fixed and mobile transmitters in the 36–37 GHz band, the Commission concludes that it will provide appropriate protection to the passive sensors from transmitters in the adjacent band.

87. The Commission will not adopt a guard band at 37 GHz to protect the EESS and SRS in the 36–37 GHz band as suggested by CORF and IEEE Frequency Allocations in Remote Sensing (FARS). Neither CORF nor IEEE FARS make a specific recommendation on the necessary size of the guard band, although CORF requests a guard band of at least 100 MHz. Because a guard band will reduce the spectrum available for mmW devices, the Commission does not want to take this step without compelling evidence that it is necessary. No one has provided information on the specific benefits and necessity of adopting a guard band of at least 100 MHz to protect EESS and SRS. Given the lack of data supporting adoption of a guard band, the Commission believes that the out-of-band emission limit that the Commission has adopted will provide adequate protection to the EESS and SRS without the need for a guard band at 37 GHz.

88. With regard to protecting radio astronomy at the three locations specified by CORF, the Commission is not convinced that additional measures are needed to protect radio astronomy. The radio astronomy observations that CORF is concerned about will be conducted in the 36.43–36.5 GHz band, which is 500 megahertz from the 37 GHz band, so the emission limits that the Commission is adopting for mmW devices should sufficiently protect radio astronomy.

F. Licensing, Operating, and Regulatory Issues

1. Creation of New Rule Service and Part

89. The Commission adopted in its proposal to create a new service, the UMFUS under a new part 30 of the Commission's rules to include the 28 GHz, 39 GHz, and 37 GHz bands. Licensing the millimeter wave bands under part 27, as CTIA suggests, would produce a less flexible regime than the Commission intend while the rules the Commission adopted in part 30 will provide much of the flexibility present in the part 27 rules. Part 27 would be a poor fit for the point-to-point services currently operating in the 28 and 39 GHz bands, and for the backhaul uses other licensees may wish to include in their services. Part 96, which Google suggests, is designed for a specific regime of intensive, three-tier sharing. As the Commission is not adopting this type of sharing regime for these bands at this time, using this rule part would be inappropriate. The Commission concludes that establishing a new rule part will allow us to have one unified set of rules governing the various types of operations the Commission contemplates licensees will offer, which will provide more clarity to licensees and more accurately reflect the nature of these licenses.

2. Regulatory Status

90. The Commission adopted in its proposal from the *NPRM* to implement a flexible regulatory framework for the UMFUS. As the Commission proposed, UMFUS licensees in the 28, 39, and 37 GHz bands will be able to choose the regulatory status (common carrier, non-common carrier, or both) that best fits their business models and the services they seek to provide. This approach will maintain an open and flexible framework that will allow the business judgments of individual applicants and licensees in these bands to shape the nature of the services offered pursuant to their licenses.

91. The Commission also adopts its proposal to rely on the applicant's designation of its common carrier or non-common carrier status, to enable us to fulfill our obligations to enforce the common carrier requirements contained in statutes and the Commission's regulations. An election to provide service on a common carrier basis requires that the elements of common carriage be present, and the applicant is in the best position to ascertain the presence of these elements. This approach is consistent with the Commission's past decisions regarding the classification of mobile services.

3. Foreign Ownership Reporting

92. Certain foreign ownership and citizenship requirements are imposed by subsections (a) and (b) of Section 310 of the Act, as modified by the 1996 Act. These provisions prohibit the issuance of licenses to certain applicants. For current LMDS, 37 GHz, and 39 GHz licensees, these statutory provisions are adopted in part 101 of the Commission's rules at § 101.7 of the Commission's rules. Specifically, § 101.7(a) prohibits the granting of any license to be held by a foreign government or its representative. Section 101.7(b) prohibits the granting of any common carrier license to be held by individuals that fail any of the four citizenship requirements listed.

93. In the *NPRM,* the Commission tentatively concluded that the Section 310 requirements would apply to any applicants in the UMFUS. Based on this interpretation of the requirements of Section 310, the Commission proposed

in the *NPRM* to include a provision in the new part 30 that would mirror the current § 101.7 of the Commission's rules. In addition, the Commission proposed that all applicants for part 30 licenses be required to report the same foreign ownership information, regardless of the specific type of service they sought to provide. An applicant requesting authorization for broadcast, common carrier, aeronautical en route, or aeronautical Fixed Services, alone or in combination with other services, would be prohibited from holding a license if it met any of the criteria in Section 310(b). If the applicant requested authorization for services other than for broadcast, common carrier, aeronautical en route, or aeronautical Fixed Services, it could hold a license if it met the single alien ownership requirement in Section 310(a), regardless of whether it would otherwise be disqualified for a common carrier authorization. No commenters addressed the issue of foreign ownership reporting requirements, or opposed the Commission's proposals.

94. The Commission adopted in its proposals from the *NPRM* to require the same foreign ownership reporting from all applicants for part 30 licenses, regardless of the specific type of service they seek to provide, and to implement this requirement by including a provision in part 30 that mirrors § 101.7 of the Commission's current rules. This approach will properly implement the restrictions contained in Sections 310(a) and (b) of the Act, and is consistent with the Commission's treatment of flexible use services regulated under part 27 of the Commission's rules.

4. Eligibility

95. In the *NPRM,* the Commission adopted an open eligibility standard for the UMFUS. The Commission noted that an open eligibility approach would not affect citizenship, character, or other generally applicable qualifications that may apply under the Commission's rules. Cisco and CTA support this proposal, citing uncertainty as to how the UMFUS bands will develop, and the need to allow innovation from all parties. No commenters opposed the Commission's proposal.

96. The Commission adopted its proposal to implement an open eligibility standard for the UMFUS. This approach is in keeping with the flexibility of the other licensing rules the Commission adopted in this *Report and Order,* as well as the Commission's treatment of other flexible use services, and will encourage innovation and efficient use of spectrum in these bands.

5. License Term

97. The Commission adopted its proposal to establish a 10-year license term for all UMFUS licenses, and the Commission's proposal to award a renewal expectancy for subsequent license terms if the licensee continues to provide at least the initially-required level of service. While the Commission has pursued shorter license terms and non-renewable licenses in other bands, and continue to believe there are circumstances where those structures are appropriate, here the Commission adopted a 10 year license term that can be renewed. The Commission believes a 10-year license term will give licensees sufficient certainty to invest in their systems, particularly as the new technology is still nascent and will require time to fully develop. If the standards for mobile service in the mmW bands are established by, at the latest, 2020, new licensees would still have the majority of the license term after that point to plan and to deploy service. Neither XO nor any other commenter has presented facts that would justify a longer license term. A 10-year license term is also consistent with existing license terms in a wide variety of services.

98. The Commission also adopted in its proposal to award a renewal expectancy for subsequent license terms if the licensee continues to provide at least the initially-required level of service through the end of any subsequent license terms. That treatment is consistent with the Commission's treatment of many other licensed services and will provide incentives for licensees to continue to provide service.

6. Mobile Spectrum Holdings Policies

99. The Commission found it essential to establish clear and transparent mobile spectrum holdings policies that will promote competition in the future, including competition in the development of 5G services, as well as promote the efficient use of mmW spectrum, and avoid an excessive concentration of licenses. As mentioned in the *NPRM,* demand for mobile service that mmW spectrum is expected to enhance and improve has been increasing, and the Commission's predictive judgment is that interest in the spectrum will be high. Thus, the Commission finds that it would provide regulatory certainty, flexibility in planning, and expedited deployment if the Commission supplies guidance on application of these policies at this stage when the Commission authorizes mobile service in these bands and adopt related rules governing the terms of service, rather than at some later stage. In the Commission's consideration of whether to adopt a mobile spectrum holdings limit for the licensing spectrum through competitive bidding and, if so, what type of limit to apply, the Commission's evaluation includes, among other things, the promotion of competition in relevant markets, the acceleration of private sector deployment of advanced services, and generally managing the spectrum in the public interest. The Commission evaluates how a limit would likely affect the quality of communications services or result in the provision of new or additional services to consumers, as well as any other statutory goals and directives applicable to a particular spectrum band being licensed by competitive bidding.

100. As the Commission noted in the Mobile Spectrum Holdings Report and Order, the mobile wireless marketplace is highly concentrated, and with continually increasing consumer demand for mobile broadband, ''in order for there to be robust competition, multiple competing service providers must have access to or hold sufficient spectrum to be able to enter a marketplace or expand output rapidly in response to any price increase or reduction in quality, or other change that would harm consumer welfare.'' In addition, the Commission has found that holding a mix of spectrum bands is advantageous to providers and that consumers' benefit when multiple providers have access to a mix of spectrum bands. The Commission concludes here that with, the rapid rate of technological advance, mmW spectrum is likely to be a critical component in the development of 5G, and the Commission must take steps to ensure its optimal use to the benefit of all American consumers. For these reasons, the Commission adopted an *ex ante* spectrum aggregation limit of 1250 megahertz that will apply to licensees acquiring spectrum in the 28 GHz, 37 GHz, and/or 39 GHz bands, through competitive bidding in auction. The Commission adopted for these same reasons a spectrum threshold of 1250 megahertz for proposed secondary market transactions in these three bands.[6]

101. Historically, mmW frequencies have been considered unsuitable for

[6] The Commission notes that this 1250 megahertz spectrum threshold helps to identify those markets that provide particular reason for further competitive analysis, but that the Commission's consideration of potential competitive harms would not be limited solely to those markets identified by the threshold.

mobile applications because of propagation losses at such high frequencies and the inability of mmW signals to propagate around obstacles. As noted in the *NPRM,* bands above 24 GHz were not typically considered for stand-alone mobile services but rather as supplementary channels to deliver ultra-high speed data in specific places. Due to technological advances, the mmW bands could potentially be used for mobile broadband and are likely to serve as an important supplement to lower-band spectrum. Specifically, the mmW bands potentially will be used for supporting very high capacity networks in areas that require such capacity, as well as for machine-to-machine communications, and in the development of various Internet of Things (IoT) applications including wearables, fitness and healthcare devices, autonomous driving cars, and home and office automation.

102. The Commission finds that grouping the 28 GHz, 37 GHz, and 39 GHz bands together for purposes of applying these spectrum holdings policies, either at auction or in the secondary market, is appropriate in view of the interchangeability of the spectrum in these bands, *i.e.,* similar technical characteristics and potential uses of this spectrum that are unique to the mmW bands. While certain differences across the mmW bands exist, the Commission finds these technical differences are not sufficient to significantly affect how these spectrum bands might be used and to require separate band-specific limits. This approach mirrors the Commission's existing Commercial Mobile Radio Service (CMRS) spectrum screen, which applies across a number of bands that do not have the same technical characteristics and not on a band-specific basis. Even assuming that more 37 GHz to 39 GHz spectrum would be needed to provide the same performance, there will be 2400 megahertz of 37 GHz and 39 GHz spectrum available for service providers' use, almost three times as much as in the 28 GHz band. And, in any event, all the particular facts of any proposed secondary market transaction will be carefully evaluated on a case-by-case basis to ensure that the public interest is served. For these reasons, the Commission does not find that adopting a band-specific spectrum aggregation limit is necessary, and the Commission finds that the spectrum holdings policies adopted in the *Report and Order* will best support its objective of ensuring that multiple providers have access to this high band spectrum that is likely to be critically important in the development of 5G services moving forward. The Commission anticipates that applying these spectrum holdings policies to spectrum with similar technical characteristics that may become available in the future is also likely to be appropriate.

103. *Competitive Bidding.* The Commission concludes that an approach based on limiting an entity's holding to approximately one-third of the relevant spectrum will help to ensure that multiple providers are able to access a sufficient amount of spectrum to the benefit of consumers. In the Commission's consideration of the appropriate limit to set at auction, the Commission notes that as a result of the various license sizes in these bands, setting a limit at approximately one-third would as a practical matter result in a limit notably lower than a one-third limit.[7] Given the varied license sizes of spectrum blocks in each band, as well as the total amount of mmW spectrum available, the Commission finds that permitting licensees to acquire somewhat more than one-third of the spectrum available in these bands at auction is appropriate. The Commission therefore will not permit licensees to acquire more than 1250 megahertz across the three bands at auction.[8] The Commission finds that the spectrum aggregation limit the Commission adopted will help ensure that multiple providers will be able to access a sufficient amount of mmW spectrum to facilitate the deployment of new services and innovation that will benefit consumers, while guarding against the excessive concentration of licenses. The Commission asks for comment below on how this limit might be implemented.

104. *Secondary Market.* The Commission adopted its proposal to exclude mmW spectrum from the current spectrum screen that includes those spectrum bands that the Commission has determined are suitable and available for the provision of mobile telephony/broadband services. As the Commission has previously explained, spectrum is considered ''available'' if it is ''fairly certain that it will meet the criteria for suitable spectrum in the near term, an assessment that can be made at the time the spectrum is licensed or at later times after changes in technology or regulation that affect the consideration.'' The Commission does not find that the mmW bands are suitable and available for the provision of mobile telephony/broadband services in the same manner as other spectrum bands that are currently included in the Commission's spectrum screen as applied to secondary market transactions. The Commission makes this finding based on the unique characteristics of these bands as described above. Accordingly, the Commission does not include the mmW bands in the spectrum screen.

105. However, the Commission recognizes that this frontier spectrum is likely to become increasingly valuable to the advent of 5G services. In its competitive analysis of wireless transactions, the spectrum screen applicable to lower-band spectrum has been one tool used to help identify particular markets for further competitive analysis; it is applied on a county-by-county basis and identifies local markets where an entity would hold approximately one-third or more of the total spectrum suitable and available for the provision of mobile telephony/broadband services, post-transaction. Similarly, for proposed secondary market transactions that would result in an entity holding 1250 megahertz or more of the total spectrum in the 28 GHz, 37 GHz, and 39 GHz bands, the Commission will apply its threshold on a county-by-county basis, and subject such transactions to the Commission's case-by-case review in order to ensure that the public interest is served. As noted above, while this 1250 megahertz spectrum threshold helps to identify those markets that provide particular reason for further competitive analysis, the Commission's consideration of potential competitive harms will not be limited solely to those markets identified by the threshold. Establishing this spectrum aggregation threshold in the secondary market context recognizes the specific characteristics of the

[7] The total available amount of the mmW spectrum in the 28 GHz, 37 GHz, and 39 GHz bands today is equal to 3250 megahertz, approximately one-third of which is 1100 megahertz. Given the sizes of the spectrum blocks in these bands, however, no entity could hold more than 1050 megahertz, and an entity interested in holding only licenses in the 37 and 39 MHz bands could hold no more than 1000 megahertz. More specifically, the latter entity would be able to hold no more than five licenses of 200 megahertz each across the 37 GHz and 39 GHz bands for a total of 1000 megahertz. An entity interested in holding some 28 GHz spectrum could hold either two 28 GHz licenses and one license of 200 megahertz for a total of 1050 megahertz, or one 425 megahertz license in the 28 GHz band and three licenses of 200 megahertz for a total of 1025 megahertz.

[8] The Commission recognizes that there are incumbent licensees in the 28 GHz and 39 GHz bands that currently hold varying amounts of spectrum. These licensees would be able to bid in the auction to an amount that would be no more than 1250 megahertz in total, taking existing spectrum holdings into account. Service providers' existing spectrum holdings across the 28 GHz, 37 GHz, and 39 GHz bands therefore will be counted for purposes of the Commission's application of the 1250 megahertz limit.

spectrum while helping to ensure that multiple entities have an opportunity to obtain mmW spectrum for deployment of innovative mobile technologies.

106. *Summary.* The Commission finds, on balance, that the potential public interest benefits of adopting a 1250 megahertz limit for auctions of this spectrum, and a 1250 megahertz threshold for secondary market transactions for these unique spectrum bands outweigh any potential public interest harms. Further, adopting these spectrum holdings policies is consistent with the Commission's previous determination that an ''approximately one-third threshold for total spectrum that the Commission uses to identify those holdings in local markets that may raise particular competitive concerns'' is an effective analytical tool in the secondary market context. The Commission anticipates that the potential costs of adopting such spectrum holdings policies will be low. The Commission disagrees with commenters who argue that it is premature for the Commission to establish any spectrum aggregation policies in these bands and that such policies will undermine the potential use of this spectrum. On the contrary, the Commission finds that establishing such policies that will apply as mmW spectrum is introduced into the marketplace will help promote competition from the outset. The Commission has explained that mmW spectrum holds the potential for a range of uses from supporting high capacity networks to use with various IoT applications. While the Commission cannot be certain at this time how this spectrum will be used, the Commission finds that its anticipated value to the future of 5G makes it critical that multiple providers have access to it. The spectrum holdings policies the Commission adopted will guard against consolidation of this spectrum by one or two providers and will encourage the development of innovative services to the benefit of the American consumer.

7. Performance Requirements

a. Performance Metrics and Milestones

107. The Commission declines to adopt a unified performance metric at this time. Based on the criticisms and alternative suggestions in the record, the Commission concludes that such an approach would not provide the flexibility necessary to support innovative uses of the spectrum, as it would favor one deployment approach over another. A unified approach might also deter investment and deployment in these bands. The Commission also declines to adopt a ''substantial service'' standard of performance for the UMFUS. The Commission determines that such a standard, with no firm minimum requirements, would not adequately safeguard effective use of spectrum in these bands. The Commission also declines to adopt a usage-based metric for performance requirements because it is not clear that there is a workable method of measuring or enforcing such a requirement. Instead, the Commission adopted a series of metrics, tailored for each type of service a licensee might choose to offer. Licensees may fulfill their performance requirements by showing that they meet their choice of any one of the below standards, or a combination of several. This framework is intended to provide enough certainty to licensees to encourage investment and deployment in these bands as soon as possible, while retaining enough flexibility to accommodate both traditional services and new or innovative services or deployment patterns. Its increased level of firmness over a substantial service metric is also consistent with the Commission's recent approach in other services.

108. The Commission notes that this list of metrics is not intended to be exhaustive. The Commission recognizes that the metrics the Commission adopted does not cover all possible types of service that licensees may seek to offer in these bands, and that new, innovative services may be developed with different characteristics that the Commission cannot foresee at this time. The Commission therefore seeks further comment in the *FNPRM* on additional metrics that should be applied to these innovative services.

109. The Commission adopted these performance requirements only in relation to the end of the initial license terms in these bands. Because the Commission believes it is taking action with significant lead time before the full development of the technology, the Commission believes an interim benchmark might be difficult to meet and may result in a substantial number of waiver and extension requests. While the Commission does not adopt any ongoing or subsequent performance requirements at this time, the Commission strongly encourages licensees to deploy networks and services in a timely manner consistent with the development of the technology for these bands. The Commission emphasizes, however, that the Renewal and Service Continuity proceeding (WT Docket No. 10–112), which addresses this issue, remains open, and that licensees may be subject to any requirements adopted as part of that proceeding at some later date.

110. *Mobile and point-to-multipoint.* For mobile and point-to-multipoint services in the 28 GHz, 37 GHz (geographic area licenses only), and 39 GHz bands, the Commission adopted a modified version of the Commission's proposal in the *NPRM.* In order to meet the standards for license renewal, a licensee providing mobile service must provide coverage to 40 percent of the population of the license area and must be using the facilities to provide service. This is a lower portion of the population than is the standard for lower frequency bands because this level of coverage strikes the appropriate balance between ensuring sufficient use of the spectrum and allowing licensees flexibility to deploy an emerging technology which may be more suitable for smaller coverage areas. The Commission views the current safe harbor of 20 percent population coverage as inappropriate going forward because the new technologies being developed will dramatically increase the opportunities to use these bands. Since the Commission is not requiring service demonstrations until the end of the license term, the Commission believes licensees will have more than adequate time to meet this benchmark. Similarly, the Commission does not believe CTIA's suggestions of 10 ''connections'' per 10,000 population, or 50 connections per county, will result in robust build out in these bands. Under CTIA's proposed definition of a ''connection,'' these 10 connections could represent as little as one subscriber accessing the network 10 times in one month. This is a particularly low benchmark for mobile operations, which is one of the primary target use cases for this new service. The Commission does not believe this standard represents a sufficient level of service to justify renewal.

111. The Commission declines to adopt the measurement method the Commission proposed in the *NPRM* and concludes that requiring a specific methodology is unnecessary. Instead, the Commission will provide licensees with flexibility in terms of how they make their service showings, but Commission staff will continue to review showings to ensure that they accurately reflect coverage.

112. *Fixed.* The Commission does not adopt its proposed method of ''keyhole contours'' for assigning fixed links a population equivalent. Instead, the Commission adopted a more traditional method of demonstrating fixed service: the number of links per population in the license area. Specifically, the Commission adopted a requirement that

geographic area licensees providing Fixed Service in the 28 GHz, 39 GHz, or 37 GHz bands must construct and operate at least four links in license areas with less than 268,000 population, and at least one link per 67,000 population in license areas with greater population. This standard is similar to the standard the Commission established for fixed point-to-point services in the 2.3 GHz band. While links in mmW bands will presumably be shorter because of the propagation characteristics, the higher frequencies will allow more reuse of spectrum in a given area. These links must be part of a network that is actually providing service, whether to unaffiliated customers or private, internal uses, and all links must be present and operational at the end of the license term. As with the mobile performance milestone, for bands licensed by areas larger than counties the number of links and the size of the population will be calculated over the entire license area, not county by county.

113. *Satellite.* The Commission adopted it proposal from the *NPRM.* A licensee who purchases a 28 GHz UMFUS license may fulfill build-out requirements for the license by deploying an earth station in the license area that is operational and providing service. The Commission notes that a licensee may not fulfill this requirement by leasing a portion of its license area to a satellite operator that builds and operates an earth station within the leased area. In 37 and 39 GHz, because the Commission adopted significantly larger geographic license areas than counties, constructing and operating an earth station will fulfill the performance requirement only for the county in which it is constructed, and not for the entire license area. Satellite operators who develop earth stations under the satellite sharing mechanisms the Commission adopted for the 28 GHz and 39 GHz bands will continue to be subject to the applicable part 25 build-out requirements.

114. *Combination.* Licensees whose deployments contain a mix of services, for example mobile service combined with fixed backhaul may meet the relevant fixed or mobile/point-to-multipoint standard separately. The Commission declines to establish a specific formula for evaluating such buildouts on a combined basis. Instead, the Commission will evaluate such showings on a case-by-case basis, as the Commission has done for LMDS.

b. Failure To Meet Buildout Requirements

115. The Commission adopted a modified version of its proposal, tailored to the different license area sizes the Commission adopted for each band. For all bands, the Commission adopted its proposal to terminate licenses (or portions of licenses, as appropriate) automatically if a licensee fails to meet the applicable performance requirements, which is widely applied in many wireless services. The band-specific approaches to license renewal and termination are explained in more detail below. In the accompanying *FNPRM,* the Commission seeks to further develop the record on use-or-share obligations.

116. *28 GHz.* The 28 GHz band will be licensed by county because partitioning licenses in these bands into license areas smaller than counties would be administratively burdensome without providing any off-setting benefits to licensees or service providers. Accordingly, if a licensee in the 28 GHz band fails to meet the applicable performance requirements at the end of its license term, the license for that county will terminate immediately in its entirety. As the Commission is reissuing the licenses in these band by county rather than by BTA, the Commission declines to implement EchoStar's proposal to continue to evaluate incumbent licensees' performance on a BTA-wide basis.

117. *37 and 39 GHz.* The 39 GHz band, as well as the 37.6–38.6 GHz band, will be licensed by PEAs, rather than counties. In order to balance the need to ensure productive use of spectrum with the need to encourage investment and deployment, the Commission adopted a modified approach to performance requirements in this band.

118. A licensee who meets the applicable performance requirements for the entire PEA, taken as a whole, will be eligible to renew the entire license. A licensee who does not meet the requirements for the entire license area will have two options: (1) automatic termination of the entire license, or (2) partition the license at the county level, and return a portion of the license to the Commission such that the applicable performance requirements are met for the remaining non-forfeited area. For example, a licensee of a PEA containing five counties of 100,000 people each, who deployed mobile service covering 60 percent of the population in each of two counties, and made no deployments in the other three counties, would be covering only 24 percent of the total population of the license area. This would not be enough to meet performance requirements across the entire license. However, the licensee could forfeit the portion of the license covering the three un-deployed counties, and retain and renew the portion of the license covering the remaining two counties. Similarly, a licensee of the same hypothetical PEA who deployed mobile service covering 80 percent of one county, and 30 percent of another, could retain and renew the portion of the license for those two counties because the resulting two-county license area would have coverage of 55 percent of its population, which exceeds the 40 percent requirement.

c. Treatment of Incumbents

119. The Commission declines to adopt its proposal from the *NPRM.* For license terms concluding before 2020, licensees may be unable as a practical matter to meet the new, more rigorous requirements the Commission adopted for these bands at the end of their current license terms because of the nascent state of technology. Moreover, providing for additional time will provide more effective opportunities for licensees to use the spectrum in ways that maximize the flexibility now afforded by the Commission's new rules. For example, the transition toward providing innovative mobile services is likely to require complex business decisions and changes in plans. In short, it is the Commission's intent to encourage deployment of new and innovative services—particularly mobile service—as efficiently and effectively as possible.

120. Thus, the Commission slightly modifies and extends the deadline for meeting the performance requirements pertaining to licensees' current licenses for licenses expiring after the adoption date of the rules in this proceeding. Specifically, current licensees in the 28 GHz and 39 GHz bands who, under the current rules, face a deadline for demonstrating substantial service after the adoption date of this *Report and Order* will not be required to demonstrate substantial service at renewal. Instead, those licensees will be required to fulfill the performance requirements the Commission adopted for their respective licenses by June 1, 2024. This approach will allow current licensees to focus on growing and transitioning their networks in line with new and developing industry standards, which will support earlier and more robust deployment of next-generation services in these bands.

d. Alternatives to Performance Requirements

121. The Commission declines to adopt either of these alternatives for these bands. The Communications Act contemplates that the Commission will take measures ''to prevent stockpiling or warehousing of spectrum by licensees.'' The Commission believes the foregoing performance requirements are feasible in these bands, and the best method to prevent warehousing in this context. O3b argues that such ''consecutive license terms with recurring payments'' would simply change the financial calculation underpinning warehousing: while the initial bid would be smaller and discounted less, the lower price of entry could encourage warehousing by reducing the amount initially needed to hold on to the spectrum. In the absence of any discussion of the ''option payment'' concept, the Commission will not adopt the proposal at this time.

8. Permanent Discontinuance of Operations

122. Under § 1.955(a)(3) of the Commission's rules, an authorization will automatically terminate, without specific Commission action, if service is ''permanently discontinued.'' In the *NPRM,* the Commission proposed that for UMFUS licensees that identify their regulatory status as common carrier or non-common carrier, ''permanently discontinued'' should be defined as a period of 180 consecutive days during which the licensee does not provide service to at least one subscriber that is not affiliated with, controlled by, or related to, the provider in the service area of its license (or smaller service area in the case of a partitioned license).

123. The Commission proposed a different approach for licensees that use their licenses for private, internal communications. For these services, the Commission proposes to define ''permanent discontinuance'' as a period of 180 consecutive days during which the licensee does not operate any facilities under the license. The Commission proposed that licensees not be subject to this requirement until one year after their initial license period ends, to allow them adequate time to construct their networks.

124. The Commission also proposed that when 28 GHz, 37 GHz, or 39 GHz licensees permanently discontinue service, the licensee must notify the Commission of the discontinuance within 10 days, by filing FCC Form 601 and requesting license cancellation. The Commission further proposed that an authorization automatically terminates without specific Commission action if service is permanently discontinued, even if a licensee fails to file the required form. No commenters discuss the permanent discontinuance of service proposals.

125. The Commission adopted its proposals from the *NPRM* related to permanent discontinuance of operations. Specifically, the Commission adopted the two separate proposed definitions of ''permanent discontinuance,'' for common carrier and non-common carrier service, and for private communications services. The Commission also adopted its proposal to wait to implement this requirement until one year after the initial license period ends. This approach is consistent with the definitions the Commission has adopted for other spectrum bands that are licensed for mobile use, including the H Block, AWS–3, and AWS–4 bands.

126. The Commission also adopted its proposal that a licensee who permanently discontinues service must notify the Commission within 10 days, and the Commission's proposal that such licenses terminate automatically even if a licensee fails to appropriately notify the Commission. This approach to permanent discontinuance is consistent with § 1.955(a)(3) of the Commission's rules. The permanent discontinuance rule is intended to provide operational flexibility while ensuring that spectrum does not lie idle for extended periods, and the rules the Commission adopted support those goals.

9. Secondary Markets Policies

a. Partitioning and Disaggregation

127. The Commission's part 101 rules generally allow for geographic partitioning and spectrum disaggregation in the LMDS and 39 GHz service. Geographic partitioning refers to the assignment of geographic portions of a license to another licensee along geopolitical or other boundaries. Spectrum disaggregation refers to the assignment of discrete amounts of spectrum under the license to another entity. Disaggregation allows for multiple transmitters in the same geographic area operated by different companies on adjacent frequencies in the same band.

128. In 1997, the Commission determined that all LMDS licensees would generally be permitted to disaggregate and partition their licenses. The Commission later adopted specific procedural, administrative, and operational rules to govern the disaggregation and partitioning of LMDS licenses. Similarly, in the same year, the Commission concluded that partitioning and disaggregation would be permitted in the 39 GHz band and adopted partitioning and disaggregation rules in this band as well. The rules require the spectrum to be disaggregated by FDD pair in the 39 GHz band.

129. In the *NPRM,* the Commission proposed to continue to allow partitioning and disaggregation in the 28 and 39 GHz bands, and to permit 37 GHz licensees to partition and disaggregate their licenses as well. The Commission also proposed to require all parties to a partitioning or disaggregation agreement to independently fulfill the applicable performance and renewal requirements, which is consistent with the current requirements.

130. Commenters overwhelmingly support allowing secondary market transactions in general, and partitioning and disaggregation in particular. Intel supports expanding disaggregation in the 39 GHz band by also permitting pair-splitting. No commenters oppose allowing secondary market transactions generally, or partitioning or disaggregation specifically. No commenters discuss performance requirements for parties to a partition or disaggregation.

131. The Commission adopted its proposal in the *NPRM* to allow partitioning and disaggregation of licenses in the 28, 37, and 39 GHz bands. As the Commission noted when first establishing partitioning and disaggregation rules, allowing such flexibility could facilitate the efficient use of spectrum by enabling licensees to make offerings directly responsive to market demands for particular types of services, increasing competition by allowing new entrants to enter markets, and expediting provision of services that might not otherwise be provided in the near term. This policy would leave the decision of determining the correct size of licenses to the licensees and the marketplace. Allowing this flexibility is consistent with the record, and with the flexible approach to licensing these bands that the Commission adopted in this *Report and Order.* Because the band plan the Commission adopted for the 39 GHz band does not use paired spectrum blocks, the current rule that licenses in that band must be disaggregated in pairs will no longer apply.

132. The Commission also adopted its proposal to require all parties to a partitioning or disaggregation agreement to independently fulfill applicable performance and renewal requirements. According to the performance requirements framework the Commission adopted, individual

licensees may choose which metric they fulfill (*e.g.,* fixed, mobile, or satellite), but each licensee must make a showing that independently satisfies the requirements. This requirement will facilitate efficient spectrum use, while enabling service providers to configure geographic area licenses and spectrum blocks to meet their operational needs.

b. Spectrum Leasing

133. In 2003, in order to promote more efficient use of terrestrial wireless spectrum through secondary market transactions and in order to eliminate regulatory uncertainty, the Commission adopted the *Secondary Markets First Report and Order,* which contained a comprehensive set of policies and rules to govern spectrum leasing arrangements between terrestrial licensees and spectrum lessees. These policies and rules enabled terrestrially-based Wireless Radio Service licensees holding ''exclusive use'' spectrum rights to lease some or all of the spectrum usage rights associated with their licenses to third party spectrum lessees. Those third party lessees were then permitted to provide wireless services consistent with the underlying license authorization.

134. This 2003 Order excluded a number of wireless radio services from the spectrum leasing rules and policies, including part 101 services. A year later, the Commission extended the spectrum leasing policies to a number of additional wireless services, including part 101 services. At that time, the Commission also built upon the spectrum leasing framework by establishing immediate approval procedures for certain categories of terrestrial spectrum leasing arrangements.

135. In the *NPRM,* the Commission proposed to apply these spectrum leasing policies to the new part 30 radio service governing UMFUS's, including all 28 GHz, 37 GHz, and 39 GHz terrestrial licenses. The Commission proposed to apply these policies in the same manner that they apply to part 101 services.

136. Many commenters support allowing secondary market transactions generally and spectrum leasing specifically. Commenters cite the additional flexibility afforded by leasing spectrum, and the market certainty granted by using established rules. Several commenters also mention that spectrum leasing allows a broader range of entities to access licensed spectrum and provides additional competition in the marketplace. No commenters oppose allowing spectrum leasing arrangements.

137. The Commission adopted its proposal to allow spectrum leasing in the 28 and 39 GHz bands, as well as the portion of the 37 GHz band licensed on a geographic area basis. Allowing spectrum leasing in these bands will promote more efficient, innovative, and dynamic use of the spectrum, expand the scope of available wireless services and devices, enhance economic opportunities for accessing spectrum, and promote competition among providers. In addition, spectrum leasing policies in a particular band generally follow the same approach as the partitioning and disaggregation policies for that band. Thus, the Commission's adoption of spectrum leasing rules for the 28 GHz, 39 GHz, and 37 GHz bands is consistent with the Commission's decision above to allow partitioning and disaggregation in these bands as well.

10. Other Operating Requirements

138. The Commission adopted its proposal in the *NPRM* to require UMFUS licensees to comply with other rule parts that pertain generally to wireless communications services, and with any applicable service-specific rules. This approach will maintain general consistency among various wireless communications services. Consistent with the Commission's proposal, the Commission will add UMFUS to the definitions of Wireless Radio Service and Wireless Telecommunications Service in § 1.907 of the Commission's rules. The Commission refrains from modifying other existing rules in other rule parts at this time, as no commenter has identified any incompatibilities or inconsistencies between the UMFUS Service and the existing service-specific or generally applicable rules. To consolidate the technical rules for all of the types of flexible uses that might be deployed by UMFUS licensees under a single rule part, and to maintain consistency between the rules that the Commission adopted and the current technical requirements that existing LMDS and 39 GHz licensees are subject to, the Commission will move the existing part 101 technical rules for traditional point-to-point and point-to-multipoint operations into part 30.

11. Competitive Bidding Procedures

a. Applicability of Part 1 Competitive Bidding Rules

139. The Commission proposed in the *NPRM* to conduct any spectrum auction of UMFUS licenses in conformity with the general competitive bidding procedures set forth in part 1 subpart Q of the Commission's rules. No commenters proposed any alternative or objected. Given the Commission's experience in successfully conducting auctions using these procedures, the Commission adopted its proposed approach. The Commission will employ the part 1 rules governing competitive bidding design, designated entity preferences, unjust enrichment, application and payment procedures, reporting requirements and the prohibition on certain communications between auction applicants—including those updates made in the *Competitive Bidding Update Report and Order.* The Commission notes however, that the Commission could modify these procedures at a later time.

140. In discussing the competitive bidding rules, one commenter urges that if the Commission adopts county-level licenses, it would be critical to permit 'package bidding' so that operators could assemble larger footprints by bidding on multiple counties at one time. In response, two commenters argue that the Commission should not permit any form of package bidding because such bidding procedures may make it more difficult for small bidders to acquire specific licenses that are included in larger packages. Issues involving such bidding procedures are more appropriately addressed in a pre-auction proceeding that will seek public input on the competitive bidding procedures to be used for a particular auction of UMFUS licenses. Accordingly, the Commissions defer consideration of such matters to such proceeding(s) where interested parties are likely to have a more informed context for such input.

b. Small Business Provisions for Geographic Area Licenses

141. In authorizing the Commission to use competitive bidding, Congress mandated that the Commission ''ensure that small businesses, rural telephone companies, and businesses owned by members of minority groups and women are given the opportunity to participate in the provision of spectrum-based services.'' One of the principal means by which the Commission fulfills this mandate is through the award of bidding credits to small businesses. In the *Competitive Bidding Second Memorandum Opinion and Order,* the Commission stated that it would define eligibility requirements for small businesses on a service-specific basis, taking into account the capital requirements and other characteristics of each particular service in establishing the appropriate threshold. Further, in the *Part 1 Third Report and Order* and the more recent *Competitive Bidding*

Update Report and Order, the Commission, while standardizing many auction rules, determined that it would continue a service-by-service approach to defining small businesses. The Commission recently updated its standardized schedule of small business definitions to reflect the capital challenges small businesses face in the current wireless industry, and in the *NPRM* the Commission sought comment on whether to apply those updated definitions for auctions of spectrum in the UMFUS bands.[9]

142. Based on the Commission's prior experience with the use of bidding credits in spectrum auctions, the Commission believes that the using bidding credits is an effective tool to achieve the statutory objective of promoting participation of designated entities in the provision of spectrum-based service.

143. In adopting competitive bidding rules for the 39 GHz band, the Commission included provisions for designated entities to promote opportunities for small businesses, rural telephone companies, and businesses owned by members of minority groups and women to participate in the provision of spectrum-based services. Specifically, the Commission adopted bidding credits for applicants qualifying as small businesses. For auction of licenses in the 39 GHz band, the Commission adopted two small business definitions. These two small business definitions were later adopted as the highest two of three thresholds in the Commission's standardized schedule of bidding credits. In the *NPRM,* the Commission proposed to adopt for the UMFUS the two small business definitions with higher gross revenues thresholds reflecting the recently adopted updates to the part 1 schedule of small business definitions in the *Competitive Bidding Update Report and Order.* The Commission adopted its proposal to apply the two small business definitions with higher gross revenues thresholds to auctions of UMFUS licenses in the 28, 37, and 39 GHz bands and any other spectrum bands that the Commission may subsequently designate for inclusion in the UMFUS. Accordingly, an entity with average annual gross revenues for the preceding three years not exceeding $55 million will qualify as a ''small business,'' while an entity with average annual gross revenues for the preceding three years not exceeding $20 million will qualify as a ''very small business.'' While the capital requirements of the services to be deployed in these bands is not yet known, the Commission believes that using these gross revenue thresholds will enhance the ability of small businesses to acquire and retain capital and thereby complete meaningfully at auction. The Commission also believes that these thresholds are not overly inclusive, and prevents designated entity benefits from flowing to entities for which such credits are not necessary. The Commission believes that the various spectrum bands included in the UMFUS—spectrum that will be utilized under the same or similar technical rules—will be deployed for the same types of service, and therefore the two small business definitions with higher gross revenues thresholds should apply to all of the bands in the UMFUS.

144. The Commission also adopted its proposal to provide qualifying ''small businesses'' with a bidding credit of 15 percent and qualifying ''very small businesses'' with a bidding credit of 25 percent, consistent with the standardized schedule in part 1 of the Commission's rules. This proposal was modeled on the small business size standards and associated bidding credits that the Commission adopted for a range of other services, including Advanced Wireless Services in the AWS–1 band. The Commission believes that this two-tiered approach has been successful in the past, and will once again utilize it. The Commission uses the existing 39 GHz service rules as a starting point, but adjusts the bidding credit levels to be consistent with the schedule in part 1 of the Commission's rules. The Commission believes that use of the small business definitions and associated bidding credits set forth in the part 1 bidding credit schedule will provide consistency and predictability for small businesses. No commenter provides any alternative or reason why the Commission's bidding credit thresholds or small business definitions would not work in this service. Accordingly the Commission adopted its proposals regarding small business definitions and bidding credits.

c. Rural Service Provider Provisions for Geographic Area Licenses

145. The rural service provider bidding credit awards a 15 percent bidding credit to those servicing predominantly rural areas and that have fewer than 250,000 combined wireless, wireline, broadband and cable subscribers. In the *NPRM,* the Commission stated that in the absence of comments to the contrary, the Commission would leave open the option for future bidding applicants to apply for rural service provider bidding credits in lieu of a small business bidding credits. The Commission now decides that the Commission will apply the rural service provider bidding credit to auctioning the 28 GHz, 37 GHz and 39 GHz bands. Although the Commission has not received comments about this issue, the Commission believes that a targeted bidding credit will better enable rural service providers to compete for spectrum licenses at auction and in doing so, will increase the availability of 5G service in rural areas.

d. Small Business and Rural Service Provider Bidding Credit Caps

146. In the *Competitive Bidding Update Report and Order,* the Commission adopted a process for establishing a reasonable monetary limit or cap on the amount of bidding credits that an eligible small business or rural service provider may be awarded in any particular auction. The Commission established the parameters to implement a bidding credit cap for future auctions on an auction-by-auction basis. Consistent with the Commission's longstanding approach, after adoption of all of the necessary service rules for the UMFUS, the Commission will initiate a public notice process to solicit public input on certain details of auction design and the auction procedures for the initial auction of UMFUS licenses. As part of that process, the Commission will solicit public input on the appropriate amount of the bidding credit cap and subsequently establish the cap that will apply for that auction, based on an evaluation of the expected capital requirements presented by the particular spectrum being auctioned and the inventory of licenses to be auctioned.

e. Tribal Lands Bidding Credit

147. The tribal lands bidding credit program awards a discount to a winning bidder for serving qualifying tribal land that have a wireline telephone

[9] Under the new standardized schedule, businesses with average annual gross revenues for the preceding three years not exceeding $4 million would be eligible for a 35 percent bidding credit, businesses with average annual gross revenues for the preceding three years not exceeding $20 million would be eligible for a 25 percent bidding credit, and businesses with average annual gross revenues for the preceding three years not exceeding $55 million would be eligible for a 15 percent bidding credit. The Commission also adopted a monetary cap on the total amount of bidding credits that an eligible small business or rural service provider may be awarded in any particular auction. Specifically, the amount of the bidding credit cap for a small business in any particular auction will not be less than $25 million and the bidding credit cap for the total amount of bidding credits that a rural service provider may be awarded will not be less than $10 million.

subscription rate equal to or less than 85 percent of the population. The Commission believes that tribal entities involved in the telecommunications industry face unique challenges in participating in spectrum auctions and that the tribal lands bidding credit will promote further deployment and use of spectrum over tribal lands. No commenters oppose the tribal land bidding credit nor suggest that the tribal lands bidding credit is unnecessary. Accordingly, a winning bidder for a market will be eligible to receive a credit for serving qualifying Tribal lands within that market, provided it complies with the applicable competitive bidding rules.

f. Bidding Process Options

148. Finally, the Commission also sought comment in the *NPRM* on whether the Commission should revise any of the Commission's bidding process and payment rules to ameliorate the administrative difficulties the Commission could potentially face in enforcing the construction requirements in the 3,143 counties nationwide. One alternative the Commission discussed was to allow prospective millimeter wave licensees to bid, in a single auction, on licenses that have consecutive terms of license rights in a given geographic area—*i.e.,* licensees could bid at auction for the right to obtain a license in a given county not just for a single license term, but for each subsequent five-year license term; and the winning bidder would pay an auction-determined fee, in lieu of other performance requirements before the start of each term. Once a winning bidder made this payment, a new license would issue for the next consecutive license term. Some commenters support adopting such payments in lieu of performance requirements. However several commenters criticize the approach as incentivizing spectrum warehousing. For example, O3b notes that consecutive license terms with recurring payments would simply change the financial calculation underpinning warehousing: while the initial bid would be smaller and discounted less, the lower price of entry could encourage warehousing by reducing the amount initially needed to hold on to the spectrum. The Commission declines to adopt recurring payments as an alternative to performance requirements in this order and note it is unlikely the Commission would adopt such payments given the Commission's review of the record and further consideration of the factors affecting these bands. In the *NPRM,* the Commission speculated that these payments could incentivize deployment of network facilities and discourage spectrum warehousing because a licensee would be unlikely to pay the auction price for successive terms for spectrum it did not intend to use. However, the Commission believes there is a strong likelihood that bidders would still warehouse spectrum and leave it fallow if the cost of the recurring payment to the spectrum holder was outweighed by the benefit derived from foreclosing other operators' access to the spectrum. This would counter the Commission's goal of accelerating deployment in these bands. Accordingly the Commission declines to adopt this proposal.

12. Security

149. The FCC's approach to cybersecurity proceeds from the view that communications providers are generally in the best position to evaluate and address risks to their network operations. This approach recognizes the importance of private sector leadership and innovation in cybersecurity, and it reduces the need for ongoing regulatory involvement in private sector security practices. It will prove successful, though, only if the private sector aggressively addresses evolving threats through security-by-design, even where short-term market incentives may not be sufficient to drive long-term security investments before harm is realized.

150. Emerging security standards for new flexible uses of the mmW bands (and ''5G'' more broadly) are developing in parallel, but not necessarily at the same pace, with the emerging networks, devices, and equipment. While CTIA has observed that significant, multi-stakeholder, multi-disciplinary, and ''multi-layered'' efforts are ongoing, domestically and globally, ''to assure that [5G] network and [mmW] device security is preserved to the maximum extent feasible,'' the Commission must acknowledge that to date many wireless communications systems have not been successful at implementing security-by-design. The Commission recognize that, in the race to market, vital security protections too often fall by the wayside.

151. The Commission took narrowly tailored steps to help promote an environment that encourages the early and ongoing consideration of security issues by all private sector participants, including infrastructure and device firms, established communications firms, and new entrants to communications markets. New mmW-based networks will enable valuable new services, and accelerating the deployment of those services is a national priority. Those benefits, however, will be undermined if security risks are not managed by licensees. Accordingly, the Commission is moving expeditiously both to meet the need for new mmW spectrum for next generation services and to help ensure that security for these services is built in from the beginning, not left as an afterthought. In this approach, the Commission concurs with stakeholders who identify that there is an opportunity to take action now—before the technology is mature or the services deployed—to encourage, from the outset, the development of necessary cybersecurity protections alongside the development of emerging services and technologies.

152. In the *NPRM,* the Commission recognized the significance of security to 5G networks and the future devices enabled by and connecting to them. Because of the implications related to both sets of issues, the Commission sought comment on how to secure mmW band devices, networks, and their communications, and specifically on ''how to ensure that effective security features are built into key design principles for all mmW band communications devices and networks.'' The Commission expressed a belief in the value of ''security-by-design'' that is motivated by the Commission's expectations that these networks may provide capabilities for a wide variety of new devices and applications, including, among others, traditional mobile communications capabilities, IoT and other applications as well as devices critical to public safety and related services that provide essential protections to the nation. The Commission indicated that security by design means ensuring that the goals that drive the development of networks and devices include achieving an objective state of security. In that context, the Commission explained that the security constructs of confidentiality, integrity, and availability help us gain insight into security generally, and that security-by-design can help ensure that the next generation of wireless networks meets these critical components of a secure network. Several commenters expressed their support for this approach.

153. The Commission continues to believe in the significant benefits of security by design, including the benefits that the Commission would expect to flow from using the confidentiality, integrity, and availability construct for assessing, planning and incorporating security elements into networks and devices as early as possible in their developmental

stages. Indeed, the record demonstrates that security elements are appropriate and important for service providers and equipment developers to consider now, during the development process, as well as part of an ongoing discussion as networks and devices are deployed and operated.

154. For example, one commenter notes that the ''network-based hop-to-hop security approach used to secure the path between communications users will not be sufficient for differentiated end-to-end security for certain 5G services.'' Systems are in need of a ''secure architecture, stringent identity management and data protection, more rigorous authentication methods, and an array of system-level protections to defend against distributed denial of service . . . attacks and other intrusions.'' Accordingly, the commenter believes that security features that are incorporated into 5G systems by design would provide a significant advantage over any ''built on top of'' system design. Since the service and network architecture of 5G is going through dramatic remodeling, the commenter maintains it will ''improve the feature and competitive strength for 5G if security protection is included at an early stage.''

155. The view that security should be a fundamental component in the design of any new network architecture and protocols is also shared by 5G Americas, which underscores the heightened sense that security is expected to take on as new technology and services are deployed. For example, 5G Americas states that 5G systems are expected to provide important applications such as ''smart grids, telemedicine, industrial control, public safety and automotive, [which] have security requirements to defend against intrusion and to ensure uninterrupted operations.'' Other commenters offer additional examples illustrating why it is appropriate and important to build security elements into considerations that go into developing networks and devices. For instance, AT&T notes a variety of developments that will have security implications: ''machine to machine communications will contemplate energy optimization, reduced signaling, and massive connectivity. With these advancements, IoT [Internet of Things] will become a reality. 5G systems will be capable of supporting a range of machine-to-machine services, from connected cars to smart cities to telemedicine and beyond.'' Highly secure 5G systems will be expected even in times of stress. As FiberTower notes, ''reliance on 5G will only increase in the event of a man-made or naturally occurring outage in a critical service.'' To support these needs, the Commission believes 5G services will need to be highly secure prior to deployment, and the Commission thinks it reasonable that the Commission be apprised of security plans in place prior to 5G services becoming operational.

156. Based on the Commission's analysis of the record, the Commission can best facilitate adoption of security-by-design approaches by promoting an open dialogue about security practices that would be consistent with a discussion at a standards organization. Therefore, the Commission is asking to receive from licensees—before they begin operations—general statements, at a level consistent with the open forum standards body discussions, of their plans for safeguarding their networks and devices from security breaches. Requiring licensees to submit that information at that juncture creates an incentive for them to engage in the development of security measures at an earlier stage. The specific information that the Commission receives will also facilitate the Commission's ability to help in identifying security risks, including areas where more attention to security may be needed, and in disseminating information about successful practices for addressing the risks. Moreover, this approach avoids the drawbacks of imposing prescriptive security mandates—*e.g.,* downsides such as the likelihood that one size will not fit all, the lack of agility in responding to changing circumstances and technologies, and the rigidity that such mandates tend to introduce into systems at the outset—thereby preserving for operators, equipment developers, and other interested parties significant flexibilities for addressing security concerns.

157. As described in detail below, the provision that the Commission adopted promotes ''security-by-design'' approaches within the mmW network and product development environment, in ways that should (i) minimally impact (but appropriately enhance the prospects for security ''assurance'') ongoing design and development with respect to this nascent technology, (ii) facilitate integration of network and product development with the timeline for standards development, and (iii) encourage early participation in and monitoring of such standards development. This provision—a requirement that each licensee discuss at a high level how confidentiality, integrity, and availability principles are reflected in its network security design planning in a Statement submitted to the Commission prior to commencing operations—should also help inform the Commission's collective understanding and strategies for addressing security issues in the next generation of communications networks. More specifically, the Commission is requiring licensees to file a Statement with the Commission within three years after grant of the license, but no later than six months prior to deployment. This time period accords with the Commission's security-by-design goals while leaving flexibility for licensees depending on when they are able to deploy service. The Statement must be signed by a senior executive within the licensee's organization with personal knowledge of the organization's security plans and practices, within the licensee's organization, and must include, at a minimum, the following elements:

- A high-level, general description of the licensee's security approach designed to safeguard the planned network's confidentiality, integrity, and availability with respect to communications from: a device to the licensee's network; one element of the licensee's network to another element on the licensee's network; the licensee's network to another network; and device to device (with respect to telephone voice and messaging services).
- A high-level, general description of the licensee's anticipated approach to assessing and mitigating cyber risk induced by the presence of multiple participants in the band. This should include the high level approach taken toward ensuring consumer network confidentiality, integrity, and availability security principles, which are to be protected in each of the following use cases: communications between a wireless device and the licensee's network; communications within and between each licensee's network; communications between mobile devices that are under end-to-end control of the licensee; and communications between mobile devices that are not under the end-to-end control of the licensee.
- A high-level description of cybersecurity standards and practices to be employed, whether industry-recognized or related to some other identifiable approach;
- A description of the extent to which the licensee participates in standards bodies or industry-led organizations pursuing the development or maintenance of emerging security standards and/or best practices;
- The high-level identification of any other approaches to security, unique to the services and devices the licensee intends to offer and deploy; and

• Plans to incorporate relevant outputs from Information Sharing and Analysis Organizations (ISAOs) as elements of the licensee's security architecture. Plans should include comment on machine-to-machine threat information sharing, and any use of anticipated standards for ISAO-based information sharing.

158. The intent of the disclosures is to facilitate multi-stakeholder peer review and earlier development of devices and a commercially viable market for the service. The Commission recognizes that the Statements concern the cybersecurity of the Commission's nation's critical communications infrastructure and, accordingly, the content of the Statements should be at a high-level and not include information that, if publicly disclosed, would create a significant risk to the security of this infrastructure or related systems and networks. The Commission also recognizes that an entity's cybersecurity posture can be a competitive differentiator and that unauthorized disclosures of Statements containing more detailed information could result in competitive harm to the licensee. Here again, the Commission concludes that the Statements should not provide information at a level of granularity that its public disclosure would jeopardize the competitive position of the licensee. For example, the Commission expects that these disclosures will contain information that could be disclosed at a standards meeting where stakeholders gather to share ideas and information for the purpose of advancing the state of the art. If, however, licensees intend to submit information that warrant confidential treatment, they may seek confidential treatment pursuant to the Commission's rules. Furthermore, the information required to be submitted under this rule as it relates to security plans and practices will not be used for the purpose of enforcing compliance with the Communications Act or any of the Commission's rules, other than the requirement of filing such Statements.

159. The Commission finds that appropriate cybersecurity safeguards are a fundamental part of the development and deployment of mmW systems and services contemplated by this *Report and Order*. The reporting requirement the Commission adopted will not only help ensure that industry focuses the necessary degree of attention throughout these development and deployment processes on the most effective ways to include these safeguards at the earlier possible points, but it will also keep the Commission informed of the ongoing progress in this area so the Commission can provide timely, measured and effective responses to address any emerging problems before they become intractable. It will also be important to consider how best to ensure that the types of cyber safeguards that the Commission encourages for the mmW bands will be incorporated more broadly into future so called 5G networks and services. Consequently, the Commission directs the OET, the Public Safety and Homeland Security Bureau (PSHSB), and the WTB to, by not later than October 31, 2016, issue in a separate docket a *Notice of Inquiry (NOI)* exploring the security implications and solutions in future 5G networks, beyond the actions the Commission took in this *Report and Order.* The Commission believes this *NOI* is an opportunity to look holistically at the potential security implications in future 5G networks offering different types of services to different types of users (*e.g.,* wireless broadband, low-data-rate IoT applications, high-data-rate IoT applications). It will also provide a collaborative vehicle for exploring 5G security-related threats, solutions, and best practices in order to address the implications more effectively. The *NOI* is not intended to duplicate or replace ongoing or future 5G security architecture and 5G design work by standards bodies, industry or academic groups, but instead to facilitate common appreciation across the 5G ecosystem for the evolving security standards. The *NOI* will also provide an opportunity for stakeholders to identify new 5G issues as new IoT functions are developed in 5G, and as national security, public safety, critical infrastructure industries, and consumers begin to understand the implications and potential opportunities of 5G.

G. Technical Rules

1. Flexible Duplexing Rules

160. Consistent with the Commission's proposal in the *NPRM,* the Commission adopted flexible duplexing rules for the 27.5–28.35 GHz, 37–38.6 GHz, and 38.6–40 GHz bands. While the comments indicate that TDD is the duplexing scheme licensees are most likely to deploy in the bands, the Commission sees no reason to prevent them from using other technologies. Therefore, the rules the Commission adopted will allow any type of duplexing to be deployed, subject to other technical rules to manage interference. The Commission also adopted changes to the 39 GHz channel plan, as discussed in more detail in Section I.B.5 (39 GHz Band (38.6–40 GHz)), which will accommodate more flexible duplexing schemes.

2. Transmission Power Limits and Antenna Height

a. Base Stations

161. The Commission believes that an increase in the maximum base station power from what the *NPRM* proposed is necessary for two reasons. First, the 62 dBm/100 MHz EIRP power limit proposed in the *NPRM* will limit UMFUS base stations to a much lower power density than is permitted for other mobile services. For example, Personal Communications Service (PCS) and AWS base stations are permitted to transmit at 62 dBm/MHz EIRP, which would permit a total EIRP of 82 dBm for a 100 MHz signal. The Commission sees no reason why UMFUS should be limited to a lower power density than PCS and AWS. Second, the propagation properties in the mmW band make higher powers necessary. Signal attenuation with distance is higher in the mmW bands than at lower frequencies and signals are more severely attenuated due to obstacles such as foliage and walls. As the simulations submitted by commenters illustrate, higher signal powers are necessary to permit relatively modest base station coverage areas and to increase data throughput. Unnecessarily limiting the base station power in the mmW bands by applying the existing part 27 base station limit could unduly inhibit future technologies and applications.

162. The Commission adopted a base station power limit of 75 dBm/100 MHz EIRP as the base station power limit for the 28 GHz, the 37 GHz and 39 GHz bands. For channel bandwidths less than 100 megahertz the permitted EIRP will be reduced below 75 dBm proportionally and linearly based on the bandwidth relative to 100 megahertz. Because the technology for providing mobile services in these bands is still being developed, the appropriate transmitted power requirements for this equipment cannot be definitively known at this time. This 75 dBm/100 MHz limit represents a consensus that has been endorsed by the commenters who have expressed an intention to manufacture UMFUS equipment. Therefore, the Commission is confident that this power level will provide the equipment manufacturers and future licensees with the flexibility needed to deploy service in these bands. Because of the early stage of development of UMFUS technology, the Commission will monitor how this technology develops and revisit the base station

power limit in the future if it becomes necessary.

163. The Commission is not persuaded by those commenters who do not favor increasing the base stations power limit above the level proposed in the *NPRM.* Boeing's claim that the 75 dBm limit is inconsistent with the operational range of 5G applications is contradicted by the simulation results that show the benefits of increasing the maximum power beyond 62 dBm and the consensus among equipment manufacturers that 75 dBm is a reasonable power limit for UMFUS base stations. Furthermore, the Commission's rules for the 37.5–40.0 GHz band, about which Boeing expresses sharing concerns, limit the FSS to gateway-type earth station operations and prohibit the ubiquitous deployment of satellite earth stations designed to serve individual consumers. The Commission does not believe that the higher power limit the Commission is adopting will significantly affect the limited gateway FSS operations permitted in the band because the Commission is providing a means for gateway earth stations in the band to obtain protection from terrestrial transmissions. As for SES Americom's and Avanti's concerns, the Commission explained in Section I.G.2.d. (Terrestrial Aggregate Interference Concerns to FSS Satellite Receivers in 28 GHz), that the Commission does not believe the Commission needs to take specific action with respect to aggregate interference to satellite receivers in the 28 GHz band at this time. The Commission therefore will not unduly restrict the development of UMFUS by limiting the base station transmit power.

164. The Commission will not adopt a different power limit for equipment that is used to provide both mobile services and backhaul. As the *NPRM* noted, several commenters to the *NOI* suggested that it might be feasible to deploy such 5G equipment. The Commission notes that those commenters did not address this subject in response to the *NPRM* and no other commenters specifically request higher power limits for such equipment. The Commission believes that by adopting a higher power limit for base stations than proposed in the *NPRM,* the Commission is also providing adequate power to ensure successful deployment for combined access/backhaul equipment. In addition, the Commission will not limit base station antenna height at this time because no commenters address the issue. Instead, the Commission shall seek further comment on this topic in the *FNPRM.*

165. Compliance with the transmit power limit shall be ascertained with over the air measurement of EIRP of the device under test (DUT). As Qualcomm has stated, mmW devices are being designed with an array of multiple antennas employing dynamic beamforming and that these designs make verification of transmitter power, EIRP, and antenna gain challenging. In this early stage of mmW development, compliance testing will be challenging because of lack of test equipment and/or facilities that can accurately measure over the air EIRP of the DUT and the need to account for the introduction of antenna arrays and beamforming. Even so, OET has issued a number of Knowledge Database (KDB) publications that delineate measurement procedures for testing of antenna arrays.[10] Moreover, OET will address the further development of mmW measurement procedures with input from industry stakeholders and other interested parties and issue further KDB guidance.

b. Mobile Stations

166. As proposed in the *NPRM,* the Commission adopted a 43 dBm EIRP maximum mobile power limit in the 27.5–28.35 GHz, 37–38.6 GHz, and 38.6–40 GHz bands. The simulations and analyses by commenters indicate that this power level will be sufficient to provide the expected range and data rates. In addition, the power level is consistent with the Commission's rules for part 15 devices in the 57–64 GHz band that have been in place since 1995. The Commission is also encouraged by the strong support for this power limit, especially from commenters who indicate that they will manufacture equipment for these bands.

[10] *See* Federal Communications Commission, Office of Engineering and Technology, Laboratory Division, *Emissions Testing of Transmitters with Multiple Outputs in the Same Band* (October 31, 2013) and *MIMO with Cross-Polarized Antenna* (October 25, 2011) (*https://apps.fcc.gov/kdb/GetAttachment.html?id=B0ZQiTBTVsn3P3wZ2WdqhQ%3D%3D* and *https://apps.fcc.gov/kdb/GetAttachment.html?id=i%2BFRza%2B2Hh0pf9nHJHJGHw%3D%3D*). The Commission notes that OET has developed a substantial body of additional guidance that is available via public notices, frequently asked questions (FAQ's), and specific process guidance that is compiled in our online Knowledge Database (KDB). Equipment authorization topics that relate to new services and devices authorized by the Commission are often addressed in the KDB. This includes, for example, simple answers to questions, guidance on how to file for authorization of new types of devices, and guidance on how to conduct rule compliance testing. The staff guidance provided in the KDB is intended to assist the public in following Commission requirements. The guidance is not binding on the Commission and will not preclude the Commission from making a different decision in any matter that comes to its attention for resolution.

167. The Commission notes that UMFUS devices will be expected to comply with the Commission's rules regarding radiofrequency radiation exposure in addition to complying with the 43 dBm EIRP limit the Commission adopted. These radiofrequency radiation exposure rules specify more stringent exposure limits for devices that are designed to be used within 20 centimeters of the user's body. The Commission recognizes that such devices may have to limit their transmit power below the 43 dBm limit to meet exposure limits.

c. Transportable Stations

168. The Commission agrees with the majority of commenters that there is a need for an additional class of transportable stations requiring a maximum allowable power limit higher than the 43 dBm adopted for mobile user equipment stations. Higher power for such devices will increase range, enable higher data rates and provide for better coverage throughout buildings, which will allow consumers flexibility in installation locations to provide service where needed. These devices could be used to provide residential broadband service, which as the simulation results provided by Nokia illustrate will benefit from a higher transmit power than the Commission is allowing for mobile stations. The Commission adopted a 55 dBm EIRP maximum power limit for this for this class of equipment, which the Commission shall refer to as transportable stations. This 55 dBm limit represents a consensus that has been endorsed by commenters who have expressed an intention to manufacture UMFUS equipment. The Commission notes that in adopting this higher power limit for transportable stations that such devices will be expected to comply with the Commission's rules regarding radiofrequency exposure.

169. No commenter has proposed a definition of transportable devices for purposes of the Commission's rules. However, the terminology that most commenters have used suggests that such devices will be stationary while operating. Therefore, the Commission shall define a transportable device as transmitting equipment that is not intended to be used while in motion, but rather at stationary locations. The Commission believes this definition is appropriate because it will exclude portable devices that are meant to be carried by people while operating such as mobile phones or smart phones from transmitting at the higher power level. One commenter has suggested that these transportable devices could be built into

vehicles, which implies that they should be permitted to operate while in motion. The Commission has chosen not to expand the Commission's definition to include devices in moving vehicles because such devices in general will not need to transmit signals that penetrate walls and therefore will not require more power than mobile devices.

d. Terrestrial Aggregate Interference Concerns to FSS Satellite Receivers in 28 GHz

170. The analyses, provided by commenters, leads us to conclude that specific technical limits on UMFUS stations are not necessary at this time to address aggregate interference. As discussed in more detail below, the information in the record shows a wide disparity between assumptions and illustrates that much work must be done to accurately model mmW systems and the effects that these systems might have on co-channel satellite receivers. As a result, the Commission does not want to unduly restrict the development and growth of UMFUS unless the Commission has adequate evidence that actual harm will occur. The Commission does not believe the record demonstrates that there is a risk of interference to satellites from aggregate interference caused by UMFUS stations. Consequently, the Commission will not adopt a limit on aggregate skyward interference from 28 GHz band UMFUS stations or require that UMFUS stations employ specific techniques to reduce skyward emissions. The Commission observes that features such as antenna downtilt, suppression of sidelobes and adaptive power control will occur naturally because they are inherent characteristics of anticipated 5G technologies.

171. The analyses provided by the satellite operators are based on very conservative assumptions and provide for a worst case scenario regarding aggregate interference from future terrestrial networks. For example, the satellite analyses appear to assume terrestrial devices will continuously operate at maximum power levels and do not account for the fact that many UMFUS deployments will occur indoors. Most of the satellite analyses assume all terrestrial devices will be line of sight to the satellites with the exception of the analysis submitted jointly by the Satellite Operators, which assumes only a 9.6 dB attenuation for a 90% non-line of sight scenario. These analyses also assume a −12.2 dB interference criteria, which the Joint Filers point out has been under past review in language reflected in a Conference Preparatory Meeting report to WRC–15. The Joint Filers also note that some system parameters provided by Satellite Industry Association (SIA), such as satellite noise and receive beam gain, are based on the most sensitive projections about future, planned satellite network deployments, not necessarily satellite networks that currently exist.

172. While the Joint Filer's simulation results are not based on as conservative assumptions as the satellite operators, they vividly illustrate how the assumptions made can lead to vastly different conclusions. Assumptions such as the antenna pattern of the UMFUS devices, how many of the devices are line of sight to the satellites, the characteristics of the satellites, and the satellite interference criteria clearly can make an enormous difference in the number of devices that may transmit without interference occurring. Given that mmW technology is just being developed and the deployment scenarios of these devices are uncertain, many of these assumptions are speculative at this point and any conclusions that can be drawn from analyses or simulations at this point are necessarily tentative. The Commission also observes that no information has been submitted into the record as to how terrestrial licensees would demonstrate compliance with a limit on aggregate energy at each satellite or each point in the sky. While the Commission concludes that the various studies submitted by the parties do not support establishment of an aggregate interference limit or adoption of specific technical requirements to reduce skyward emissions, they do indicate the need for additional study on the effect of aggregate interference on satellite receivers. The Commission expects that the parties will continue to study this issue and inform the Commission of the outcome. The Commission will revisit this issue if additional information comes to the Commission's attention suggesting that regulatory requirements are necessary.

3. Out-of-Band Emission Limits

a. Use of Conductive Emission Limits

173. One of the implications of requiring an EIRP metric for the OOBE limit is that a transmitter has to meet the limit along the maximum EIRP direction. This makes meeting the radiative OOBE limit particularly challenging, as recognized by the commenters. In the mmW band, transmitters require higher gain antennas to compensate for significantly higher propagation losses and consequently the antennas will, in general, have much smaller beamwidth, as compared to other lower band mobile systems. As a result, OOBE of mmW transmitters have highly directive characteristics, concentrating the transmission power along a narrow beam in the direction of maximum EIRP. Furthermore, because the beam is narrow and because a transmitter needs to track the relative movement of its intended receiver in order to maintain the communication link, the OOBE of the mmW transmitter should be spatially averaged over the path of the receiver to reflect the spatially transient nature of the transmitter OOBE. In this regard, Qualcomm states that, ''based on its simulations to date, the average interference from a mobile and a base-station/small cell with a steerable/selectable array is very different and variable when compared to a fixed link. With mobile operations, the interference impact differs from fixed links due to the dynamic nature of the array, for it points in different directions as mobile users move and are served.'' The Commission believes these features of the mmW spectrum make the OOBE limit in the maximum EIRP direction less significant and a spatially averaged OOBE limit more appropriate. One way to spatially average OOBE of a transmitter is to determine its out of band TRP or by extension of its out of band conductive power.[11] To set forth a more suitable OOBE metric that reflects the aforementioned features of mmW band, the Commission should express the OOBE limit as an equivalent conductive limit. An equivalent conductive limit is consistent with the OOBE rule for other mobile systems.

174. Compliance with a conductive OOBE limit in the mobile mmW systems will be the same as other mobile systems where access to the antenna RF port(s) is available. Where access to the RF port(s) is not available, a somewhat more complicated process is necessary. For each frequency (or band), an emission measurement of the DUT must be performed along the direction of the maximum EIRP. The EIRP measurement value is then adjusted for the antenna gain along the same direction as the measured EIRP and at the same frequency (or band) to obtain a conductive OOBE power of the device. This process needs to be performed for

[11] TRP of a transmitter is closely related to its' conductive power. In fact, TRP is product of antenna radiation efficiency, e_r, and conductive power P ($TRP = e_r P$ and depending on antenna efficiency TRP can be virtually the same as the conductive power P. *See* W.L. Stutzman and Gary A. Thiele, *Antenna Theory and Design,* 2013, equations 13–40 and 2–155.

both polarization and, the respective conductive OOBE power summed, to obtain the total conductive OOBE power of the device. To obtain the antenna gain, licenses should use a validated antenna pattern computation, manufacturer supplied antenna pattern, or any other approach acceptable to the Commission as may be described in OET's KDB publications. The Commission recognizes that under certain circumstances the DUT antenna may interact with its supporting structure sufficiently enough that the interaction may require consideration through simulation or by an additional measurement step. One way to identify such circumstances may be through the antenna pattern validation step. Other means of identifying and considering such circumstances may be described in OET's KDB publications.

175. With respect to TRP, TRP measurement requires EIRP measurement of the device under test around spherical surface of the device for both polarizations, and as a result it can be time consuming and difficult. A reverberation chamber is deemed to be one of the most practical means of TRP measurement. However, as noted by Straight Path, TRP measurement in a reverberation chamber requires conducted power measurement of power amplifiers. Straight Path further argues that given that in many cases 5G transceiver power amplifiers and antennas may be integrated on a single printed circuit board, it is unclear how conducted measurement can be achieved for transceivers. Moreover, even if access to RF ports were to be made available, a conductive measurement would be far easier and economical to perform than TRP, as no over the air measurement would be required for conductive measurement. However, given that a number of commenters have requested TRP as a metric for OOBE, and given that TRP is a spatial averaging method, the Commission will allow TRP as the alternate metric for compliance. As there are no TRP measurement procedures currently defined, new measurement procedures will be developed through the FCC Laboratory's KDB process.

176. In the *NPRM* the Commission proposed a radiated OOBE limit that requires licensees to attenuate their unwanted radiated emission power below the transmission power (P) by a factor of at least $43 + 10\log_{10}(P)$ per MHz (or an absolute power of −13 dBm/MHz) for any emissions on frequencies outside the licensee's authorized spectrum. This radiated OOBE limit is consistent with the conductive OOBE limit that the Commission has generally required for other mobile systems. In addition, a number of commenters state that using TRP as a metric the proposed OOBE attenuation factor or absolute power of −13dBm/MHz would be feasible. For these reasons the Commission has set the OOBE limit for both conductive metric and TRP metric to −13 dBm/MHz. This may be used as a basis for developing further requirements that relate to transmitter performance by industry standard organizations. This limit applies to base stations, transportable, and mobile stations.

177. With respect to dBr radiated emission mask, the mask is significantly more relaxed than the −13 dBm/MHz absolute limit that a number of commenters support. In addition, the Commission finds that the equivalent conductive limit (or alternatively TRP) is the appropriate metric for OOBE in this band. For these reasons, the Commission declines to adopt the dBr radiated emission mask that Qualcomm proposes.

b. Licensed Block Edge Region

178. The Commission agrees with Ericsson, and some of the other commenters that a bandwidth-dependent unwanted emission requirement at the first megahertz adjacent to the licensed block discriminates against broadband systems. However, a bandwidth-independent unwanted emission requirement at the channel edge may not be sufficient for very large bandwidth channels, or may not be spectrally efficient for narrowband channels. As it is difficult at this nascent stage of mmW development to anticipate the future channel configuration of this technology, the Commission is relaxing the emission requirement at the channel edge dependent on channel bandwidth, so as to provide for the greatest latitude for channel configuration. For the first 10 percent of the channel bandwidth from the edge of the licensed block, the Commission requires an emission level of −5 dBm/MHz. Beyond the first 10 percent of the channel bandwidth, the Commission requires an emission level of −13 dBm/MHz. These requirements exceed Intel's request over the first 10 percent of the channel bandwidth immediately outside and adjacent to the licensee's frequency block. The permissible out of band power under these emission limits are higher than Nokia and Sprint recommendations over the first 10 percent of the channel bandwidth, but lower than Samsung's recommendations. Overall, the Commission believes these requirements balance the various comments on record.

4. Interference Protection and Coordination

a. Coordination and Field Strength Limits at Market Borders

i Base/Mobile Operations

179. The Commission agrees with the majority of commenters that some criteria is necessary at market boundaries to manage interference and coordination between adjacent area licensees. The Commission also believes that given the wide channel bandwidths and diversity of potential applications that might be deployed in these bands, any criteria that the Commission adopts should include a scaling factor for the bandwidth. Therefore, the Commission will adopt a PFD limit/MHz that base operations must meet at the licensee's market boundary, absent a mutual agreement between adjacent market licensees to exceed that value.

180. The Commission continues to believe that the 47dBuV/m field strength value that the Commission proposed in the *NPRM* is an appropriate basis on which to set a PFD limit for the mmW bands. This is the same limit that has been successfully used in the PCS, AWS, and BRS bands. However, the Commission notes that a field strength of 47dBuV/m results in a very conservative absolute power limit because field strength does not take into consideration the bandwidth and frequency components. Therefore, the Commission believes it is appropriate to convert a 47dBuV/m field strength to a PFD limit in terms of dBm/m²/MHz for the mmW bands. Looking again at the AWS, PCS, and BRS bands, the Commission notes that the equivalent PFD based on a 47dBuV/m field strength is within the range of −76 to −81 dBm/m²/MHz depending on what bandwidth is assumed. The Commission observes that these values bound the −77.6 dBm/m²/MHz PFD limit proposed by the joint filers. The Commission also recognizes that these values are higher than the −86 dBm/m²/MHz PFD proposed by Straight Path and the −90.3 dBm/m²/MHz PFD proposed by Intel. However, the Commission notes that Straight Path assumed an interference criteria of −10 dB I/N. In recent rulemakings the Commission has assumed an interference criteria of 0 dB I/N. Adjusting Straight Path's proposed limit to provide a 0dB I/N as opposed to a −10dB I/N yields a market boundary limit of −76 dBm/m²/MHz. The Commission also notes that Intel's

proposed PFD was based on worst case assumptions about the receive antenna gain, citing that the base station would have a gain of 29.1 dB in the direction of the interfering source. The Commission believes that this assumption is overly conservative. For example, the joint filers stated that a lower antenna gain is typically computed in the simulation towards the earth station since the receive beam is pointed in the direction of the transmitting UE, and it is statistically unlikely to coincide with the direction towards the earth station. Thus, on balance, the Commission believes that adopting a -77.6 dBm/m^2/MHz PFD limit as suggested by the joint filers, will protect terrestrial facilities in adjacent market areas from interference in a variety of different terrestrial to terrestrial use cases as well as the earth station to terrestrial scenario. Therefore, the Commission will adopt a market border PFD limit of -77.6 dBm/m^2/MHz measured at 1.5 meters above ground. The Commission emphasizes that this level is intended to be a coordination trigger and that adjacent licensees are free to coordinate mutually agreed upon limits that exceed this value along their common market boundaries. The Commission will also reserve the right to revisit the market border PFD limit in the future if it becomes necessary as technology and services develop in these bands.

ii. Fixed Point-to-Point Operations

181. The Commission agrees with Skyriver that a field strength limit would not be appropriate for fixed point-to-point operations because it would require large power reductions by fixed service providers. The Commission will retain the existing part 101 technical rules for traditional fixed point-to-point links. As such, the Commission believes that it is also appropriate to retain the existing requirement that fixed point-to-point operations within 16 kilometers (in the 38.6–40 GHz band) or 20 kilometers (in the 27.5–28.35 GHz band) of a licensee's market boundary must coordinate with co-channel licensees in adjacent market areas. With respect to Sprint's suggestion that the Commission impose a coordination requirement for adjacent channel licensees; in light of the OOBE limits that the Commission adopted, the Commission does not believe that any additional coordination requirement is necessary for adjacent channel operation.[12] The Commission seeks comment on further refining these coordination requirements in the *FNPRM.*

b. Canadian and Mexican Borders

182. In the *NPRM,* the Commission proposed to adopt a rule for the 27.5–28.35 GHz, 37–38.6 GHz, and 38.6–40 GHz bands similar to § 101.147(r)(13), 101.509(d), or 27.57 of the Commission's rules which provide that fixed and mobile operations are subject to existing and future international agreements with Mexico and Canada. The Commission noted that there are existing arrangements for fixed operations in the 27.5–28.35 GHz and 38.6–40.0 GHz bands between the United States and Canada. The Commission also noted that mmW operations must not cause harmful interference across any of the Commission's international borders. No parties filed comments with respect to this proposal.

183. Consistent with the Commission's rules for other services, the Commission adopted a rule that the 27.5–28.35 GHz, 37–38.6 GHz, and 38.6–40 GHz bands are subject to existing and future agreements with Mexico and Canada.

5. Operability

184. The Commission adopted its proposal to require operability across each millimeter wave band for mobile and transportable equipment. The Commission continues believe that interoperability delivers important benefits to consumers. While there is significant opposition in the record to an interoperability requirement, no commenter offered specific reasons why the type of operability proposed in the *NPRM* would be either technically infeasible or harmful as a policy matter in these bands. In addition, much of the opposition in the record appears to be based on an interpretation of an interoperability requirement that the Commission did not propose. The Commission therefore concludes that the benefit to consumers outweighs the burden to manufacturers in this regard.

185. Specifically, the Commission requires that any mobile or transportable device designed to operate within the 28 GHz band (27.5 GHz–28.35 GHz) be capable of operating at all frequencies within the 28 GHz band, on each air interface it uses to operate in the 28 GHz band, and similarly that a device operating in the 37 or 39 GHz bands be capable of operating at all frequencies within those bands (37 GHz–40 GHz). For example, a device that uses an LTE air interface to operate in a lower frequency band, and a future 5G air interface to operate in the 28 GHz band, would be compliant with this requirement if it could operate on frequencies from 27.5 GHz to 28.35 GHz using the 5G air interface.

186. For the purposes of this requirement, for the 37 GHz and 39 GHz bands, a device operating in either band must be capable of operating across the entirety of both bands, from 37 GHz to 40 GHz (including the 37–37.6 MHz lower block). This requirement will increase the market for equipment in these bands, and allow both smaller and larger service providers to benefit from economies of scale and increased equipment availability. Mandating operability will also facilitate shared use of the 37 GHz band by ensuring that a wide variety of equipment is available by both Federal agencies and non-Federal SALs.

187. The Commission emphasizes that it will not mandate compatibility of each device with all possible air interfaces to be used in these bands, as some commenters interpreted. Rather, the Commission will mandate that *with each air interface* used by a particular device in a millimeter wave band, that device must be capable of operating across the entire band. The Commission does not adopt any requirement that a device must be capable of utilizing any particular standard, technology, or air interface. Additionally, while the Commission does not require operability of base or fixed equipment, it is its expectation that licensees will work in good faith through the standards setting process to develop standards, as technically feasible, that support the operation of base and fixed equipment across each band.

6. Technical Rules for Part 15 Operation Within the 64–71 GHz Band

188. The Commission is adopting requirements for unlicensed operations in the 64–71 GHz band that are based on the technical standards used for the 57–64 GHz band under § 15.255 of the Commission's rules. Part 15 of the Commission's regulations permits the operation of radio frequency (RF) devices without an individual license from the Commission or the need for frequency coordination. The technical standards contained in part 15 are designed to ensure that there is a low probability that such devices will cause harmful interference to other users of the radio spectrum. Except for operating

[12] The Commission also notes that Sprint's assumption that ULS contains current station information is not entirely correct. While ULS does contain some information on leased links there is no requirement for licensees to report all fixed point-to-point links operating under their geographic licenses. Therefore the ULS database is an incomplete record of the existing point-to-point links.

on-board aircraft or satellites, and in mobile field disturbance sensor applications, any type of unlicensed operation is permitted within the 57–64 GHz band under § 15.255 of the Commission's rules.[13]

189. *Suitability of the Existing Rules in Section 15.255 to the 64–71 GHz Band.* In the *NPRM,* the Commission proposed to apply the existing rules in § 15.255 to the 64–71 GHz band with some adjustments, and sought comments on certain aspects of the rules to further the growth and development of devices without increasing the potential for harmful interference to authorized users in the bands. Proponents of unlicensed operations unanimously support the proposal to extend the technical rules in § 15.255 to cover the entire 57–71 GHz band. Google argues that harmonized rules for the frequencies between 57 and 71 GHz will allow economies of scale and other efficiencies, thereby facilitating rapid and widespread deployment of unlicensed devices; the Wi-Fi Alliance confirms that extending part 15 rules to the 64–71 GHz band would greatly enhance the capacity of next-generation WiGig technologies.'' The Commission finds that the existing technical rules in the 57–64 GHz band can successfully apply to the proposed 64–71 GHz adjacent band, with certain adjustments, as the Commission examines the pertinent rules in detail below.

a. Operation On-Board Aircraft

190. The Commission is reluctant to allow 60 GHz unlicensed operations on-board aircraft in the 57–71 GHz band at the present time. In the *NPRM,* the Commission did not propose to permit unlicensed operations on-board aircraft but sought to start the discussion to compile a comprehensive record on this subject. The Commission noted, there are substantial technical disagreements between the passive services licensees and the WiGig industry regarding the attenuation provided by aircraft components (*e.g.,* windows and fuselage) and how WiGig signals would propagate (*e.g.,* by direct line-of-sight or reflections, etc.) and aggregate. The Commission further observes that even among the WiGig industry advocates, there is technical disagreement. For example, ZII, a wireless inflight entertainment services and products provider, opposes on-board aircraft operation of WiGig devices in the 64–71 GHz band at the present time due to its findings of potential harmful interference to passive services above 63 GHz despite its financial interest in providing these services. Conversely, the Wi-Fi Alliance's analysis found no harmful interference to EESS and RAS in the entire 57–71 GHz spectrum. The Commission also finds that the studies and technical analyses submitted in the record are not persuasive for several reasons. First, the CEPT ECC and ITU reports do not address the 60 GHz band, but cover lower frequencies. Second, the various link budget analyses from the industry (*e.g.,* from ZII and Wi-Fi Alliance) do not show a technical consensus, at least for a portion of the proposed 57–71 GHz band, and cast doubt on the validity of certain assumptions used to derive these link budgets. Third, since the collaboration effort between the WiGig industry and NTIA/NSF/JPL (Jet Propulsion Laboratory) has not yet resolved many issues, as indicated by NRAO, a decision on the Commission's part at this time could prejudge the outcome of that work. Finally, the Commission notes that 60 GHz transmitters in mobile devices are only just beginning to be marketed, and the impact of their deployment in real-world scenarios will require time to be assessed adequately. Further, the technology will continue to evolve to address signal propagation challenges in the mmW spectrum such that analyses of WiGig transmissions on-board aircraft could change substantially once the Commission has wide deployments.

191. The Commission finds that further technical analyses and data are necessary before lifting the present operation restriction because the record so far did not reflect a clear perspective of the types of WiGig applications envisioned on-board aircraft, the priority/order of their planned introduction, etc., to provide an adequate assessment of their associated potential harmful interference profile as the Commission elaborates further in the *FNPRM* to seek additional information on this topic, *infra.* Specifically, the Commission requests sharing studies and data demonstrating that 60 GHz transmitters could operate on-board aircraft without causing harmful interference to passive sensor services in various types of inflight applications and on various types of aircraft.

192. Finally, the Commission finds that as long as the Commission does not permit 60 GHz operations on-board aircraft, the airlines (who control the aircraft) would not install access points operating at 60 GHz on airplanes to provide entertainment/broadband services to WiGig user devices. Without the presence of 60 GHz access points, the potential for widespread airborne WiGig transmissions is removed. The Commission also expects manufacturers/host integrators of WiGig transmitters that are incorporated into mobile devices, such as laptops, to provide instructions to end users regarding the prohibition of operating such transmitters' on-board aircraft, in compliance with the Commission's rules as part of the equipment authorization process. Consequently, end users will be aware of this rule to avoid device-to-device transmissions. Based on the above, the Commission is extending the restriction on on-board aircraft operation in § 15.255(a)(1) to cover the entire 57–71 GHz band.

b. Field Disturbance Sensor Operation

193. The Commission is reluctant at this time to lift the restriction on mobile field disturbance applications in the 60 GHz spectrum. At this time, the Commission does not have sufficient information about the operation of these mobile field disturbance sensors in this spectrum to allow general operation of all mobile field disturbance sensors. However, the Commission finds that the narrow application of mobile radars in short-range devices for interactive motion sensing, such as that described in Google's Project Soli,—where a radar is used to detect hand gestures very close to a device to control the device without touching it—could be allowed without causing harmful interference to other authorized users. As a first cautious step, the Commission will not permit these devices to operate at the same power levels as 60 GHz communications devices in this spectrum, as Google requests, but will allow these short-range devices to operate at the same low power levels as those permitted in existing *fixed* field disturbance sensors (i.e., 10 dBm peak EIRP and −10 dBm peak transmitter conducted output power, approximately 30 dB below the allowable power levels of WiGig communications devices). These power levels will ensure that the mobile radars will operate at very short distances—such as using hand gestures to control a watch, a smartphone's or tablet's screen—which will minimize their harmful interference potential. As the Commission acquires more experience with these devices, the Commission may consider allowing them higher power levels in the future. Accordingly, the Commission is

[13] A field disturbance sensor is defined as ''a device that establishes a radio frequency field in its vicinity and detects changes in that field resulting from the movement of persons or objects within its range.'' 47 CFR 15.3(l). Examples of unlicensed field disturbance sensors include radars operating under 47 CFR 15.252 or 15.256; and perimeter protection systems operating under 47 CFR 15.209(g) or 15.229.

amending § 15.255 to permit the operation of short-range devices for interactive motion sensing at 10 dBm peak EIRP and −10 dBm peak transmitter conducted output power over the entire 57–71 GHz band.

194. With respect to fixed field disturbance sensors, the Commission finds that these devices can continue to operate under the technical rules in § 15.255, as they have successfully done over the years, and that these rules may be extended to the 64–71 GHz band without increasing the potential for harmful interference to communication devices in the band. This would result in their wider usage in wireless factory automation processes in manufacturing facilities, such as those mentioned by Boeing. Accordingly, the Commission is amending § 15.255 to allow the operation of fixed field disturbance sensors over the entire 57–71 GHz band at the existing power limits permitted in the 57–64 GHz band (*i.e.,* 10 dBm peak EIRP and −10 dBm peak transmitter conducted output power).

c. Emission Limits

195. The Commission declines to increase the EIRP limits for low-power networking indoor and outdoor 60 GHz transmitters by a factor of 10 as requested by commenters. The Commission notes that the existing generous average and peak EIRP limits were adopted based on the very high oxygen attenuation in the 57–64 GHz band, which would ensure that unlicensed transmitters operating in this band do not cause harmful interference to other authorized services. The Commission further notes that the Commission proposed the same emission limits for the 64–71 GHz band, despite the fact that this band does not exhibit the same atmospheric attenuation characteristics, which would enable equipment operating in the proposed 64–71 GHz band at the same emission levels to effectively provide longer range and higher data throughput. The Commission finds that keeping the same emission limits in the absence of high oxygen attenuation in the 64–71 GHz band effectively provides an increase in power. No additional increase is necessary at this time and the Commission is amending the EIRP limits for 60 GHz transmitters in § 15.255 to apply across the 57–71 GHz band.

d. Spurious Emissions

196. The Commission observes that since the Commission first adopted part 15 rules for unlicensed operation in the 57–64 GHz band in the 1995–2000 time frame, 60 GHz unlicensed transmitters have been operating without causing harmful interference to RAS by their harmonic signals. This indicates that the Commission's spurious emission limits in § 15.255 for transmitters operating in the existing 57–64 GHz band are adequate for protecting these passive services. Thus, the Commission is concerned with the potential effect of the harmonics of fundamental signals in the proposed 64–71 GHz band. The Commission observes at the outset that the existing spurious emission limit in § 15.255, at 90 pW/cm^2, is extremely low as compared to the spurious limit adopted for other unlicensed transmitters operating in comparative spectrum, such as the 76–77 GHz, which, at 600 pW/cm^2, is more than 6 times higher than the spurious limit in § 15.255.

197. While acknowledging that attenuation effects due to oxygen become much less pronounced in the 64–71 GHz band as compared to the 57–64 GHz band, the Commission finds that interference to RAS stations is unlikely for the following reasons. First, RAS receivers discriminate against off-axis signals, are generally located in rural and remote areas, and radio astronomy observatories typically have control over access to a distance of one kilometer from the telescopes to provide protection from interference caused by uncontrolled radio frequency interference (RFI) sources. Second, the severe propagation losses of RF signals in the 64–71 GHz band, their ability to be blocked easily by terrain and obstacles, and the typically directional emissions of transmitters at these frequencies limit any potential for interference from fundamental emissions to a short distance (*e.g.,* 100–200 meters). Third, spurious and harmonic emissions generally roll off (*i.e.,* reduce in amplitude) the further they are in frequency from the fundamental emission; therefore, if fundamental emissions are severely attenuated, harmonics would be affected proportionally. Based on all these factors, the Commission finds that spurious and harmonic emissions of 57–71 GHz unlicensed transmitters at the very low limit of 90 pW/cm^2 in § 15.255 would not cause harmful interference to RAS operations. Accordingly, the Commission is amending the spurious emission rule in § 15.255 to apply across the 57–71 GHz band.

e. Publicly-Accessible Coordination Channel

198. Section 15.255(d) sets aside a publicly-accessible coordination channel in the 57.00–57.05 GHz band, in which only spurious emissions and emissions related to coordination techniques regarding interference management between diverse, non-interoperable, transmitters are permitted. The Commission observed in the *NPRM* that with recent technological advances and industry standardization, co-existence between 60 GHz devices is better resolved by voluntary standards than by a coordination channel requirement in the rules, and proposed to remove this requirement. Commenters unanimously agree with the Commission's assessment and support the elimination of this requirement to free a 50-megahertz swath of spectrum for communications usage. Accordingly, the Commission is removing the requirement for a publicly-accessible coordination channel from § 15.255.

f. Conducted Transmitter Output Power

199. Section 15.255(e) limits the peak transmitter conducted output power of 57–64 GHz unlicensed devices to 500 mW (*i.e.,* 27 dBm) for transmitters with an emission bandwidth of at least 100 MHz, and is reduced for systems that employ narrower bandwidths.

200. The Commission declines to remove this requirement. The reason for limiting the peak transmitter conducted output power while allowing very high EIRP limits (in this case, 40 dBm (10W) average/43 dBm (20W) peak) for an unlicensed transmitter is to ensure that the transmitter antenna beamwidth is kept sufficiently narrow to avoid causing harmful interference to other users in the band and to minimize the risk of RF exposure to humans. Accordingly, the Commission denies NCTA's request and amend the peak transmitter conducted output power requirement in § 15.255 to apply across the 57–71 GHz band.

g. Frequency Stability

201. Section 15.255(f) requires that fundamental emissions be contained within the 57–64 GHz frequency band during all conditions of operation; and that equipment be able to operate over the temperature range −20 to +50 degrees Celsius with an input voltage variation of 85% to 115% of rated input voltage. In the *NPRM,* the Commission proposed to apply the same requirements to transmitters operating in the 64–71 GHz band. No party objects to this proposal. Accordingly, the Commission is amending § 15.255 to apply across the 57–71 GHz band.

h. Co-Location of Separately-Authorized Transmitters

202. Section 15.255(h) allows group installation of transmitters that have

been tested separately for compliance with the rules and received separate equipment authorizations, as long as no transmitter in the group is equipped with external phase-locking inputs that permit beam-forming arrays to be realized. In the *NPRM,* the Commission indicated that this requirement seeks to prevent the possibility of producing a high-power coherent beam from discrete transmitters that have not been tested for compliance together. This could lead to non-compliance with the emission limits but it does not preclude the use of advanced antenna technologies with beam-forming arrays in any transmitter, as long as the emissions in any array configuration comply with the emission and RF exposure limits. The Commission proposed to apply the same requirement to equipment operating in the 64–71 GHz band. No party objects to this proposal. Accordingly, the Commission is amending § 15.255 to apply across the 57–71 GHz band.

7. Equipment Authorization

203. The OET was delegated authority by the Commission to administer the equipment authorization program for RF devices under part 2 of its rules. All RF devices subject to equipment authorization must comply with the Commission's rules prior to importation or marketing, by being tested for compliance with the applicable technical requirements, using measurement procedures that either follow guidance issued by OET through its KDB publications, or have been found to be acceptable to the Commission in accordance with § 2.947 of the rules.

a. Measurement Techniques

204. In the *NPRM,* the Commission recognized that there are some unique technical challenges specific to demonstrating compliance for the purpose of equipment authorization of millimeter wave devices. The Commission sought comments on a variety of challenges involved with measurements of in-band, out-of-band and spurious emissions. As discussed, *supra,* a number of parties discuss the measurement challenges concerning emission limit metrics. For example, certain parties oppose using EIRP as the metric for measuring OOBE limits, proposing instead a different metric using TRP, claiming consistency with recent academic research for multiple-input, multiple-output (MIMO) antenna arrays. However, TRP is not presently part of the Commission's measurement procedure guidance for devices using MIMO antennas. Commenters recommend that the Commission continue to provide guidance on acceptable new measurement procedures via OET's KDB publications. Commenters also recognize that 5G technology is in the early stages of equipment design and development so it is difficult at this point in time to identify all of the potential compliance and measurement challenges.

205. The Commission finds that the mmW technology will continue to evolve to address various technical challenges in this spectrum (with respect to propagation, interference protection, modulation techniques, transmission security, etc.), and pending new measurement equipment availability to cover the entire mmW spectrum that the Commission is making available for the next generation of wireless services herein, mmW measurement procedures are best developed by OET with the participation of interested parties. The Commission expects that OET will provide guidance on various acceptable measurement techniques for mmW devices through its KDB publications as products are developed.

b. RF Exposure Compliance

206. (RF) exposure compliance is an ongoing requirement for all transmitters authorized by the Commission. In the *NPRM,* the Commission proposed to similarly require compliance with the Commission's general RF exposure limits in §§ 1.1307(b), 2.1091 and 2.1093 of the rules for equipment operating in the UMFUS. While the Commission sought comment on this proposal alongside some of the other relevant technical challenges unique to compliance demonstration for devices envisaged to be operating under the UMFUS, the Commission acknowledged in the *NPRM* that any issues raised involving the present exposure limits themselves would be considered in the context of the Commission's separate proceeding on this particular issue.

207. With respect to the rules specific to UMFUS in part 30 of the Commission's rules, the Commission adopts the paragraph the Commission proposed in the *NPRM* that requires compliance with the Commission's general RF exposure limits in §§ 1.1307(b), 2.1091 and 2.1093 of the rules. The comments from industry advocate adopting alternative exposure limits, which the Commission continues to view as beyond the scope of this proceeding, and that will be considered in a separate proceeding. The Commission is not changing its fundamental exposure limits at this time in light of the devices to be expected under the UMFUS rules. More specifically, the Commission is not modifying its specified SAR values as a primary exposure limit between 100 kHz and 6 GHz, and the Commission will continue to use the specified MPE power density limit as a primary exposure limit above 6 GHz.

208. The Commission recognizes that there is a discontinuity at 6 GHz resulting from the fact that the Commission's rules do not specify a spatial averaging area (an area over which to average power density) or a spatial peak power density above 6 GHz that is consistent with the Commission's localized (over 1 gram) specific absorption rate (SAR) below 6 GHz. At lower frequencies for sources at least 20 cm from the body, spatial averaging over the entire body has been acceptable. However, both IEEE and International Commission on Non-Ionizing Radiation Protection (ICNIRP) have recognized that at higher frequencies spatial averaging areas need to be smaller. Of these specifications, the smaller and more conservative area is by ICNIRP, which has specified a spatial averaging area of 20 cm^2 above 10 GHz. While the Commission notes this as an apparently reasonable requirement the Commission is not suggesting any particular changes to the Commission's evaluation procedures at this time. The Commission will separately consider the broader questions of the RF exposure limits and how they should be applied in the Commission's RF *Inquiry.* In the meantime, as the Commission acknowledged in the *NPRM,* specific guidance on evaluating devices operating in this service will be issued by OET, and it is consistent with the Commission's existing discussions on spatial averaging to further clarify guidance on an area over which to average power density in the Commission's KDB publications through that process. Finally, the Commission acknowledges the variations between standards pointed out by the MMF and encourage further efforts on the specific issue of localized millimeter wave exposure by the standards setting bodies and the broader research community.

H. Other Allocation Issues

209. The Commission deletes the broadcasting and broadcasting-satellite service allocations from the 42 GHz band to better protect the radio astronomy observations of the 42.5–43.5 GHz band from out-of-band emissions. Further, the ubiquitous nature of the BSS and the broadcasting service would likely interfere with ubiquitous mobile deployment in similar ways to a ubiquitous fixed service deployment. As

previously noted, the BSS also poses an interference risk to adjacent RAS services. Nevertheless, the BSS will still retain 1.5 gigahertz of spectrum in the 40.5–42 GHz band for its future operations.

210. The Commission also declines to adopt its proposal to allocate the 42 GHz band for FSS downlink operations. Given the Commission's decision to grant FSS enhanced access to the 37.5–40 GHz band, and the fact that FSS has access to the 40.5–42 GHz band, the Commission find there is less reason to further expand FSS operations to the 42 GHz band. The Commission believes there is value in potentially having an UMFUS band available for exclusive terrestrial use, and the Commission addresses this issue in the companion *FNPRM.*

II. Procedural Matters

Final Regulatory Flexibility Analysis

211. As required by the Regulatory Flexibility Act of 1980, as amended (RFA), the Commission incorporated an Initial Regulatory Flexibility Analysis (IRFA) of the possible significant economic impact on a substantial number of small entities by the policies and rules proposed in the NPRM. No comments were filed addressing the IRFA. Because the Commission amends the rules in this Report and Order, the Commission has included this Final Regulatory Flexibility Analysis (FRFA) which conforms to the RFA.

1. Need for, and Objectives of, the Proposed Rules

212. In the attached *Report and Order,* the Commission increases the Nation's supply of spectrum for mobile broadband by adopting rules for fixed and mobile services in the 27.5–28.35 GHz band (28 GHz band), the 38.6–40 GHz band (39 GHz band), and the 37–38.6 GHz band (37 GHz band). The Commission also authorizes unlicensed operation pursuant to part 15 of its rules in the 64–71 GHz band. These bands are known collectively as the ''mmW bands.''

213. Until recently, the mmW bands were generally considered unsuitable for mobile applications because of propagation losses at such high frequencies and the inability of mmW signals to propagate around obstacles. As increasing congestion has begun to fill the lower bands and carriers have resorted to smaller and smaller microcells in order to re-use the available spectrum, however, industry is taking another look at the mmW bands and beginning to realize that at least some of its presumed disadvantages can be turned to advantage. For example, short transmission paths and high propagation losses can facilitate spectrum re-use in microcellular deployments by limiting the amount of interference between adjacent cells. Furthermore, where longer paths are desired, the extremely short wavelengths of mmW signals make it feasible for very small antennas to concentrate signals into highly focused beams with enough gain to overcome propagation losses. The short wavelengths of mmW signals also make it possible to build multi-element, dynamic beam-forming antennas that will be small enough to fit into handsets—a feat that might never be possible at the lower, longer-wavelength frequencies below 6 GHz where cell phones operate today.

214. In the 28 GHz, 39 GHz, and 37 GHz bands, the Commission creates a new radio service in a new rule part that will authorize fixed and mobile services—the part 30 Upper Microwave Flexible Use Service. This additional spectrum for mobile use will help ensure that the speed, capacity, and ubiquity of the nation's wireless networks keeps pace with the skyrocketing demand for mobile service. It will also make possible new types of services for consumers and businesses.

215. The service rules the Commission adopted make additional spectrum available for flexible use. In creating service rules for these bands, which include technical rules to protect against harmful interference, licensing rules to establish geographic license areas and spectrum block sizes, and performance requirements to promote robust buildout, the Commission advances toward enabling rapid and efficient deployment. The Commission does so by providing flexible service, technical, assignment, and licensing rules for this spectrum, except where special provisions are necessary to facilitate shared use with other co-primary users.

216. For the 28 GHz 37 GHz, and 39 GHz bands, the Commission proposes to assign licenses by competitive bidding using counties as the area for geographic area licensing in the 28 GHz band and in a portion of 37 GHz band (37–37.6 GHz). The Commission will award PEA-based licenses by competitive bidding for the 39 GHz and the upper portion of the 37 GHz band (37.6–38.6 GHz). In the 37–37.6 GHz band, the Commission has created a 600 MHz shared access space with rule-based, non-interfering Shared Access Licenses (SALs) which will share the band with Federal fixed and mobile operations. SAL licensees are not guaranteed spectrum access or interference protection from individual licensees. The Commission believes this system at 37 GHz will create an innovative shared space that can be used by a wide variety of Federal and non-Federal users, by new entrants and by established operators—and small businesses in particular—to experiment with new technologies in the mmW space and innovate.

217. At the same time, because the 28 GHz, 39 GHz, and 37 GHz bands are shared with satellite services, the Commission has taken steps to facilitate sharing with satellite uses in ways that are consistent with fixed and mobile use of the bands. Specifically, the Commission concludes the Commission will authorize a limited number of satellite earth stations to operate on a co-primary basis—one in each county for the 28 GHz band and one in each PEA in the 37.5–40 GHz band—on a first-come, first-served basis. In the 28 GHz band the Commission will grandfather pre-existing satellite earth stations in any county into a local interference zone with the right to operate under the terms of their existing authorizations. These FSS earth stations must comply with certain enumerated conditions to obtain an authorization for their specific locations, including coordinating their operations with any existing mmW licensees to ensure non-interference between the services. Additional earth stations can be located if the FSS operator acquires a part 30 license, reaches a contractual agreement with the part 30 licensee, or agrees to operate on a secondary basis.

218. Overall, the new provisions the Commission is adopting are designed to allow licensees to choose their type of service offerings, to encourage innovation and investment in mobile and fixed use in this spectrum, and to provide a stable regulatory environment in which fixed, mobile, and satellite deployment will be able to develop through the application of flexible rules. The market-oriented licensing framework for these bands will ensure that this spectrum is efficiently utilized and will foster the development of new and innovative technologies and services, as well as encourage the growth and development of a wide variety of services, ultimately leading to greater benefits to consumers.

2. Summary of Significant Issues Raised by Public Comments in Response to the IRFA

219. No comments were filed in direct response to the IRFA.

3. Response to Comments by the Chief Counsel for Advocacy of the Small Business Administration

220. Pursuant to the Small Business Jobs Act of 2010, which amended the RFA, the Commission is required to respond to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration (SBA), and to provide a detailed statement of any change made to the proposed rules as a result of those comments. The Chief Counsel did not file any comments in response to the proposed rules in this proceeding.

4. Description and Estimate of the Number of Small Entities to Which the Proposed Rules Will Apply

221. The RFA directs agencies to provide a description of, and where feasible, an estimate of the number of small entities that may be affected by the proposed rules and policies, if adopted. The RFA generally defines the term ''small entity'' as having the same meaning as the terms ''small business,'' ''small organization,'' and ''small governmental jurisdiction.'' In addition, the term ''small business'' has the same meaning as the term ''small business concern'' under the Small Business Act. A ''small business concern'' is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the SBA.

222. *Small Businesses, Small Organizations, and Small Governmental Jurisdictions.* The Commission's action may, over time, affect small entities that are not easily categorized at present. The Commission therefore describes here, at the outset, three comprehensive, statutory small entity size standards. First, nationwide, there are a total of approximately 28.2 million businesses, 99.7 percent of which are small, according to the SBA. In addition, a ''small organization'' is generally ''any not-for-profit enterprise which is independently owned and operated and is not dominant in its field.'' Nationwide, as of 2007, there were approximately 1,621,315 small organizations. Finally, the term ''small governmental jurisdiction'' is defined generally as ''governments of cities, towns, townships, villages, school districts, or special districts, with a population of less than fifty thousand.'' Census Bureau data for 2011 indicate that there were 89,476 local governmental jurisdictions in the United States. The Commission estimates that, of this total, as many as 88,506 entities may qualify as ''small governmental jurisdictions.'' Thus, the Commission estimates that most governmental jurisdictions are small.

223. *Wireless Telecommunications Carriers (except satellite).* The appropriate size standard under SBA rules is for the category Wireless Telecommunications Carriers. Under that size standard, such a business is small if it has 1,500 or fewer employees. Census Bureau data for 2012, show that there were 967 firms in this category that operated for the entire year. Of this total, 955 had employment of 999 or fewer, and 12 firms had employment of 1,000 employees or more. Thus under this category and the associated small business size standard, the Commission estimates that the majority of wireless telecommunications carriers (except satellite) are small entities that may be affected by the Commission's action.

224. *Fixed Microwave Services.* Microwave services include common carrier, private-operational fixed, and broadcast auxiliary radio services. They also include the Local Multipoint Distribution Service (LMDS), the Digital Electronic Message Service (DEMS), the 39 GHz Service (39 GHz), the 24 GHz Service, and the Millimeter Wave Service where licensees can choose between common carrier and non-common carrier status. At present, there are approximately 61,970 common carrier fixed licensees, 62,909 private and public safety operational-fixed licensees, 20,349 broadcast auxiliary radio licensees, 412 LMDS licenses, 35 DEMS licenses, 870 39 GHz licenses, and five 24 GHz licenses, and 408 Millimeter Wave licenses in the microwave services. The Commission has not yet defined a small business with respect to microwave services. For purposes of the FRFA, the Commission will use the SBA's definition applicable to Wireless Telecommunications Carriers (except satellite)—*i.e.,* an entity with no more than 1,500 persons is considered small. Under that size standard, such a business is small if it has 1,500 or fewer employees. Census Bureau data for 2012, show that there were 967 firms in this category that operated for the entire year. Of this total, 955 had employment of 999 or fewer, and 12 firms had employment of 1,000 employees or more. Thus under this category and the associated small business size standard, the Commission estimates that the majority of wireless telecommunications carriers (except satellite) are small entities that may be affected by the Commission's proposed action. The Commission notes that the number of firms does not necessarily track the number of licensees. The Commission estimates that virtually all of the Fixed Microwave licensees (excluding broadcast auxiliary licensees) would qualify as small entities under the SBA definition.

225. *Satellite Telecommunications and All Other Telecommunications.* Two economic census categories address the satellite industry. The first category has a small business size standard of $32.5 million or less in average annual receipts, under SBA rules. The second also has a size standard of $32.5 million or less in annual receipts.

226. The category of Satellite Telecommunications ''comprises establishments primarily engaged in providing telecommunications services to other establishments in the telecommunications and broadcasting industries by forwarding and receiving communications signals via a system of satellites or reselling satellite telecommunications.'' Census Bureau data for 2012 show that 333 Satellite Telecommunications firms operated for that entire year. Of this total, 275 firms had annual receipts of under $10 million, and 58 firms had receipts of $10 million to $24,999,999. Consequently, the Commission estimates that the majority of Satellite Telecommunications firms are small entities that might be affected by the Commission's action.

227. The second category, *i.e.,* ''All Other Telecommunications,'' comprises ''establishments primarily engaged in providing specialized telecommunications services, such as satellite tracking, communications telemetry, and radar station operation. This industry also includes establishments primarily engaged in providing satellite terminal stations and associated facilities connected with one or more terrestrial systems and capable of transmitting telecommunications to, and receiving telecommunications from, satellite systems. Establishments providing Internet services or voice over Internet protocol (VoIP) services via client-supplied telecommunications connections are also included in this industry.'' For this category, Census Bureau data for 2012 show that there were a total of 1442 firms that operated for the entire year. Of this total, 1400 firms had annual receipts of under $25 million, and 42 firms had annual receipts of $25 million to $49, 999,999. Consequently, the Commission estimates that the majority of All Other Telecommunications firms are small entities that might be affected by the Commission's action.

228. *Radio and Television Broadcasting and Wireless Communications Equipment*

Manufacturing. The proposed rules relating to part 15 operation pertain to manufacturers of unlicensed communications devices. The Census Bureau defines this category as follows: ''This industry comprises establishments primarily engaged in manufacturing radio and television broadcast and wireless communications equipment. Examples of products made by these establishments are: Transmitting and receiving antennas, cable television equipment, GPS equipment, pagers, cellular phones, mobile communications equipment, and radio and television studio and broadcasting equipment.'' The SBA has developed a small business size standard for firms in this category, which is: All such firms having 750 or fewer employees. According to Census Bureau data for 2007, there were a total of 939 establishments in this category that operated for part or all of the entire year. Of this total, 784 had less than 500 employees and 155 had more than 100 employees. Thus, under this size standard, the majority of firms can be considered small.

5. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements

229. The projected reporting, recordkeeping, and other compliance requirements proposed in the *Report and Order* will apply to all entities in the same manner. The revisions the Commission adopts should benefit small entities by giving them more information, more flexibility, and more options for gaining access to wireless spectrum.

230. Any applicants for Upper Microwave Flexible Use Service licenses will be required to file license applications using the Commission's automated Universal Licensing System (ULS). ULS is an online electronic filing system that also serves as a powerful information tool, one that enables potential licensees to research applications, licenses, and antenna structures. It also keeps the public informed with weekly public notices, FCC rulemakings, processing utilities, and a telecommunications glossary. Upper Microwave Flexible Use Service applicants that must submit long-form license applications must do so through ULS using Form 601, FCC Ownership Disclosure Information for the Wireless Telecommunications Services using FCC Form 602, and other appropriate forms.

231. Licensees in the Upper Microwave Flexible Use Service will be subject to performance requirements based on a series of metrics, tailored to each type of service a licensee may offer. Accordingly, mobile services will be required to provide service to 40 percent of the population of their license area by the end of their initial license terms. Geographic area licensees providing Fixed Service in the 28 GHz, 37 GHz and 39 GHz will be required to construct and operate at least 15 links per million persons in the population. Satellite operators will be able to meet their build-out requirement by deploying an operational earth station in the license area that provides service. Licensees deploying a mix of such services will be able to choose which performance metric—or combination thereof—they desire to meet. Performance will be assessed on a license area basis, regardless of license area size. For the 28 GHz band, licenses will terminate automatically if a licensee fails to meet the applicable performance requirements. For geographic area licenses in the 37 and 39 GHz bands, licensees will have the option of partitioning their licenses on a county basis to come into compliance with the relevant performance metric. Licensees will be required to provide information to the Commission on the facilities they have constructed, the nature of the service they are providing, and the extent to which they are providing coverage in their license area, to both facilitate sharing with other authorized services and to enable accurate assessment of their performance. Incumbent licensees will be granted time to transition to these new performance requirements. FSS operators will have to coordinate their operations with any existing mmW licensees to ensure non-interference between the services.

232. New licensees will also be required, within three years after receiving their licenses but no later than six months prior to deployment, to file with the Commission a security statement signed by a senior licensee executive with personal knowledge of the licensee's security plans and practice, which must include, at a minimum, the following elements: (1) A high-level, general description of the licensee's security approach designed to safeguard the planned network's confidentiality, integrity, and availability with respect to communications from: A device to the licensee's network; one element of the licensee's network to another element on the licensee's network; the licensee's network to another network; and device to device (with respect to telephone voice and messaging services); (2) a high-level, general description of the licensee's approach to assessing and mitigating cyber risk induced by the presence of multiple participants in the band. This should include the high level approach taken toward ensuring consumer network confidentiality, integrity, and availability security principles, which are to be protected in each of the following use cases: Communications between a wireless device and the licensee's network; communications within and between each licensee's network; communications between mobile devices that are under end-to-end control of the licensee; and communications between mobile devices that are not under the end-to-end control of the licensee; (3) a high-level description of relevant cybersecurity standards and practices to be employed, whether industry-recognized or related to some other identifiable approach; (4) a description of the extent to which the licensee participates with standards bodies or industry-led organizations pursuing the development or maintenance of emerging security standards and/or best practices; (5) the high-level identification of any other approaches to security, unique to the services and devices the licensee intends to offer and deploy; and (6) plans to incorporate relevant outputs from Information Sharing and Analysis Organizations (ISAOs) as elements of the licensee's security architecture. Plans should include comment on machine-to-machine threat information sharing.

233. All of the filing, recordkeeping and reporting requirements associated with the demands described above, including professional, accounting, engineering or survey services used in meeting these requirements will be the same for large and small businesses that intend to utilize these new UMFUS licenses, but as described below, several steps have been taken that will alleviate burdens on small businesses in particular.

6. Steps Taken To Minimize Significant Economic Impact on Small Entities, and Significant Alternatives Considered

234. The RFA requires an agency to describe any significant alternative that it has considered in reaching its approach, which may include the following four alternatives (among others): (1) The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for small entities; (3) the

use of performance, rather than design, standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.

235. As noted above, the various construction and performance requirements and their associated showings will be the same for large and small businesses that license the Upper Microwave Flexible Use Service bands. To the extent the same cost of complying with these burdens is relatively greater for smaller businesses than for large ones, these costs are necessary to effectuate the purpose of the Communications Act, namely to further the efficient use of spectrum and to prevent spectrum warehousing. Likewise compliance with the Commission's service and technical rules and coordination requirements are necessary for the furtherance of the Commission's goals of protecting the public while also providing interference free services. Large and small businesses must therefore comply with these rules and requirements, but the Commission has taken steps to alleviate the burden on small businesses that seek to comply with these requirements, as discussed below.

236. The *Report and Order* provides that in the 28 GHz, 37 GHz and 39 GHz bands, mmW licensees will have the flexibility to provide any fixed or mobile service that is consistent with their spectrum allocation. This breaks with the recent past in which licensees were limited to only single use licenses in these bands, and such new flexibility benefits small businesses by giving them more avenues for gaining access to valuable wireless spectrum. In addition, licensees will be able to make a showing based on a combination of fixed and mobile service, simplifying this process for all licensees including small businesses. The Commission has also extended the existing renewal deadlines for incumbent licensees in the 28 and 39 GHz bands, giving these licensees, including small businesses in these bands, additional time until 2024 to meet the performance requirements pertaining to their current licenses.

237. Furthermore, the license areas chosen in the *Report and Order* should provide spectrum access opportunities for smaller carriers by giving them access to less densely populated areas that match their footprints. For example, the *Report and Order* transitions the 28 GHz band from being licensed on the BTA basis to a much smaller license area—counties. Similarly, the Commission transitions the 39 GHz band from being licensed via Economic Areas (''EAs'') to the smaller Partial Economic Areas (''PEAs''). The Commission also uses PEAs for the 37 GHz band, which will be newly licensed. The Commission abandons its proposed ''hybrid licensing scheme'' in the 37 GHz band and has instead opted to use geographic area licensing with PEAs in the upper 37.6–38.6 GHz portion with county-based licensing in the lower band (37.0–37.6 GHz). Finally, the Commission has created an unlicensed space in the 64–71 GHz band. However, the *Report and Order* also permits partitioning and disaggregation by licensees in the mmW bands. While PEAs and counties are small enough to provide spectrum access opportunities for smaller carriers and PEAs could even be further disaggregated, these units of area also nest within and may be aggregated to form larger license areas. Therefore, the benefits and burdens resulting from assigning spectrum in PEA and county license areas are equivalent for small and large businesses. The 400 MHz shared space the Commission has created in the lower 37 GHz band (37.0–37.6 GHz) should also provide ease-of-entry and plenty of space for opportunistic and innovative uses that could be developed by small businesses. These rules should enable providers, or any entities large or small providing service in the mmW bands, to more easily adjust their spectrum holdings and build their networks pursuant to individual business plans. The Commission believes this should result in small businesses having an easier time acquiring or accessing spectrum.

238. Licensees may also adjust their geographic coverage through auction in those areas where the Commission is permitting geographic area auctions or through the secondary markets. The *Report and Order* concludes it will auction licenses in the mmW bands in conformity with the general competitive bidding rules set forth in part 1, subpart Q, of the Commission's rules, and substantially consistent with the competitive bidding procedures that have been employed in previous auctions. The procedures the Commission has adopted contain provisions to assist small entities in competitive bidding. The Commission will employ the part 1 rules governing competitive bidding design, designated entity preferences, unjust enrichment, application and payment procedures, reporting requirements, and the prohibition on certain communications between auction applicants. Furthermore, qualifying ''small businesses''—those with gross revenues for the preceding three years not exceeding $55 million—will be provided with a bidding credit of 15 percent, and ''very small businesses''—those with average annual gross revenues for the preceding three years not exceeding $20 million—with a bidding credit of 25 percent. Providing small businesses and very small businesses with bidding credits will provide an economic benefit to small entities by making it easier for small entities to acquire spectrum or access to spectrum in these bands.

239. Furthermore, the *Report and Order* provides for licensing of this spectrum under market-oriented rules. This includes applying the Commission's secondary market policies and rules to all transactions involving the use of mmW bands, which will provide greater predictability and regulatory parity with bands licensed for mobile broadband service. These rules should make it easier for mmW providers to enter secondary market arrangements involving use of their spectrum. The secondary market rules apply equally to all entities, whether small or large. As a result, the Commission believes that this will provide an economic benefit to small entities by making it easier for entities, whether large or small, to enter into secondary market arrangements for mmW spectrum.

240. The *Report and Order* also adopts an operability requirement such that any device designed to operate within the 37 GHz and 39 GHz bands (37–40 GHz) must be capable of operating on all frequencies within those bands. This operability requirement will ensure that devices developed for the geographic area licensed portion of the band will also operate in the innovation shared space, making it easier for smaller businesses with fewer resources to find equipment that can operate across multiple bands. The technical rules in the *Report and Order* will also allow licensees of the mmW spectrum to operate while protecting licensees in nearby spectrum from harmful interference, some of whom may be small entities.

241. Finally, the proposals to facilitate satellite service in the 28 GHz and 37.5–40 GHz bands should also assist small satellite businesses.

7. Federal Rules That May Duplicate, Overlap, or Conflict With the Proposed Rules

242. None.

J. Ordering Clauses

243. Accordingly, *it is ordered,* pursuant to Sections 1, 2, 3, 4, 5, 7, 10, 201, 225, 227, 301, 302, 302a, 303, 304, 307, 309, 310, 316, 319, 332, and 336 of

the Communications Act of 1934, 47 U.S.C. 151, 152, 153, 154, 155, 157, 160, 201, 225, 227, 301, 302, 302a, 303, 304, 307, 309, 310, 316, 319, 332, 336, Section 706 of the Telecommunications Act of 1996, as amended, 47 U.S.C. 1302, and § 1.411 of the Commission's Rules, 47 CFR 1.411, that this *Report and Order and Further Notice of Proposed Rulemaking* is hereby *adopted.*

244. *It is further ordered* pursuant to section 4(i) of the Communications Act of 1934, 47 U.S.C. 154(i), that the Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, *shall* send a copy of this *Report and Order and Further Notice of Proposed Rulemaking,* including the Final and Initial Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

245. *It is further ordered* that the petition for rulemaking filed by the Fixed Wireless Communications Coalition (RM–11664) is denied with respect to the 42–42.5 GHz band.

246. *It is further ordered* that the Commission *shall* send a copy of this *Report and Order and Further Notice of Proposed Rulemaking* to Congress and the Government Accountability Office pursuant to the Congressional Review Act, *see* 5 U.S.C. 801(a)(1)(A).

List of Subjects in 47 CFR Parts 1, 2, 15, 25, 30 and 101

Communications common carriers, Communications equipment, Reporting and recordkeeping requirements.

Federal Communications Commission.

Marlene H. Dortch,

Secretary.

Final Rules

For the reasons discussed in the preamble, the Federal Communications Commission amends 47 CFR parts 1, 2, 15, 25, 30 and 101 as follows:

PART 1—PRACTICE AND PROCEDURE

■ 1. The authority citation for part 1 is revised to read as follows:

Authority: 47 U.S.C. 151, 154(i), 154(j), 155, 157, 160, 201, 225, 227, 303, 309, 332, 1403, 1404, 1451, 1452, and 1455.

■ 2. Section 1.907 is amended by revising the definitions for ''Wireless Radio Services'' and ''Wireless Telecommunications Services'' to read as follows:

§ 1.907 Definitions.

* * * * *

Wireless Radio Services. All radio services authorized in parts 13, 20, 22, 24, 26, 27, 30, 74, 80, 87, 90, 95, 96, 97 and 101 of this chapter, whether commercial or private in nature.

Wireless Telecommunications Services. Wireless Radio Services, whether fixed or mobile, that meet the definition of ''telecommunications service'' as defined by 47 U.S.C. 153, as amended, and are therefore subject to regulation on a common carrier basis. Wireless Telecommunications Services include all radio services authorized by parts 20, 22, 24, 26, 27, and 30 of this chapter. In addition, Wireless Telecommunications Services include Public Coast Stations authorized by part 80 of this chapter, Commercial Mobile Radio Services authorized by part 90 of this chapter, common carrier fixed microwave services, Local Television Transmission Service (LTTS), Local Multipoint Distribution Service (LMDS), and Digital Electronic Message Service (DEMS), authorized by part 101 of this chapter, and Citizens Broadband Radio Services authorized by part 96 of this chapter.

■ 3. Section 1.1307 is amended by adding an entry for ''Upper Microwave Flexible Use Service (part 30)'' above the entry for ''Radio Broadcast Services (part 73)'' in Table 1 in paragraph (b)(1) and revising paragraph (b)(2)(i) to read as follows:

§ 1.1307 Actions that may have a significant environmental effect, for which Environmental Assessments (EAs) must be prepared.

* * * * *

(b) * * *

(1) * * *

TABLE 1—TRANSMITTERS, FACILITIES AND OPERATIONS SUBJECT TO ROUTINE ENVIRONMENTAL EVALUATION

Service (title 47 CFR rule part)	Evaluation required if:
* *	* * * * * *
Upper Microwave Flexible Use Service (part 30).	Non-building-mounted antennas: Height above ground level to lowest point of antenna <10 m and power >1640 W EIRP. Antennas are mounted on buildings.
* *	* * * * * *

(2)(i) Mobile and portable transmitting devices that operate in the Commercial Mobile Radio Services pursuant to part 20 of this chapter; the Cellular Radiotelephone Service pursuant to part 22 of this chapter; the Personal Communications Services (PCS) pursuant to part 24 of this chapter; the Satellite Communications Services pursuant to part 25 of this chapter; the Miscellaneous Wireless Communications Services pursuant to part 27 of this chapter; the Upper Microwave Flexible Use Service pursuant to part 30 of this chapter; the Maritime Services (ship earth stations only) pursuant to part 80 of this chapter; the Specialized Mobile Radio Service, the 4.9 GHz Band Service, or the 3650 MHz Wireless Broadband Service pursuant to part 90 of this chapter; the Wireless Medical Telemetry Service (WMTS), or the Medical Device Radiocommunication Service (MedRadio) pursuant to part 95 of this chapter; or the Citizens Broadband Radio Service pursuant to part 96 of this chapter are subject to routine environmental evaluation for RF exposure prior to equipment authorization or use, as specified in §§ 2.1091 and 2.1093 of this chapter.

* * * * *

■ 4. Section 1.9001 is amended by revising paragraph (a) to read as follows:

§ 1.9001 Purpose and scope.

(a) The purpose of part 1, subpart X is to implement policies and rules pertaining to spectrum leasing arrangements between licensees in the services identified in this subpart and spectrum lessees. This subpart also implements policies for private commons arrangements. These policies and rules also implicate other Commission rule parts, including parts 1, 2, 20, 22, 24, 25, 27, 30, 80, 90, 95,

and 101 of title 47, chapter I of the Code of Federal Regulations.

* * * * *

■ 5. Section 1.9005 is amended by revising paragraphs (hh) through (kk) and adding paragraph (ll) to read as follows:

§ 1.9005 Included services.

* * * * *

(hh) The Multipoint Video Distribution and Data Service (part 101 of this chapter);

(ii) The 700 MHz Guard Bands Service (part 27 of this chapter);

(jj) The ATC of a Mobile Satellite Service (part 25 of this chapter);

(kk) The 600 MHz band (part 27 of this chapter); and

(ll) The Upper Microwave Flexible Use Service (part 30 of this chapter).

PART 2—FREQUENCY ALLOCATIONS AND RADIO TREATY MATTERS; GENERAL RULES AND REGULATIONS

■ 6. The authority citation for part 2 continues to read as follows:

Authority: 47 U.S.C. 154, 302a, 303, and 336, unless otherwise noted.

■ 7. Section 2.106 is amended as follows:

■ a. Pages 55, 57, 58, and 61 are revised.

■ b. In the list of United States (US) Footnotes, footnote US151 is added.

■ c. In the list of Non-Federal Government (NG) Footnotes, footnote NG63 is added.

The revisions and additions read as follows:

§ 2.106 Table of Frequency Allocations.

United States (US) Footnotes

* * * * *

US151 In the band 37–38 GHz, stations in the fixed and mobile services shall not cause harmful interference to Federal earth stations in the space research service (space-to-Earth) at the following sites: Goldstone, CA; Socorro, NM; and White Sands, NM. Applications for non-Federal use of this band shall be coordinated with NTIA in accordance with 47 CFR 30.205.

* * * * *

Non-Federal Government (NG) Footnotes

* * * * *

NG63 In the band 37.5–40 GHz, earth station operations in the fixed-satellite service (space-to-Earth) shall not claim protection from stations in the fixed and mobile services, except where individually licensed earth stations are authorized pursuant to 47 CFR 25.136.

* * * * *

■ 8. Section 2.1091 is amended by revising paragraph (c)(1) introductory text to read as follows:

§ 2.1091 Radiofrequency radiation exposure evaluation: mobile devices.

* * * * *

(c)(1) Mobile devices that operate in the Commercial Mobile Radio Services pursuant to part 20 of this chapter; the Cellular Radiotelephone Service pursuant to part 22 of this chapter; the Personal Communications Services pursuant to part 24 of this chapter; the Satellite Communications Services pursuant to part 25 of this chapter; the Miscellaneous Wireless Communications Services pursuant to part 27 of this chapter; the Upper Microwave Flexible Use Service pursuant to part 30 of this chapter; the Maritime Services (ship earth station devices only) pursuant to part 80 of this chapter; the Specialized Mobile Radio Service, and the 3650 MHz Wireless Broadband Service pursuant to part 90 of this chapter; and the Citizens Broadband Radio Service pursuant to part 96 of this chapter are subject to routine environmental evaluation for RF exposure prior to equipment authorization or use if:

* * * * *

■ 9. Section 2.1093 is amended by revising paragraph (c)(1) to read as follows:

§ 2.1093 Radiofrequency radiation exposure evaluation: portable devices.

* * * * *

(c)(1) Portable devices that operate in the Cellular Radiotelephone Service pursuant to part 22 of this chapter; the Personal Communications Service (PCS) pursuant to part 24 of this chapter; the Satellite Communications Services pursuant to part 25 of this chapter; the Miscellaneous Wireless Communications Services pursuant to part 27 of this chapter; the Upper Microwave Flexible Use Service pursuant to part 30 of this chapter; the Maritime Services (ship earth station devices only) pursuant to part 80 of this chapter; the Specialized Mobile Radio Service, the 4.9 GHz Band Service, and the 3650 MHz Wireless Broadband Service pursuant to part 90 of this chapter; the Wireless Medical Telemetry Service (WMTS) and the Medical Device Radiocommunication Service (MedRadio), pursuant to subparts H and I of part 95 of this chapter, respectively, unlicensed personal communication service, unlicensed NII devices and millimeter wave devices authorized under §§ 15.253(f), 15.255(g), 15.257(g), 15.319(i), and 15.407(f) of this chapter; and the Citizens Broadband Radio Service pursuant to part 96 of this chapter are subject to routine environmental evaluation for RF exposure prior to equipment authorization or use.

* * * * *

PART 15—RADIO FREQUENCY DEVICES

■ 10. The authority citation for part 15 continues to read as follows:

Authority: 47 U.S.C. 154, 302a, 303, 304, 307, 336, 544a, and 549.

■ 11. Section 15.255 is amended by revising the section heading, paragraphs (a)(2), (b), and (c)(1); removing paragraph (d); redesignating paragraphs (e) through (h) as paragraphs (d) through (g); revising newly redesignated paragraph (d)(2); and adding new paragraph (h) to read as follows:

§ 15.255 Operation within the band 57–71 GHz.

(a) * * *

(2) Field disturbance sensors, including vehicle radar systems, unless the field disturbance sensors are employed for fixed operation, or used as short-range devices for interactive motion sensing. For the purposes of this section, the reference to fixed operation includes field disturbance sensors installed in fixed equipment, even if the sensor itself moves within the equipment.

(b) Within the 57–71 GHz band, emission levels shall not exceed the following equivalent isotropically radiated power (EIRP):

(1) Products other than fixed field disturbance sensors and short-range devices for interactive motion sensing shall comply with one of the following emission limits, as measured during the transmit interval:

(i) The average power of any emission shall not exceed 40 dBm and the peak power of any emission shall not exceed 43 dBm; or

(ii) For fixed point-to-point transmitters located outdoors, the average power of any emission shall not exceed 82 dBm, and shall be reduced by 2 dB for every dB that the antenna gain is less than 51 dBi. The peak power of any emission shall not exceed 85 dBm, and shall be reduced by 2 dB for every dB that the antenna gain is less than 51 dBi.

(A) The provisions in this paragraph for reducing transmit power based on antenna gain shall not require that the power levels be reduced below the limits specified in paragraph (b)(1)(i) of this section.

(B) The provisions of § 15.204(c)(2) and (4) that permit the use of different antennas of the same type and of equal or less directional gain do not apply to intentional radiator systems operating under this provision. In lieu thereof, intentional radiator systems shall be certified using the specific antenna(s) with which the system will be marketed and operated. Compliance testing shall be performed using the highest gain and the lowest gain antennas for which certification is sought and with the intentional radiator operated at its maximum available output power level. The responsible party, as defined in § 2.909 of this chapter, shall supply a list of acceptable antennas with the application for certification.

(2) For fixed field disturbance sensors that occupy 500 MHz or less of bandwidth and that are contained wholly within the frequency band 61.0–61.5 GHz, the average power of any emission, measured during the transmit interval, shall not exceed 40 dBm, and the peak power of any emission shall not exceed 43 dBm. In addition, the average power of any emission outside of the 61.0–61.5 GHz band, measured during the transmit interval, but still within the 57–71 GHz band, shall not exceed 10 dBm, and the peak power of any emission shall not exceed 13 dBm.

(3) For fixed field disturbance sensors other than those operating under the provisions of paragraph (b)(2) of this section, and short-range devices for interactive motion sensing, the peak transmitter conducted output power

shall not exceed −10 dBm and the peak EIRP level shall not exceed 10 dBm.

(4) The peak power shall be measured with an RF detector that has a detection bandwidth that encompasses the 57–71 GHz band and has a video bandwidth of at least 10 MHz. The average emission levels shall be measured over the actual time period during which transmission occurs.

(c) * * *

(1) The power density of any emissions outside the 57–71 GHz band shall consist solely of spurious emissions.

* * * * *

(d) * * *

(2) Peak transmitter conducted output power shall be measured with an RF detector that has a detection bandwidth that encompasses the 57–71 GHz band and that has a video bandwidth of at least 10 MHz.

* * * * *

(h) Measurement procedures that have been found to be acceptable to the Commission in accordance with § 2.947 of this chapter may be used to demonstrate compliance.

PART 25—SATELLITE COMMUNICATIONS

■ 12. The authority citation for part 25 continues to read as follows:

Authority: Interprets or applies 47 U.S.C. 154, 301, 302, 303, 307, 309, 319, 332, 605, and 721, unless otherwise noted.

■ 13. Add § 25.136 to read as follows:

§ 25.136 Earth Stations in the 27.5–28.35 GHz and 37.5–40 GHz bands.

(a) FSS is secondary to the Upper Microwave Flexible Use Service in the 27.5–28.35 GHz band. Notwithstanding that secondary status, an earth station in the 27.5–28.35 GHz band that meets one of the criteria listed below may operate consistent with the terms of its authorization without providing any additional interference protection to stations in the Upper Microwave Flexible Use Service:

(1) The FSS licensee also holds the relevant Upper Microwave Flexible Use Service license(s) for the area in which the earth station generates a power flux density (PFD), at 10 meters above ground level, of greater than or equal to −77.6 dBm/m²/MHz;

(2) The FSS earth station was authorized prior to July 14, 2016; or

(3) The application for the FSS earth station was filed prior to July 14, 2016 and has been subsequently granted; or

(4) The applicant demonstrates compliance with all of the following criteria in its application:

(i) There are no more than two other authorized earth stations operating in the 27.5–28.35 GHz band within the county where the proposed earth station is located that meet the criteria contained in either paragraphs (a)(1), (2), (3), or (4) of this section. For purposes of this requirement, multiple earth stations that are collocated with or at a location contiguous to each other shall be considered as one earth station;

(ii) The area in which the earth station generates a power flux density (PFD), at 10 meters above ground level, of greater than or equal to −77.6 dBm/m²/MHz, together with the similar area of any other earth station authorized pursuant to paragraph (a) of this section, does not cover, in the aggregate, more than 0.1 percent of the population of the county within which the earth station is located;

(iii) The area in which the earth station generates a power flux density (PFD), at 10 meters above ground level, of greater than or equal to −77.6 dBm/m²/MHz does not contain any major event venue, arterial street, interstate or U.S. highway, urban mass transit route, passenger railroad, or cruise ship port; and

(iv) The applicant has successfully completed frequency coordination with the UMFUS licensees within the area in which the earth station generates a power flux density (PFD), at 10 meters above ground level, of greater than or equal to −77.6 dBm/m²/MHz with respect to existing facilities constructed and in operation by the UMFUS licensee. In coordinating with UMFUS licensees, the applicant shall use the applicable processes contained in § 101.103(d) of this chapter.

(b) Applications for earth stations in the 37.5–40 GHz band shall provide an exhibit describing the zone within which the earth station will require protection from transmissions of Upper Microwave Flexible Use Service licensees. For purposes of this rule, the protection zone shall consist of the area where UMFUS licensees may not locate facilities without the consent of the earth station licensee. The earth station applicant shall demonstrate in its application, using reasonable engineering methods, that the requested protection zone is necessary in order to protect its proposed earth station.

(c) The protection zone (as defined in paragraph (b) of this section) shall comply with the following criteria. The applicant shall demonstrate compliance with all of the following criteria in its application:

(1) There are no more than two other authorized earth stations operating in the 37.5–40 GHz band within the Partial Economic Area within which the proposed earth station is located that meet the criteria contained in paragraph (c) of this section. For purposes of this requirement, multiple earth stations that are collocated with or at a location contiguous to each other shall be considered as one earth station;

(2) The protection zone, together with the protection zone of other earth stations in the same Partial Economic Area authorized pursuant to this section, does not cover, in the aggregate, more than 0.1 percent of the population of the Partial Economic Area within which the earth station is located;

(3) The protection zone does not contain any major event venue, arterial street, interstate or U.S. highway, urban mass transit route, passenger railroad, or cruise ship port; and

(4) The applicant has successfully completed frequency coordination with the UMFUS licensees within the protection zone with respect to existing facilities constructed and in operation by the UMFUS licensee. In coordinating with UMFUS licensees, the applicant shall use the applicable processes contained in § 101.103(d) of this chapter.

(d) If an earth station applicant or licensee in the 27.5–28.35 GHz or 37. 5–40 GHz bands enters into an agreement with an UMFUS licensee, their operations shall be governed by that agreement, except to the extent that the agreement is inconsistent with the Commission's rules or the Communications Act.

■ 14. Section 25.202 is amended by revising footnotes 1 and 7 to the table in paragraph (a)(1) to read as follows:

§ 25.202 Frequencies, frequency tolerance, and emission limits.

(a) * * *

(1) * * *

[1] Use of this band by the Fixed-Satellite Service is limited to individually licensed earth stations. Satellite earth station facilities in this band may not be ubiquitously deployed and may not be used to serve individual consumers.

* * * * *

[7] The Fixed-Satellite Service is secondary to the Upper Microwave Flexible Use Service authorized pursuant to 47 CFR part 30, except for FSS operations associated with earth stations authorized pursuant to 47 CFR 25.136.

* * * * *

■ 15. Part 30 is added to read as follows:

PART 30—UPPER MICROWAVE FLEXIBLE USE SERVICE

Subpart A—General

Subpart B—Applications and Licenses

Subpart C—Technical Standards

Subpart D—Competitive Bidding Procedures

Subpart E—Special Provisions for Fixed Point-to-Point, Fixed Point-to-Multipoint Hub Stations, and Fixed Point-to-Multipoint User Stations

Authority: 47 U.S.C. 151, 152, 153, 154, 301, 303, 304, 307, 309, 310, 316, 332, 1302.

Subpart A—General

§ 30.1 Creation of upper microwave flexible use service, scope and authority.

As of December 14, 2016, Local Multipoint Distribution Service licenses for the 27.5–28.35 GHz band, and licenses issued in the 38.6–40 GHz band under part 101 of this chapter shall be reassigned to the Upper Microwave Flexible Use Service. Local Multipoint Distribution Service licenses in bands other than 27.5–28.35 GHz shall remain in that service and shall be governed by the part 101 of this chapter applicable to that service.

§ 30.2 Definitions.

The following definitions apply to this part:

Authorized bandwidth. The maximum width of the band of frequencies permitted to be used by a station. This is normally considered to be the necessary or occupied bandwidth, whichever is greater. (See § 2.202 of this chapter).

Authorized frequency. The frequency, or frequency range, assigned to a station by the Commission and specified in the instrument of authorization.

Fixed satellite earth station. An earth station intended to be used at a specified fixed point.

Local Area Operations. Operations confined to physical facility boundaries, such as a factory.

Point-to-Multipoint Hub Station. A fixed point-to-multipoint radio station that provides one-way or two-way communication with fixed Point-to-Multipoint Service User Stations.

Point-to-Multipoint Service. A fixed point-to-multipoint radio service consisting of point-to-multipoint hub stations that communicate with fixed point-to-multipoint user stations.

Point-to-Multipoint User Station. A fixed radio station located at users' premises, lying within the coverage area of a Point-to-Multipoint Hub station, using a directional antenna to receive one-way communications from or providing two-way communications with a fixed Point-to-Multipoint Hub Station.

Point-to-point station. A station that transmits a highly directional signal from a fixed transmitter location to a fixed receive location.

Portable device. Transmitters designed to be used within 20 centimeters of the body of the user.

Prior coordination. A bilateral process conducted prior to filing applications which includes the distribution of the technical parameters of a proposed radio system to potentially affected parties for their evaluation and timely response.

Secondary operations. Radio communications which may not cause interference to operations authorized on a primary basis and which are not protected from interference from these primary operations

Transportable station. Transmitting equipment that is not intended to be used while in motion, but rather at stationary locations.

Universal Licensing System. The Universal Licensing System (ULS) is the consolidated database, application filing system, and processing system for all Wireless Radio Services. ULS supports electronic filing of all applications and related documents by applicants and licensees in the Wireless Radio Services, and provides public access to licensing information.

§ 30.3 Eligibility.

Any entity who meets the technical, financial, character, and citizenship qualifications that the Commission may require in accordance with such Act, other than those precluded by section 310 of the Communications Act of 1934, as amended, 47 U.S.C. 310, is eligible to hold a license under this part.

§ 30.4 Frequencies.

The following frequencies are available for assignment in the Upper Microwave Flexible Use Service:

(a) 27.5 GHz—28.35 GHz band—27.5–27.925 GHz and 27.925–28.35 GHz.

(b) 38.6–40 GHz band:

(1) New channel plan:

Channel No.	Frequency band limits (MHz)
1	38,600–38,800
2	38,800–39,000
3	39,000–39,200
4	39,200–39,400
5	39,400–39,600
6	39,600–39,800
7	39,800–40,000

(2) Pending transition to the new channel plan, existing 39 GHz licensees licensed under part 101 of this chapter may continue operating on the following channel plan:

Channel group A		Channel group B	
Channel No.	Frequency band limits (MHz)	Channel No.	Frequency band limits (MHz)
1–A	38,600–38,650	1–B	39,300–39,350
2–A	38,650–38,700	2–B	39,350–39,400
3–A	38,700–38,750	3–B	39,400–39,450
4–A	38,750–38,800	4–B	39,450–39,500

Channel group A		Channel group B	
Channel No.	Frequency band limits (MHz)	Channel No.	Frequency band limits (MHz)
5–A	38,800–38,850	5–B	39,500–39,550
6–A	38,850–38,900	6–B	39,550–39,600
7–A	38,900–38,950	7–B	39,600–39,650
8–A	38,950–39,000	8–B	39,650–39,700
9–A	39,000–39,050	9–B	39,700–39,750
10–A	39,050–39,100	10–B	39,750–39,800
11–A	39,100–39,150	11–B	39,800–39,850
12–A	39,150–39,200	12–B	39,850–39,900
13–A	39,200–39,250	13–B	39,900–39,950
14–A	39,250–39,300	14–B	39,950–40,000

(c) 37–38.6 GHz band: 37,600–37,800 MHz; 37,800–38,000 MHz; 38,000–38,200 MHz; 38,200–38,400 MHz, and 38,400–38,600 MHz. The 37,000–37,600 MHz band segment shall be available on a site-specific, coordinated shared basis with eligible Federal entities.

§ 30.5 Service areas.

(a) Except as noted in paragraphs (b) and (c) of this section, and except for the shared 37–37.6 GHz band, the service areas for the Upper Microwave Flexible Use Service are Partial Economic Areas.

(b) For the 27.5–28.35 GHz band, the service areas shall be counties.

(c) Common Carrier Fixed Point-to-Point Microwave Stations licensed in the 38.6–40 GHz bands licensed with Rectangular Service Areas shall maintain their Rectangular Service Area as defined in their authorization. The frequencies associated with Rectangular Service Area authorizations that have expired, cancelled, or otherwise been recovered by the Commission will automatically revert to the applicable county licensee.

(d) In the 37.5–40 GHz band, Upper Microwave Flexible Use Service licensees shall not place facilities within the protection zone of Fixed-Satellite Service earth stations authorized pursuant to § 25.136 of this chapter, absent consent from the Fixed-Satellite Service earth station licensee.

§ 30.6 Permissible communications.

(a) A licensee in the frequency bands specified in § 30.4 may provide any services for which its frequency bands are allocated, as set forth in the non-Federal Government column of the Table of Frequency Allocations in § 2.106 of this chapter (column 5).

(b) Fixed-Satellite Service shall be provided in a manner consistent with part 25 of this chapter.

§ 30.7 37–37.6 GHz Band—Shared coordinated service.

(a) The 37–37.6 GHz band will be available for site-based registrations on a coordinated basis with co-equal eligible Federal entities.

(b) Any non-Federal entity meeting the eligibility requirements of § 30.3 may operate equipment that complies with the technical rules of this part pursuant to a Shared Access License.

(c) Licensees in the 37–37.6 GHz band must register their individual base stations and access points prior to placing them in operation.

§ 30.8 5G Provider cybersecurity statement requirements.

(a) *Statement.* Each Upper Microwave Flexible Use Service licensee is required to submit to the Commission a Statement describing its network security plans and related information, which shall be signed by a senior executive within the licensee's organization with personal knowledge of the security plans and practices within the licensee's organization. The Statement must contain, at a minimum, the following elements:

(1) *Security approach.* A high-level, general description of the licensee's approach designed to safeguard the planned network's confidentiality, integrity, and availability, with respect to communications from:

(i) A device to the licensee's network;

(ii) One element of the licensee's network to another element on the licensee's network;

(iii) The licensee's network to another network; and

(iv) Device to device (with respect to telephone voice and messaging services).

(2) *Cybersecurity coordination.* A high-level, general description of the licensee's anticipated approach to assessing and mitigating cyber risk induced by the presence of multiple participants in the band. This should include the high level approach taken toward ensuring consumer network confidentiality, integrity, and availability security principles, are to be protected in each of the following use cases: communications between a wireless device and the licensee's network; communications within and between each licensee's network; communications between mobile devices that are under end-to-end control of the licensee; and communications between mobile devices that are not under the end-to-end control of the licensee;

(3) *Cybersecurity standards and best practices.* A high-level description of relevant cybersecurity standards and practices to be employed, whether industry-recognized or related to some other identifiable approach;

(4) *Participation with standards bodies, industry-led organizations.* A description of the extent to which the licensee participates with standards bodies or industry-led organizations pursuing the development or maintenance of emerging security standards and/or best practices;

(5) *Other security approaches.* The high-level identification of any other approaches to security, unique to the services and devices the licensee intends to offer and deploy; and

(6) *Plans with Information Sharing and Analysis Organizations.* Plans to incorporate relevant outputs from Information Sharing and Analysis Organizations (ISAOs) as elements of the licensee's security architecture. Plans should include comment on machine-to-machine threat information sharing, and any use of anticipated standards for ISAO-based information sharing.

(b) *Timing.* Each Upper Microwave Flexible Use Service licensee shall submit this *Statement* to the Commission within three years after grant of the license, but no later than six months prior to deployment.

(c) *Definitions.* The following definitions apply to this section:

Availability. The accessibility and usability of a network upon demand.

Confidentiality. The protection of data from unauthorized access and disclosure, both while at rest and in transit.

Integrity. The protection against the unauthorized modification or destruction of information.

Subpart B—Applications and Licenses

§ 30.101 Initial authorizations.

Except with respect to in the 37–37.6 GHz band, an applicant must file a single application for an initial authorization for all markets won and frequency blocks desired. Initial authorizations shall be granted in accordance with § 30.4. Applications for individual sites are not required and will not be accepted, except where required for environmental assessments, in accordance with §§ 1.1301 through 1.1319 of this chapter.

§ 30.102 Transition of existing local multipoint distribution service and 39 GHz licenses.

Local Multipoint Distribution Service licenses in the 27.5—28.35 GHz band issued on a Basic Trading Area basis shall be disaggregated into county-based licenses and 39 GHz licenses issued on an Economic Area basis shall be disaggregated into Partial Economic Area-based licenses on December 14, 2016. For each county in the Basic Trading Area or Partial Economic Area in the Economic Area which is part of the original license, the licensee shall receive a separate license. If there is a co-channel Rectangular Service Area licensee within the service area of a 39 GHz Economic Area licensee, the disaggregated license shall not authorize operation with the service area of the Rectangular Service Area license.

§ 30.103 License term.

Initial authorizations will have a term not to exceed ten years from the date of initial issuance or renewal.

§ 30.104 Construction requirements.

(a) Upper Microwave Flexible Use Service licensees must make a buildout showing as part of their renewal applications. Licensees relying on mobile or point-to-multipoint service must show that they are providing reliable signal coverage and service to at least 40 percent of the population within the service area of the licensee, and that they are using facilities to provide service in that area either to customers or for internal use. Licensees relying on point-to-point service must demonstrate that they have four links operating and providing service, either to customers or for internal use, if the population within the license area is equal to or less than 268,000. If the population within the license area is greater than 268,000, a licensee relying on point-to-point service must demonstrate it has at least one link in operation and is providing service for each 67,000 population within the license area.

(b) Showings that rely on a combination of multiple types of service will be evaluated on a case-by-case basis.

(c) If a licensee in this service is also a Fixed-Satellite Service licensee and uses the spectrum covered under its UMFUS license in connection with a satellite earth station, it can demonstrate compliance with the requirements of this section by demonstrating that the earth station in question is in service, operational, and using the spectrum associated with the license. This provision can only be used to demonstrate compliance for the county in which the earth station is located.

(d) Failure to meet this requirement will result in automatic cancellation of the license. In bands licensed on a Partial Economic Area basis, licensees will have the option of partitioning a license on a county basis in order to reduce the population within the license area to a level where the licensee's buildout would meet one of the applicable performance metrics.

(e) Existing 28 GHz and 39 GHz licensees shall be required to make a showing pursuant to this rule by June 1, 2024.

§ 30.105 Geographic partitioning and spectrum disaggregation.

(a) Parties seeking approval for partitioning and disaggregation shall request from the Commission an authorization for partial assignment of a license pursuant to § 1.948 of this chapter. Upper Microwave Flexible Use Service licensees may apply to partition their licensed geographic service area or disaggregate their licensed spectrum at any time following the grant of their licenses.

(b) *Technical standards*—(1) *Partitioning.* In the case of partitioning, applicants and licensees must file FCC Form 603 pursuant to § 1.948 of this chapter and list the partitioned service area on a schedule to the application. The geographic coordinates must be specified in degrees, minutes, and seconds to the nearest second of latitude and longitude and must be based upon the 1983 North American Datum (NAD83).

(2) Spectrum may be disaggregated in any amount.

(3) The Commission will consider requests for partial assignment of licenses that propose combinations of partitioning and disaggregation.

(4) For purposes of partitioning and disaggregation, part 30 systems must be designed so as not to exceed the signal level specified for the particular spectrum block in § 30.204 at the licensee's service area boundary, unless the affected adjacent service area licensees have agreed to a different signal level.

(c) *License term.* The license term for a partitioned license area and for disaggregated spectrum shall be the remainder of the original licensee's license term as provided for in § 30.103.

(d)(1) Parties to partitioning agreements must satisfy the construction requirements set forth in § 30.104 by the partitioner and partitionee each certifying that it will independently meet the construction requirement for its respective partitioned license area. If the partitioner or partitionee fails to meet the construction requirement for its respective partitioned license area, then the relevant partitioned license will automatically cancel.

(2) Parties to disaggregation agreements must satisfy the construction requirements set forth in § 30.104 by the disaggregator and disaggregatee each certifying that it will independently meet the construction requirement for its respective disaggregated license area. If the disaggregator or disaggregatee fails to meet the construction requirement for its respective disaggregated license area, then the relevant disaggregated license will automatically cancel.

§ 30.106 Discontinuance of service.

(a) An Upper Microwave Flexible Use License authorization will automatically terminate, without specific Commission action, if the licensee permanently discontinues service after the initial license term.

(b) For licensees with common carrier regulatory status, permanent discontinuance of service is defined as 180 consecutive days during which a licensee does not provide service to at least one subscriber that is not affiliated with, controlled by, or related to the licensee in the individual license area. For licensees with non-common carrier status, permanent discontinuance of service is defined as 180 consecutive days during which a licensee does not operate.

(c) A licensee that permanently discontinues service as defined in this section must notify the Commission of the discontinuance within 10 days by filing FCC Form 601 or 605 requesting license cancellation. An authorization will automatically terminate, without specific Commission action, if service is permanently discontinued as defined in this section, even if a licensee fails to

file the required form requesting license cancellation.

Subpart C—Technical Standards

§ 30.201 Equipment authorization.

(a) Except as provided under paragraph (c) of this section, each transmitter utilized for operation under this part must be of a type that has been authorized by the Commission under its certification procedure.

(b) Any manufacturer of radio transmitting equipment to be used in these services may request equipment authorization following the procedures set forth in subpart J of part 2 of this chapter. Equipment authorization for an individual transmitter may be requested by an applicant for a station authorization by following the procedures set forth in part 2 of this chapter.

(c) Unless specified otherwise, transmitters for use under the provisions of subpart E of this part for fixed point-to-point microwave and point-to-multipoint services must be a type that has been verified for compliance.

§ 30.202 Power limits.

(a) For fixed and base stations operating in connection with mobile systems, the average power of the sum of all antenna elements is limited to an equivalent isotopically radiated power (EIRP) density of +75dBm/100 MHz. For channel bandwidths less than 100 megahertz the EIRP must be reduced proportionally and linearly based on the bandwidth relative to 100 megahertz.

(b) For mobile stations, the average power of the sum of all antenna elements is limited to a maximum EIRP of +43 dBm.

(c) For transportable stations, as defined in § 30.2, the average power of the sum of all antenna elements is limited to a maximum EIRP of +55 dBm.

(d) For fixed point-to-point and point-to-multipoint limits see § 30.405.

§ 30.203 Emission limits.

(a) The conductive power or the total radiated power of any emission outside a licensee's frequency block shall be −13 dBm/MHz or lower. However, in the bands immediately outside and adjacent to the licensee's frequency block, having a bandwidth equal to 10 percent of the channel bandwidth, the conductive power or the total radiated power of any emission shall be −5 dBm/MHz or lower.

(b)(1) Compliance with this provision is based on the use of measurement instrumentation employing a resolution bandwidth of 1 megahertz or greater.

(2) When measuring the emission limits, the nominal carrier frequency shall be adjusted as close to the licensee's frequency block edges as the design permits.

(3) The measurements of emission power can be expressed in peak or average values.

(c) For fixed point-to-point and point-to-multipoint limits see § 30.404.

§ 30.204 Field strength limits.

(a) *Base/mobile operations:* The predicted or measured Power Flux Density (PFD) from any Base Station operating in the 27.5–28.35 GHz band, 37–38.6 GHz band, and 38.6–40 GHz bands at any location on the geographical border of a licensee's service area shall not exceed −76dBm/m^2/MHz (measured at 1.5 meters above ground) unless the adjacent affected service area licensee(s) agree(s) to a different PFD.

(b) *Fixed point-to-point operations.* (1) Prior to operating a fixed point-to-point transmitting facility in the 27,500–28,350 MHz band where the facilities are located within 20 kilometers of the boundary of the licensees authorized market area, the licensee must complete frequency coordination in accordance with the procedures specified in § 101.103(d)(2) of this chapter with respect to neighboring licensees that may be affected by its operations.

(2) Prior to operating a fixed point-to-point transmitting facility in the 37,000–40,000 MHz band where the facilities are located within 16 kilometers of the boundary of the licensees authorized market area, the licensee must complete frequency coordination in accordance with the procedures specified in § 101.103(d)(2) of this chapter with respect to neighboring licensees that may be affected by its operations.

§ 30.205 Federal coordination requirements.

(a) Licensees in the 37–38 GHz band located within the zones defined by the coordinates in the tables below must coordinate their operations with Federal Space Research Service (space to Earth) users of the band via the National Telecommunications and Information Administration (NTIA). All licensees operating within the zone defined by the 60 dBm/100 MHz EIRP coordinates in the tables below must coordinate all operations. Licensees operating within the area between the zones defined by the 60 dBm and 75 dBm/100 MHz EIRP coordinates in the tables below must coordinate all operations if their base station EIRP is greater than 60 dBm/100 MHz or if their antenna height exceeds 100 meters above ground level. Licensees operating outside the zones defined by the 75 dBm/100 MHz EIRP coordinates in the tables below are not required to coordinate their operations with NTIA.

TABLE TO PARAGRAPH (b)—COORDINATION AREAS FOR FEDERAL TERRESTRIAL SYSTEMS—Continued

Location	Agency	Coordination area (decimal degrees)
Moody Air Force Base, GA	Air Force	30 kilometer radius centered on latitude 30.96694 and longitude −83.185.
Hurlburt Air Force Base, FL	Air Force	30 kilometer radius centered on latitude 30.42388 and longitude −86.70694.

§ 30.206 International coordination.

Operations in the 27.5–28.35 GHz, 37–38.6, and 38.6–40 GHz bands are subject to existing and future international agreements with Canada and Mexico.

§ 30.207 Radio frequency (RF) safety.

Licensees and manufacturers are subject to the radio frequency radiation exposure requirements specified in §§ 1.1307(b), 1.1310, 2.1091, and 2.1093 of this chapter, as appropriate. Applications for equipment authorization of mobile or portable devices operating under this section must contain a statement confirming compliance with these requirements. Technical information showing the basis for this statement must be submitted to the Commission upon request.

§ 30.208 Operability.

Mobile and transportable stations that operate on any portion of frequencies within the 27.5–28.35 GHz or the 37–40 GHz bands must be capable of operating on all frequencies within those particular bands.

§ 30.209 Duplexing.

Stations authorized under this rule part may employ frequency division duplexing, time division duplexing, or any other duplexing scheme, provided that they comply with the other technical and operational requirements specified in this part.

Subpart D—Competitive Bidding Procedures

§ 30.301 Upper Microwave Flexible Use Service subject to competitive bidding.

Mutually exclusive initial applications for Upper Microwave Flexible User Service licenses are subject to competitive bidding. The general competitive bidding procedures set forth in part 1, subpart Q of this chapter will apply unless otherwise provided in this subpart.

§ 30.302 Designated entities and bidding credits.

(a) *Eligibility for small business provisions.* (1) A small business is an entity that, together with its affiliates, its controlling interests and the affiliates of its controlling interests, have average gross revenues that are not more than $55 million for the preceding three (3) years.

(2) A very small business is an entity that, together with its affiliates, its controlling interests and the affiliates of its controlling interests, has average gross revenues that are not more than $20 million for the preceding three (3) years.

(b) *Bidding credits.* A winning bidder that qualifies as a small business, as defined in this section, or a consortium of small businesses may use a bidding credit of 15 percent, as specified in § 1.2110(f)(2)(i)(C) of this chapter. A winning bidder that qualifies as a very small business, as defined in this section, or a consortium of very small businesses may use a bidding credit of 25 percent, as specified in § 1.2110(f)(2)(i)(B) of this chapter.

(c) A rural service provider, as defined in § 1.2110(f)(4) of this chapter, who has not claimed a small business bidding credit may use a bidding credit of 15 percent bidding credit, as specified in § 1.2110(f)(4)(i) of this chapter.

Subpart E—Special Provisions for Fixed Point-to-Point, Fixed Point-to-Multipoint Hub Stations, and Fixed Point-to-Multipoint User Stations

§ 30.401 Permissible service.

Stations authorized under this subpart may deploy stations used solely as fixed point-to-point stations, fixed point-to-multipoint hub stations, or fixed point-to-multipoint user stations, as defined in § 30.2, subject to the technical and operational requirements specified in this subpart.

§ 30.402 Frequency tolerance.

The carrier frequency of each transmitter authorized under this subpart must be maintained within the following percentage of the reference frequency (unless otherwise specified in the instrument of station authorization the reference frequency will be deemed to be the assigned frequency):

Frequency (MHz)	Frequency tolerance (percent)
27,500 to 28,350	0.001
38,600 to 40,000	0.03

§ 30.403 Bandwidth.

(a) Stations under this subpart will be authorized any type of emission, method of modulation, and transmission characteristic, consistent with efficient use of the spectrum and good engineering practice.

(b) The maximum bandwidth authorized per frequency to stations under this subpart is set out in the table that follows.

Frequency band (MHz)	Maximum authorized bandwidth
27,500 to 28,350	850 MHz.
38,600 to 40,000	200 MHz.[1]

[1] For channel block assignments in the 38,600–40,000 MHz bands when adjacent channels are aggregated, equipment is permitted to operate over the full channel block aggregation without restriction.

§ 30.404 Emission limits.

(a) The mean power of emissions must be attenuated below the mean output power of the transmitter in accordance with the following schedule:

(1) When using transmissions other than those employing digital modulation techniques:

(i) On any frequency removed from the assigned frequency by more than 50 percent up to and including 100 percent of the authorized bandwidth: At least 25 decibels;

(ii) On any frequency removed from the assigned frequency by more than 100 percent up to and including 250 percent of the authorized bandwidth: At least 35 decibels;

(iii) On any frequency removed from the assigned frequency by more than 250 percent of the authorized bandwidth: At least $43 + 10 \log_{10}$ (mean output power in watts) decibels, or 80 decibels, whichever is the lesser attenuation.

(2) When using transmissions employing digital modulation techniques in situations not covered in this section:

(i) In any 1 MHz band, the center frequency of which is removed from the assigned frequency by more than 50 percent up to and including 250 percent of the authorized bandwidth: As specified by the following equation but in no event less than 11 decibels:

$A = 11 + 0.4(P - 50) + 10 \text{ Log}_{10} B$.
(Attenuation greater than 56 decibels or to an absolute power of less than −13 dBm/1MHz is not required.)

(ii) In any 1 MHz band, the center frequency of which is removed from the assigned frequency by more than 250 percent of the authorized bandwidth: At least $43 + 10 \text{ Log}_{10}$ (the mean output power in watts) decibels, or 80 decibels, whichever is the lesser attenuation. The authorized bandwidth includes the nominal radio frequency bandwidth of an individual transmitter/modulator in block-assigned bands. Equipment licensed prior to April 1, 2005 shall only be required to meet this standard in any 4 kHz band.

(iii) The emission mask in paragraph (a)(2)(i) of this section applies only to the band edge of each block of spectrum, but not to subchannels established by licensees. The value of P in the equation is the percentage removed from the carrier frequency and assumes that the carrier frequency is the center of the actual bandwidth used. The emission mask can be satisfied by locating a carrier of the subchannel sufficiently far from the channel edges so that the emission levels of the mask are satisfied. The emission mask shall use a value B (bandwidth) of 40 MHz, for all cases even in the case where a narrower subchannel is used (for instance the actual bandwidth is 10 MHz) and the mean output power used in the calculation is the sum of the output power of a fully populated channel. For block assigned channels, the out-of-band emission limits apply only outside the assigned band of operation and not within the band.

(b) [Reserved]

§ 30.405 Transmitter power limitations.

On any authorized frequency, the average power delivered to an antenna in this service must be the minimum amount of power necessary to carry out the communications desired. Application of this principle includes, but is not to be limited to, requiring a licensee who replaces one or more of its antennas with larger antennas to reduce its antenna input power by an amount appropriate to compensate for the increased primary lobe gain of the replacement antenna(s). In no event shall the average equivalent isotropically radiated power (EIRP), as referenced to an isotropic radiator, exceed the following:

MAXIMUM ALLOWABLE EIRP

Frequency band (MHz)	Fixed (dBW)
27,500–28,350[1]	+ 55
38,600–40,000	+ 55

[1] For Point-to-multipoint user stations authorized in these bands, the EIRP shall not exceed 55 dBw or 42 dBw/MHz.

§ 30.406 Directional antennas.

(a) Unless otherwise authorized upon specific request by the applicant, each station authorized under the rules of this subpart must employ a directional antenna adjusted with the center of the major lobe of radiation in the horizontal plane directed toward the receiving station with which it communicates: *provided, however,* where a station communicates with more than one point, a multi- or omni-directional antenna may be authorized if necessary.

(b) Fixed stations (other than temporary fixed stations) must employ transmitting and receiving antennas (excluding second receiving antennas for operations such as space diversity) meeting the appropriate performance Standard A indicated in the table to this section, except that in areas not subject to frequency congestion, antennas meeting performance Standard B may be used. For frequencies with a Standard B1 and a Standard B2, in order to comply with Standard B an antenna must fully meet either Standard B1 or Standard B2. Licensees shall comply with the antenna standards table shown in this paragraph in the following manner:

(1) With either the maximum beamwidth to 3 dB points requirement or with the minimum antenna gain requirement; and

(2) With the minimum radiation suppression to angle requirement.

Frequency (MHz)	Category	Maximum beamwidth to 3 dB points[1] (included angle in degrees)	Minimum antenna gain (dbi)	Minimum radiation suppression to angle in degrees from centerline of main beam in decibels						
				5° to 10°	10° to 15°	15° to 20°	20° to 30°	30° to 100°	100° to 140°	140° to 180°
38,600 to 40,000[2]	A	n/a	38	25	29	33	36	42	55	55
	B	n/a	38	20	24	28	32	35	36	36

[1] If a licensee chooses to show compliance using maximum beamwidth to 3 dB points, the beamwidth limit shall apply in both the azimuth and the elevation planes.
[2] Stations authorized to operate in the 38,600–40,000 MHz band may use antennas other than those meeting the Category A standard. However, the Commission may require the use of higher performance antennas where interference problems can be resolved by the use of such antennas.

§ 30.407 Antenna polarization.

In the 27,500–28,350 MHz band, system operators are permitted to use any polarization within its service area, but only vertical and/or horizontal polarization for antennas located within 20 kilometers of the outermost edge of their service area.

PART 101—FIXED MICROWAVE SERVICES

■ 16. The authority citation for part 101 continues to read as follows:

Authority: 47 U.S.C. 154, 303.

§ 101.17 [Removed and Reserved]

■ 17. Remove and reserve § 101.17.

§ 101.56 [Removed and Reserved]

■ 18. Remove and reserve § 101.56.

■ 19. Section 101.63 is amended by revising paragraph (a) to read as follows:

§ 101.63 Period of construction; certification of completion of construction.

(a) Each Station, except in Multichannel Video Distribution and Data Service, Local Multipoint Distribution Service, and the 24 GHz Service, authorized under this part must be in operation within 18 months from the initial date of grant.

* * * * *

§ 101.101 [Amended]

■ 20. Section 101.101, the table, is amended by removing the entries ''27,500–28,350'' and ''38,600–40,000.''

■ 21. Section 101.103 is amended by revising paragraph (g)(1) and by removing paragraph (i) as follows:

§ 101.103 Frequency coordination procedures.

* * * * *

(g) * * *

(1) When the transmitting facilities in a Basic Trading Area (BTA) are to be operated in the bands 29,100–29,250 MHz and 31,000–31,300 MHz and the facilities are located within 20 kilometers of the boundaries of a BTA, each licensee must complete the frequency coordination process of

paragraph (d)(2) of this section with respect to neighboring BTA licensees that may be affected by its operations prior to initiating service. In addition, all licensed transmitting facilities operating in the bands 31,000–31,075 MHz and 31,225–31,300 MHz and located within 20 kilometers of neighboring facilities must complete the frequency coordination process of paragraph (d)(2) of this section with respect to such authorized operations before initiating service.

* * * * *

§ 101.107 [Amended]

■ 22. Section 101.107 is amended by removing the entry ''27,500 to 28,350'' from the table following paragraph (a).

■ 23. Section 101.109 is amended by removing the entries ''27,500 to 28,350'' and ''38,600 to 40,000'' in the table following paragraph (c) and revising footnote 7 to the table.

The revision reads as follows:

§ 101.109 Bandwidth.

* * * * *

(c) * * *

[7] For channel block assignments in the 24,250–25,250 MHz band, the authorized bandwidth is equivalent to an unpaired channel block assignment or to either half of a symmetrical paired channel block assignment. When adjacent channels are aggregated, equipment is permitted to operate over the full channel block aggregation without restriction.

* * * * *

§ 101.113 [Amended]

■ 24. Section 101.113 is amended by removing the entries ''27,500–28,350'' and ''38,600 to 40,000'' in the table following paragraph (a).

§ 101.115 [Amended]

■ 25. Section 101.115 is amended by removing the entry ''38,600 to 40,000'' in the table following paragraph (b)(2), removing footnote 14, and redesignating footnote 15 as footnote 14.

■ 26. Section 101.147 is amended by revising the portion of paragraph (a) preceding the Notes, revising paragraph (t), and removing and reserving paragraph (v).

The revisions read as follows:

§ 101.147 Frequency assignments.

(a) Frequencies in the following bands are available for assignment for fixed microwave services.

928.0–929.0 MHz (28)
932.0–932.5 MHz (27)
932.5–935 MHz (17)
941.0–941.5 MHz (27)
941.5–944 MHz (17) (18)
952.0–960.0 MHz (28)
1,850–1,990 MHz (20) (22)
2,110–2,130 MHz) (1) (3) (7) (20) (23)
2,130–2,150 MHz (20) (22)
2,160–2,180 MHz (1) (2) (20) (23)
2,180–2,200 MHz (20) (22)
2,450–2,500 MHz (12)
2,650–2,690 MHz
3,700–4,200 MHz (8) (14) (25)
5,925–6,425 MHz (6) (14) (25)
6,425–6,525 MHz (24)
6,525–6.875 MHz (14) (33)
6,875–7,125 MHz (10), (34)
10,550–10,680 MHz (19)
10,700–11,700 MHz (8) (9) (19) (25)
11,700–12,200 MHz (24)
12,200–12,700 MHz (31)
12,700–13,200 (22), (34)
13,200–13,250 MHz (4) (24) (25)
14,200–14,400 MHz (24)
17,700–18,820 MHz (5) (10) (15)
17,700–18,300 MHz (10) (15)
18,820–18,920 MHz (22)
18,300–18,580 MHz (5) (10) (15)
18,580–19,300 MHz (22) (30)
18,920–19,160 MHz (5 (10) (15)
19,160–19,260 MHz (22)
19,260–19,700 MHz (5) (10) (15)
19,300–19,700 MHz (5) (10) (15)
21,200–22,000 MHz (4) (11) (12) (13) (24) (25) (26)
22,000–23,600 MHz (4) (11) (12) (24) (25) (26)
24,250–25,250 MHz
29,100–29,250 MHz (5), (16)
31,000–31,300 MHz (16)
42,000–42,500 MHz
71,000–76,000 MHz (5) (17)
81,000–86,000 MHz (5) (17)
92,000–94,000 MHz (17)
94,100–95,000 MHz (17)

* * * * *

(t) *29,100–29,250; 31,000–31,300 MHz.* These frequencies are available for LMDS systems. Each assignment will be made on a BTA service area basis, and the assigned spectrum may be subdivided as desired by the licensee.

* * * * *

§ 101.149 [Removed and Reserved]

■ 27. Remove and reserve § 101.149.

■ 28. Section 101.1005 is amended by revising paragraphs (a) and (b) to read as follows:

§ 101.1005 Frequencies available.

(a) The following frequencies are available for assignment to LMDS in two license blocks:

Block A of 300 MHz
29,100–29,250 MHz
31,075–31,225 MHz
Block B of 150 MHz
31,000–31,075 MHz
31,225–31,300 MHz

(b) In Block A licenses, the frequencies are authorized as follows:

(1) 29,100–29,250 MHz is shared on a co-primary basis with feeder links for non-geostationary orbit Mobile Satellite Service (NGSO/MSS) systems in the band and is limited to LMDS hub-to-subscriber transmissions, as provided in §§ 25.257 and 101.103(h) of this chapter.

(2) 31,075–31,225 MHz is authorized on a primary protected basis and is shared with private microwave point-to-point systems licensed prior to March 11, 1997, as provided in § 101.103(b).

* * * * *

Subpart N—[Removed and Reserved]

■ 29. Remove and reserve subpart N, consisting of §§ 101.1201 through 101.1209.

50 CFR Parts 28 and 29
Management of Non-Federal Oil and Gas Rights; Final Rule

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Parts 28 and 29

[Docket No. FWS–HQ–NWRS–2012–0086; FXRS12610900000–156–FF09R24000]

RIN 1018–AX36

Management of Non-Federal Oil and Gas Rights

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), are finalizing regulations governing the exercise of non-Federal oil and gas rights outside of Alaska in order to improve our ability to protect refuge resources, visitors, and the general public's health and safety from potential impacts associated with non-Federal oil and gas operations located within refuges. The exercise of non-Federal oil and gas rights refers to oil and gas activities associated with any private, State, or tribally owned mineral interest where the surface estate above such rights is administered by the Service as part of the Refuge System. The existing non-Federal oil and gas regulations have remained unchanged for more than 50 years and provide only vague guidance to staff and operators. This rule will make the regulations more consistent with existing laws, policies, and industry practices. It is designed to provide regulatory clarity and guidance to oil and gas operators and refuge staff, provide a simple process for compliance, incorporate technological improvements in exploration and drilling technology, and ensure that non-Federal oil and gas operations are conducted in a manner that avoids or minimizes impacts to refuge resources.

DATES: This rule is effective December 14, 2016.

ADDRESSES: Supplementary documents prepared in conjunction with preparation of this rule, including an economic analysis and an environmental impact statement, and the public comments received on the proposed rule are available at *www.regulations.gov* at Docket No. FWS–HQ–NWRS–2012–0086.

FOR FURTHER INFORMATION CONTACT: Scott Covington, U.S. Fish and Wildlife Service, Division of Natural Resources and Planning, MS: NWRS, 5275 Leesburg Pike, Falls Church, VA 22041; telephone 703–358–2427.

SUPPLEMENTARY INFORMATION:

Executive Summary

This rule revises the existing regulations at subpart C, part 29, of title 50 of the Code of Federal Regulations (CFR) and adds new regulations at subpart D of 50 CFR part 29 to govern the exercise of non-Federal oil and gas rights within refuges outside of Alaska. This revision improves the effectiveness of the Service to protect refuge resources and uses from avoidable, unnecessary impacts by non-Federal oil and gas operations. It will also bring consistency and clarity for both operators and the Service as to the process by which operators may access non-Federal oil and gas on the National Wildlife Refuge System (NWRS). The Service defines the National Wildlife Refuge System to consist of all lands, waters, and interests therein that it administers (25 CFR 25.12) and does not apply its regulations to the non-Federal lands found within refuge boundaries (*i.e.,* inholdings).

The Service promulgated the current regulations at 50 CFR 29.32 to govern the exercise of non-Federal mineral rights on the NWRS more than 50 years ago, and they have not been updated since. The current regulations outline a general policy to minimize impacts to refuge resources to the extent practicable from all activities associated with non-Federal mineral exploration and development where access is on, across, or through federally owned or controlled lands or waters of the NWRS. However, they have been ineffective at protecting refuge resources because they do not provide operators or refuge staff with an explicit process or requirements for operating on refuge lands, resulting in inconsistency in protections for refuge resources and uses.

Therefore, updating these regulations is a necessary exercise of the Service's authority to ensure that we are meeting our responsibilities under the National Wildlife Refuge System Administration Act (NWRSAA), as amended by the National Wildlife Refuge System Improvement Act (NWRSIA) (16 U.S.C. 668dd *et seq.*), to protect refuge resources and uses while ensuring that mineral rights holders have reasonable access to develop their non-Federal oil and gas.

Key components of the rule include:

- A permitting process for new operations;
- A permitting process for well-plugging and reclamation for all operations;
- Information requirements for particular types of operations;
- Operating standards so that both the Service and the operator can readily identify what standards apply to particular operations;
- Fees for new access beyond that held as part of the operator's oil and gas right;
- Financial assurance (bonding);
- Penalty provisions;
- Exemption of refuges in Alaska from these requirements;
- Codification of some existing Service policies and practices.

Background

Advance Notice of Proposed Rulemaking, Proposed Rule, and Public Comment Period

This rulemaking effort began on February 24, 2014, when we issued an advance notice of proposed rulemaking (ANPR) (79 FR 10080) to assist us in developing the proposed rule. The ANPR had a 60-day comment period, ending April 25, 2014. On June 9, 2014, we reopened the comment period for another 30 days, ending July 9, 2014 (79 FR 32903). We received comments from unaffiliated private citizens (36), conservation organizations (14), State agencies (8), counties (2), Alaska Native Corporations (2), a tribal agency, oil and gas owners and operators (6), business associations (5), and a Federal agency, along with almost 80,000 form letter comments from members of two environmental organizations. The majority of commenters were in favor of strengthening and expanding the regulations to better protect refuge resources and values. Some commenters requested that we not revise the existing regulations, while others questioned whether the Service had the statutory authority to regulate non-Federal oil and gas operations on refuges.

We utilized these comments to prepare the proposed rule, which we published on December 11, 2015 (80 FR 77200), and opened, with the associated draft Environmental Impact Statement (EIS), a 60-day comment period. During this comment period we received approximately 39,600 responses (mostly form letters) indicating general support regulating oil and gas activities on refuges and our proposed rule. However, many commented that the proposed rule did not go far enough in regulating these activities, with some requesting a ban on any oil and gas activity, or at least hydraulic fracturing, in refuges. We also received 12 letters from State agencies, oil and gas associations, oil companies, and an individual opposing the rulemaking. Primary reasons for opposition are that these entities believe that the Service lacks authority to regulate private oil and gas and existing State and Federal regulations are sufficient to protect refuges. More information on the ANPR,

proposed rule, and public comments is available at *http://www.fws.gov/refuges/oil-and-gas/rulemaking.html* and also at *www.regulations.gov* at Docket No. FWS–HQ–NWRS–2012–0086.

A detailed discussion of all changes made after consideration of comments on the proposed rule is contained in the *Summary of and Response to Public Comments* section below.

Non-Federal Oil and Gas on the NWRS

Non-Federal oil and gas rights exist within the NWRS in situations where the oil and gas interest has been severed from the estate acquired by the United States, either because:

- The United States acquired property from a grantor that did not own the oil and gas interest; or
- The United States acquired the property from a grantor that reserved the oil and gas interest from the conveyance.

Non-Federal oil and gas interests can be held by individuals, partnerships, for-profit corporations, nonprofit organizations, tribes, or States and their political subdivisions. We recognize that interests in non-Federal oil and gas are property rights that may be taken for public use only with payment of just compensation in accordance with the Fifth Amendment of the U.S. Constitution. Application of this rule is not intended to result in the taking of a property interest, but rather to impose reasonable regulations on activities that involve or affect federally owned lands and resources of the NWRS to avoid or minimize impacts from such activities to the maximum extent practicable.

These regulations do not apply to the development of the Federal mineral estate, including Federal oil and gas, which are administered by the Bureau of Land Management (BLM), under the Mineral Leasing Act and the Federal Land Policy and Management Act. In areas where oil and gas rights are owned by the United States, and leasing is authorized, the applicable regulations are found at 43 CFR part 3100 *et seq.* There is a general prohibition to leasing Federal oil and gas on refuge lands (43 CFR 3101.5–1). These regulations do not apply to refuges located in Alaska.

Examples of non-Federal oil and gas operations conducted on refuges include: Geophysical (seismic) exploration; exploratory well drilling; field development well drilling; oil and gas well production operations, including installation and operation of well flowlines and gathering lines; enhanced recovery operations; well plugging and abandonment; and site reclamation.

Impacts of Oil and Gas Activities on Refuge Resources and Uses

Oil and gas activities have the potential to adversely impact refuge resources and uses in some or all of the following manners:

- Surface water quality degradation from spills, storm water runoff, erosion, and sedimentation;
- Soil and groundwater contamination from existing drilling mud pits, poorly constructed wells, improperly conducted enhanced recovery techniques, spills, and leaks;
- Air quality degradation from dust, natural gas flaring, hydrogen sulfide gas, and emissions from production operations and vehicles;
- Increased noise from seismic operations, blasting, construction, oil and gas drilling and production operations;
- Reduction of roadless areas on refuges;
- Noise and human presence effects on wildlife behavior, breeding, and habitat use;
- Disruption of wildlife migration routes;
- Adverse effects on sensitive and endangered species;
- Viewshed (an area of land, water, or other environmental element that is visible to the human eye from a fixed vantage point) intrusion by roads, traffic, drilling equipment, production equipment, pipelines, etc.;
- Night sky intrusion from artificial lighting and gas flares;
- Disturbance to archaeological and cultural resources associated with seismic exploration and road/site preparation, associated with maintenance activities, or by spills;
- Visitor safety hazards from equipment, pressurized vessels and lines, presence of hydrogen sulfide gas, and leaking oil and gas that can create explosion and fire hazards;
- Wildlife mortality from oil spills or entrapment in open-topped tanks or pits, poaching, and vehicle collisions;
- Fish kills from oil and oilfield brine spills; and
- Vegetation mortality from oilfield brine spills.

Service Authority To Regulate Non-Federal Oil and Gas Activities

As noted in the preamble to the proposed rule, one of the principal recommendations of the 2003 Government Accountability Office report to Congress was for the Service to clarify its regulatory authority with respect to the exercise of non-Federal oil and gas rights within the Refuge System. We provided in the preamble to the proposed rule an explanation of the basis for the Service's authority. As further discussed below, the Service received opposing public comments on its analysis. While some commenters asserted that the Service lacked the authority to regulate such private property rights, others agreed that we do have this regulatory authority.

After carefully considering the public comments, as well as engaging in further discussions with the Office of the Solicitor of the Department of the Interior, the Service concludes that the National Wildlife Refuge System Administration Act, as amended in 1997 by the National Wildlife Refuge System Improvement Act (NWRSAA) (16 U.S.C. 668dd *et seq.*), provides us the statutory authority to promulgate these regulations. In turn, Congress's authority to enact the NWRSAA is the Property Clause of the United States Constitution, which provides it the power ''to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States.'' U.S. Const. art IV, sec. 3, cl. 2.

In 1997, Congress declared the Service's mission to be: ''to administer a national network of lands and waters for the conservation, management, and where appropriate, restoration of the fish, wildlife, and plant resources and their habitats within the United States for the benefit of present and future generations of Americans.'' (16 U.S.C. 668dd(a)(2)). The NWRSAA further directs the Secretary of the Interior, in administering the System, to:

- Provide for the conservation of fish, wildlife, and plants, and their habitats within the NWRS;
- Ensure that the biological integrity, diversity, and environmental health of the NWRS are maintained for the benefit of present and future generations of Americans;
- Ensure that the mission of the NWRS and the purposes of each refuge are carried out;
- Ensure effective coordination, interaction, and cooperation with owners of land adjoining refuges and the fish and wildlife agency of the States in which the units of the NWRS are located;
- Assist in the maintenance of adequate water quantity and water quality to fulfill the mission of the NWRS and the purposes of each refuge;
- Recognize compatible wildlife-dependent recreational uses as the priority general public uses of the NWRS through which the American public can develop an appreciation for fish and wildlife;

• Ensure that opportunities are provided within the NWRS for compatible wildlife-dependent recreational uses; and

• Monitor the status and trends of fish, wildlife, and plants in each refuge.

To carry out its mission and these statutory directives to administer the Refuge System, Congress provided the Service the authority to issue regulations to carry out the NWRSAA (16 U.S.C. 668dd(b)(5)), as well as to prescribe regulations to ''permit the use of any areas within the System for any purpose. . . .'' (16 U.S.C. 668dd(d)(1)(A)). In this regard, the statutory authority of the Service is substantially similar to that of the National Park Service (NPS), which since 1979 has regulated the exercise of non-federal oil and gas rights within the Park System on the basis of its authority to issue regulations ''necessary or proper for the use and management of System units'' (54 U.S.C. 100751).

The rule ''applies to all operators conducting non-Federal oil and gas operations outside of Alaska on Service-administered surface estates held in fee or less-than fee (excluding coordination areas) or Service-administered waters within the boundaries of the refuge to the extent necessary to protect those property interests.'' Thus, the regulation directly relates to the Service mission ''to administer a national network of lands and waters for the conservation, management, and where appropriate, restoration of the fish, wildlife, and plant resources and their habitats . . .'' and various statutory directives, including the conservation of fish and wildlife within the NWRS and ensuring their biological integrity. The rule, therefore, falls within the Service's authority to issue regulations to carry out the NWRSAA (16 U.S.C. 668dd(b)(5)). Regulating the use of Service-administered surface estates and waters also falls within the Service's statutory authority to issue regulations to ''permit the use of any areas within the System for any purpose. . . .''

Several relatively recent appellate court decisions support our interpretation of the NWRSAA. In *Burlison* v. *United States* (533 F.3d 419 (6th Cir. 2008)), the appeals court held that the Service's authority to permit the use of roads on refuge lands included the power to reasonably regulate a reserved easement within a refuge:

> We do conclude, however, that the Fish and Wildlife Service may legitimately exercise the sovereign police power of the Federal Government in regulating the easement. Section 668dd(d)(1)(B) delegates the power to the Secretary of the Interior (and the Fish and Wildlife Service) ''under such regulations as he may prescribe,'' to ''permit the use of . . . any areas within the System for purposes such as . . . roads.''

Id. at 438. *Burlison* also relied on the decision of the U.S. Court of Appeals Eighth Circuit in *Duncan Energy Co.* v. *United States Forest Service,* 50 F.3d 584 (8th Cir. 1995), which upheld the Forest Service's authority to regulate non-Federal oil and gas rights on the basis of statutory authority that is also very similar to that of the NWRSAA:

> Under the Bankhead-Jones Farm Tenant Act, Congress directed the Secretary of Agriculture ''to develop a program of land conservation and land utilization.'' 7 U.S.C. Sec. 1010 (1988). The Act directs the Secretary to make rules as necessary to ''regulate the use and occupancy'' of acquired lands and ''to conserve and utilize'' such lands. 7 U.S.C. Sec. 1011(f) (Supp.V.1993). The Forest Service, acting under the Secretary's direction, manages the surface lands here as part of the National Grasslands, which are part of the National Forest System. See 16 U.S.C. Sec. 1609(a) (1988). Congress has given the Forest Service broad power to regulate Forest System land. See, *e.g.,* 7 U.S.C. Sec. 1011 (1988 & Supp.V.1993); 16 U.S.C. Sec. 551 (Supp.V.1993).

Id. at 589. Similarly, the U.S. Court of Appeals for the Fifth Circuit has interpreted the NWRSAA to authorize the Service to regulate access and use of refuge lands by holders of valid interests in land. *School Board of Avoyelles Parish* v. *United States Department of the Interior* (647 F.3d 570 (5th Cir. 2011)). The School Board administered an enclosed estate within the refuge and under Louisiana property law was entitled to a right of passage over neighboring property to the nearest public road. The Service did not dispute that a right to cross refuge lands existed, but asserted it could condition such use, and imposed permit limits on the times of day and types of vehicles that could use the right-of-way to access the enclosed estate. Reversing the district court, the Fifth Circuit affirmed the authority under the NWRSAA and Service regulations to require a permit and to impose reasonable conditions for ''any person entering a national wildlife refuge'' even where that person held property rights afforded under the laws of Louisiana. Citing *Burlison* and a series of Supreme Court and circuit court cases interpreting the Property Clause, the Fifth Circuit held that requiring a permit for entry and use, and imposing reasonable restrictions on the exercise of the non-Federal property rights, was well within Federal authority under the Property Clause.

The primary arguments that the Service lacks the necessary regulatory authority are based on the analysis contained in a 1986 memorandum from the Associate Solicitor, Division of Conservation and Wildlife (''1986 Opinion'') that concluded the Service then lacked the authority from Congress to adopt regulations requiring permits for access by holders of mineral interests, unless the authority was provided for in the deed by which the United States acquired title to the surface estate. That opinion relied in part on *Caire* v. *Fulton,* 1986 U.S. Dist. LEXIS 31049 (W.D. La. 1986), an unpublished district court decision, where the United States had explicitly agreed during eminent domain proceedings to delete from the proposed deed a provision authorizing Service regulation of the oil and gas interests not being acquired.

The 1986 Opinion was also premised on a provision of the Migratory Bird Conservation Act (MBCA), originally enacted in 1929 and amended in 1935, that now provides:

> The Secretary of the Interior may do all things and make all expenditures necessary to secure the safe title in the United States to the areas which may be acquired under this subchapter, but no payment shall be made for any such areas until the title thereto shall be satisfactory to the Attorney General or his designee, but the acquisition of such areas by the United States shall in no case be defeated because of rights-of-way, easements, and reservations which from their nature will in the opinion of the Secretary of the Interior in no manner interfere with the use of the areas so encumbered for the purposes of this subchapter, but such rights-of-way, easements, and reservations retained by the grantor or lessor from whom the United States receives title under this subchapter or any other Act for the acquisition by the Secretary of the Interior of areas for wildlife refuges shall be subject to rules and regulations prescribed by the Secretary of the Interior for the occupation, use, operation, protection, and administration of such areas as inviolate sanctuaries for migratory birds or as refuges for wildlife; and it shall be expressed in the deed or lease that the use, occupation, and operation of such rights-of-way, easements, and reservations shall be subordinate to and subject to such rules and regulations as are set out in such deed or lease or, if deemed necessary by the Secretary of the Interior, to such rules and regulations as may be prescribed by him from time to time. (16 U.S.C. 715e)

The Service broadly construes its statutory authority to issue regulations ''to permit the use of any area within the System for any purpose'' and that the NWRSAA, not the MBCA, is therefore the controlling authority with respect to regulating non-federal oil and gas rights. While the specific facts of the unreported decision in *Caire* have always suggested that it was of limited precedential value, the Fifth Circuit's

decision in *Avoyelles Parish* is the controlling juridical authority to apply in that circuit. Moreover, even if the MBCA provisions were construed to limit the applicability of the NWRSAA authority, which clearly it does not, those limits would apply only to lands acquired under that Act. As of the end of Fiscal Year 2015, approximately 31.3 percent of the total 8,100,204.93 acres of Federal lands and interests in lands in 252 of the Nation's approximately 560 National Wildlife Refuges have been purchased under authority of the MBCA.

In our review of various deeds used by the Service over the years to acquire lands and interests in lands that make up the NWRS, we find many variations were used and that it is not possible to review or summarize here all such provisions, or ensure that we are familiar with the circumstances surrounding each acquisition of NWRS lands that did not include oil and gas rights. As part of the pre-application meeting with the Service (see § 29.91), and/or the submission of a permit application (see § 29.94), we will provide the opportunity to receive copies of any deeds and other relevant information that the applicant believes would control or otherwise limit the applicability of any provision of this rule to the particular applicant's operations. We intend this process to ensure on a case-by-case basis that the Service fully considers all relevant information concerning the particular acquisitions before imposing specific requirements on the applicant's operations. The Service will respect applicable deed conditions; however, the rule requirements will apply to the extent that they do not conflict with such deed conditions, which we believe will be the situation in most cases. The Solicitor's Office has withdrawn the 1986 Opinion on the basis that the opinion is out of date and does not reflect the current state of law with regard to the Service's full authorities to manage lands within units of the NWRS. The Solicitor will be issuing a new opinion in the near future that sets out the supporting legal analysis of the underlying authorities upon which the Service is adopting this rule.

Final Rule

Summary of Final Rule

The rule generally requires that operators receive permits for new non-Federal oil and gas activities on the NWRS; provide a regulatory framework to achieve the necessary protections for refuge resources; and improve regulatory consistency to the benefit of both refuge resources and oil and gas operators. The rule contains performance-based standards that provide flexibility to resource managers and operators to use evolving technologies within different environments to achieve the standards. It establishes standards for surface use and site management, specific resource protections, spill prevention and response, waste management, and reclamation. Additionally, the rule contains procedures for permit applications and Service review and approval. Finally, there are provisions for financial assurance (bonding), access fees, mitigation, change of operator, permit modification, and prohibitions and penalties. We incorporated public input received during the rulemaking process to shape the rule.

Permitting Approach

The permitting process allows the Service to ensure that refuge resources, as well as public health and safety, are protected to the greatest extent practicable. Under the rule, the Service requires the following:

a. *New operations are by permit only.* Operators conducting new operations must obtain an operations permit before commencing new or modified operations within a refuge (§ 29.42). This requirement addresses exploration, drilling, production, enhanced recovery operations, transportation, plugging, and reclamation operations. We encourage operators to contact the Service early in the process so that the Service can provide suggestions to improve the application. Additionally, an operator will be authorized to begin operations only after the operator has received all other required State and Federal permits.

b. *Operations under an existing Service permit may continue under the terms of that permit,* but must comply with existing Federal, State, and local laws and regulations and the applicable general terms and conditions of this rule (§ 29.43). Operators are required to obtain a new permit or amend their existing permit if they propose to conduct new operations or modify their existing operations (*i.e.,* proposed activities outside the scope of their existing approval that will have impacts on refuge resources as determined by the Service). At the time of reclamation, the Service will review existing permits and modify them as necessary to ensure compliance with all Service reclamation standards.

c. *Operators with operations not under a Service permit* being conducted prior to the effective date of this rule, or prior to a boundary change or establishment of a new refuge, are considered ''pre-existing operators'' and may continue to operate as they have been, but they must comply with existing Federal, State, and local laws and regulations and the applicable general terms and conditions of this rule (§ 29.44). Additionally, these operators are required to obtain an operations permit for any new operations or for any modification to their existing operation. Finally, once production operations cease, the operator must obtain an operations permit for plugging and reclamation, or to maintain their well(s) in extended shut-in status.

d. *All operators must have a permit* for plugging and reclamation and comply with all Service reclamation standards.

e. When pre-existing operations are transferred, the new operator must obtain an operations permit.

f. *Wells drilled from outside refuges or on non-Federal inholdings to access non-Federal minerals* are exempt from these regulations.

g. *Operations on refuges in Alaska* are exempt from these regulations. However, the performance-based standards of this rule may be used, as appropriate, as guidance in determining how an operator would meet the various requirements of ANILCA and ANCSA to protect refuge resources and uses.

The Service finds that this permitting process is the best way to manage oil and gas operations and protect refuge resources on the NWRS and using time, place, and manner stipulations are the most effective way for the Service to avoid or minimize impacts. The ''place'' factor in the ''time, place, and manner'' equation is often most important in terms of ability to protect an environmental resource. The risks created by a poorly selected location cannot easily be overcome with even the best operational methods. Conversely, proper site selection can do much to mitigate the effects of accidents or environmentally unsound practices. The ''time'' factor restricts the timing of operations to remove or minimize impacts on resources that are only seasonally present. The ''manner'' factor is the method in which oil and gas activities are conducted, using best management practices. Therefore, requiring a permit that contains such stipulations is the most effective way to avoid or minimize impacts of new operations.

Proper site planning, timing restrictions, and best management practices established through the permit process for new operations will accomplish great improvements in resource protection. Because existing

operations with a special use permit already have stipulations in those permits that have been implemented to protect refuge resources and uses, they are allowed to continue their operations under the terms of that permit. Furthermore, the Service is not requiring a permit for operators with existing operations not currently under a permit (pre-existing operations) because a majority of the impacts avoided or mitigated under the permit have already occurred, and the permit process can result in substantial administrative and operational costs on both the Service and the operator. These costs (similar to those of permitting new operations) could be disproportional to the environmental benefits gained where the operator's well has already been drilled and the area of operations (access route, well site, production facilities, and routes for gathering lines) has already been established.

Our analysis found that the Service could eliminate many of the ongoing, unnecessary impacts to refuge resources and uses resulting from the production phase of pre-existing operations by enforcing State laws and regulations on Service-administered lands and waters. Making violation of applicable State laws related to oil and gas a prohibited act under the rule allows the Service to enforce these requirements as Federal requirements, and so gives us greater enforcement capabilities in ensuring that unnecessary impacts from these operations, such as leaks and spills, are avoided or minimized. This approach to permitting allows the Service to focus its limited time and resources on those new operations that create the highest level of incremental impacts. Also, by requiring all operators, pre-existing, existing with a Service-issued permit, and new, to have a permit for plugging and reclamation, we can ensure rehabilitation of impacted habitat.

When a well is drilled on inholdings or non-Federal adjacent lands, impacts to refuge resources are avoided or minimized to a great extent. Therefore, the Service's approach of exempting downhole aspects of these operations that occur within a refuge from the regulations is intended to provide an incentive for operators to use drilling from a surface location not administered by the Service in order to reach their oil and gas rights under the refuge-administered surface estate. However, anytime an operator needs to physically cross Service land for access, including access to a non-Federal surface location, such as an inholding, to conduct operations, then the operator must comply with the applicable provisions of this subpart for obtaining approval from the Service for such access, including obtaining an operations permit covering the new access or modification to the existing access.

Operating Standards

The Service developed this rule using a suite of performance-based standards that establish goals and define a desired level of protection for refuge resources and uses. This approach provides flexibility to resource managers and operators to best protect refuge resources and uses over time and across various environments by uses of varied technologies and methods. Resource managers and operators will identify and develop specific actions and best management practices that are then incorporated into operations permits. In contrast, prescriptive regulations define specific requirements of time, place, and manner and may not fully consider how these measures achieve the desired level of resource protection or how they may apply in different environments. The Service examined other Federal and State oil and gas regulations and determined that the performance-based standards approach provided the most efficient means of successfully avoiding or minimizing the effects of oil and gas operations on refuge resources and visitor uses. A one-size-fits-all (*i.e.,* prescriptive) approach does not work due to the widely differing environments found at the various refuges with non-Federal oil and gas rights across the country. A performance-based standards model has been successfully used by NPS for more than 35 years and applied in the context of a permit that contains specific actions an operator must take to meet the regulatory standards.

In developing and analyzing the rule and alternatives, the Service found that the preponderance of impacts and risks of impacts to refuge resources associated with exploration and development of oil and gas emanate from surface activities. However, mishaps below the surface can adversely affect the surficial groundwater systems that are important to the success of many national wildlife refuges. This finding holds true for operations that include the use of hydraulic fracturing. The Service found that well drilling and production operations that include the use of hydraulic fracturing have similar types of surface activities (*e.g.,* road and pad construction, tractor-trailer truck traffic, use of water, use of chemicals, use of large diesel-powered engines, generation of waste) as operations that do not include hydraulic fracturing. Hydraulic fracturing operations, particularly those used in combination with horizontal drilling techniques to access oil or gas in shale or other ''tight'' formations, usually increase the scope, intensity, and duration of activities commonly associated with oil and gas well drilling and completion, as well as the pressures to which the well casings are subjected.

In the context of this rule, the term ''hydraulic fracturing'' means those operations conducted in an individual wellbore designed to increase the flow of hydrocarbons from the rock formation to the wellbore through modifying the permeability of reservoir rock by applying fluids under pressure to fracture it. It does not include the comprehensive list of all oil and gas activities associated with development that happens to include hydraulic fracturing. While the rule's operating standards are not specific to hydraulic fracturing operations, they were developed with the expectation that hydraulic fracturing will occur on refuge lands and give the Service the ability to effectively manage the additional impacts that hydraulic fracturing may have on refuge resources and uses.

The Service notes that BLM has recently promulgated regulations addressing hydraulic fracturing on Federal and Indian lands at 43 CFR part 3160 (80 FR 16128, March 26, 2015). We carefully considered the recently promulgated BLM oil and gas regulations on hydraulic fracturing. (The Service also notes that those regulations have been set aside by the U.S. District Court in Wyoming, and that decision is on appeal to the United States Court of Appeals for the Tenth Circuit.) The Service and BLM take different approaches to operating standards because of our differing statutory bases for regulating the exercise of oil and gas rights. Specifically, the BLM has regulatory authority over the development of the Federal mineral estate, including Federal oil and gas resources under Federal and Indian lands. Instead, these Service regulations address private property rights within refuges and are based on the authorities and directives of the NWRSAA, including ''to administer a national network of lands and waters for the conservation, management, and where appropriate, restoration of the fish, wildlife, and plant resources and their habitats within the United States for the benefit of present and future generations of Americans.'' Therefore, the Service's regulations are focused on avoiding or minimizing impacts to federally owned and administered lands and resources of the NWRS to the maximum extent

practicable by using the most technologically feasible, least damaging oil and gas development methods to protect refuge resources and uses.

The rule maintains the non-prescriptive operating standards from the proposed rule, which are similar to the existing NPS regulations in 36 CFR, subpart B (the ''9B'' regulations), and provide operators flexibility to design operations while protecting refuge resources, uses, and visitor health and safety. The Service's approach is to review an operator's submissions to determine if they are avoiding or minimizing impacts to the maximum extent practicable, and if not, to include in the operating permits the terms and conditions that will ensure that they do so.

State Regulations

The Service's goal in this rule is to provide a regulatory regime that complements State regulatory programs to the benefit of the surface estate and the resources for which we are entrusted, while not compromising the ability of operators to develop their resource. The Service and State oil and gas agencies have fundamentally different missions. The Service's legal mandate is to conserve fish, wildlife, and plant resources and their habitats for the benefit of present and future generations. In contrast, State oil and gas regulations typically focus on the protection of mineral rights and ''conservation'' of the oil and gas resources (*i.e.,* minimizing waste of oil and gas resources). From a regulatory perspective, management of oil and gas operations is necessary in order for the Service to protect its surface resources and meet its congressionally mandated mission.

The Service's intention is to avoid or minimize potential procedural and operational duplication of State programs, while working cooperatively to achieve common objectives between the Service, States, and operators. The Service received several comments from the public on the effectiveness of State regulations in protecting refuge resources and uses, and that issue is discussed further below in our response to comments.

In the context of enforcing State oil and gas regulations, the Service focus is on noncompliance issues that have the potential to adversely affect refuge resources and visitor uses. Making violation of non-conflicting provisions of State oil and gas law and regulations a prohibited act under the rule allows us to enforce on refuges as a matter of Federal law, the same requirements already imposed on operators by a State. States may not have enough inspectors to ensure companies are meeting State standards. Louisiana, the State with the most non-Federal oil and gas production on refuge lands, recently reported that it lacks an adequate number of inspectors and its inspection rate is too low. Under this rule, Refuge Law Enforcement will work cooperatively with States to ensure that operators on refuges are meeting Service and State regulatory requirements with a minimum of duplication.

Summary of and Response to Public Comments

A summary of substantive comments and Service responses is provided below followed by a table that sets out changes we have made to the proposed rule based on the analysis of the comments and other considerations.

Authority

1. *Comment:* We received comments both in opposition to and in support of our general authority to manage oil and gas operations on Refuge lands. Commenters opposing our authority generally noted that they believe the Service has limited authority to regulate oil and gas operations based on the authority by which the Service acquired the land and specific deed language in the Migratory Bird Conservation Act (MBCA; 16 U.S.C. 715e) and the Supreme Court decision in *United States* v. *Little Lake Misere Land Co.* (412 U.S. 580,597–98 (1973)), which interpreted the MBCA to require the Service to express in the deed language that non-Federal mineral rights will be subject to regulation. Commenters also cited subsequent case law and the legislative history of both the National Wildlife Refuge System Administration Act, as amended by the National Wildlife Refuge System Improvement Act (16 U.S.C. 668dd) (NWRSAA and NWRSIA), to contend that the Service has not since been granted specific authority to regulate non-Federal mineral rights and so, absent specific deed language, the Service is limited to common law in protecting refuge resources and uses from impacts associated with oil and gas operations.

Other commenters expressed support for our general authority and responsibility to promulgate regulations to manage non-Federal oil and gas based on the Property Clause of the Constitution (U.S. Const.) and the NWRSIA, as well as subsequent case law that has held that the Service does have the authority to reasonably regulate access to private rights on the NWRS (see *Sch. Bd. of Avoyelles Par.* v. *U.S. Dep't of Interior,* 647 F.3d 570, 581, 581 n.4 (5th Cir. 2011); *Burlison* v. *United States,* 533 F.3d 419, 434–35 (6th Cir. 2008)).

Service Response: We have carefully considered all the comments, and the Service concludes that the NWRSAA, as amended by the NWRSIA, provides us the statutory authority pursuant to Congress' Property Clause powers to promulgate and implement these regulations as further explained in the preamble to the proposed rule. Furthermore, we conclude these regulations are also consistent with common law principles that a mineral rights holder's access to their minerals cannot unreasonably impact the surface estate. These regulations respect an operator's right to use the surface estate on refuges while protecting and minimizing impacts to refuge resources and uses to comply with the unique mission of these public lands ''for the conservation, management, and where appropriate, restoration of the fish, wildlife, and plant resources and their habitats within the United States for the benefit of present and future generations of Americans.'' (16 U.S.C. 668dd(a)(2)). For additional information on our authorities, see the section on *Service Authority to Regulate Non-Federal Oil and Gas Activities.* With regard to the comment citing the Supreme Court Case *U.S.* v. *Little Lake Misere Land Co.,* as we state in the *Service Authority to Regulate Non-Federal Oil and Gas Activities* section, the Service will respect applicable deed conditions, however, the rule requirements will apply to the extent that they do not conflict with such deed conditions.

Acquisition of Minerals Under the NWRS

2. *Comment:* The Service received several comments suggesting that the Service consider buying all non-Federal mineral rights to ensure complete protection of refuge resources and uses from these activities.

Service Response: The Service has determined that acquisition of all mineral rights in refuges is financially infeasible and unnecessary to protect refuge resources and uses. While the Service did not undertake a costly and time-intensive evaluation of the fair market value of the non-Federal oil and gas rights within the NWRS, in the EIS associated with this rulemaking we did consider full acquisition of such oil and gas rights, but this alternative was dismissed from further consideration because it was financially infeasible and unnecessary. Relying on our general knowledge of what acquiring a mineral right can cost in areas where there is potential for oil and gas development,

we conclude that it would be too costly for the Service to acquire all mineral rights that exist within the NWRS.

Additionally, the Service concludes that it can sufficiently protect refuge resources and uses as required by the NWRSAA and provide access to operators for developing their non-Federal oil and gas rights under this rule, and so acquisition of all mineral rights is unnecessary. Under the rule, the Service will determine on a case-by-case basis, and in collaboration with prospective operators, whether a proposed operation meets the operating standards and approval standards contained in this rule. If the proposed operation cannot meet Service standards for protecting refuge resources and uses, the Service has general statutory authority to acquire the mineral right from a willing seller in those instances.

Rule's Function With State and Federal Regulations

3. *Comment:* Several comments stated that State regulations fully accomplish all the necessary protections of NWRS resources and uses, and, therefore, the proposed rule is duplicative and unnecessary. Commenters contended that many of the operational restrictions of the proposed rule were duplicative or in conflict with State regulations, although no specific examples were provided. The Service also received comments that supported the Service's analysis that State regulations are not uniformly designed or intended to fully protect the surface owner's interests or, as in this case, mandates of the Service to protect NWRS resources and uses.

Service Response: While developing the proposed rule, the Service reviewed the oil and gas regulations of 43 States. Because of the differences between the objectives of State regulation and the rule, we found that State regulations do not fully address necessary protections for the conservation of fish and wildlife resources and public use on refuges. The Service's legal mandate is to conserve fish, wildlife, and plant resources and their habitats for the benefit of present and future generations. In contrast, State oil and gas regulations typically focus on the protection of mineral rights and conservation of oil and gas resources (*i.e.,* minimizing waste). States do provide for protection of surface and groundwater via well design requirements, setbacks, and oil pollution control measures. However, State programs vary in these areas, and also in regard to protection of many other surface resources and surface use conflicts.

Most States are consistent in deferring to landowners and operators to work out many of the details of surface uses, and formal surface use agreements between landowner and operator are common. In some States, like Oklahoma and New Mexico, oil and gas companies are required by statute to enter into these agreements before production begins. A surface use agreement may direct the specific locations of access routes, drilling sites, and flowlines that are placed on the property. Timing considerations may be critical for protections of wildlife that may be present only seasonally. The final regulations provide a consistent set of procedures and operational standards which when incorporated into an operations permit are the functional equivalent of a ''surface use agreement'' between the Service and operator.

Furthermore, the Service has carefully designed this rule to work in concert with the State oil and gas regulatory processes. The Service has analyzed which aspects of State oil and gas regulatory regimes are generally sufficient for protecting refuge resources and uses and which are not, and have sought to regulate in this rule only those activities where State regulatory regimes are not generally sufficient. Our analysis found the preponderance of impacts to refuge resources and uses associated with oil and gas activities emanate from surface uses, not the downhole aspects of an operation. Our analysis also found that there is a possibility of impacts to groundwater from downhole operations, so the rule provides the Service with the ability to go further than State regulations when necessary to protect groundwater.

Accordingly, the rule does not regulate most downhole activities related to an operation, including well construction and blowout prevention. The regulation does include a downhole operating standard to prevent the escape of fluids to the surface and for isolation and protection of usable water zones throughout the life of a well. Otherwise, the Service finds that State regulations are sufficient to ensuring that downhole operations are protective of refuge resources and uses, as well as public safety. As this example shows, the Service regulations avoid unnecessary procedural and operational duplication with State programs, and reflect the Service's intention to work cooperatively with States and operators to achieve common objectives.

4. *Comment:* Additionally, the Service received comments that recommended the Service not rely on State regulations to protect refuge resources and uses from the impacts associated with pre-existing operations, believing that the Service has been somewhat contradictory in its analysis that State regulations are not sufficient, but then relying on State regulations to protect refuge resources and uses from pre-existing operations in the proposed rule.

Service Response: The Service has considered these comments and would like to clarify its prior explanation why relying on existing Federal and State regulatory regimes is sufficiently protective. As required by Executive Order (E.O.) 12866, the Service analyzed the costs and benefits of each regulatory requirement being considered. This analysis found that new operations create the greatest additional impacts on refuges and that proper site planning, timing restrictions, and best management practices (BMPs) through a permit system accomplish the greatest improvement in resource protection. The permit process focuses on the full suite of time, place, and manner considerations on those new operations that create the highest level of incremental impacts. By applying a reclamation standard for all operations on refuges, including pre-existing operations, the rule also ensures long-term rehabilitation of habitat damaged by all operations.

While applying the full regulatory requirements to pre-existing operations may provide some incremental protection for refuge resources and uses, it would not retroactively eliminate a majority of the impacts to refuge resources and uses that have already taken place as a result of pre-existing operations. For example, pre-existing wells have already been drilled, the area of operations (access route, well site, production facilities, and routes for gathering lines) established, and impacts to refuge resources, such as to geology and soils, wetlands, and wildlife-dependent recreation, have all occurred prior to this rule being effective.

In terms of ongoing impacts from production, our analysis indicates that an operator's compliance with State laws will serve to improve protection of refuge resources and uses from ongoing impacts from these operations, in areas such as removal of waste, storage of chemicals, and leak and spill prevention. Where individual States' regulations do not specifically address an issue, the Service will continue to work cooperatively with operators to reduce impacts, or risks of impacts, to refuge resources and uses. This approach enables managers to focus limited resources on those operations with the greatest possible impacts to refuge resources and uses rather than an

indiscriminate administration of permits for the approximately 4,000 pre-existing operations. A general permit requirement would necessitate the Service to roughly double its oil and gas management resources from current levels, while the administrative costs to operators of pre-existing wells would be approximated to be initially $1,800 per well annually. Our analysis indicates these costs, in general, would be inefficiently applied and disproportionately high in general relative to the benefits to refuge resources and uses.

Scope: Inholdings

5. *Comment:* The Service received comments both expressing a lack of authority for the Service in regulating inholdings as well as comments asserting that the Service has both the authority and the responsibility to regulate operations on private lands, including inholdings, under the Property Clause and the NWRSIA, which commenters contend granted the Service the authority to regulate outside the boundaries of the Refuge to the extent that such activities interfere with the designated purpose of Federal lands (citing *Minnesota* v. *Block,* 660 F.2d 1240, 1249 (8th Cir.1981)). Some commenters also noted that the Service has taken a different approach from the NPS and suggested the Service adopt the NPS approach to inholdings.

Service Response: The Service has carefully considered these comments; however, the Service has concluded that no change should be made in the rule, which appropriately balances refuge protection, private property rights, and feasibility of administration. As discussed in the Final EIS, there are some potential cross-boundary impacts from oil and gas development on refuge resources and uses, such as spills or leaks migrating into refuge lands or waters or noise disturbance on wildlife and visitor experience. The Service has always worked, and will continue to work, with operators on inholdings and adjacent lands to mitigate or avoid any potential cross-boundary impacts, particularly those that may impact species protected under the Endangered Species Act. For instance if an operator were proposing to site an operation close to a refuge boundary, we might ask them to set the operation back, ensure they have proper spill or leak protection methods, and site the operation away from any waterways that flow into a refuge. Furthermore, even when exempted from these regulations, operators do not have a right to cause unreasonable damage to refuge resources and uses and are responsible for any damage done from their operations (*e.g.,* leaks or spills). Existing Federal and/or State laws provide enforcement remedies for activities on non-Federal lands that damage Refuge resources and uses. Additionally, by not imposing regulations on inholdings or non-Federal adjacent lands, the Service is incentivizing operators to locate such operations off refuges.

As to the differences between the proposed revisions to the NPS 9B regulations (80 FR 65572; October 26, 2015) and this rule, an operator working on both NWRS and NPS lands will experience little difference in regulatory resource and use protections, regulatory structure based on performance standards, operations permit processes and requirements, monitoring and compliance, and other terms and conditions. However, there are some variations between the two proposed rules necessitated by differing authorities and missions and the scope and resources of the two agencies' non-Federal oil and gas programs. The existing and future potential for operations on inholdings within the NPS is much smaller than that of the NWRS, and, therefore, the administrative burden is more manageable for NPS's oil and gas program to regulate activities on inholdings to the extent necessary to protect park resources and uses.

In designing this rule, the Service has carefully considered the environmental benefits of these regulations in light of the Service's mission and limited resources and has chosen to prioritize regulation of activities on Service lands. As noted above, the Service defines the National Wildlife Refuge System to consist of all lands, waters, and interests therein that it administers (25 CFR 25.12) and does not apply its regulations to the non-Federal lands found within refuge boundaries (*i.e.,* inholdings). Furthermore, the Service has concluded that it can manage the cross-boundary impacts from inholdings and non-Federal adjacent lands through cooperation with operators instead of through direct regulation, which places a heavy administrative burden on the Service and operators.

Scope: Operations on Non-Federal Land

6. *Comment:* The Service received similar comments regarding directional drilling operations on non-Federal land as it did for inholdings, recommending that the Service extend regulations beyond the NWRS to operations on private lands as described in the Modified Proposed Rule alternative of the DEIS. We also received comments from others that the Service has no authority to do so. Some commenters also noted that the Service has taken a different approach from the NPS and suggested the Service adopt the NPS approach to directional drilling operations.

Service Response: The Service has considered these comments; however, we have not extended the rule to operations on inholdings and non-Federal adjacent lands from which there is directional drilling under Service-administered surface estate. The Service has a clear legal and policy directive to protect refuge lands and resources, and having oil and gas operations sited off refuge property is preferable to having impacts occur on refuge lands. Our analysis shows avoiding the cost and time delay of Service regulation provides an incentive for operators to drill from a non-Federal surface location to reach their oil and gas rights within a refuge. Exempting downhole operations that occur inside a refuge from these regulations will result in fewer wells drilled on refuge-administered lands and waters resulting in an overall benefit to refuge resources and uses (avoidance or minimization of direct impacts).

If the Service extended its regulation beyond the NWRS as evaluated in Alternative C of the EIS, the Service could require actions, such as noise abatement or visual screening, which serve to reduce cross-boundary effects on Service resources and uses. However, these benefits to resources and uses could evaporate, and many adverse consequences could occur, if just a small percentage of wells that otherwise would have been located outside a refuge are drilled in a refuge. Gains in resource protection under Alternative C would likely be lost due to loss of the incentive to locate operations outside the refuge. Locating all operations (surface and downhole) inside the boundary of a refuge would subject refuge resources and values to the long-term impacts of surface occupancy within the park—impacts that would last years, if not decades. Therefore, the Service concludes the best course of action is to maintain the incentive in the proposed rule to encourage operators to locate operations outside a refuge.

The Service will continue to work with operators, landowners, and other permitting agencies to address issues that may arise from operations on non-Federal adjacent lands. For example, the Service could advocate for setbacks from the refuge boundary or waterways and strong spill control and response measures to reduce the risk of damage to refuge resources from accidents. As mentioned above, even where exempt

from these regulations, operators do not have a right to cause unreasonable damage to refuge resources and uses and are responsible for any damage done from these operations (*e.g.,* leaks or spills).

Additionally, based on the comments the Service received, it appears that some commenters misunderstood the NPS rule as related to operations on non-Federal lands outside the park boundary from which there is directional drilling underneath a park unit. NPS's regulatory authority over directional drilling operations begins at the subsurface point where the proposed operations (borehole) cross the park boundary and enter federally owned or administered lands or water, and applies to all infrastructure and activities within a park unit. Additionally the NPS provides an exemption to the operations permit requirement for these in-park operations if it determines they ''pose no significant threat of damage to park resources.'' In the many decades that the NPS has had this exemption in place, it has not made a single finding that such operations pose a significant threat. In only a few instances has NPS included in its determination suggestions to the operator to modify its planned operations in any way.

The Service has concluded that the risk of any impacts to refuge resources by the Service not regulating the portion of a wellbore beneath a refuge is exceedingly low. The Service has carefully designed this rule to ensure that it is prioritizing its limited resources on those oil and gas activities that have the greatest impact to refuge resources and uses. Commenters from both industry and non-governmental organizations have asked the Service to ensure it has the resources to effectively implement this rule. The Service has carefully analyzed its resources and capabilities and has specifically tailored this rule to ensure maximum refuge protection within the constraints of its management capabilities. The Service agrees with commenters that it must ensure that it has sufficient resources to implement the rule in order for it to be successful. Balancing the low risk of impacts from the downhole aspects of these directional-drilling operations on refuge resources and uses with the high administrative costs of regulating all of these operations, the Service has exempted these operations in the rule.

Hydraulic Fracturing and Regulation of Downhole Activities

7. *Comment:* Several commenters requested that the Service ban hydraulic fracturing completely from the NWRS.

Service Response: The Service considered these comments, as well as other information and studies provided by commenters regarding hydraulic fracturing, and we have concluded that the additional information provided did not justify a change from the proposed rule's approach to hydraulic fracturing. Comments requesting the ban on hydraulic fracturing used the term to encompass all the activities and impacts that are associated with oil and gas development that happens to use hydraulic fracturing. These comments did not provide new information to the Service.

The information provided by commenters was available and considered by the Service in developing the proposed rule. The Service has determined that the actual process of hydraulic fracturing does not create impacts or risks of impacts that are so elevated above those of conventional oil and gas operations in general that a hydraulic fracturing ban is justified. It is the Service's policy that ''scientific and scholarly information that we consider in our decision-making must be robust, of the highest quality, and the result of the most rigorous scientific and scholarly processes as can be achieved'' (212 FW 7).

As the Service has noted in the EIS accompanying the rule, studies show that oil and gas operations that include hydraulic fracturing stimulation methods can negatively affect surrounding resources and the environment and can increase the risks of such impacts where appropriate measures are not taken before, during, and after hydraulic fracturing operations (*e.g.,* improper cementing of casing and well integrity issues or surface mismanagement of fracking and flowback fluids). However, studies also show that proper implementation of such measures can substantially reduce—to a level close to that of conventional well operations—the risks to the surrounding environment from hydraulic fracturing operations.

Based on the Service's review of studies provided during the public comment period, we do not find that a ban on hydraulic fracturing completion methods in refuges is necessary or appropriate at this time. The Service will continue to revisit and update its policy as more information on hydraulic fracturing completion methods becomes available. Further, the Service notes that well completion programs using hydraulic fracturing were not given approval under the proposed rule. The rule also does not give such approval, and includes operating and approval standards developed with the knowledge that hydraulic fracturing operations will likely be proposed by operators and were designed to ensure that operators employ technologically feasible least-damaging methods that will not impact refuge resources and uses. The Service will consider hydraulic fracturing operations on a case-by-case basis and analyze potential impacts on refuge resources and uses under the regulations' approval standards.

8. *Comment:* The Service was asked to clarify how the rule would, or would not, be impacted by BLM's impending fracking rule and associated litigation.

Service Response: As explained in the proposed rule, we have taken different approaches to regulating hydraulic fracturing activities based on our different statutory authorities and the specific needs of the NWRS. The Service has concluded that our rule is consistent with our statutory authorities and, therefore, should not be affected by the pending litigation.

9. *Comment:* The Service received several comments recommending that the Service extend its regulations to more comprehensively cover all aspects of downhole operations, particularly with regard to wellbore construction standards for operations that include use of hydraulic fracturing. Commenters also requested that the Service require baseline flowback requirements. On the other hand, the Service received comments that that Service regulation will only duplicate existing State and Federal requirements that fully address these downhole issues.

Service Response: The Service analyzed both the costs and benefits of further regulating downhole operations on the NWRS through this rulemaking and found the increased costs necessary to hire and maintain engineering staff to oversee our own separate downhole requirements and standards would not likely provide a comparable benefit in reduction of impacts or risks of impacts to surface resources. The Service reviewed and considered the comments and studies provided by the public on this issue, but found they did not change the Service's analysis of the benefits. On the other hand, the Service did identify additional costs for both the Service and industry if the Service were to regulate downhole operations. The Service would need additional specialized technical staff to evaluate proposals and subsequently monitor and inspect downhole operations for compliance. Industry costs would involve providing downhole well construction information such as drilling, mud, casing, cementing, and stimulation programs. This information

is developed as a matter of course by industry, so there would be some minimal costs to provide copies of these programs.

Recognizing the public concern regarding impact to water resources from these activities and the Service's responsibility to ensure that it protects these resources, the rule does include standards for well control and isolation and protection of usable water (§ 29.119(a)(3) and (4)). The standard serves to inform the public and the operators that the Service retains regulatory control for management and protection of all its resources including groundwater. However, as discussed above, the Service would have to substantially augment its engineering capacity to review, approve, and monitor downhole well construction. Comprehensive Service regulation of downhole wellbore construction and maintenance for the isolation and protection of usable water would duplicate state programs in many areas, and thus provide a diminished return in terms of reduction of risks to groundwater. Additionally, the rule includes provisions (information requirements, operating standards, and reporting requirements) that address the management of wastes including flowback fluids. Under the rule, all new hydraulic fracturing operations will be conducted under new operations permits or modifications to existing Service-approved permits. Thus, new operations under the rule are required to provide for management of flowback fluids, including tanks to capture and temporarily store flowback fluids, no use of earthen pits, and prompt removal of wastes from the refuge.

Easements

10. *Comment:* Some commenters requested clarity on the applicability of these regulations to easements.

Service Response: The definition of the National Wildlife Refuge System includes less than fee interests in land such as easements (50 CFR 25.12). Therefore, the exercise of non-federally owned oil and gas rights underneath the Service's easement estate are subject to these regulations to the extent necessary to protect the interests held by the United States under the easement (see § 29.40(b)). The Service holds many unique and varied easement interests throughout the United States. For this reason, it is difficult to generalize how the rule applies to any particular easement. To determine the applicability of these regulations, the Service will review the terms of the legal instrument by which the United States acquired or reserved its easement interest to determine what regulation is appropriate in relation to that interest. Oil and gas operations will be subject to some and not necessarily all, of the requirements and standards of this subpart. Depending on the easement interest acquired, the Service may require an operator to obtain a permit from the Service to ensure that operations minimize the destruction of vegetative cover, control spread of invasive species, and/or avoid ecologically sensitive habitats by using technologically feasible, least-damaging methods. On the other hand, if an operator avoids burning, draining, filling, or dredging wetlands on one of the Service's conservation easements acquired for the purpose of protecting wetlands, the operator is likely exempt from these regulations.

Ultimately, the Service wants to ensure it is notified of operations that may affect the Service's less-than-fee interests and work cooperatively with the landholder and mineral rights holder, if different, to minimize or avoid impacts to our conservation interest in the land. However, the Service will continue to provide reasonable access to mineral rights holders for the development of their mineral rights, as we do on fee-title lands of the NWRS. The Service will work with operators and landowners in determining what is reasonable to protecting the Service's property interests under the easement.

Oil and Gas Operations in Alaska

11. *Comment:* The Service received several comments on how the proposed rule would affect oil and gas operations on refuges in Alaska and asking for clarification from the Service on how the rule would work in conjunction with the Alaska National Interest Lands Conservation Act (94 Stat. 2371; Pub. L. 96–487) and implementing regulations (43 CFR part 36). The Service got several comments recommending that the Service should clarify and revise the rule to fully recognize the controlling role of ANILCA and its implementing regulations in Alaska, and to address other issues. For instance, the Service received a comment to specifically replace the multiple references to ANILCA with the following blanket provision stating that ANILCA and implementing regulations at 43 CFR part 36 govern access, including but not limited to access to inholdings in Alaska, in lieu of the provisions of the non-Federal oil and gas regulations in subpart D: ''In lieu of the provisions of this subpart, authorization and management of access in Alaska, including but not limited to access to inholdings, shall be governed by the applicable provisions in 43 CFR part 36.'' Additionally, it was recommended that the final regulations should clarify that the only operations permit that would be required with regard to access across the NWRS associated with oil and gas development activities on private inholdings in Alaska would be a right-of-way issued pursuant to title XI of ANILCA and the regulations at 43 CFR part 36.

Service Response: We agree with the many comments we received that our rule was unclear about how this rule applies to operations in Alaska. After careful consideration of comments received on this issue, the Service has concluded that the rule does not need to include operations in refuges in Alaska as the existing Departmental regulations implementing section 1110(a) of ANILCA, access to inholdings, provide sufficient protection of refuge resources and use. The Service has revised § 29.41 ''When does this subpart apply to me?'' to clarify that the rule does not apply to operators in Alaska. In addition to this revision, the Service has removed any reference to ANILCA in other provisions of this rule. The specific references in various parts of the proposed rule were more confusing than helpful.

Refuges in Alaska will continue to be governed by title XI of the Alaska National Interest Lands Conservation Act (ANILCA; 16 U.S.C. 410hh–410hh–5, 16 U.S.C. 3101 *et seq.,* 43 U.S.C. 1601 *et seq.*), and the Department's implementing regulations and standards found at 43 CFR part 36. Additionally, section 22(g) of the Alaska Native Claims Settlement Act of 1971 (ANCSA) (43 U.S.C. 1601–1624) and its implementing regulations found at 50 CFR 25.21 will continue to apply to lands conveyed to Alaska Native Corporations that are within the boundaries of a National Wildlife Refuge in existence on the date of enactment of ANCSA. However, the performance-based standards outlined in this rule may be used, as appropriate, as guidance in determining how an operator would meet the various requirements of ANILCA and ANCSA to protect refuge resources and uses. ANILCA provides the Service with the authority to ensure that operators accessing non-Federal mineral rights underneath refuges in Alaska must work cooperatively with the Service through a permitting process outlined in section 1110 and 43 CFR part 36 to avoid or minimize impacts from these operations to refuge resources and uses. For example, under the ANILCA regulations, the Service may require an operator to: Obtain a permit for

operations on federally owned surface estate; provide the Service with financial assurance; restrict the time, place, and manner of activities as necessary to protect refuge resources and uses; and ensure the operation is properly plugged and reclaimed after production operations are complete.

12. *Comment:* The Service also received comments asking to further clarify that this rule would not be used to regulate activities conducted on Alaska Native Corporation (ANC)-owned or other non-Federal lands in Alaska.

Service Response: The scope of this rule is limited to activities on Federal lands within the National Wildlife Refuge System. In the case of refuges in Alaska, it does not apply to inholdings or non-Federal adjacent lands. Commenters generally seemed to be clear about the scope of this rule on this point, and, therefore, the Service concludes it does not need to clarify this further in the final rule. As discussed above, access through refuges to ANC-owned or other non-Federal lands in Alaska will continue to be governed by ANILCA, ANCSA, and their implementing regulations.

13. *Comment:* The Service also received comments recommending that the Service clarify further how the operations standards outlined in the proposed rule would apply to operations under an ANILCA permit. Based on concern about how some of the standards would further limit landowners' ability to specify route or method of access and, therefore, diminish their rights to adequate and feasible access to inholdings as authorized under ANILCA, these commenters asked that the Service not apply these operation standards to operations in Alaska. On the other hand, the Service also received comments asking that the final rule avoid citing specific sections of the operating standards that may apply to operations under an ANILCA permit, because doing so would raise doubts about the application of the rest of the rule to these operations (see 80 FR 77206; December 11, 2015).

Service Response: As discussed above, this rule does not apply to oil and gas operations in Alaska. However, the Service has developed these operating standards through a thorough analysis of what is needed to properly protect refuge resources and uses. Therefore, to the extent consistent with these existing ANCSA and ANILCA regulations, the Service may use these standards as guidance in approving operations and issuing permits under existing regulations applicable to Alaska. The standards that will be applicable will be determined on a case-by-case basis and will only be used if consistent with the standards outlined in ANILCA and its implementing regulations.

14. *Comment:* Other commenters recommended that the Service apply the rule more comprehensively to operations in Alaska, believing that ANILCA is not sufficient at protecting NWRS resources and uses from impacts of oil and gas operations.

Service Response: The Service has concluded that ANILCA provides sufficient regulation of oil and gas operations in Alaska where the Service has been able to effectively work with operators to minimize or avoid impacts to refuge resources and uses while providing operators access to their minerals under the existing regulations. As discussed above, implementation of the existing ANILCA regulations provides stringent protection of refuge resources and uses and provides the Service the appropriate tools for regulating non-Federal oil and gas operations on refuge-administered surface estate. As one commenter suggested, if the Service does, in the future, decide we need different tools to effectively manage oil and gas resources in Alaska, we can propose revisions to the ANILCA implementing regulations.

15. *Comment:* The Service received a comment highlighting the fact that the statutory authority and obligation to review and approve geological and geophysical exploration plans per section 1002 of ANILCA (16 U.S.C. 3142) (and associated regulations at 50 CFR part 37) has expired (see Memorandum Decision and Order, U.S. District Court for the District of Alaska *(State of Alaska* v. *Jewell, et al.* Case No. 3:14-cv–00048–SLG)), and recommending that the final rule should clarify that the Service cannot accept further applications for geological or geophysical exploration for oil and gas in the coastal plain of the Arctic Refuge. The comment also recommended that the final rule should also explicitly mention prohibitions on oil and gas leasing, development, and production in the Arctic National Wildlife Refuge (16 U.S.C. 3143).

Service Response: The Service agrees that we cannot accept any further application for geological or geophysical exploration in the coastal plain of the Arctic National Wildlife Refuge and that oil and gas leasing is prohibited in the refuge for the reasons stated in the comment; however, the recommended revisions are not necessary in the final rule because they are outside the scope of this rulemaking.

Existing Production Operations Under a Service Permit

16. *Comment:* The Service received comments that the proposed rule was unclear as to which provisions of this subpart applied to existing operators under a Service-issued permit.

Service Response: The Service agrees with the commenter that the proposed rule was not clear as to which provisions of the rule applied to existing operators with a Service-issued permit. For operations being conducted under § 29.43, all administrative or operational requirements that are specific to obtaining or operating under an operations permit issued under this subpart do not apply. The operator with an existing permit may continue to operate under the terms and conditions of that Service-issued permit, unless the operator proposes to modify its operations or propose new operations not covered by the existing Service-issued permit, such as plugging and reclamation. If an operator wishes to modify their operations or proposes new operations outside the scope of their existing Service-issued permit, the permit will need to be amended such that any modification or new operation meets applicable operating standards of the rule. We have revised § 29.43 accordingly.

17. *Comment:* Several commenters recommended that operators conducting production operations under a currently approved special use permit should be required to obtain a new permit under the proposed rule, as the Service considered in Alternative C of the DEIS, to ensure that they are following certain performance-based standards regarding waste management and disposal, leaks, spills, and pits.

Service Response: The Service has been very successful at working with operators through these Special Use Permits (SUP) to ensure that impacts to refuge resources and uses are avoided and minimized. As explained above, the Service has concluded that a new permit requirement for these existing operations would bring little to no beneficial impacts to refuge resources and uses, and would impose an unnecessary administrative burden on the Service and operators by requiring a new permit to replace the existing permit. In issuing permits to existing operators, the Service considered and included many provisions to protect refuge resources and uses, such as waste management and disposal, spill prevention, and spill response. Some SUPs have authorized the creation of reserve pits, while others have prohibited them. Such inconsistency in

the future has been addressed and eliminated by this rule. The Service has decided that requiring these operators to get a new permit is not reasonable or appropriate, considering that these operators have been cooperative in working with the Service to protect refuge resources and uses and have reasonable expectations from their work with us that the operations permitted by the Service in their SUP are sufficient. However, as discussed above, any modifications to their operations or proposals for new operations not covered by the original permit are subject to all applicable requirements of part 29.

Also, the Service has further clarified in § 29.43, as discussed above, that an existing operator must comply with the Service's plugging provisions at §§ 29.180 and 29.181. Some commenters stated there should be a clear requirement for operators with an approved SUP to provide financial assurance prior to proceeding with plugging and reclamation. The Service's intent under § 29.43 is to allow operators who have cooperated with the Service in conducting activities under a Service-issued permit to continue under the terms and conditions that have been agreed upon. While financial assurance would provide the benefit of ensuring the public does not become responsible for plugging and reclamation costs should an operator default or abandon their operation, based on the knowledge and experiences of current and past refuge managers engaged in oil and gas oversight, we were not able to identify any well becoming orphaned by an operator within the past 20 years. Therefore, the Service declines to add a financial assurance provision at great cost to these operators with little benefit to refuge resources and uses. However, if an operator's original permit did not include authorization to conduct plugging and reclamation, the operator would be required to amend their Service-issued permit or obtain a new operations permit, either of which requires compliance with the plugging and reclamation provisions of this rule, including providing financial assurance.

Pre-Existing Operations

18. *Comment:* The Service received several comments suggesting the Service clarify how pre-existing operations would be subject to provisions of the rule absent a new permit requirement. One commenter expressed concern that the proposed rule did not include a mechanism for ensuring pre-existing operations are following the requirements of the rule. Additionally, commenters wanted more clarity as to what general terms and conditions apply to pre-existing operations.

Service Response: The Service agrees that the rule should further clarify which provisions of the subpart would apply to these classes of operations. For operations being conducted under § 29.44, all administrative or operational requirements that are specific to obtaining or operating under an operations permit issued under this subpart do not apply unless the operator chooses to obtain a new operations permit instead of amending their existing permits under the terms and conditions of that permit. We have made this clarification in the rule at § 29.44. Additionally, we agree the language needs to be clearer as to the plugging and reclamation responsibilities of a pre-existing operator. After production operations have been completed, a pre-existing operator must obtain an Operations Permit from the Service, either to maintain the well in shut-in status or to plug and reclaim operations in compliance with this subpart. The Service has made this clarification in § 29.63. Finally, the Service has made specific revisions to the rule at § 29.64 that identify the specific ''General Terms and Conditions'' applicable to pre-existing operations.

The Service has concluded it does not need to impose a permit requirement on pre-existing operators in order to notify them of the applicable requirements of the rule or to ensure they are in compliance with its requirements. The Service has a duty to ensure that all pre-existing and existing operators are notified of the requirements of the rule. The Service is working on guidance documents for all classes of operators, including pre-existing operators. Additionally, the Service has already developed relationships with many of the pre-existing operators. The Service will be in contact with operators to ensure they are informed about the requirements of the rule.

19. *Comment:* Some commenters agree with the Service's proposed approach not to require operations permits for pre-existing operations during the production phase. Other commenters believe that pre-existing operations should be subject to the same requirements as new operations under the rule (as the Service considered in Alternative C of the DEIS), specifically requiring a new permit for pre-existing operators that would ensure that they are following the applicable performance-based standards of the proposed rule, including waste management and disposal, spill prevention and response, and the general prohibition on the use of pits, for example; and/or obtaining financial assurance for the full cost of plugging and reclamation during the production phase.

Service Response: After weighing the comments on both sides of the issue, the Service has decided to continue the approach outlined in the proposed rule that a pre-existing operator not be required to get a permit or post financial assurance during the production phase of its operation. In the cost-benefit analysis and environmental impact statement, the Service evaluated the range of alternatives related to the management of pre-existing operations from no additional regulatory oversight to full regulatory oversight. The Service did identify unnecessary impacts to refuge resources and uses related to the ongoing production phase of pre-existing operations, but also recognized the potential to apply a different, more efficient approach to address many of the refuge resource and use issues for this class of operation.

The primary issue with pre-existing operations, as identified by refuge managers, is that reclamation has not been typically or consistently performed in a way that restores disturbed areas to productive habitat. This issue is addressed by the rule. First, in accordance with § 29.63 (which has been revised to clarify), after production operations have been completed, a pre-existing operator must obtain an Operations Permit from the Service, either to maintain the well in shut-in status or to plug and reclaim operations in compliance with this subpart, including the requirement that an operator obtain financial assurance at this time. Second, a pre-existing operator is subject to the reclamation standards of § 29.117(d), which provides for removing all above-ground structures, equipment, roads, well pads, and contaminating substances, reestablishing native vegetation, restoring conditions to pre-disturbance hydrologic functions, and restoring disturbed areas to productive habitat.

Our analysis found that the Service could eliminate many of the ongoing, unnecessary impacts to refuge resources and uses resulting from the production phase of pre-existing operations by making violation of non-conflicting State laws and regulations relating to oil and gas operations a prohibited act in the rule. Though not required to obtain a Service operations permit during production, the Service would have greater authority to ensure these operations are in compliance with applicable laws because Refuge Law Enforcement would be able to enforce

State law on the NWRS. Any violation of State laws on the NWRS would constitute a violation of the law under the rule, and all applicable penalties and prohibitions would apply.

State laws usually address ongoing impacts from these pre-existing operations, such as waste disposal and prevention and cleanup of leaks and spills. Where an individual State's regulations do not specifically address an issue, the Service would continue to work cooperatively with State agencies and operators to reduce impacts or risks to refuge resources and uses. For example, in an assessment of State regulations conducted by the Ground Water Protection Council (GWPC) for the U.S. Department of Energy (DOE), the GWPC found that 23 of 27 oil-producing States assessed required oil production site storage tanks to have secondary containment dikes to contain leaks and spills (GWPC 2014). Additionally, the GWPC (2014) reported that 23 of the 27 States require reporting and remediation of spills and 13 of the 27 States specify cleanup standards for spills. Some States also have siting or setback requirements for pits (production skim pits and reserve pits) with some States prohibiting the use of pits in 100-year floodplains or in areas with shallow aquifers (GWPC 2014). An operator's compliance with these types of laws and the Service's ability to assist in the enforcement of these laws would provide additional protection to refuge resources and uses.

While full regulation of pre-existing operations during their production phase would provide some additional protection to refuge resources and uses, it would not be able to remedy a majority of the impacts to refuge resources and uses caused when the operators chose the time, place, and manner of these pre-existing operations. For example, on existing operations, the operator's well has already been drilled and the area of operations (access route, well site, production facilities, and routes for gathering lines) were established, and impacts to refuge resources, such as geology and soils, wetlands, and wildlife-dependent recreation, occurred prior to the acquisition of a refuge. The Service could require actions not addressed by applicable State rules—site maintenance for erosion control, vegetation management, noise abatement, housekeeping, for examples—by imposing a permit requirement and undergoing the associated administrative processes and costs. Our analysis estimated that approximately 4,000 wells operated by perhaps 400 different operators would fall under the operations permit requirement. Many wells could be grouped under a single operations permit by an operator, but the volume of operations permit applications required would likely exceed 1,000. The Service would need to roughly double its oil and gas management resources from current levels, while the administrative costs to operators of pre-existing wells is estimated to be approximately $1,800 per well.

Based on our analysis, we determined enforcing a pre-existing operator's compliance with State laws and regulations best meets the purposes and needs of revising the existing rule and will provide the maximum protection of refuge resources when balanced with the cost to operators and to the Service for administration. This approach enables managers to focus limited resources on those operations with the greatest possible impacts to refuge resources and uses rather than an indiscriminate administration of permits for the approximately 4,000 pre-existing operations. Comments from the public have not provided us with substantial new information that would change our analysis or conclusion.

20. *Comment:* The Service received a comment requesting that we revise the definition of ''modification,'' so that a pre-existing operation must obtain a permit when they transfer operators.

Service Response: After considering this comment, the Service agrees that a change in operator should trigger the requirement that the new operator obtain an Operations Permit from the Service. However, revising the definition of modification is not the best way to accomplish this objective. Instead, the Service has revised the rule language to replace ''operation'' with ''operator'' in § 29.44 to clarify that the exempt status follows an operator not an operation. Also, in § 29.171, we have included language that would allow an operator to continue operations for 90 days while the operator files the permit application and posts bond to ensure continuity of new operations. The new operator would need to obtain an Operations Permit that meets operating standards and general terms and conditions of the rule, including posting of financial assurance. The Service will not require a change in the time or place of these operations, but rather will ensure that any ongoing unnecessary impacts from these operations are avoided or minimized by requiring the new operator to employ ''technologically feasible, least damaging methods'' moving forward. This change in what constitutes loss of pre-existing status ensures that more operations on the NWRS will be operating under Service standards sooner, and provides greater protection of refuge resources and uses from the ongoing unnecessary impacts of pre-existing operations.

21. *Comment:* We received comments from the public requesting that the rule require more than just basic information from pre-existing operators on refuge lands (*e.g.,* mitigation, spill control, emergency preparedness plans). Commenters stated that the Service should require other important information necessary for the proper management and conservation of refuge resources from these pre-existing operators. For instance, one comment suggested that the Service's requirement in proposed § 29.61 for a scaled map that delineates only an ''area of operation'' may not be sufficiently detailed to provide refuge managers with baseline information to monitor operations, changes in operations, and violations, and that the Service should require a scaled map, as well as detailed schematics of existing wells and infrastructure.

Service Response: After further considering these comments, the Service has concluded that some additional, basic information from pre-existing operators would enhance the protection of refuge resources through better documentation of the equipment, materials, and operational practices being used on location. Additional operational information will also help to establish an operator's reclamation responsibilities as well as a baseline for determining whether future actions constitute a modification as defined under § 29.50. Therefore, the Service has amended the rule at § 29.61 to require pre-existing operators to also submit to the Service: a brief description of the current operations and any anticipated changes to the current operations, including documentation of the current operating methods, surface equipment, and materials produced or used.

22. *Comment:* Some commenters requested that the Service delete the phrases ''subject to the provisions of this subpart'' and ''subject to applicable requirements of this subpart'' from proposed §§ 29.43 and 29.44, believing that subjecting pre-existing operations and existing operations currently under a Service permit retroactively was inappropriate.

Service Response: In developing the rule, the Service identified several key objectives that needed to be addressed in considering the extent to which to regulate pre-existing operations and operations already being conducted

under Service authorization. These objectives included that: (1) These operations not create additional unnecessary impacts on refuge resources and uses; and (2) all operations within refuges are eventually plugged and reclaimed to Service standards. Pre-existing operations and existing operations are subject to specific provisions of this rule that ensure that these objectives are met and that future activities of these operators do not result in additional, unnecessary impacts. Therefore, subjecting these operations to these provisions is not inappropriate, as the commenter suggested, because the provisions are not focused on retroactively regulating past activities and impacts of these operations (*i.e.,* time, place, or manner of operations) but rather on regulating new or modified activities and impacts of these operations.

Financial Assurance

23. *Comment:* Some commenters expressed the desire that the Service go beyond what was in the proposed rule and periodically review reclamation costs and corresponding requirements for financial assurance, and update these estimates as necessary to accurately reflect the cost of reclamation upon the decommission of the well.

Service Response: The concern that financial assurance amounts will become outdated and insufficient to ensure reclamation was already addressed in proposed § 29.152, which we, therefore, have not revised. The Service may require, or the operator may request, an adjustment to the financial assurance amount because of any circumstance that increases or decreases the estimated costs of plugging and reclamation. Cost changes due to inflation would be a circumstance that would allow the Service to require an adjustment in the amount of financial assurance.

24. *Comment:* The Service also received comments that requiring financial assurance above and beyond financial assurance already required by the State is not necessary because the State bonds are sufficient. Commenters stated that this additional financial assurance requirement was ''unfair and unreasonable,'' and should only be done on a case-by-case basis as necessary to supplement bonds already lodged with the State.

Service Response: The Service's rule does not rely on State bonds to ensure timely well plugging and site reclamation to Service standards for two primary reasons: (1) Bonds furnished to operators by the State are not usually directly available to the Service to plug and reclaim that particular site; and (2) State bonding programs do not typically require well plugging and reclamation to Service standards. State bond amounts are generally insufficient in themselves to cover the actual costs of plugging and reclamation. However, States administer well plugging funds with money derived from sources other than forfeited bonds, *e.g.,* permitting fees, taxes on production, or penalties. Most States with regulations overseeing oil and gas activities have developed programs for plugging and reclaiming orphaned wells, and, theoretically, the State may have sufficient funds to plug and reclaim orphaned wells on the NWRS. However, many State programs remain backlogged with a number of orphaned wells that need to be plugged or reclaimed.

Orphaned wells on Federally managed lands do not usually rank as top priorities on State lists for plugging. (Office of Inspector General, Report No. CR–EV–FWS–002–2014: Oil and Gas Development on U.S. Fish and Wildlife Service Refuges). So the bond that an operator furnishes to the State is often not available to ensure that wells are plugged and areas of operation reclaimed in the event of operator default or abandonment of the operation. Even where a State may expeditiously address plugging of an orphaned well on a refuge, State plugging programs typically do not require restoration of a site in a manner that meets Service standards in the rule (§ 29.117(d)). For these reasons, State bonds are typically not sufficient to ensure protection of refuge resources in the event that an operator defaults or abandons his or her operation.

However, in the event that a State and the Service were in formal agreement that State plugging funds would be used to plug a well directly upon its becoming orphaned as well as to conduct site reclamation, the Service would consider this to be a condition under § 29.152 that would justify reducing the financial assurance required by the Service.

Modification of Operations and Permits

25. *Comment:* The Service received several comments requesting clarity of the proposed rule's definition of ''modification'' (proposed § 29.50). Some commenters wanted the Service to clarify the definition to ensure it includes certain changes. Specifically, one commenter suggested the Service amend the definition to read: ''Examples of a modification could include, but are not limited to, drilling additional wells from the same pad, conducting hydraulic fracturing or other well stimulation activities, creating additional surface disturbance (expanding the footprint of a well pad, realigning a road, constructing new pipelines or gathering lines), or converting a natural gas well into a wastewater disposal well so that the resulting modification has notable impacts to the refuge resource.''

Service Response: The Service agrees that many of the examples listed by the commenters require a pre-existing operator to obtain a new permit or an operator under an existing Service-issued permit to obtain an amendment to its permit, including drilling additional wells from the same pad, conducting hydraulic fracturing or other well stimulation activities, creating additional surface disturbance (expanding the footprint of a well pad, realigning a road, constructing new pipelines or gathering lines), or converting a natural gas well into a wastewater disposal well, will also likely be considered ''modifying'' an operation. The Service had identified several examples in the preamble of the proposed rule, and examples of a modification include drilling additional wells from the same pad, creating additional surface disturbance (*e.g.,* expanding the footprint of a well pad, realigning a road), or converting a natural gas well into a wastewater disposal well, as these modifications will have impacts beyond the scope, intensity, and/or duration of existing impacts. This provision was not intended to apply to minor actions, such as repositioning of surface facilities within the current footprint of pre-existing operations, minor changes in color schemes, or minor, non-routine maintenance actions.

The Service has decided it is not necessary to revise the definition of ''modification'' in the rule to include these specific examples. Instead, these examples and others the Service develops in the future will be included in guidance documents provided to pre-existing operators and holders of existing Service authorizations as well as Service staff who will administer the rule.

26. *Comment:* Another commenter recommended two changes to the regulations addressing modification of existing operations. First, the commenter asked the Service to add the word ''significant'' before ''additional impacts'' in the definition for ''modifying.'' This change would clarify that modified permits are not (and should not be) required for minor modifications to operations that do not result in significant changes in effects to the environment. Second, proposed

§ 29.160 should be modified to clarify that the Service may amend a permit only when there is a ''significant'' or ''substantial'' modification to the permitted operation.

Service Response: The Service considered the addition of the word ''significant,'' as well as other adjectives to provide more clarity for what the Service would consider to be a ''modification.'' However, we decided that adding any such language was not useful, because such terms themselves remained subject to various interpretations. For instance, an operator, the Service, or a non-governmental organization or individual may have very different beliefs as to what constitutes a ''significant'' impact to refuge resources and uses. Therefore, we have provided several examples of what would likely constitute a modification (see above) to provide some clarification to our intentions in regulating modifications, and as previously stated we will provide further guidance documents for this purpose. However, determining whether a change is a ''modification'' of the operation must be done on a case-by-case basis because the details of when, where, and how such changes are accomplished will determine whether such a change is ''beyond the scope, intensity, and/or duration of existing impacts.'' Therefore, the Service did not revise the rule as suggested by this comment.

Performance-Based Standards

27. *Comment:* The Service received conflicting comments regarding our proposed approach of regulating oil and gas operations based on performance-based standards. Some commenters requested that the Service require prescriptive actions, at least in some instances. For example, one commenter suggested the general reclamation standard to ''remove or neutralize contaminating substance'' (§ 29.117(d)(3)) be modified to include a strict prohibition of onsite remediation of contaminants. Also, the Service received comments that these performance-based standards leave too much discretion to the Service to either be too lenient with operators or too strict.

Service Response: Pursuant to Executive Order 12866 (58 FR 51735), ''[e]ach agency shall identify and assess alternative forms of regulation and shall, to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt'' (E.O. 12866(b)(8)). Consistent with the direction provided in E.O. 12866, and as stated in the proposed rule, the rule is based on performance-based standards rather than prescriptive operating standards. A prescriptive standard may seem stricter because it ensures that an operator follows a certain practice that seems like it would protect refuge resources and uses and allows the operator no flexibility to use a less-protective standard. However, in implementation, these standards can, in some instances, have the unintended consequence of actually being more harmful to refuge resources and uses. For example, onsite remediation of a hydrocarbon spill may result in less overall impacts or risks of impacts by reducing heavy truck traffic than a prescriptive standard of requiring offsite removal of soils, which also increases the potential for introduction of invasive plant species associated with import of new fill material. The flexibility for refuge managers and operators to accomplish a desired end allows site-by-site evaluation of alternatives that are least damaging overall. Additionally, science and technology are constantly advancing, and new methodologies used today are much more environmentally protective than those available only a few years before. If these trends continue in the future, the performance-based standards in the rule easily adapt to those changing methodologies and will be at least as effective in the future as they are today.

In response to comments that using performance-based standards leaves too much discretion to the Service, this rule will be accompanied by detailed guidance for both operators and Service staff on what are current best management practices for meeting these standards. This guidance will provide consistency of interpretation and application of the standards across the NWRS and decrease the possibility that the discretion afforded refuge managers will be misapplied. Furthermore, through compliance with the National Environmental Policy Act (NEPA) process at the site-specific permit level, the public will have the opportunity to review and comment on Service proposals.

28. *Comment:* Other commenters were generally supportive of the more flexible approach, but recommend that the Service remove what they saw as more prescriptive standards in the rule in favor of more general goals to be achieved. For example, a commenter recommended removing the proposed regulations requiring the installation and maintenance of secondary containment, applying seasonal restrictions, and specifying the location, type, and design of facilities (proposed §§ 29.111–29.119) as unreasonable, burdensome, and unlawfully diminishing the value of the mineral estate. The commenter suggested that the Service replace these standards with more general goals to be achieved to ''the extent technologically and economically feasible, and a requirement to use best management practices.''

Service Response: The Service recognizes that some arguably prescriptive management practices are included in the suite of performance-based standards. The observation that an operator must install and maintain secondary containment is a good example (§ 29.111(b)). In part, the provision is prescriptive, but acknowledges the widespread use of the best management practice of secondary containment by industry and regulatory agencies to capture spills, prevent their spread, and facilitate their cleanup. In this instance, the Service does not envision any alternatives that would exclude the use of secondary containment and still meet the ''technologically feasible, least damaging method'' standard, and so the provision serves to inform operators and the public of an aspect of the rule's approach to managing contaminating substances. Additionally, the requirement still leaves flexibility for the refuge manager and operators to decide on the design and operation of the secondary containment system. Similarly, in a few other instances the Service has included practices that we find to be more informative but which may be seen as somewhat prescriptive; however, we have maintained flexibility for site-specific implementation. The rule includes the necessary general goals applied with the overall standard of technologically feasible, least damaging methods. The rule will result in best management practices being identified and included in the site-specific operations permit.

29. *Comment:* One commenter asked whether what is practical for a particular operator would be a consideration in what is ''technologically feasible, least damaging methods.''

Service Response: While we do consider economics in determining appropriate methods, we look at what is feasible in terms of industry-wide practice, not what is affordable for a specific operator. The Service does not intend to allow operators to use methods that unreasonably harm refuge resources and uses just because the operators don't have the adequate financial resources to employ

technologically feasible, least damaging methods.

30. *Comment:* The Service also received a comment that it does not have the authority to permit only the ''least damaging'' operational methods and that the Service's use of the term ''technologically feasible, least damaging methods'' is not appropriate and should be replaced with ''feasible methods'' that are technologically and economically feasible, as determined by the best industry practices available. This commenter contended that the Service may only recommend, not require, the ''least damaging'' methods, stating that the mineral interest owner is not required to conduct its operations in a manner that is not economically or technologically feasible in order to access its mineral rights.

Service Response: The Service has considered this comment and does not agree. First, we note that NPS has in fact used this standard for new operations since January 1979. This term, defined at § 29.50, ensures that the Service does not go beyond what is technologically feasible in the methods required of an operator and considers the industry-wide economics of those methods in making those decisions. It also ensures that an operator uses those methods that are least damaging of refuge resources and uses, which is a responsibility of the Service to maintain under the NWRSAA. Therefore, the Service concludes that requiring ''technologically feasible, least damaging methods'' is well within the authority of the Service.

31. *Comment:* The Service received several comments recommending that the Service remove any ambiguous language contained in the proposed rule, including the term ''greatest extent practicable'' found at proposed § 29.32. Commenters were concerned that such language would allow the operators the unnecessary ability to pressure the Service into allowing methods that are based more on economic factors rather than NWRS resource and use protection.

Service Response: In response to these comments, the Service went back to the regulations to review for any ambiguous language. The Service did use these terms quite frequently in the preamble to the proposed rule where it outlined the Service's general intent regarding the proposed rule. The Service has avoided using such ambiguous terms in the preamble to the final rule. When the Service reviewed the proposed rule text in consideration of this comment, we found that the term ''greatest extent practicable'' only appeared at § 29.32, which is a revised version of a general policy statement of the Service related to managing all non-Federal mineral rights. This language remains from the previous regulations found at § 29.32 and pertains to rights other than oil and gas rights, so the Service decided not to revise this language at this time. Other than this section, the Service found one other instance of ambiguous language in the proposed rule (see in proposed § 29.111(g) ''to the extent reasonably practicable'') and has removed such language.

Timeline for Approval

32. *Comment:* The Service sought comment on whether the 180-day timeline for final action is reasonable. The Service received some comments stating that this timeline was too long for operators to wait to get authorization on their permits. Other commenters suggested that this timeline was too short and would hinder the Service's ability to fully comply with NEPA requirements.

Service Response: The Service has considered these comments, but has determined that the timeline from the proposed rule should be maintained in the final rule. The timeline does provide for hard deadlines and limits the Service's discretion to delay the processing of Operations Permit applications. For instance, under the rule, the Service has 30 days to conduct its ''initial review'' to determine whether an operator's application is complete, request more information from the operator, or inform the operator that more time is necessary and provide written justification for the delay. Once the application is deemed complete, the Service must generally take final action within 180 days. Any additional time after the 180 days may be taken only if the operator agrees to additional time, or that time is necessary for the Service to comply with applicable laws and regulations. The Service's purpose in using the 180-day timeframe is to provide operators with greater certainty regarding the permitting process. While the Service cannot always guarantee meeting this deadline and has, therefore, provided an extension provision in the rule, it is the Service's intention to process these permits as quickly as possible and not unreasonably impede a private mineral rights owner's right to access those minerals.

33. *Comment:* One commenter recommended that the Service add a provision to the regulations that would provide a Categorical Exclusion under NEPA for permits issued under this subpart and additionally include a provision that compliance with the terms of the permit is ''deemed to be not likely to adversely affect any species listed under the federal Endangered Species Act.''

Service Response: The Service declines to adopt the commenter's recommendation because it is beyond the scope of this rulemaking and we do not currently have the record that we would need to demonstrate to the Council on Environmental Quality to establish a new categorical exclusion. As the Service gains experience in implementing the rule, we may find that it is appropriate to pursue adoption of a new categorical exclusion. Similarly, with respect to the inclusion in the rule of a provision regarding compliance with the Endangered Species Act (ESA), we are unable to accept the recommendation because such determinations must be made on a case-by-case basis in compliance with section 7 of the ESA (16 U.S.C. 1531 *et seq.*).

Information Requirements and Public Access to Information

34. *Comment:* The Service received some comments that the proposed information requirements for permit applications (50 CFR 29.94–29.97) were extraordinarily extensive and unduly burdensome. These commenters believed that these sections, as well as § 29.121(f), also unlawfully require the disclosure of confidential and/or proprietary information and requested that any provisions requiring the disclosure of such information be removed. These commenters also requested that the Service scale down information requirements to only the basic information needed for the Service to assess the location and type of operations that will be undertaken.

Service Response: The Service carefully considered what information was necessary from operators so that the agency could properly administer non-Federal oil and gas activities on the NWRS and ensure that operators avoid or minimize impacts to refuge resources and uses. We analyzed each of the information requirements in compliance with the Regulatory Flexibility Act to ensure that the benefit of these information requirements to NWRS resources and uses were appropriate based on the administrative costs to the operator and the Service, and we concluded that all information requirements in the rule are appropriate. Furthermore, we understand that information requirements can be burdensome on operators, so in instances where the Service needs information gathered in compliance with other Federal or State laws under this rule, the Service does not require an

operator to duplicate that information but rather provide the Service copies (see, *e.g.,* §§ 29.61(d), 29.121(g)).

35. *Comment:* Commenters suggested that the Service information requirements are inadequate because they do not require full disclosure of chemicals used for hydraulic fracturing prior to obtaining a permit. They questioned how the Service could do a full analysis of the environmental risks of a hydraulic fracturing operation if they did not have all of the information regarding chemical uses by the operator. Commenters also stated that proposed § 29.210 would allow operators to avoid any obligations to disclose the identity of fracking chemicals used simply by submitting nothing more than an affidavit in support of their claim that the information is confidential and the Service would have no power to disclose the information to the public if the operator were to provide it.

Service Response: While an operator will be able to provide an affidavit to support the protection of proprietary or confidential information, an operator still must provide the Service any information the agency needs to fully assess the environmental impacts of an operator's activities, including all chemical uses in the operation. Information requirements included under § 29.95(p) include identification of contaminating or toxic substances used or expected to be encountered during operations, including material safety sheets. In the rule, the Service also used the ''including, but not limited to'' term in the list of information requirements to reserve the ability to require additional information (see § 29.96) if necessary.

The information requirements of § 29.95(p) provide the Service with the necessary information upfront to sufficiently analyze the environmental risks of a hydraulic fracturing operation and to ensure that operators are following best management practices for storing and removing these chemicals. The post-operational chemical disclosure information that operators commonly provide via FracFocus is for the different purpose of identifying specific sources of contamination and responsible parties should contamination occur.

36. *Comment:* One commenter requested the Service provide an easy way for the public to access information about proposed operations and report perceived violations, including the option for anonymity to encourage workers and others with sensitive positions to report problems.

Service Response: The Service's approval of any proposed operations on the NWRS will be done in compliance with NEPA, and the Service will provide the public with information about proposed operations and the opportunity to participate as afforded by that Act. As for reporting perceived violations, contact information for each refuge is readily available and is the fastest and most efficient way of notifying the Refuge of any perceived violations. We encourage the public and workers to contact that refuge with any concerns they may have regarding perceived violations by these operators. Such information can be provided to the refuge anonymously through letters, phone calls, or any other means that will allow an individual to feel comfortable doing so.

Penalty and Enforcement Provisions

37. *Comment:* The Service received several comments recommending that the final rule provide for robust enforcement of rule requirements and include specific penalties for non-compliance. For instance, commenters requested specific provisions regarding notifying and working with operators to bring them into immediate compliance; issuing formal written notices of non-compliance; specific penalties for non-compliance; seeking civil penalties for failure to comply with a notice of non-compliance; and for more egregious cases, filing a civil action in Federal court seeking an injunction or restraining order to stop damaging operations. One commenter also suggested that the Service adopt NPS current regulations for approval of an operations permit (50 CFR 9.37(a)) believing that the language contained in that section, if adopted by the Service, would provide the Service the ability to deny a permit if it is not protective enough of a refuge.

Service Response: The Service considered these comments, but concluded that modifying our enforcement provisions as the commenter suggested is not warranted. In speaking with Refuge law enforcement, the Department of Justice, and the Solicitor's Office, the Service finds these provisions provide sufficient tools for the Service to ensure compliance with this subpart on penalty and enforcement. Administrative corrective actions are not normally contained within the prohibited acts sections of regulations. The Service would adopt the recommended progressive enforcement action suggested by the comment through Service policy.

Furthermore, the rule provides the Service the ability to deny a permit if the operator does not meet several requirements (§ 29.103). The Service finds that these requirements are both more specific and clearer than the language suggested by the commenter. These requirements have been carefully crafted to ensure that the Service's approval (or denial) process for an Operations Permit meets the objectives of the rulemaking to ensure operations avoid or minimize impacts to refuge resources and uses.

38. *Comment:* Additionally, a commenter requested that the Service provide further clarity on how prohibited acts and penalties apply to pre-existing operations and recommended that violation of the informational requirements, modifications, reclamation, general terms and conditions, and other operational requirements in §§ 29.60–29.64 be added to prohibited acts and penalties for pre-existing operations at § 29.190.

Service Response: The Service agrees with the commenter that the proposed rule could have been clearer as to which provisions apply to pre-existing requirements or not and has revised the rule accordingly at § 29.60 through § 29.64 and § 29.190. A violation by a pre-existing operator of informational requirements, modifications requirements, reclamation requirements, and applicable general terms and conditions is considered a prohibited act and subject to applicable penalties.

Appeals

39. *Comment:* The Service received comments that the two-tiered appeals process proposed in the regulations is unreasonable and unduly burdensome. There should be a single, expedited administrative appeal available for challenges to actions taken by the Service under the proposed regulations. This administrative decision should be directly appealable in Federal court.

Service Response: The appeals process outlined at § 25.45 is the process by which the Service currently reviews all appeals of the Service's permit decisions for public uses on refuge lands. The Service will not provide a different appeals process under this subpart, because we find that the current process works well and that the changes requested would lead to less consistency and efficiency for the administration of permits by the Service. The two-tiered appeals process provides additional opportunities to resolve disagreements, while preserving opportunities for judicial review of final agency action under the Administrative Procedure Act. As to the other concern raised by the commenter, we revised § 29.200 to clarify that the decision of

the Regional Director will constitute the Service's final agency action.

Finally, in reviewing the appeals process under the proposed rule as it would relate to pre-existing operations, the Service realized that it needed to revise this section to provide an operator the opportunity to appeal decisions made by the Service that do not apply to a permit granted by the Service and so has added the following provision to § 29.200: ''The process set forth in § 25.45 is to be used for any written decision concerning approval, denial, or modification of an operation made by the Service under this subpart.''

Access

40. *Comment:* The Service received comments requesting the final rule contain a provision stating that the Service cannot place conditions on operations in a permit that only allows an operator to access and traverse Federal lands (*i.e.,* in order to access operations on non-Federal lands).

Service Response: In administering access across Federal lands, the Service is required by law to analyze the impacts of authorizing that access under NEPA. Through that analysis, the Service may find impacts to refuge resources and uses resulting from operations on non-Federal land resulting from the authorization of that access. In those cases, the Service will work with those requesting access across Federal lands to minimize or avoid those impacts, and, if agreeable to both the Service and the operator, those avoidance or mitigation measures may be included in the access permit. However, as stated in the proposed rule and maintained in the rule, the Service has made clear that we are permitting the access and not regulating the operations on non-Federal land. Accordingly, no change in the regulatory text is required.

Fees

41. *Comment:* Some commenters suggested that the Service ensure that they are assessing the appropriate and/or additional fees of operators in order to ensure that the Service has adequate funding to administer these operations. Additionally, the Service received comments stating that the agency should have full authority to charge fees to cover annual inspections as well as any more frequent inspections needed during construction and pre-production activities, as well as for repeat violators or higher risk operations. Commenters recommended that the Service replace ''may'' with ''will'' at § 29.120(c), not understanding why the Service would not charge for the costs of processing and administering temporary access permits and operations permits, particularly in an era of limited agency budgets. Other commenters stated that fees cannot be required for access or administering operating permits that are already within the scope of the operator's oil and gas right or other right provided by law and that there should be no fees for emergency access. Additionally, they stated that if an access fee can be applied, then it must be reasonable and cannot burden the underlying oil and gas right or otherwise diminish the value of the mineral estate.

Service Response: After considering these comments, the Service did not revise the rule with respect to fees charged by the Service for either access or administering operations permits. Related to access fees, the Service is not charging for access that is pursuant to a deeded or statutory right to use the refuge-administered lands without payment, but only for access that is granted as a privilege ''outside the scope of an operator's oil and gas right'' for which the fees are subject to the provisions of the Refuge Revenue Sharing Act (16 U.S.C. 715s). Such access is a special benefit that warrants a user charge commensurate with fees and charges for similar privileges and products made by private land owners in the vicinity or in accordance with local value (see 50 CFR 29.5). In terms of recovery costs of permit administration and operations monitoring allowed under § 29.120(c), the Service uses ''may'' instead of ''will'' to provide flexibility to refuge managers and foster cooperation with operators. In some instances, operators may choose to share the costs with the Service in administering permits in order to expedite the process. For example, an operator may provide funding for a third-party contractor to prepare an environmental assessment for the Service during the permitting process. Periodic and annual inspections are aspects of administering a permit, and charging fees for such activities fall under that section. With flexibility in charging fees, operators and refuge managers may develop a mix of self-reporting and refuge monitoring that reduces administrative requirements on both parties.

Implementation

42. *Comment:* The Service got one comment suggesting that the Service have refuge-specific management plans.

Service Response: The Service appreciated this comment and will further consider it in implementing the rule. The Service already has developed refuge-specific oil and gas management plans through Comprehensive Conservation Plans, Habitat Management Plans, or other planning documents created to manage specific refuges. On refuges where there is the potential of oil and gas development, they include management strategies for these operations. The Service will continue to develop and update these plans as necessary to ensure they are consistent with this rule.

43. *Comment:* Several commenters from industry and non-governmental organizations expressed concern that the Service does not have adequate staffing to properly implement the rule. In particular, some commenters expressed the need to ensure that, along with this rule, the Service has the necessary level of funding, staffing, and training to properly implement the rule, as highlighted by the 2007 Government Accountability Office (GAO) report that assessed the status of oil and gas operations on the National Wildlife Refuge System in 2007. Their report highlighted the inadequacy of the Service's current regulations and, in part, led to the promulgation of these proposed revisions. The GAO stated that ''[w]e recommend[ ] that FWS determine the level of staffing necessary to adequately oversee oil and gas operations and seek the necessary funding to meet those needs through appropriations, the authority to assess fees, or other means.'' The report further stated, ''we recommend that FWS ensure that staff are adequately trained to oversee oil and gas activities'' (GAO–07–829R). One comment requested the Service scale back the rule based on its limited resources. Another comment suggested that this rule may require assessing additional fees on operations, periodically ensuring that fees are adequate to cover the costs of monitoring and enforcement.

Service Response: In crafting the proposed and final rules, the Service carefully considered the administrative burden the rule placed on operators and Service staff and on the resources required by the Service to successfully implement the rule. Therefore, the Service has weighed the cost of administration versus the resource benefits gained from regulation and decided on several occasions that were discussed in the responses to several comments above that the cost-benefit analysis did not support a more stringent regulatory regime. As promulgated, the rule prioritizes and regulates those activities with the largest potential impacts on refuge resources and uses. As discussed above, this is

one of the main reasons the Service for the most part has declined to regulate downhole activities associated with operations and to exempt inholdings and non-Federal adjacent lands from the rule.

The Service currently has dedicated staff that manages oil and gas development on National Wildlife Refuge System lands. This rule brings more consistency and guidance to staff already dedicated to these issues. While there are additional responsibilities involved in processing operations permit applications and monitoring operations, the Service has determined this increase in need can be effectively met with the reallocation of refuge staff and resources. Additionally, the rule contains cost recovery or cost-sharing provisions that help ensure the Service has the necessary resources to implement the rule effectively and efficiently.

Section-by-Section Recommendations

The Service received several other recommendations on specific section revisions to the proposed rule. The Service has considered all of these recommendations and has made changes, as appropriate, to provisions of the rule as discussed below and/or outlined in the table in the section *Changes from the Proposed Rule.*

44. *Comment:* The Service received comments requesting that the definition of ''access'' (proposed § 29.50) be revised so that ''access'' does not include use of an aircraft when the aircraft doesn't take off of or land on Service-administered lands or waters. On the other hand, the Service received other comments recommending that the Service carry over the definition of ''access'' to the final rule, at least subjecting aircrafts landing on non-Federal lands to timing limitations to avoid disturbing wildlife.

Service Response: The Service has considered these comments and has revised § 29.50 to clarify that access does not include aircrafts that both take off from and land on inholdings or non-Federal adjacent lands, because the Service does not have the authority to condition aircraft landings outside of the NWRS.

45. *Comment:* The Service received a comment asking that the Service further clarify the process for authorizing use of water outside of a State right and that it should be done in line with a compatibility determination.

Service Response: The Service has concluded that determining sources of water for use in operations is best evaluated using the procedures and performance standards of the rule. Absent a demonstration by the operator that they have a right to use the water (*e.g.,* State-held water right, specific deed language), water use, transportation, and storage on a refuge would be evaluated for the technologically feasible, least damaging method. Considerations would include, among other things, the volume of water needed, capacity of water sources to meet those needs and resulting consequences on aquatic resources, and transportation and storage methods.

46. *Comment:* The Service received a comment suggesting the definition for ''usable water'' includes water for wildlife purposes so that shallow-water aquifers, seeps, and springs will be protected for wildlife on the NWRS.

Service Response: The definition for usable water does not need to be changed in the rule in order for the Service to protect water for wildlife purposes. The rule includes hydrologic standards (§ 29.113) and fish and wildlife protection standards (§ 29.112), as well as other standards, that serve to maintain water quality and quantity for use by wildlife. The term ''usable water'' is a specific term and definition that has been developed and used by other Federal agencies (*i.e.,* the Environmental Protection Agency (EPA) and BLM) to ensure protection of specific resources that may be impacted by oil and gas operations or other activities. So the Service did not revise this definition.

47. *Comment:* The Service received a comment requesting that the Service remove fuel drums, pipes, oil, contaminated soil, etc., with any residue of oil or hazardous chemicals from the definition of ''waste,'' because they include ''contaminating substances'' and should be defined and treated as such.

Service Response: The Service intends that these terms are not mutually exclusive, and something may be both ''waste'' and a ''contaminating substance.'' An operator must comply with the applicable rule requirements for dealing with each.

48. *Comment:* We received comments requesting that the Service increase the distance an operator is required to place operations away from surface waters from 500 feet to 2 miles based on BLM's determination that ''surface and groundwater contamination, due to oil and gas development . . . occurred between 1,000 to 1,800 feet from . . . drilling'' in Colorado (BLM Grand Junction Resource Management Plan FEIS at 6-271).

Service Response: The Service is aware of this BLM finding, but has concluded that a revision of the rule is not necessary to protect surface and groundwater resources from contamination. The establishment of setbacks of operations from sensitive resources such as surface waters or wetlands is based on common knowledge that providing time and space to react to incidents such as spills or poor operating practices is key to minimizing risks. However, there is no single setback distance that is appropriate for all conditions of proposed activities and environmental conditions. Environmental conditions may provide natural or human-made barriers that would justify a reduced setback. On the other hand, site conditions such as steep slopes or annually high precipitation can enhance pathways between the activity and resource, and thus justify greater setbacks.

Regulatory establishment of a ''good offset'' that considers both the activities and the average environmental conditions provides a beginning point for site location considerations. Additionally, having a regulatory process for adjusting site-specific setbacks—either lower or higher—based on project and environmental conditions is the key to successful use of setbacks. Through the Service's own analysis in the associated EIS, we continue to believe that 500 feet provides the necessary time and space in the majority of circumstances. However, the rule (§ 29.113) appropriately gives the ability to the Service to require an even greater setback if conditions, such as those highlighted by the comment, would justify a greater setback distance. We also recognize that exceptions to the setback are sometimes essential to balancing overall impacts of an operation. A prime example occurs in coastal environments where the practice of locating drilling operations in open water has been demonstrated to be least damaging by avoiding the impacts of cutting and dredging drilling slips and canals into sensitive marshland. Therefore, the Service believes that flexibility in this standard is appropriate and gives the Service the ability not only to ensure the least damaging methods to refuge resources and uses, but also to ensure that an operator has reasonable access to their minerals based on a case-by-case determination.

49. *Comment:* The Service received comments recommending that we include provisions in the final rule that require an operator to collect additional information, such as water and soil samples and wildlife surveys, prior to beginning operations.

Service Response: In response to these comments, it is our intention that reconnaissance surveys will be used to collect this type of information and any other necessary natural and cultural resource conditions the Service deems necessary to ensure protection of refuge resources and uses. We acknowledged above that proposed § 29.94 was not clear, and we have revised the rule to clarify that reconnaissance surveys will be used to collect this type of baseline information.

50. *Comment:* The Service received comments stating that the Service does not have the authority to require mitigation for impacts by mandating that operators provide for ''habitat creation, habitat restoration, land purchase, or other compensation'' and recommending that proposed § 29.120(g) be eliminated from the regulations as it amounts to an access fee that unreasonably and unlawfully restricts access to mineral rights.

Service Response: After considering these comments, the Service has revised proposed § 29.120(g), redesignated as § 29.120(f) in the final rule, to clarify that mitigation tools must be mutually agreed upon by the Service and the operator. The Service believes this provision is within the scope of the Service's authority under the NWRSAA to protect refuge resources and uses, and may in some circumstances be appropriately used by an operator to offset impacts to refuge resources and lost use.

51. *Comment:* The Service received comments recommending that the Service expand the monitoring and reporting requirements. For instance, some commenters recommended that the Service decrease the reporting time from 90 days to 30 days and include explanations of what happened, why it happened, who was involved, the results, and how the company intends to prevent similar incidents in the future.

Service Response: The Service finds that these recommendations are not warranted. This provision in the rule is intended to provide the Service with information about occurrences on the NWRS. Due to the nature of accident investigations and the time it may take to get the official report, we concluded that 90 days is an appropriate timeframe. There are also existing State and Federal laws governing various accident occurrences, and we have determined that additional regulatory provisions are not needed at this time to better enable the Service to protect Refuge resources and uses.

Changes From the Proposed Rule

After taking the public comments into consideration and after additional review, the Service made the following substantive changes in the rule:

§ 29.40	Revised to clarify the scope of this rule as related to Alaska inholdings and waters within NWRS boundaries.
§ 29.41	Revised to clarify that this rule does not apply to operations in Alaska.
§ 29.42	Revised to remove provisions related to operations in Alaska.
§ 29.43	Revised to clarify which provisions of the rule apply to existing operators with a Service-issued permit and to clarify requirements in regards to plugging and reclamation.
§ 29.44	Revised to clarify requirements for pre-existing operators in regard to plugging and reclamation. Also, replaced ''operation'' with ''operator'' to clarify that exemption from a permit requirement applies to a pre-existing operator, not the operation.
§ 29.50	Revised to: (1) clarify that access does not include aircrafts that both take off from and land on inholdings or non-Federal adjacent lands; (2) clarify that the term ''area of operations'' can include pre-existing, proposed, and approved areas; (3) clarify that ''modifying'' applies to a changes in existing operations; (4) remove the definition of right-of-way (ROW) permits as it was only applicable to operations in Alaska.
§ 29.61	Revised to require additional information from pre-existing operators, including a brief description of the current operations and any anticipated changes to the current operations; and documentation of the current operating methods, surface equipment, and materials produced or used.
§ 29.62	Revised to clarify that the requirement to obtain an operations permit for a new operation or a modification will be limited to that new operation or modification, not the entire existing operation.
§ 29.63	Revised to clarify that pre-existing operators must plug and reclaim their operations in compliance with this rule.
§ 29.64	Revised to clarify which additional provisions of the rule would apply to the various classes of operations.
§ 29.70	Removed language regarding operations in Alaska.
§ 29.90	Removed language regarding operations in Alaska.
§ 29.92	Revised to clarify that if an operator is using previously submitted information, they should reference it in the permit application.
§ 29.94	Revised to remove language regarding an unnecessary ROW form; also revised to clarify the Service's authority to require an operator to collect certain natural and cultural resource information if necessary and other minor changes to and deletions of unnecessary language for clarity.
§ 29.101	Removed language regarding operations in Alaska.
§ 29.111	Revised to remove ambiguous and repetitive language and be consistent with the NPS 9B regulations; also added paragraph (h) related to operation setbacks from surface water locations previously found in the hydrological standards section.
§ 29.112	Revised to clarify our standards for protecting wildlife.
§ 29.113(a)	Combined the provision related to operation setbacks from surface water locations with the general facility design and management standard for setbacks from refuge structures or facilities in § 29.111(h).
§ 29.117(d)(5)	Revised to clarify the objective of grading requirements during reclamation.
§ 29.118	Deleted provisions related to geophysical operations in Alaska; and revised paragraph (d)(3) to clarify that an operator must not leave a site in a condition that poses hazards to wildlife.
§ 29.119(b)(5)	Revised to clarify that an operator must not leave a site in a condition that poses hazards to wildlife.
§ 29.120(d)	Revised to clarify that any use of Federal water on the NWRS absent a demonstrated right must be approved by the Service as the technologically feasible, least damaging method.
§ 29.120(e)	Moved to § 29.103(b)(3) to clarify that providing a statement under penalty of perjury that an operator is in compliance with applicable State and Federal laws is part of the permit approval process.
§ 29.120(g)	Revised to clarify that mitigation must be mutually agreed upon and that it may be required to offset impacts to refuge resources or lost uses. Redesignated as § 29.120(f).
§ 29.121(e)	Revised to clarify that an operator would need to provide the Service with information only to the extent necessary to demonstrate compliance with a Service-issued permit.
§ 29.140	Removed language regarding operations in Alaska.
§ 29.141	Removed (c) as the Service does not currently have the authority to accept in-kind services to offset fees.

§ 29.151	Revised to clarify that operator is responsible for reclaiming any disturbances inside or outside of their area of operation and that an operator is liable for the full cost of reclamation.
§ 29.160	Revised to clarify that an operator will be given a chance to respond to the Service's notice of a proposed modification to their operations.
§ 29.171	Revised to include the requirement that, when a pre-existing operator transfers operations, the new operator must obtain an Operations Permit from the Service. Also revised to allow continuity of operations while they file the permit application.
§ 29.180	Revised to clarify that this section applies to any Service-issued permit (i.e., existing operators under a Service-issued permit) not just an Operations Permit granted under this rule for new operations; and revised language from ''continuously inactive for a period of 1 year'' to ''has no measurable production quantities for 12 consecutive months'' to provide further clarity on when an operator must plug a well.
§ 29.190	Deleted provisions related to operations in Alaska.
§ 29.190(e)	Revised to separate violations of Federal and State law into two different prohibited acts, (e) and (f), and to make wording consistent with other Service regulations.
§ 29.192	Revised to clarify that a violation will not affect your ability to get a permit for plugging and reclamation.
§ 29.200	Revised to clarify that an operator must administratively appeal under § 25.45 before going to Federal court. Also, revised to clarify that this process would be used to appeal all written decisions made under this subpart, not just those made under a permit. Finally, removed language regarding operations in Alaska.
§ 29.210(g)	Revised to clarify that for information provided under both § 29.210(d) and § 29.210(e), after reviewing an operator's affidavit or a third party's affidavit claiming exemption from public disclosure, the Service may find that information is not exempt from public disclosure and make that information available 10 business days after providing notice.

Compliance With Other Laws, Executive Orders, and Department Policies

Regulatory Planning and Review (Executive Orders 12866 and 13563)

Executive Order 12866 provides that the Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget will review all significant rules. OIRA has determined that this rule is significant, because it may raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the executive order.

Executive Order 13563 reaffirms the principles of Executive Order 12866 while calling for improvements in the nation's regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The executive order directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. Executive Order 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for public participation and an open exchange of ideas. This rule is consistent with these requirements.

Regulatory Flexibility Act

Under the Regulatory Flexibility Act (RFA), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), 5 U.S.C. 601 *et seq.,* whenever an agency is required to publish a notice of rulemaking for any proposed or final rule, it must prepare and make available for public comment a regulatory flexibility analysis that describes the effects of the rule on small entities (*i.e.,* small businesses, small organizations, and small government jurisdictions). However, no regulatory flexibility analysis is required if the head of the agency certifies the rule will not have a significant economic impact on a substantial number of small entities. The SBREFA amended the RFA to require Federal agencies to provide a statement of the factual basis for certifying that the rule will not have a significant economic impact on a substantial number of small entities.

We certify that this rule would not have a significant economic effect on a substantial number of small entities under the RFA (5 U.S.C. 601 *et seq.*). This certification is based on the cost-benefit and regulatory flexibility analysis found in the report entitled Non-Federal Oil and Gas Rulemaking Economic Analysis, which can be viewed at *http://www.fws.gov/refuges/oil-and-gas/rulemaking.html,* by clicking on the link entitled Non-Federal Oil and Gas Rulemaking Economic Analysis or at *www.regulations.gov* in Docket No. FWS–HQ–NWRS–2012–0086.

Small Business Regulatory Enforcement Fairness Act (SBREFA)

This rule is not a major rule under 5 U.S.C. 804(2). This rule:

(a) Would not have an annual effect on the economy of $100 million or more;

(b) Would not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; and

(c) Would not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises.

These conclusions are based on the cost-benefit and regulatory flexibility analysis found in the report entitled Non-Federal Oil and Gas Rulemaking Economic Analysis, which can be viewed at *http://www.fws.gov/refuges/oil-and-gas/rulemaking.html,* by clicking on the link entitled Non-Federal Oil and Gas Rulemaking Economic Analysis or at *www.regulations.gov* in Docket No. FWS–HQ–NWRS–2012–0086.

Unfunded Mandates Reform Act (UMRA)

This rule would not impose an unfunded mandate on State, local, or tribal governments or the private sector of more than $100 million per year. The rule would not have a significant or unique effect on State, local, or tribal governments or the private sector. It addresses use of refuge lands, and would impose no requirements on other agencies or governments. A statement containing the information required by the UMRA (2 U.S.C. 1531 *et seq.*) is not required.

Takings (Executive Order 12630)

This rule is not intended to result in the taking of private property or otherwise have takings implications under Executive Order 12630. The provisions of this rule would afford access to operators exercising non-Federal mineral rights under reasonable regulation. No other private property is affected. A takings implication assessment is not required.

Federalism (Executive Order 13132)

Under the criteria in section 1 of Executive Order 13132, the rule does not have sufficient Federalism

implications to warrant the preparation of a federalism summary impact statement. It addresses use of refuge lands, and would impose no requirements on other agencies or governments. A federalism summary impact statement is not required.

Civil Justice Reform (Executive Order 12988)

This rule complies with the requirements of Executive Order 12988. Specifically, this rule:

(a) Meets the criteria of section 3(a) requiring that all regulations be reviewed to eliminate errors and ambiguity and be written to minimize litigation; and

(b) Meets the criteria of section 3(b)(2) requiring that all regulations be written in clear language and contain clear legal standards.

Consultation With Indian Tribes (Executive Order 13175 and Department Policy)

The Department of the Interior strives to strengthen its government-to-government relationship with Indian tribes through a commitment to consultation with Indian tribes and recognition of their right to self-governance and tribal sovereignty. We have evaluated this rule under the Department's consultation policy and under the criteria in Executive Order 13175 and have determined that it has no substantial direct effects on federally recognized Indian tribes, but we offered consultation under the Department's tribal consultation policy with all interested tribes. On January 25, 2016, during the public comment period, we consulted with Doyon Limited, an Alaska Native Corporation, at their request.

Paperwork Reduction Act of 1995 (PRA)

This rule contains a collection of information that we have submitted to OMB for approval under the PRA (44 U.S.C. 3501 *et seq.*). We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

As part of our continuing efforts to reduce paperwork and respondent burdens, we invited the public and other Federal agencies to comment on any aspect of the reporting burden associated with this information collection. While we received no comments that were specific to the information collection portion of the rule, we did receive several comments that relate to the information collection portion of the rule. These comments and our responses can be found in *Information Requirements and Public Access to Information* in the Summary of and Response to Public Comments portion of the preamble. We made no changes to the information collection portion of the rule based on these comments. However, we have made two changes to the rule that impact information collection.

The first change expands the information an operator of pre-existing wells is required to submit to the refuge manager. In addition to requiring operators of pre-existing wells to submit right-to-operate documentation, company contact information, a plat of existing area of operations, and copies of plans and permits required by local, State, and Federal agencies, operators must also submit to the Service: A brief description of the current operations and any anticipated changes to the current operations; as well as documentation of the current operating methods, surface equipment, and materials produced or used. These new information collection requirements are, as follows: Pre-existing Operations (§ 29.61). Within 90 days after the effective date of these regulations, or after a boundary change or establishment of a new refuge, pre-existing operators without a Service-issued permit must submit:

- Documentation of the right to operate within the refuge.
- Contact information (names, phone numbers, and addresses) of the primary company representative; the representative responsible for field supervision; and the representative responsible for emergency response.
- A brief description of the current operations, and any anticipated changes to the current operations.
- Scaled map clearly delineating the existing area of operations.
- Documentation of the current operating methods, surface equipment, materials produced or used, and monitoring methods.
- Copies of all plans and permits required by local, State, and Federal agencies.

The second change to the final rule that impacts information collection is that if an operator transfers their operations to another operator this results in the loss of pre-existing status for that operation, and the new operator will need to obtain an Operations Permit. As a result, this operator must provide all applicable information required by this rule for obtaining an Operations Permit. These new information collection requirements are as follows:

Change of Operator (§ 29.171)

Section 29.171(a). When operations conducted under § 29.44 are transferred, the transferee must apply for an operations permit and include the information requested in FWS Form 3–2469 within 90 days of the transfer. The new operator may continue operating, but must provide to the Service within 30 calendar days from the date of the transfer:

- Documentation demonstrating that the operator holds the right to operate within the refuge.
- Names, phone numbers, and addresses of the primary company representative, the representative responsible for field supervision, and the representative responsible for emergency response.

Section 29.171(b). If operations conducted under § 29.43 or an operations permit are transferred, the transferee must provide the following within 30 days of commencing operations:

- Right-to-operate and contact information required under § 29.171(a).
- Written agreement to conduct operations in accordance with all terms and conditions of the previous operator's permit.
- Financial assurance that is acceptable to the Service and made payable to the Service.

For further information on these changes, see the ''Response to Comments'' section.

Below is a summary of the information collection associated with non-Federal oil and gas operations on National Wildlife Refuge System lands. Operators do not need to resubmit information that is already on file with the Service, provided the information is still current and accurate. Documents and materials submitted to other Federal and State agencies may be submitted, if they meet the specific requirements of the Service.

OMB Control No: 1018–0162.

Title: Management of Non-Federal Oil and Gas Rights on National Wildlife Refuge System Lands, 50 CFR part 29, subpart D.

Service Form Number(s): 3–2469.

Description of Respondents: Businesses that conduct oil and gas exploration on national wildlife refuges.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Total Annual Nonhour Cost Burden: None.

Activity/requirement	Estimated number of annual responses	Completion time per response (hours)	Estimated total annual burden hours
Preexisting Operations (§ 29.61)	40	50	2,000
Temporary Access Permit Application (§ 29.71)	35	17	595
Accessing Oil and Gas Rights from Non-Federal Surface Location (§ 29.80)	5	1	5
Pre-application Meeting for Operations Permit (§ 29.91)	45	2	90
Operations Permit Application (§§ 29.94–29.97)	45	140	6,300
Financial Assurance (§§ 29.103(b), 29.150)	45	1	45
Identification of Wells and Related Facilities (§ 29.119(b))	45	2	90
Reporting (§ 29.121):			
Third-Party Monitor Report (§ 29.121(b))	300	17	5,100
Notification—Injuries/Mortality to Fish and Wildlife and Threatened/Endangered Plants (§ 29.121(c))	20	1	20
Notification—Accidents involving Serious Injuries/Death and Fires/Spills (§ 29.121(d))	20	1	20
Written Report—Accidents Involving Serious Injuries/Deaths and Fires/Spills (§ 29.121(d))	20	16	320
Report—Verify Compliance with Permits (§ 29.121(e))	240	4	960
Notification—Chemical Disclosure of Hydraulic Fracturing Fluids uploaded to FracFocus (§ 29.121(f))	5	1	5
Permit Modifications (§ 29.160(a))	10	16	160
Change of Operator:			
Transferring Operator Notification (§ 29.170)	20	8	160
Acquiring Operator's Requirements for Wells Not Under a Service Permit (§ 29.171(a))	19	40	760
Acquiring Operator's Acceptance of an Existing Permit (§ 29.171(b))	1	8	8
Extension to Well Plugging (§ 29.181(a)):			
Application for Permit	10	140	1,400
Modification	5	16	80
Public Information (§ 29.210):			
Affidavit in Support of Claim of Confidentiality (§ 29.210(c) and (d))	1	1	1
Confidential Information (§ 29.210(e) and (f))	1	1	1
Maintenance of Confidential Information (§ 29.210(h))	1	1	1
Generic Chemical Name Disclosure (§ 29.210(i))	1	1	1
Total	934	.....	18,122

National Environmental Policy Act (NEPA)

This rule constitutes a major Federal action with the potential to significantly affect the quality of the human environment. We have prepared the final environmental impact statement (FEIS) under the requirements of the NEPA of 1969 (42 U.S.C. 4321 *et seq.*). The FEIS is available at *http://www.fws.gov/refuges/oil-and-gas/rulemaking.html,* by clicking on the link entitled ''Non-Federal Oil and Gas FEIS'' and at *www.regulations.gov* at Docket No. FWS–HQ–NWRS–2012–0086.

In addition, EPA published a notice announcing the final EIS, as required under section 309 of the Clean Air Act (42 U.S.C. 7401 *et seq.*), on August 19, 2016, at 81 FR 55456. The EPA is charged under section 309 of the Clean Air Act to review all Federal agencies' environmental impact statements (EISs) and to comment on the adequacy and the acceptability of the environmental impacts of proposed actions in the EISs. On February 9, 2016, the Service received a ''no objection'' finding from the EPA that concluded that the draft EIS did not identify any potential environmental impacts requiring substantive changes to the proposal. Elsewhere in today's **Federal Register** is a notice announcing the availability of the record of decision.

Effects on the Energy Supply (Executive Order 13211)

This rule is not a significant energy action under the definition in Executive Order 13211. A statement of Energy Effects is not required.

Drafting Information

This final rule reflects the collective efforts of Service staff in the NWRS, Division of Natural Resource and Conservation Planning, Branch of Wildlife Resources, refuges, and field offices, with assistance from the Department of the Interior, Office of the Solicitor.

List of Subjects

50 CFR Part 28

Law enforcement, Penalties, Wildlife refuges.

50 CFR Part 29

Oil and gas exploration, Public lands—mineral resources, Public lands—rights-of-way, Reporting and recordkeeping requirements, Wildlife refuges.

Final Regulation Promulgation

In consideration of the foregoing, the Service amends 50 CFR parts 28 and 29 as follows:

PART 28—ENFORCEMENT, PENALTY, AND PROCEDURAL REQUIREMENTS FOR VIOLATIONS OF SUBCHAPTER C

■ 1. The authority citation for part 28 is revised to read as follows:

Authority: 5 U.S.C. 301; 16 U.S.C. 460k, 664, 668dd, 685, 690d, 715i, 725; 43 U.S.C. 315a.

■ 2. Revise the heading of part 28 to read as set forth above.

■ 3. Revise § 28.11 to read as follows:

§ 28.11 Purpose of regulations.

The regulations in this part govern enforcement, penalty, and procedural requirements for violations of subchapter C of this chapter.

PART 29—LAND USE MANAGEMENT

■ 4. The authority citation for part 29 is revised to read as follows:

Authority: 5 U.S.C. 301; 16 U.S.C. 460k, 664, 668dd, 685, 690d, 715i, 725, 3161; 30 U.S.C. 185; 31 U.S.C. 3711, 9701; 40 U.S.C. 319; 43 U.S.C. 315a; 113 Stat. 1501A–140.

Subpart C—Mineral Operations

■ 5. Revise § 29.32 to read as follows:

§ 29.32 Non-Federal mineral rights.

(a) Non-Federal mineral rights owners within the National Wildlife Refuge System, not including coordination areas, must, to the greatest extent practicable, conduct all exploration, development, and production operations in such a manner as to prevent damage, erosion, pollution, or contamination to Service-administered lands, waters, facilities, and to wildlife thereon. So far as is practicable, such operations must also be conducted without interference to the operation of the refuge and disturbance to the wildlife thereon.

(1) Physical occupancy must be kept to the minimum space necessary to conduct efficient mineral operations.

(2) Persons conducting mineral operations on Service-administered lands and waters must comply with all applicable Federal and State laws and regulations for the protection of wildlife and the administration of the area.

(3) All waste and contaminating substances must be kept in the smallest practicable area, confined so as to prevent escape as a result of rains and high water or otherwise, and removed from Service-administered lands and waters as quickly as practicable in such a manner as to prevent contamination, pollution, damage, or injury to Service-administered lands, waters, or facilities, or to wildlife thereon.

(4) Structures and equipment must be removed when the need for them has ended, and, upon the cessation of operations, the habitat in the area of operations must be restored to the extent possible to pre-operation conditions.

(b) Nothing in this section will be applied so as to contravene or nullify rights vested in holders of mineral interests on refuge lands.

■ 6. Add subpart D to read as set forth below:

Subpart D—Management of Non-Federal Oil and Gas Rights

Purpose and Scope

§ 29.40 What are the purpose and scope of the regulations in this subpart?

(a) The purpose of this subpart is to ensure that operators exercising non-Federal oil and gas rights within the National Wildlife Refuge System (NWRS) outside of Alaska use technologically feasible, least damaging methods to:

(1) Protect Service-administered lands and waters, and resources of refuges;

(2) Protect refuge wildlife-dependent recreational uses and experiences and visitor or employee health and safety; and

(3) Conserve refuges for the benefit of present and future generations of Americans.

(b) This subpart applies to all operators conducting non-Federal oil and gas operations outside of Alaska on Service-administered lands held in fee or less-than fee (excluding coordination areas) or Service-administered waters to the extent necessary to protect those property interests. These regulations do not apply to non-Federal surface locations within the boundaries of a refuge (*i.e.,* inholdings), except to the extent that activities associated with those operations, including access to an inholding, occur on Service-administered lands or waters.

(c) This subpart is not intended to result in a taking of any property interest. The purpose of this subpart is to reasonably regulate operations to protect Service-administered lands and waters, resources of refuges, visitor uses and experiences, and visitor or employee health and safety.

§ 29.41 When does this subpart apply to me?

This subpart applies to you if you are an operator who conducts or proposes to conduct non-Federal oil or gas operations on Service-administered lands or waters outside of Alaska.

§ 29.42 What authorization do I need to conduct operations?

(a) You must demonstrate to the Service that you have the right to operate in order to conduct operations on Service-administered lands or waters.

(b) Except as provided in §§ 29.43 or 29.44, before starting operations, you must obtain a temporary access permit under §§ 29.70 through 29.73 for reconnaissance surveys and/or an operations permit under §§ 29.90 through 29.97.

§ 29.43 If I am already operating under Service authorization, what do I need to do?

If you already have a Service-issued permit, you may continue to operate according to the terms and conditions of that approval, subject to the provisions of this subpart. If you propose to conduct new operations, modify your existing operations, conduct well plugging or reclamation operations, or obtain an extension of the well plugging requirement to maintain your well in shut-in status, you must either amend your current authorization or obtain an operations permit in accordance with §§ 29.90 through 29.97, Operations Permit: Application, and such new operations or modifications will be subject to the applicable provisions of this subpart. Additionally, your existing operations are subject to the following regulations:

(a) § 29.120(b) and (d)–(g) and § 29.121(a) and (c)–(f);

(b) § 29.170(a);

(c) §§ 29.180 and 29.181;

(d) § 29.190; and

(e) § 29.200.

§ 29.44 If I am operating without prior Service authorization, what do I need to do?

Any operator that has commenced operations prior to December 14, 2016 in accordance with applicable local, State, and Federal laws and regulations may continue without an operations permit. However, your operation is subject to the requirements of §§ 29.60 through 29.64, Pre-Existing Operations, and the requirements that when you propose to conduct new operations, modify your pre-existing operations, conduct well plugging and reclamation operations, or obtain an extension of the well plugging requirement to maintain your well in shut-in status, you must obtain an operations permit in accordance with §§ 29.90 through 29.97, Operations Permit: Application, and all applicable requirements of this subpart.

Definitions

§ 29.50 What do the terms used in this subpart mean?

In addition to the definitions in §§ 25.12, 29.21, and 36.2 of this subchapter, the following definitions apply to this subpart:

Access means any method of entering or traversing on or across Service-administered lands or waters, including but not limited to: Vehicle, watercraft, fixed-wing aircraft, helicopter, unmanned aerial vehicle, off-road vehicle, mobile heavy equipment, snowmobile, pack animal, and foot. Access does not include the use of aircraft, including, but not limited to, airplanes, helicopters, and unmanned aircraft vehicles, that do not land on, or are not launched from, Service-administered lands or waters.

Area of operations means the area of Service-administered lands or waters on which operations are carried out, including roads or other areas that you are authorized to use related to the exercise of your oil and gas rights.

Contaminating substance means any toxic or hazardous substance that is used in or results from the conduct of operations and is listed under the Clean Air Act (42 U.S.C. 7401 *et seq.*), Clean Water Act regulations at 40 CFR parts 112 and 116, the Resource Conservation and Recovery Act regulations at 40 CFR part 261, or the Hazardous Materials Transportation Act regulations at 49 CFR part 172. This includes, but is not limited to, explosives, radioactive materials, brine waters, formation waters, petroleum products, petroleum byproducts, and chemical compounds used for drilling, production, processing, well testing, well completion, and well servicing.

Gas means any fluid, either combustible or noncombustible, that is produced in a natural state from the earth and that maintains a gaseous or rarefied state at ordinary temperature and pressure conditions.

Oil means any viscous combustible liquid hydrocarbon or solid hydrocarbon substance that occurs naturally in the earth and is easily liquefiable on warming.

Modifying means changing operations in a manner that will result in additional impacts on refuge resources, visitor uses, refuge administration, or human health and safety beyond the scope, intensity, and/or duration of existing impacts. In order to determine if activities would have additional impacts, you must consult with the Service.

Operations means all existing and proposed functions, work, and activities in connection with the exercise of oil or gas rights not owned by the United States and located on Service-administered lands or waters.

(1) Operations include, but are not limited to: Access by any means to or from an area of operations; construction; geological and geophysical exploration; drilling, well servicing, workover, or recompletion; production; hydraulic fracturing, well simulation, and injection wells; gathering (including installation and maintenance of flowlines and gathering lines); storage, transport, or processing of petroleum products; earth moving; excavation; hauling; disposal; surveillance, inspection, monitoring, or maintenance of wells, facilities, and equipment;

reclamation; road and pad building or improvement; shot hole and well plugging and abandonment, and reclamation; and all other activities incident to any of the foregoing.

(2) Operations do not include reconnaissance surveys as defined in this subpart or oil and gas pipelines that are located within a refuge under authority of a deeded or other right-of-way.

Operations permit means a permit issued by the Service under this subpart authorizing an operator to conduct operations on Service-administered lands or waters.

Operator means any person or entity, agent, assignee, designee, lessee, or representative thereof exercising or proposing to exercise non-Federal oil and gas rights on Service-administered lands or waters.

Reconnaissance survey means an inspection or survey conducted by qualified specialists for the purpose of preparing a permit application. A reconnaissance survey:

(1) Includes identification of the area of operations and collection of natural and cultural resource information within and adjacent to the proposed area of operations.

(2) Does not include surface disturbance activities except for minimal disturbance necessary to perform cultural resource surveys, natural resource surveys, and location surveys required under this subpart.

Right to operate means a deed, lease, memorandum of lease, designation of operator, assignment of right, or other documentation demonstrating that you hold a legal right to conduct the operations you are proposing on Service-administered lands or waters.

Service, we, us and *our* means the U.S. Fish and Wildlife Service.

Technologically feasible, least damaging methods are those that we determine, on a case-by-case basis, to be most protective of refuge resources and uses while ensuring human health and safety, taking into consideration all relevant factors, including environmental, economic, and technological factors and the requirements of applicable law.

Temporary access permit means a permit issued by the Service authorizing an operator to access that operator's proposed area of operations to conduct reconnaissance surveys to collect basic information necessary to prepare an operations permit application.

Third-party monitor means a qualified specialist, who is not an employee, agent, or representative of the operator, nor has any conflicts of interest that could preclude objectivity in monitoring an operator's compliance, and who has the relevant expertise to monitor operations for compliance with applicable laws, regulations, and permit requirements.

Usable water means an aquifer or its portion that:

(1)(i) Supplies any public water system; or

(ii) Contains a sufficient quantity of ground water to supply a public water system and either:

(A) Currently supplies drinking water for human consumption; or

(B) Contains fewer than 10,000 mg/l total dissolved solids; and

(2) Is not an exempted aquifer.

Waste means any material that is discarded. It includes, but is not limited to: Drilling fluids and cuttings; produced fluids not under regulation as a toxic or hazardous substance; human waste; garbage; fuel drums; pipes; oil; refined oil and other hydrocarbons; contaminated soil; synthetic materials; manmade structures or equipment; or native and nonnative materials.

You means the operator, unless otherwise specified or indicated by the context.

Pre-Existing Operations

§ 29.60 Do I need an operations permit for my pre-existing operation?

No. Pre-existing operations are those conducted as of December 14, 2016 without an approved permit from the Service or prior to a boundary change or establishment of a new refuge. Your pre-existing operations may be continued without an operations permit, but you are required to operate in accordance with applicable local, State, and Federal laws and regulations, and are subject to applicable provisions of this subpart, including requirements for a permit when you propose to conduct new operations or to modify pre-existing operations.

§ 29.61 What information must I provide to the Service?

You must submit the following information to the Service where your pre-existing operation is occurring by February 13, 2017 or 90 days after a boundary change or establishment of a new refuge:

(a) Documentation demonstrating that you hold the right to operate on Service-administered lands or waters.

(b) The names, phone numbers, and addresses of your:

(1) Primary company representative;

(2) Representative responsible for field supervision; and

(3) Representative responsible for emergency response.

(c) A brief description of your current operations, and any anticipated changes to current operations, including:

(1) A scaled map clearly delineating your existing area of operations;

(2) Documentation of the current operating methods, surface equipment, materials produced or used, and monitoring methods; and

(3) Copies of all plans and permits required by local, State, and Federal agencies, including a Spill Prevention Control and Countermeasure Plan if required by Environmental Protection Agency regulations at 40 CFR part 112.

§ 29.62 What if I intend to conduct new operations or modify my pre-existing operations?

(a) You must obtain an operations permit before conducting operations that are begun after December 14, 2016 for those new operations in accordance with §§ 29.90 through 29.97, Operations Permit: Application, and all applicable requirements of this subpart.

(b) You must obtain an operations permit prior to modifying your pre-existing operations for that modification in accordance with §§ 29.90 through 29.97, Operations Permit: Application, and all applicable requirements of this subpart.

§ 29.63 What plugging and reclamation requirements apply to my pre-existing operations?

Upon completion of your production operation, you are subject to the reclamation standards in § 29.117(d). You must obtain an operations permit in accordance with §§ 29.90 through 29.97, Operations Permit: Application, and all applicable requirements of this subpart, prior to plugging your well and conducting site reclamation.

§ 29.64 What other provisions apply to my operations?

Your pre-existing operations are also subject to the following regulations in this part 29:

(a) § 29.120(b), (d), (f), and (g) and § 29.121(a) and (c)–(f);

(b) § 29.170(a);

(c) §§ 29.180 and 29.181;

(d) § 29.190; and

(e) § 29.200.

Temporary Access Permits

§ 29.70 When do I need a temporary access permit?

You must apply to the Service and obtain a temporary access permit to access your proposed area of operations in order to conduct reconnaissance surveys within a refuge. This permit will describe the means, routes, timing, and other terms and conditions of your access determined by the Service to

result in only the minimum disturbance necessary to perform surveys.

§ 29.71 How do I apply for a temporary access permit?

You must submit the information requested in FWS Form 3–2469 (Oil and Gas Operations Special Use Permit Application) to the refuge in which you propose to conduct operations. Information includes, but is not limited to:

(a) The name, legal address, and telephone number of the operator, employee, agent, or contractor responsible for overall management of the proposed operations;

(b) Documentation demonstrating that you hold the right to operate on Service-administered lands or waters;

(c) The name, legal address, telephone number, and qualifications of all specialists responsible for conducting the reconnaissance surveys (only required if the assistants/subcontractors/subpermittees will be operating on Service-administered lands or waters without the permittee being present);

(d) A brief description of the intended operation so that we can determine reconnaissance survey needs;

(e) A description of the survey methods you intend to use to identify the natural and cultural resources;

(f) A map (to-scale and determined by us to be acceptable) delineating the proposed reconnaissance survey area in relation to the refuge boundary and the proposed area of operations; and

(g) A description of proposed means of access and routes for conducting the reconnaissance surveys.

§ 29.72 When will the Service grant a temporary access permit?

Within 30 calendar days of receipt of the application for a reconnaissance survey, we will advise you whether the application fulfills the requirements of §§ 29.70 through 29.71 and issue you a temporary access permit or provide you with a statement of additional information that is needed for us to conduct review of your application.

§ 29.73 How much time will I have to conduct my reconnaissance surveys?

Your temporary access permit will be in effect for a maximum of 60 calendar days from the date of issuance, unless a longer term is approved in the permit. We may extend the term of the permit for a reasonable period of time, based upon your written request that explains why an extension is necessary.

Accessing Oil and Gas Rights From a Non-Federal Surface Location

§ 29.80 Do I need a permit for accessing oil and gas rights from a non-Federal location?

No. Using directional drilling from a non-Federal surface location to reach your oil and gas rights within a refuge is exempt from these regulations. However, you are encouraged to provide the Service the names, phone numbers, and addresses of your primary company representative, representative responsible for field supervision, and representative responsible for emergency response at least 60 calendar days prior to conducting your operation. If you require access across Service-administered lands or waters, that access is subject to applicable provisions of this subpart, including obtaining an operations permit for any new access or modification of existing access.

Operations Permit: Application

§ 29.90 Who must apply for an operations permit?

Except as otherwise provided in §§ 29.43, 29.44, 29.70, and 29.80, if you are proposing to conduct operations on Service-administered lands or waters outside of Alaska, you must submit an application (FWS Form 3–2469) for an operations permit to the Service.

§ 29.91 What should I do before filing an application?

You should participate in a pre-application meeting with the Service to allow for an early exchange of information between you and the Service with the intent of avoiding delays in your application process.

(a) For the meeting, you should provide:

(1) Documentation demonstrating that you hold the legal right to operate on Service-administered lands or waters; and

(2) An overview of your proposed operation and timing.

(b) The Service will provide guidance on the permitting process and information on available resource data, and identify additional data needs.

§ 29.92 May I use previously submitted information?

Yes.

(a) You do not need to resubmit information that is already on file with the Service, provided that such information is still current and accurate. You should reference this information in your oil and gas operations permit application.

(b) You may submit documents and materials submitted to other Federal and State agencies noting how the information meets the specific requirements of §§ 29.93 through 29.97.

§ 29.93 Do I need to submit information for all possible future operations?

No. You need only provide information for those operations for which you are seeking immediate approval. Approval of activities beyond the scope of your application may be subject to a new application and approval process.

§ 29.94 What information must be included in all applications?

All applications must include the information requested on FWS Form 3–2469, including, but not limited to:

(a) The name, legal address, and telephone number of the operator, employee, agent, or contractor responsible for overall management of the proposed operations.

(b) Documentation demonstrating that you hold the legal right to operate within the refuge.

(c) A description of the natural features of your proposed area of operations, such as: Streams, lakes, ponds, wetlands, estimated depths to the top and bottom of zones of usable water and topographic relief.

(d) The location of existing roads, trails, railroad tracks, pipeline rights-of-way, pads, and other disturbed areas.

(e) The location of existing structures that your operations could affect, including buildings, pipelines, oil and gas wells including both producing and plugged and abandoned wells, injection wells, freshwater wells, underground and overhead electrical lines, and other utility lines.

(f) Descriptions of the natural and cultural resource conditions from your reconnaissance survey reports or other sources collected for your proposed area of operations, including any baseline testing of soils and surface and near-surface ground waters within your area of operations that reasonably may be impacted by your surface operations.

(g) Locations map(s) (to-scale and determined by us to be acceptable) that clearly identifies:

(1) Proposed area of operations, existing conditions, and proposed new surface uses, including the boundaries of each of your oil and gas tracts in relation to your proposed operations and the relevant refuge boundary.

(2) Proposed access routes of new surface disturbances as determined by a location survey.

(3) Proposed location of all support facilities, including those for transportation (*e.g.,* vehicle parking areas, helicopter pads, etc.), sanitation,

occupation, staging areas, fuel storage areas, refueling areas, loading docks, water supplies, and disposal facilities.

(h) The method and diagrams, including cross-sections, of any proposed pad construction, road construction, cut-and-fill areas, and surface maintenance, including erosion control.

(i) The number and types of equipment and vehicles, including an estimate of vehicular round trips associated with your operation.

(j) An estimated timetable for the proposed operations, including any operational timing constraints.

(k) The type and extent of security measures proposed at your area of operations.

(l) The power sources and their transmission systems for the proposed operations.

(m) The types and quantities of all solid and liquid waste generated and the proposed methods of storage, handling, and disposal.

(n) The source, quantity, access route, and transportation/conveyance method for all water to be used in operations, including hydraulic fracturing, and estimations of any anticipated wastewater volumes generated, including flowback fluids from hydraulic fracturing, and the proposed methods of storage, handling, and recycling or disposal.

(o) The following information regarding mitigation actions and alternatives considered:

(1) A description of the steps you propose to take to mitigate anticipated adverse environmental impacts on refuge resources and uses, including, but not limited to, the refuge's land features, land uses, fish and wildlife, vegetation, soils, surface and subsurface water resources, air quality, noise, lightscapes, viewsheds, cultural resources, and economic environment.

(2) A description of any anticipated impacts that you cannot mitigate.

(3) A description of alternatives considered that meet the criteria of technologically feasible, least damaging methods of operations, as well as the costs and environmental effects of such alternatives.

(p) You must submit the following information about your spill control and emergency preparedness plan. You may use a spill prevention control and countermeasure plan prepared under 40 CFR part 112 if the plan includes all of the information required by this section. You must submit:

(1) The names, addresses, and telephone numbers of the people whom the Service can contact in the event of a spill, fire, or accident, including the order in which the individuals should be contacted.

(2) The notification procedures and steps taken to minimize damage in the event of a spill, fire, or accident.

(3) Identification of contaminating substances used within your area of operations or expected to be encountered during operations.

(4) Trajectory analysis for potential spills that are not contained on location.

(5) Identification of abnormal pressure, temperature, toxic gases or substances, or other hazardous conditions at your area of operations or expected to be encountered during operations.

(6) Measures (*e.g.,* procedures, facility design, equipment) to minimize risks to human health and safety, and the environment.

(7) Steps to prevent accumulations of oil or other materials deemed to be fire hazards from occurring in the vicinity of well locations and lease tanks.

(8) The equipment and methods for containment and cleanup of contaminating substances, including a description of the equipment available at your area of operations and equipment available from local contractors.

(9) A stormwater drainage plan and actions intended to mitigate stormwater runoff.

(10) Material safety data sheets for each material you will use or encounter during operations, including expected quantities maintained at your area of operations.

(11) A description of the emergency actions you will take in the event of injury or death to fish and wildlife or vegetation.

(12) A description of the emergency actions you will take in the event of accidents causing human injury.

(13) Contingency plans for conditions and emergencies other than spills, such as if your area of operations is located in areas prone to hurricanes, flooding, tornadoes, fires, or earthquakes.

(q) A description of the specific equipment, materials, methods, and schedule that will be used to meet the operating standards for reclamation at § 29.117.

(r) An itemized list of the estimated costs that a third party would charge to complete reclamation.

§ 29.95 What additional information must be included if I am proposing geophysical exploration?

If you propose to conduct geophysical exploration, you must submit the information requested on FWS Form 3–2469, including, but not limited to:

(a) A map showing the positions of each survey line including all source and receiver locations as determined by a locational survey, and including shot point offset distances from wells, buildings, other infrastructure, cultural resources, and environmentally sensitive areas;

(b) The number of crews and numbers of workers in each crew;

(c) A description of the acquisition methods, including the procedures and specific equipment you will use, and energy sources (*e.g.,* explosives, vibroseis trucks);

(d) A description of the methods of access along each survey line for personnel, materials, and equipment; and

(e) A list of all explosives, blasting equipment, chemicals, and fuels you will use in the proposed operations, including a description of proposed disposal methods, transportation methods, safety measures, and storage facilities.

§ 29.96 What additional information must be included if I am proposing drilling operations?

If you are proposing to drill a well, you must submit the information requested on FWS Form 3–2469, including, but not limited to:

(a) A description of the well pad construction, including dimensions and cross sections of cut-and-fill areas and excavations for ditches, sumps, and spill control equipment or structures, including lined areas;

(b) A description of the drill rig and equipment layout, including rig components, fuel tanks, testing equipment, support facilities, storage areas, and all other well-site equipment and facilities;

(c) A description of the type and characteristics of the proposed drilling mud systems; and

(d) A description of the equipment, materials, and methods of surface operations associated with your drilling, well casing and cementing, well control, well evaluation and testing, well completion, hydraulic fracturing or other well stimulation, and well plugging programs.

§ 29.97 What additional information must be included if I am proposing production operations?

If you are proposing to produce a well, you must submit the information requested on FWS Form 3–2469, including, but not limited to:

(a) The dimensions and the to-scale layout of the well pad, clearly identifying well locations, noting partial reclamation areas; gathering, separation, metering, and storage equipment; electrical lines; fences; spill control

equipment or structures, including lined areas, artificial lift equipment, tank batteries, treating and separating vessels, secondary or enhanced recovery facilities, water disposal facilities, gas compression and/or injection facilities; metering points; sales point (if on lease); tanker pickup points; gas compressor, including size and type (if applicable); and any other well site equipment.

(b) A general description of anticipated stimulations, servicing, and workovers.

(c) A description of the procedures and equipment used to maintain well control.

(d) A description of the method and means used to transport produced oil and gas, including vehicular transport; flowline and gathering line construction and operation, pipe size, and operating pressure; cathodic protection methods; surface equipment use; surface equipment location; maintenance procedures; maintenance schedules; pressure detection methods; and shutdown procedures.

(e) A road and well pad maintenance plan, including equipment and materials to maintain the road surface and control erosion.

(f) A vegetation management plan on well sites, roads, pipeline corridors, and other disturbed surface areas, including control of noxious and invasive species.

(g) A stormwater management plan on the well site.

(h) A produced water storage and disposal plan.

(i) A description of the equipment, materials, and procedures proposed for well plugging.

Operations Permit: Application Review and Approval

§ 29.100 How will the Service process my application?

We will conduct initial review of your application to determine if all information is complete. Once your information is complete, we will begin formal review.

§ 29.101 How will the Service conduct an initial review?

(a) Within 30 calendar days of receipt of your application, the Service will notify you in writing that one of the following situations exists:

(1) Your application is complete, and the Service will begin formal review;

(2) Your application does not meet the information requirements, in which case we will identify the additional information required to be submitted before the Service will be able to conduct formal review of your application; or

(3) More time is necessary to complete the review, in which case the Service will provide the amount of additional time reasonably needed along with a justification.

(b) If you submit additional information as requested under paragraph (a)(2) of this section, and the Service determines that you have met all applicable information requirements, the Service will notify you within 30 calendar days from receipt of the additional information that either:

(1) Your application is complete, and the Service will begin formal review; or

(2) More time is necessary to complete the initial review, in which case the Service will provide the amount of additional time reasonably needed along with a justification.

§ 29.102 How will the Service conduct a formal review?

For those applications for which the Service determines that the applicant holds a valid property right, the Service will conduct a formal review of your application by:

(a) Evaluating the potential impacts of your proposal on Service-administered lands and waters, or resources of refuges; visitor uses or experiences; or visitor or employee health and safety in compliance with applicable Federal laws; and

(b) Identifying any additional operating conditions that would apply to your approved application.

§ 29.103 What standards must be met to approve my application?

(a) In order to approve your operations permit application, the Service must determine that your operations will:

(1) Use technologically feasible, least damaging methods; and

(2) Meet all applicable operating standards.

(b) Before operations begin, you must submit to the Service:

(1) Financial assurance in the amount specified by the Service and in accordance with the requirements of §§ 29.150 through 29.154, Financial Assurance;

(2) Proof of liability insurance with limits sufficient to cover injuries to persons or property caused by your operations; and

(3) A statement under penalty of perjury, signed by an official who is authorized to legally bind the company, stating that proposed operations are in compliance with any applicable Federal law or regulation or any applicable State law or regulation related to non-Federal oil and gas operations and that all information submitted to the Service is true and correct.

§ 29.104 What actions may the Service take on my operations permit application?

(a) We will make a decision on your application within 180 days from the date we deem your application complete unless:

(1) We and you agree that such decision will occur within a shorter or longer period of time; or

(2) We determine that an additional period of time is required to ensure that we have, in reviewing the permit application, complied with all applicable legal requirements.

(b) We will notify you in writing that your permit application is:

(1) Approved, with or without operating conditions; or

(2) Denied, and provide justification for the denial. Any such denial must be consistent with § 29.40(c).

Operating Standards

§ 29.110 What are the purposes of the Service's operating standards?

The purposes are to:

(a) Protect Service-administered lands and waters, and refuge resources; wildlife-dependent visitor uses and experiences; and visitor and employee health and safety; and

(b) Ensure use of technologically feasible, least damaging methods. The operating standards give us and the operator flexibility to consider using alternative methods, equipment, materials design, and conduct of operations.

§ 29.111 What general facility design and management standards must I meet?

As a permittee, you must:

(a) Design, construct, operate, and maintain access to your operational site to cause the minimum amount of surface disturbance needed to safely conduct operations and to avoid areas we have identified as containing sensitive resources.

(b) Install and maintain secondary containment materials and structures for all equipment and facilities using or storing contaminating substances. The containment system must be sufficiently impervious to prevent discharge and must have sufficient storage capacity to contain, at a minimum, the largest potential spill incident.

(c) Keep temporarily stored waste in the smallest area feasible, and confine the waste to prevent escape as a result of percolation, rain, high water, or other causes. You must regularly remove waste from the refuge and lawfully dispose of the waste in a direct and workable timeframe. You may not establish a solid waste disposal site on a refuge.

(d) Use engines that adhere to applicable Federal and State emission standards.

(e) Construct, maintain, and use roads in a manner to minimize fugitive dust emissions.

(f) Design, operate, and maintain your operations and equipment in a manner consistent with good air pollution control practices so as to minimize emissions and leaks of air pollutants and hydrocarbons, including intentional releases or flaring of gases.

(g) Control the invasion of noxious and invasive plant and animal species in your area of operations from the beginning through final reclamation.

(h) Avoid conducting ground-disturbing operations within 500 feet of any surface water, including an intermittent or ephemeral watercourse, or wetland, or any refuge structure or facility used by refuges for interpretation, public recreation, or administration. We may increase or decrease this distance consistent with the need to protect Service-administered structures or facilities, visitor uses or experiences, or visitor or employee health and safety; or to ensure that you have reasonable access to your non-Federal oil and gas. Measurements for purposes of this paragraph are by map distance.

§ 29.112 What fish and wildlife protection standards must I meet?

To protect fish and wildlife resources on the refuge, you must:

(a) Along with your employees and contractors, adhere to all refuge regulations for the protection of fish, wildlife, and plants;

(b) Ensure that you, your employees, and contractors have been informed and educated by the refuge staff on the appropriate protection practices for wildlife conservation;

(c) Conduct operations in a manner that does not create an unsafe environment for fish and wildlife by avoiding or minimizing exposure to physical and chemical hazards; and

(d) Conduct operations in a manner that avoids or minimizes impacts to sensitive wildlife, including timing and location of operations.

§ 29.113 What hydrologic standards must I meet?

You must:

(a) Construct facilities in a manner that maintains hydrologic movement and function.

(b) Not cause measurable degradation of surface water or groundwater beyond that of existing conditions.

(c) Conduct operations in a manner that maintains natural processes of erosion and sedimentation.

§ 29.114 What safety standards must I meet?

To ensure the safety of your operations, you must:

(a) Maintain your area of operations in a manner that avoids or minimizes the cause or spread of fire and does not intensify fire originating outside your operations area;

(b) Maintain structures, facilities, improvements, and equipment in a safe and professional manner in order not to create an unsafe environment for refuge resources, visitors, and employees, by avoiding or minimizing exposure to physical and chemical hazards; and

(c) Provide site-security measures to protect visitors from hazardous conditions resulting from your operations.

§ 29.115 What lighting and visual standards must I meet?

(a) You must design, shield, and focus lighting to minimize the effects of spill light on the night sky or adjacent areas; and

(b) You must reduce visual contrast in the landscape in selecting the area of operations, avoiding unnecessary disturbance, choosing appropriate colors and materials for roads and permanent structures, and other means.

§ 29.116 What noise reduction standards must I meet?

You must prevent or minimize all noise that:

(a) Adversely affects refuge resources or uses, taking into account frequency, magnitude, or duration; or

(b) Exceeds levels that have been identified through monitoring as being acceptable to or appropriate for uses at the sites being monitored.

§ 29.117 What reclamation and protection standards must I meet?

(a) You must promptly clean up and remove from the refuge any released contaminating substances in accordance with all applicable Federal, State, and local laws.

(b) You must perform partial reclamation of areas that are no longer necessary to conduct operations. You must begin final reclamation within 6 months after you complete your authorized operations unless we authorize a different reclamation period in writing.

(c) You must protect all survey markers (*e.g.,* monuments, witness corners, reference monuments, and bearing trees) against destruction, obliteration, or damage from operations. You are responsible for reestablishment, restoration, and referencing of any monuments, corners, and bearing trees that are destroyed, obliterated, or damaged by your operations.

(d) You must complete reclamation by:

(1) Plugging all wells;

(2) Removing all above-ground structures, equipment, roads, and all other manmade material and debris resulting from operations;

(3) Removing or neutralizing any contaminating substances;

(4) Reestablishing native vegetative communities, or providing for conditions where ecological processes typical of the ecological zone (*e.g.,* plant or wildlife succession) will reestablish themselves;

(5) Grading to conform the contours to pre-existing elevations as necessary to maximize ecological function;

(6) Restoring conditions to pre-disturbance hydrologic movement and functionality;

(7) Restoring natural systems using native soil material that is similar in character to the adjacent undisturbed soil profiles;

(8) Ensuring that reclamation does not interfere with visitor use or with administration of the refuge;

(9) Attaining conditions that are consistent with the management objectives of the refuge, designed to meet the purposes for which the refuge was established; and

(10) Coordinating with us or with other operators who may be using a portion of your area of operations to ensure proper and equitable apportionment of reclamation responsibilities.

§ 29.118 What additional operating standards apply to geophysical operations?

If you conduct geophysical operations, you must do all of the following:

(a) Use surveying methods that minimize the need for vegetative trimming and removal.

(b) Locate source points using industry-accepted minimum safe-offset distances from pipelines, telephone lines, railroad tracks, roads, power lines, water wells, oil and gas wells, oil- and gas-production facilities, and buildings.

(c) Use equipment and methods that, based upon the specific environment, will minimize impacts to Service-administered lands and waters, and resources of refuges; visitor uses and experiences; and visitor and employee health and safety.

(d) If you use shot holes, you must:

(1) Use biodegradable charges;

(2) Plug all shot holes to prevent a pathway for migration for fluids along any portion of the bore; and

(3) Leave the site in a clean and safe condition that will not impede surface

reclamation or pose a hazard to wildlife or human health and safety.

§ 29.119 What additional operating standards apply to drilling and production operations?

If you conduct drilling and production operations, you must meet all of the following standards:

(a) To conduct drilling operations, you must:

(1) Use containerized mud circulation systems for operations;

(2) Not create or use earthen pits;

(3) Take all necessary precautions to keep your wells under control at all times, using only employees, contractors, or subcontractors trained and competent in well control procedures and equipment operation, and using industry-accepted well control equipment and practices; and

(4) Design, implement, and maintain integrated casing, cementing, drilling fluid, completion, stimulation, and blowout prevention programs to prevent escape of fluids to the surface and to isolate and protect usable water zones throughout the life of the well, taking into account all relevant geologic and engineering factors.

(b) To conduct production operations, in addition to meeting the standards of paragraphs (a)(1) through (a)(4) of this section, you must do all of the following:

(1) Monitor producing conditions for early indications that could lead to loss of mechanical integrity of producing equipment.

(2) Maintain all surface equipment and the wellhead to prevent leaks or releases of any fluids or air pollutants.

(3) Identify wells and related facilities with appropriate signage. Signs must remain in place until the well is plugged and abandoned and the related facilities are removed. Signs must be of durable construction, and the lettering must be legible and large enough to be read under normal conditions at a distance of at least 50 feet. Each sign must show the name of the well, name of the operator, and the emergency contact phone number.

(4) Remove all equipment and materials when not needed for the current phase of your operation.

(5) Plug all wells, leaving the surface in a clean and safe condition that will not impede surface reclamation or pose a hazard to wildlife or human health and safety, in accordance with § 29.117.

General Terms and Conditions

§ 29.120 What terms and conditions apply to all operators?

The following terms and conditions apply to all operators, regardless of whether these terms and conditions are expressly included in the permit:

(a) You must comply with all applicable operating standards in §§ 29.111 through 29.119; these operating standards will be incorporated in the terms and conditions of your operations permit. Violation of these operating standards, unless otherwise provided in your operations permit, will subject you to the Prohibited Acts and Penalties provisions of §§ 29.190 through 29.192.

(b) You are responsible for ensuring that all of your employees, agents, contractors, and subcontractors comply fully with the requirements of this subpart.

(c) You may be required to reimburse the Service for the costs of processing and administering temporary access permits and operations permits.

(d) You may not use any surface water or groundwater from a source located on a refuge unless you have demonstrated a right to use that water or the use has been approved by the Service as the technologically feasible, least damaging method.

(e) You agree to indemnify and hold harmless the United States and its officers and employees from and against any and all liability of any kind whatsoever arising out of or resulting from the acts or omissions of you and your employees, agents, representatives, contractors, and subcontractors in the conduct of activities under a Service-issued permit.

(f) You will be required to take all reasonable precautions to avoid, minimize, rectify, or reduce the overall impacts of your proposed oil and gas activities to the refuge. You may be required to mitigate for impacts to refuge resources and lost uses. Mutually agreed to mitigation tools for this purpose may include providing alternative habitat creation or restoration, land purchase, or other resource compensation.

(g) You are responsible for unanticipated and unauthorized damages as a direct or indirect result of your operations. You will be responsible for the actions and consequences of your employees and subcontractors. You will also be responsible for any reclamation of damages to refuge resources directly or indirectly caused by your operations through the occurrence of severe weather, fire, earthquakes, or the like thereof.

§ 29.121 What monitoring and reporting is required for all operators?

(a) The Service may access your area of operations at any time to monitor the effects of your operations to ensure compliance with the regulations in this subpart.

(b) The Service may determine that third-party monitors are necessary to ensure compliance with your operations permit and to protect Service-administered lands and waters, or the resources of refuges, visitor uses and experiences, and visitor or employee health and safety.

(1) The Service's determination will be based on the scope and complexity of the proposed operation, reports that you are required to submit under paragraph (e) of this section, and whether the refuge has the staff and technical ability to ensure compliance with the operations permit and any provision of this subpart.

(2) A third-party monitor will report directly to the Service at intervals determined by the Service. We will make the information reported available to you upon your request.

(3) You will be responsible for the cost of the third-party monitor.

(c) You must notify the Service within 24 hours of any injuries to or mortality of fish, wildlife, or endangered or threatened plants resulting from your operations.

(d) You must notify the Service of any accidents involving serious personal injury or death and of any fires or spills on the site immediately after the accident occurs. You must submit a full written report on the accident to the Service within 90 days after the accident occurs.

(e) Upon our request, you must submit reports or other information necessary to verify compliance with your permit or with any provision of this subpart. To fulfill this request, you may submit to us reports that you have submitted to the State under State regulations, or that you have submitted to any other Federal agency to the extent they are sufficient to verify compliance with permits or this subpart.

(f) If your operations include hydraulic fracturing, you must provide the Service with a report including the true vertical depth of the well, total water volume used, and a description of the base fluid and each additive in the hydraulic fracturing fluid, including the trade name, supplier, purpose, ingredients, Chemical Abstract Service Number (CAS), maximum ingredient concentration in additive (percent by mass), and maximum ingredient concentration in hydraulic fracturing fluid (percent by mass). The report must be either submitted through FracFocus or another Service-designated database.

§ 29.122 For how long is my operations permit valid?

Operations permits remain valid for the duration of the operation. Provisions of § 29.160 apply.

Access Fees

§ 29.140 May I cross Federal property to reach the boundary of my oil and gas right?

The Service may grant you the privilege of access on, across, or through Service-administered lands or waters to reach the boundary of your oil and gas right. You should contact the Service to determine if additional permits are necessary for access.

§ 29.141 Will the Service charge me a fee for access?

(a) The Service will charge you a fee if you require use of Service-administered lands or waters outside the boundary or scope of your oil and gas right:

(1) If you require new use of Service-administered lands or waters, we will charge you a fee based on the fair market value of that use.

(2) Fees under this section will not be charged for access within the scope of your oil and gas right or access to your right that is otherwise provided for by law.

(b) If access to your oil and gas right is across an existing refuge road, we may charge a fee according to a posted fee schedule.

§ 29.142 Will I be charged a fee for emergency access to my operations?

No.

(a) The Service will not charge a fee for access across Service-administered lands or waters beyond the scope of your oil and gas right as necessary to respond to an emergency situation at your area of operations if we determine after the fact that the circumstances required an immediate response to either:

(1) Prevent or minimize injury to refuge resources; or

(2) Ensure public health and safety.

(b) You will remain liable for any damage caused to refuge resources as a result of such emergency access.

Financial Assurance

§ 29.150 When do I have to provide financial assurance to the Service?

You will need to provide financial assurance as a condition of approval for your operations permit when you submit your application. You must file financial assurance with us in a form acceptable to the Service and payable upon demand. This financial assurance is in addition to any financial assurance required by any other Federal or State regulatory authority.

§ 29.151 How does the Service establish the amount of financial assurance?

(a) You are responsible for completing reclamation of your disturbances, whether within or outside your permit area, in accordance with this subpart and the terms of your permit. If you fail to properly complete reclamation, you will be liable for the full costs of completing the reclamation. We will base the financial assurance amount upon the estimated cost that a third-party contractor would charge to complete reclamation in accordance with this subpart. If the cost of reclamation exceeds the amount of your financial assurance, you will remain liable for all costs of reclamation in excess of the financial assurance.

(b) The Service will reduce the required amount of your financial assurance during the pendency of operations by the amount we determine is represented by in-kind reclamation you complete during your operations.

§ 29.152 Will the Service adjust the amount required for my financial assurance?

The Service may require, or you may request, an adjustment to the financial assurance amount because of any circumstances that increase or decrease the estimated costs established under § 29.151.

§ 29.153 When will the Service release my financial assurance?

(a) Your responsibility under the financial assurance will continue until either:

(1) The Service determines that you have met all applicable reclamation operating standards and any additional reclamation requirements that may be included in your operations permit; or

(2) A new operator assumes your operations, as provided in § 29.170(b).

(b) You will be notified by the Service within 30 calendar days of our determination that your financial assurance has been released.

§ 29.154 Under what circumstances will I forfeit my financial assurance?

(a) You may forfeit all or part of your financial assurance if we cannot secure your compliance with the provisions of your operations permit or a provision of this subpart. The part of your financial assurance forfeited is based on costs to the Service to remedy your noncompliance.

(b) In addition to forfeited financial assurance, we may temporarily:

(1) Prohibit you from removing all structures, equipment, or other materials from your area of operations;

(2) Require you to secure the operations site and take any necessary actions to protect Service-administered lands and waters, and resources of the refuge; visitor uses; and visitor or employee health and safety; and

(3) Suspend review of any permit applications you have submitted until we determine that all violations of permit provisions or of any provision of this subpart are resolved.

(4) Seek recovery as provided in § 29.151 for all costs of reclamation in excess of the posted financial assurance.

Modification to an Operation

§ 29.160 Can I modify operations under an approved permit?

The Service may amend an approved temporary access permit or an operations permit to adjust to changed conditions or to address unanticipated conditions, either upon our own action or at your request.

(a) To request a modification to your operation, you must provide, in writing, to the Service, your assigned permit number, a description of the proposed modification, and an explanation of why the modification is needed. We will review your request for modification under the approval standards at §§ 29.72 or 29.103. You may not implement any modification until you have received the Service's written approval.

(b) If the Service needs to amend your temporary access permit or operations permit, you will receive a written notice that:

(1) Describes the modification required and justification;

(2) Specifies the time within which you must notify the Service that you either accept the modifications to your permit or explain any concerns you may have; and

(3) Absent any concerns, specifies the time within which you must incorporate the modification into your operations.

Change of Operator

§ 29.170 What are my responsibilities if I transfer my right to operate?

(a) If your operations are being conducted under § 29.44, you must notify the Service in writing within 30 calendar days from the date the new operator acquires the rights to conduct operations. Your written notification must include:

(1) The names and addresses of the person or entity conveying the right and of the person or entity acquiring the right;

(2) The effective date of transfer;

(3) The description of the rights, assets, and liabilities being transferred and which ones, if any, are being reserved by the previous operator; and

(4) A written acknowledgement from the new operator that the contents of the notification are true and correct.

(b) If your operations are being conducted under § 29.43 or an operations permit:

(1) You must provide notice under paragraph (a) of this section.

(2) You remain responsible for compliance with your operations permit, and we will retain your financial assurance until the new operator:

(i) Adopts and agrees in writing to conduct operations in accordance with all terms and conditions of your operations permit;

(ii) Provides financial assurance with us that is acceptable to the Service and made payable to the Service; and

(iii) Receives written notification from the Service that transfer of the operations permit has been approved.

§ 29.171 What must I do if operations are transferred to me?

(a) If another operator transfers operations conducted under § 29.44, as the transferee you may continue operating under the requirements of that section, but:

(1) Within 30 calendar days from the date of the transfer, you must provide to the Service:

(i) Documentation demonstrating that you hold the right to operate; and

(ii) The names, phone numbers, and addresses of your:

(A) Primary company representative;

(B) Representative responsible for field supervision; and

(C) Representative responsible for emergency response.

(2) Within 90 days, or as otherwise agreed to by the Service, submit an operations permit application in compliance with §§ 29.90–29.97, Operations Permit: Application, that must be approved in compliance with applicable provisions of this subpart and under the timelines outlined in §§ 29.100–29.103, Operations Permit: Application Review and Approval.

(b) If another operator transfers operations conducted under § 29.43 or an operations permit, you must within 30 days of commencing transferred operations:

(1) Provide documentation demonstrating that you hold the right to operate.

(2) Provide the names, phone numbers, and addresses of your:

(i) Primary company representative;

(ii) Representative responsible for field supervision; and

(iii) Representative responsible for emergency response.

(3) Agree in writing to conduct operations in accordance with all terms and conditions of the previous operator's permit.

(4) File financial assurance with us that is acceptable to the Service and made payable to the Service.

(5) Receive written approval from the Service for the transfer of the operation's permit.

(c) You may modify operations transferred to you in accordance with § 29.160.

Well Plugging

§ 29.180 When must I plug my well?

Except as provided in § 29.181, you must plug your well, in accordance with the standards and procedures outlined in this subpart, when any of the following occurs:

(a) Your drilling operations have ended and you have taken no further action on your well within 60 calendar days;

(b) Your well, which has been completed for production operations, has no measurable production quantities for 12 consecutive months; or

(c) The period approved in your permit to maintain your well in shut-in status has expired.

§ 29.181 Can I get an extension to the well plugging requirement?

(a) You may apply for either an operations permit or a modification to your approved operations permit to maintain your well in a shut-in status for up to 5 years. Provide the information requested on FWS Form 3–2469, including, but not limited to:

(1) An explanation of why the well is shut-in or temporarily abandoned and your future plans for utilization;

(2) A demonstration of the mechanical integrity of the well; and

(3) A description of the manner in which your well, equipment, and area of operations will be maintained in accordance with the standards in the subpart.

(b) Based on the information provided under this section, we may approve your application to maintain your well in shut-in status for a period up to 5 years. We may condition an extension on an adjustment of your financial assurance.

(c) You may apply for additional extensions by submitting a new application under paragraph (a) of this section.

Prohibited Acts and Penalties

§ 29.190 What acts are prohibited under this subpart?

The following acts are prohibited:

(a) Operating in violation of the terms or conditions of a temporary access permit, an operations permit, a permit under § 29.43, or any applicable provision of this subpart, including §§ 29.60–29.64 for pre-existing operations.

(b) Damaging Service-administered lands or waters, or resources of a refuge, as a result of failure to comply with the terms or conditions of a temporary access permit, an operations permit, operations being conducted under §§ 29.43 or 29.44, or any provision of this subpart.

(c) Conducting operations without a temporary access permit or an operations permit, unless conducting operations under §§ 29.43 or 29.44.

(d) Failure to comply with any suspension or revocation order issued under this subpart.

(e) Failure to comply with the applicable provisions of Federal law or regulation including this subchapter.

(f) Failure to comply with the applicable provisions of the laws and regulations of the State wherein any operation is located unless further restricted by Federal law or regulation including this subchapter.

§ 29.191 What enforcement actions can the Service take?

If you engage in a prohibited act:

(a) The Service may suspend and/or revoke your approved operations permit and your authorization for operations as set forth at § 29.43 and § 29.44; and/or

(b) All prohibited acts are subject to the penalty provisions set forth at § 28.31 of this subchapter.

§ 29.192 How do violations affect my ability to obtain a permit?

Until you comply with the regulations in this subpart, we will not consider a request to conduct any new operations, except plugging and reclamation operations, on Service-administered lands or waters.

Appeals

§ 29.200 Can I, as operator, appeal Service decisions?

Yes. If you disagree with a decision made by the Service under this subpart, you may use the appeals process in § 25.45 of this subchapter. The process set forth in § 25.45 will be used for appeal of any written decision concerning approval, denial, or modification of an operation made by the Service under this subpart. No

Service decision under this subpart that is subject to appeal to the Regional Director or the Director shall be considered final agency action subject to judicial review under 5 U.S.C. 704 until the Regional Director has rendered his or her decision on the matter. The decision of the Regional Director will constitute the Service's final agency action, and no further appeal will lie in the Department from that decision.

Public Information

§ 29.210 How can the public learn about oil and gas activities on refuge lands?

(a) Interested parties may view publicly available documents at the refuge's office during normal business hours or by other means prescribed by the refuge. The availability for public inspection of information about the nature, location, character, or ownership of refuge resources will conform to all applicable laws and implementing regulations, standards, and guidelines.

(b) The refuge will make available for public inspection any documents that an operator submits to the Service under this subpart except those that the operator has identified as proprietary or confidential.

(c) For the information required in § 29.121(f), the operator and the owner of the information will be deemed to have waived any right to protect from public disclosure information submitted through FracFocus or another Service-designated database.

(d) For information required under this subpart that the owner of the information claims to be exempt from public disclosure and is withheld from the Service, a corporate officer, managing partner, or sole proprietor of the operator must sign and the operator must submit to the authorized officer an affidavit that:

(1) Identifies the owner of the withheld information and provides the name, address, and contact information for a corporate officer, managing partner, or sole proprietor of the owner of the information;

(2) Identifies the Federal statute or regulation that would prohibit the Service from publicly disclosing the information if it were in the Service's possession;

(3) Affirms that the operator has been provided the withheld information from the owner of the information and is maintaining records of the withheld information, or that the operator has access and will maintain access to the withheld information held by the owner of the information;

(4) Affirms that the information is not publicly available;

(5) Affirms that the information is not required to be publicly disclosed under any applicable local, State, tribal, or Federal law;

(6) Affirms that the owner of the information is in actual competition and identifies competitors or others that could use the withheld information to cause the owner of the information substantial competitive harm;

(7) Affirms that the release of the information would likely cause substantial competitive harm to the owner of the information and provides the factual basis for that affirmation; and

(8) Affirms that the information is not readily apparent through reverse engineering with publicly available information.

(e) If the operator relies upon information from third parties, such as the owner of the withheld information, to make the affirmations in paragraphs (d)(6) through (d)(8) of this section, the operator must provide a written affidavit from the third party that sets forth the relied-upon information.

(f) The Service may require any operator to submit to the Service any withheld information, and any information relevant to a claim that withheld information is exempt from public disclosure.

(g) If the Service determines that the information submitted under paragraphs (d) or (e) of this section is not exempt from disclosure, the Service will make the information available to the public after providing the operator and owner of the information with no fewer than 10 business days' notice of the Service's determination.

(h) The operator must maintain records of the withheld information until the later of the Service's release of the operator's financial assurance or 7 years after completion of operations on refuge lands. Any subsequent operator will be responsible for maintaining access to records required by this paragraph during its operation of the well. The operator will be deemed to be maintaining the records if it can promptly provide the complete and accurate information to the Service, even if the information is in the custody of its owner.

(i) If any of the chemical identity information required in this subpart is withheld, the operator must provide the generic chemical name in the submission required. The generic chemical name must be only as nonspecific as is necessary to protect the confidential chemical identity, and should be the same as or no less descriptive than the generic chemical name provided to the Environmental Protection Agency.

Information Collection

§ 29.220 Has the Office of Management and Budget approved the collection of information?

The Office of Management and Budget reviewed and approved the information collection requirements contained in this subpart and assigned OMB Control No. 1018–0162. We use the information collected under this subpart to manage non-Federal oil and gas operations on Service-administered lands or waters for the purpose of protecting wildlife and habitat, water quality and quantity, wildlife-dependent recreational opportunities, and the health and safety of employees and visitors on the NWRS. We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

Karen Hyun,

Deputy Assistant Secretary for Fish and Wildlife and Parks.

Title 3—

The President

Proclamation 9538 of November 8, 2016

World Freedom Day, 2016

By the President of the United States of America

A Proclamation

The Berlin Wall stood in the city it divided for nearly 30 years, separating families and loved ones and embodying the authoritarianism that reigned in Communist states throughout the Cold War. On November 9, 1989, with the courage of their convictions and a longing to forge their own destinies, Germans from both the East and West sides of the Wall celebrated history as a defining symbol of the Iron Curtain collapsed. Twenty-seven years later, we pay tribute to the unyielding determination of those who chose unity over division, and we rededicate ourselves to carrying this spirit forward wherever core tenets of democracy and liberty are at stake.

When President John F. Kennedy declared in West Berlin that ''when one man is enslaved, all are not free,'' he captured the irrevocable truth of the work that remains to this day. Our world is more prosperous and free than at any time in our history, with more people than ever before choosing their leaders through free elections and living in democracies with greater respect for human rights. But such liberty will not emerge across the globe in a single wave—building strong, democratic institutions and maintaining robust civil societies is the work of generations, and it is up to each of us to put our shoulders to the wheel of progress and fight for the future we seek. Whether in quiet struggle or boisterous protest, the Berliners who endured the division the Berlin Wall created and stood for remind us of the necessity to never abandon the values that have brought us as far as we are today.

For centuries, people of every nation have borne witness to great strife and tension in our ever-changing world—but we have proven we can always choose a better course through our relentless pursuit of freedom. Across oceans and continents, in recognition of World Freedom Day, let us reaffirm our commitment to carrying forward the enduring celebration of liberty that defined the fall of the Berlin Wall.

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim November 9, 2016, as World Freedom Day. I call upon the people of the United States to observe this day with appropriate ceremonies and activities, reaffirming our dedication to freedom and democracy.

IN WITNESS WHEREOF, I have hereunto set my hand this eighth day of November, in the year of our Lord two thousand sixteen, and of the Independence of the United States of America the two hundred and forty-first.

Presidential Documents

Proclamation 9539 of November 8, 2016

Veterans Day, 2016

By the President of the United States of America

A Proclamation

America has long stood as a beacon of hope and opportunity, and few embody that spirit here at home and beyond our borders more than the members of our Armed Forces. Soldiers, Sailors, Airmen, Marines, and Coast Guardsmen are part of an unbroken chain of brave patriots who have served our country with honor and made tremendous sacrifices so that we may live free. On Veterans Day, we salute the women and men who have proudly worn the uniform of the United States of America and the families who have served alongside them, and we affirm our sacred duty as citizens to express our enduring gratitude, both in words and in actions, for their service.

Our country has the best-trained and best-equipped military force in the world, and we need to make sure we have the most supported and respected veterans in the world. We are a Nation that leaves no one behind, and my Administration has made historic investments to provide veterans access to the resources and education they need to share in our Nation's promise when they return home. Partnering with community leaders across America, First Lady Michelle Obama and Dr. Jill Biden's Joining Forces initiative works to ensure our country's heroes can thrive by combatting veteran homelessness, promoting their emotional well-being, and advancing employment training and placement—and we have made great progress. Today, the unemployment rate for veterans is lower than the national average, and veteran homelessness has been nearly cut in half since 2010. We also recognize that some of these courageous men and women have faced and overcome profound challenges, both physically and emotionally, in defense of our freedom. We must continue to provide high quality health care to our veterans and make sure they have the support they have earned and deserve.

The example our Nation's veterans set throughout their lives is a testament to the drive and perseverance that define the American character. Let us uphold our obligations to these heroic individuals and never forget those who paid the ultimate price for our liberty. On this day and throughout the year, may we sustain their lasting contributions to our Nation's progress and carry forward their legacy by building a future that is stronger, safer, and freer for all.

With respect for, and in recognition of, the contributions our service members have made to the cause of peace and freedom around the world, the Congress has provided (5 U.S.C. 6103(a)) that November 11 of each year shall be set aside as a legal public holiday to honor our Nation's veterans.

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, do hereby proclaim November 11, 2016, as Veterans Day. I encourage all Americans to recognize the valor and sacrifice of our veterans through appropriate public ceremonies and private prayers, and by observing 2 minutes of silence for our Nation's veterans. I call upon Federal, State, and local officials to display the flag of the United States and to participate in patriotic activities in their communities. I call on all Americans, including

civic and fraternal organizations, places of worship, schools, and communities to support this day with commemorative expressions and programs.

IN WITNESS WHEREOF, I have hereunto set my hand this eighth day of November, in the year of our Lord two thousand sixteen, and of the Independence of the United States of America the two hundred and forty-first.

Notice of November 9, 2016

Continuation of the National Emergency With Respect to Burundi

On November 22, 2015, by Executive Order 13712, I declared a national emergency to deal with the unusual and extraordinary threat to the national security and foreign policy of the United States constituted by the situation in Burundi, which has been marked by the killing of and violence against civilians, unrest, the incitement of imminent violence, and significant political repression, and which threatens the peace, security, and stability of Burundi.

The situation in Burundi continues to pose an unusual and extraordinary threat to the national security and foreign policy of the United States. For this reason, the national emergency declared on November 22, 2015, to deal with that threat must continue in effect beyond November 22, 2016. Therefore, in accordance with section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)), I am continuing for 1 year the national emergency declared in Executive Order 13712.

This notice shall be published in the *Federal Register* and transmitted to the Congress.

THE WHITE HOUSE,
November 9, 2016.
